Furthermore, the Selective Service System now has, and for 4 years has had, complete control of the great bulk of our manpower. That System has the power and the authority now adequately to place men needed in industry as well as in the armed services.

There is no showing anywhere that there is a Nation-wide shortage of manpower on the war-production line. Yet we would set up a national system, duplicating systems already in existence and designed to meet a situation which does not exist.

The situation does exist of shortages in some localities. There is ample authority and certainly there are ample bureaus already existing to deal with those shortages. The fact is the bureaus are dealing with the shortages and are meeting the situation.

I am unwilling to allow the spotty local situation to induce me to lend my vote toward putting the neck of the American workingmen under a yoke from which they will never escape.

Smear—A Recent Incident

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

SMEAR—A RECENT INCIDENT

(By John T. Flynn)

FOREWORD

In recent years the Marxists have had an epithet for all who oppose communism. They call them Fascists.

Mr. Flynn's article published herein may surprise some persons who have not sensed the real trend in communistic propaganda. But it gives an accurate picture of the un-American hate that these alien-minded gentry seek to cultivate in the United States.

We commend this pamphlet particularly to those comfortable and self-satisfied persons who still take no stock in the danger of communism.

NATIONAL ECONOMIC COUNCIL, INC.

Those who are interested in what might be called the anatomy of calumny, will, I am sure, find food for instruction in the following description of a smear—a very

effective smear—in the act of being propagated. It is entirely possible that at some time or other you may have been told that Merwin K. Hart is a dangerous and notorious agent of anti-Semitic propaganda and a leader among American Fascists. Perhaps you have wondered why he has been thus labeled. What I shall relate here will help you to understand that and a good many other things as well.

On Thursday, July 27, 1944, a meeting was assembled in Swan Lake in the Catskill Mountains in New York State, to which a large number of men and women of Jewish faith, on vacation in the mountains, were invited. The meeting was sponsored by a religious monthly called the Protestant. The speaker was Mr. William Gailmor, a radio commentator then on Station WHN. What he said was certain to be received with sober consideration. Was not the Protestant a reputable magazine sponsored by more than a thousand American clergymen and recommended even by so eminent a person as the wife of the President? Was not Mr. Gailmor a man of education accepted by a reputable radio station as a competent interpreter of the news? And were not these favorable impressions strengthened later when he became a commentator on WJZ, key station of the great national radio Blue Network, sponsored by the Electronics Corporation of America?

Mr. Gailmor, while extolling the great work of the Protestant in fighting anti-Semitism, took a moment out to tell a little story. He said, in part:

"Let me tell you of a certain incident which occurred at the Republican convention (1944) at a meeting of the resolutions committee. This committee, consisting of 90 members, prescribed over by Senator TAFT, had before it a resolution to make racial bigotry, such as anti-Semitism, a crime. There were a number of people ready to talk in favor of the resolution. There were also people opposed to it. Their spokesman was the notorious Fascist Merwin K. Hart, who spoke for about an hour. He referred continuously to and attacked Lehman, Rosenman, Frankfurter, and President 'Rosenfeld.' His talk was full of anti-Semitism and bristling with invectives and when he was through he was vociferously applauded by the resolutions committee presided over by Senator TAFT. The spokesmen for the resolution were given very little opportunity to say anything. I am not saying that the Republican resolutions committee or its chairman, Mr. TAFT, are anti-Semitic. But definitely when people in high office applaud a speech of that type by this notorious man Hart, then we have before us a situation such as Germany had in 1932."

Can anyone blame our Jewish fellow citizens for their conviction that anti-Semitism is about to devour them in America when they hear from supposedly trustworthy sources reports like this? Now let us have a look at Mr. Gailmor's statements, at Mr. Gailmor himself, and at the Protestant magazine which sponsored him.

His statement contained several distinct allegations:

1. That Merwin K. Hart appeared before the Republican resolution committee to oppose a resolution to outlaw racial intolerance.

2. That his speech bristled with anti-Semitism and attacks upon Lehman, Frankfurter, Rosenman and "Rosenfeld."

3. That he was allowed to speak an hour while supporters of the resolution were scarcely heard.

4. That when he finished, his speech was vociferously applauded by the committee—of which there were 90 present.

Every one of these statements is a deliberate invention—a lie out of the whole cloth.

1. Hart did appear before the resolutions committee, but he did not speak on the racial intolerance resolution but on a seven-point program of his organization—the National Economic Council—relating wholly to political and economic problems, expressing views utterly unrelated to race or religion in any form.

2. Never once did he mention any of the names listed. Not one word did he utter which directly or indirectly touched the Jews or any other race or religion.

3. He did not speak for an hour, but for 10 minutes only, to which allotment he was rigidly held by the chairman, having barely time to read the statement of the seven-point economic program of his organization.

4. His speech was not vociferously applauded by the committee, and even if it had been, it could not possibly have implied an approval of anti-Semitism, since the subject was not even remotely referred to.

All this is attested by the most reputable witnesses. This vicious lie would never have come to light had there not been present at the Swan Lake assembly some persons, gentlemen of Jewish origin, who were shocked at the story and who deeply resented it. The people present would have carried away merely the impression of Hart as a purveyor of racial bigotry, as scores of other audiences have done where there was no one to call attention to the calumny.

Now, who is this gentleman, Mr. William Gailmor, well-known commentator for WHN and later for WJZ, whose poisonous messages are put on the radio regularly at a cost of many thousands of dollars to an American corporation? Well, first of all, he is a thief—a self-confessed thief, to put the matter bluntly. His name is Margolies. On March 29, 1939, only 5 years ago, he pleaded guilty in general sessions court of New York City to a charge of grand larcency in the first degree. He had stolen an automobile and he confessed that this was the sixth he had stolen. Mr. Westbrook Pegler has published these facts in his column in the New York Journal-America (December 22, 1944). And he records that "psychiatrists examined Margolies and, on the strength of their recommendations, he was placed on probation and went to an institution for treatment." He is still on probation as a convicted thief and will be until next May. He is also on the radio. After his conviction he changed his name to Gailmor, a mere rearrangement of the letters. This is the gentleman who was put on a platform by the Protestant to blacken the character of an honorable American citizen and the resolutions committee of the Republican Party with a set of vicious lies.

Now, what is the Protestant, the religious magazine which is carrying on the great fight against antisemitism?

This curious phenomenon in American journalism is an example of the manner in which subversive elements work under various masks and disguises. This magazine is one of those disguises. Its editor and inspiring spirit is a gentleman named Kenneth Leslie. Frederick Woltman, in the New York World-Telegram, February 9, 1944, thus described him:

"Mr. Leslie has had a somewhat interesting and varied career. A native of Nova Scotia, he at one time or another taught, lectured, farmed an apple orchard, bought and sold stock, led a dance orchestra, studied acting, wrote poetry, operated a buttermilk restaurant in Los Angeles, sang Hebridian songs over the radio, and published popular songs under the firm name of Leslie and Fitzgerald. At one time he was on the staff of the First Baptist Church, of Montclair, N. J. For a period, according to former associates, he went in strongly for Catholicism, studying the rituals and even carry a St. Theresa religious medal."

He has drifted far from these miscellaneous moorings now. The magazine which, on its face, seems to be a journal devoted to religious discussions is, in fact, devoted, so far as it deals in religion, to the most incessant denunciation of the Roman Catholic Church, to the most slavish exaltation of the Soviet Union, and to persistent efforts to inflame the Jewish and Negro citizens of America against their enemies with which, according to The Protestant, the nation seems to be swarming. Hewlett Johnson's book, Soviet Power, which was originally published by the Communist Party in this country, was put out in another edition by the Protestant and, under this allegedly religious imprint, got a far greater circulation than was possible to the Communist Party.

On November 7, 1943, Brother Leslie wrote in the Daily Worker, official organ of the Communists:

"If there is a heart of justice in the universe it is beating now in the Red Army. I believe in that heart. I call it God. * * * The religion that will be acknowledged in the Soviet Union will be based on the actual working out of community among individuals, economic units, and national groups. It will be beautiful. * * *"

Communist writers are among the most numerous contributors to The Protestant. In seven issues of the magazine I noted 26 articles in praise of the Soviet Union and its philosophy. There were almost as many articles bitterly criticising and attacking the Catholic Church in this country and Europe. The religious journal which weeps crocodile tears over anti-Semitism is itself the most virulent provocateur of anti-Catholicism.

Even Stalin does not seem to be Red enough for Leslie, for he criticized that amiable dictator when he dissolved the Comintern—the Communist agency for international propaganda and penetration. No man can read this magazine without perceiving that its chief purpose is to inflame Protestants against Catholics and both against the Jews by inflaming the Jews against them. One cannot refrain from asking why, when this country is at war and when the President of the United States is constantly asking for unity, this magazine should be so persistently engaged in the business of dividing the population upon such delicate and explosive issues as racial and religious antagonism.

Just as Stalin is not Red enough for the Protestant, so many Jewish leaders are not pro-Jewish enough. The magazine has made a favorite target of the American Jewish Committee which at times has seemed almost anti-semitic to Leslie. But this will be understandable if we remember that not only can Christians be arrayed against Jews, but that Jews can be aroused against Jews, just as Christians can be set at war with other Christians.

Jewish leaders of whatever faction have been able however to agree on one thing, and that is that they do not want Mr. Leslie and the Protestant as their defender. The four leading Jewish organizations—the American Jewish Committee, the American Jewish Congress, the Anti-Defamation League of B'nai B'rith, and the Jewish Labor Committee—have issued statements advising Jews not to support the so-called Protestant magazine. One of these statements says that the Protestant "belies its name by circulating largely among Jews and by seeking the major part of its support from Jewish organizations and individuals." The Jewish Labor Committee said: "For a sectarian Christian magazine to meddle in internal Jewish affairs and to foment factional strife among the Jews on purely Jewish issues is not only in bad taste but is postively immoral." There is a good deal more to the story of The Protestant but this will suffice for the time being.

So far as I am concerned, I have noticed this whole incident because I have been interested in the last few years in observing the guerrilla operations of these masked

gangsters of defamation and the profound effect they have been having on the state of public opinion in this country.

I am not interested in the political or economic opinions of Mr. Hart. He is entitled to hold them. I have made a diligent examination of many facets of this whole smear front and, as part of that examination, I have industriously inquired as to the charges made against numerous persons who have been the favorite targets of these professional calumniators.

Mr. Hart's views on political subjects would, I would say, square perfectly with those held by most Americans who subscribe to the traditional position of the Republican Party. He has supported the immigration laws, and for this he has been branded an anti-Semitic—an obvious and outrageous injustice. As to fascism, I should say he is as far from the school which preaches the planning and control of the national economy by the state and the assumption by it of dictatorial political powers as is the pole itself. It is possible for Americans of many schools of thought to disagree with Mr. Hart's political philosophy, but perhaps the last thing in the world he can be charged with is an affinity for the philosophy of fascism. He is vigorously and industriously anti-Communist.

The Communists have a new verbal trick by which they divide the world into Communists and anti-Communists. If you are anti-Communist, then you are pro-Fascist. By this piece of wordy legerdemain all who are most energetic in opposing the Communists are branded Fascists, and all who favor restricted immigration are called anti-Semitic. Starting from this base, the calumniators never lack for proof of their charges. Nothing more is needed than a lying tongue. The fantastic William Gailmor and his Swan Lake address on Hart are a perfect specimen of the means by which their charges can be implemented and documented.

The men who manage this arsenal of defamation are, generally speaking, nobodies. By what means, then, can they bring to bear in their aims so much power? Because they have mastered a technique in which they put behind their schemes the prestige and often the funds of people of wealth and importance. Thus Leslie and his colleagues and, in the instance related here, Gailmor, are of no consequence. As out-and-out Communists they could get neither support nor an audience. But under cover of a supposedly Protestant and religious journal devoted ostensibly to tolerance, they can get the sponsorship of more than a thousand reputable Protestant clergymen and they can get the endorsement of the most eminent persons. Here is one:

"MY DAY"

(By Eleanor Roosevelt)

"HYDE PARK, Sunday.—For some time I have been wanting to tell you about various things I have been reading, and this fairly quiet day is a good opportunity.

"Perhaps you subscribe to the Protestant Digest (former name of The Protestant—Ed.). It is not just a Protestant magazine, but it does try to awaken those of us who happen to be Protestants to a realization of our responsibilities and interests in the world. I found it interesting. It is always stimulating to realize that if you belong to a certain religious faith there is a responsibility to make sure your thinking is constantly progressive and that you are a living force, not a static one."

Most decent men and women are for racial and religious tolerance. They are willing to lend their names to an enterprise that has this as its frontal aspect. They are foolish enough not to look behind the facade at the ugly real purpose which is concealed and which is not tolerance at all, but the exploitation of every kind of bigotry which the manipulators can locate in the community for the purpose of advancing political and social philosophies that the sponsors would not dare to support. And Gailmor, notwithstanding his unsavory past and his equally unsavory companions and sponsorship, can get the use of the microphone of a national radio network to indoctrinate the American people with the shockingly un-American principles which at the moment he is paid to propagate.

Now to return to Mr. Gailmor, the motor-car thief-philosopher. Had he made off with Hart's automobile, which he might well have done had he found it handy, thus adding a seventh theft to his string, a vigilant prosecuting attorney would have stepped in to defend Mr. Hart's property. But instead of an assault on Mr. Hart's automobile the miscreant commits an assault on his character; not just on his honesty, but on his loyalty, as an American citizen and his position as a civilized person. And though this is a gross violation of the law, far worse than stealing cars, no prosecutor seems to be in the smallest degree interested.

However, Mr. Hart and, for that matter, Mr. Gailmor, his traducer, are mere incidents in this little drama. It is no more than a small fraction of a social disturbance of the utmost gravity. What we have witnessed in the performance at Swan Lake just described is a function differing essentially no whit from that service which Mussolini attended to by beating his opponents over the head with a rubber hose. Thus, Mussolini taught his critics that it did not pay to stick those heads up too high. We are not yet at the stage where disputants feel free to bring out the rubber hose. But the groups represented by Gailmor have an instrument of compliance far more deadly and effective in this country. It is the organized smear.

There are at least four organizations in this country now, well-financed, with large offices and staffs and corps of under-cover agents, which operate as terror organizations through the use of the smear. They have busied themselves for the last 4 or 5 years blackening the names and, in many cases, assassinating the characters of numerous honorable and respected American citizens. The technique is to fasten on them the brand of "Fascist." "Nazi," and "anti-semitic." This is the penalty for disagreeing with the political objectives of these people in this country and abroad.

Hart is blackened, not to do him a personal injury merely, but to render him ineffective as an instrument of opposition and as an example to others. Having been smeared as a "pro-Nazi" and as an "anti-semitic," the assumption is that other citizens will not want to be associated with him in any kind of organized social movement. This would not be serious were it not for the fact that what has been done to Mr. Hart by this blackguard Gailmor has been done to hundreds of the most respectable men in America. Men who never dreamed of harboring a thought of intolerance against Jew or Catholic or any other religious groups, have been pilloried as violent Jew-haters.

The results have been magnificent from the point of view of the men who have been operating this racket. Not only have they brought hundreds of active and effective citizens under a cloud and thus diluted the consequences of their opposition, but they have succeeded in convincing hundreds of thousands of our Jewish citizens that these men are their sworn enemies.

This in turn has given these citizens a perfectly reasonable ground for joining in the criticism and attack. This in turn can be counted on to stimulate antisemitism in the bosoms of the victims and the thousands, indeed millions, of citizens who know them and respect them and resent the smear. A more diabolical device was never invented by the brain of man to brew hatreds and divisions among a free people who have a need at this moment to be united at least in their respect and tolerance for each other's spiritual freedom.

In describing this devilish technique and its victims I am not referring to those scores of wretched or disloyal persons whose names have figured in various news stories and who have been the active or compliant agents of truly Fascist or anti-Semitic groups. For the most part these creatures are unimportant, impecunious and, very often, stupid. But they, in their turn, have served a very useful purpose in the hands of the professional smear troopers. The names of hundreds of men and women, many of whom among our most distinguished citizens, have been stained by these brokers in calumny by mentioning their respectable names in company with the names of known or suspected persons. It is very easy, for instance, for one of these smearers, many of whom have access to radio, newspapers, magazines, to tell a yarn about the obvious disloyalty of some prosecuted and convicted offender and then mention, as a sort of side-swipe, that he is a "friend of Senator WHEELER." The constant repetition of this oblique calumny can do its work as thoroughly as if a long and implemented indictment had been presented and proved.

Take the incident I have described here. We see this professional character assassin Gailmor not only smearing Mr. Hart by picturing him as delivering a vicious anti-Semitic address, which he never delivered, but we see the traducer sweeping the tar-brush over the resolutions committee of the Republican Party by recording that they received Mr. Hart's attack with "vociferous applause," while giving Senator ROBERT TAFT a flick of the brush by naming him as the chairman who let Mr. Hart talk an hour while shutting out the proponents of the anti-Semitic resolution.

I repeat this is a solitary incident of this diabolical technique which is being practiced on a great scale against men and women in every community and against national leaders—religious, political, economic—who dare to oppose the schemes for remodeling the world of the men who operate the organizations to which I have referred.

The American people are being slugged over the head by a small handful of intellectual gangsters loose in the Nation. Some means must be found to deal with them and to bring their depredations to an end. No form of society can live with such a savage organism in its body any more than an animal can live with the deadly germs of physical disease eating at its vitals.

Obviously the only method which a civilized man who believes in the forms of our society can use is the exposure of the miscreants who use this weapon and, along with them, the foolish men and women, some of them well-meaning, who supply the funds and the prestige behind them.

If this does not succeed I shudder to think of the consequences. The task of dealing with the outrage will pass into the hands of angry and violent men.

Up to now the offenders have been almost completely immune from exposure. Let any man or woman who has suffered, or let any writer who has observed this dark phenomenon in eruption attempt to describe it—to expose it—and see how far he will get in finding the printed page, the radio, or any other medium of communication at his disposal.

The extent of the intimdation is beyond belief. The volume and violence of the revolt against this murderous device will be proportioned to the extent to which the victims and society itself have been deprived of the defenses which ordinarily free people use against such offenders.

I have written this mere incident illustrating the disease in the hope that people may be at least acquainted with its presence in our midst. That is the first step toward the cure.

What They Say

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1945

Mr. HOFFMAN. Mr. Speaker, two boys from Sturgis, Mich., serving overseas, in the Sturgis Daily Journal published at Sturgis, Mich., express thoughts which are well worth repetition. One, who prefers to remain anonymous sends on a poem. The other writes to his mother.

I quote both:

NEW GUINEA

I'm full of damned malaria,
I shake the whole day long.
The quinine's ringing in my ears
I'm anything but strong.

Mosquitos bite all day long,
And you'd think I had the itch.
My ears are full of New Guinea mud,
My bunk's a dirty ditch.

I'm living in a jungle.
It's hot as merry hell.
C rations are my menu.
No cooking can I smell.

For this I get two bucks a day,
And a chance for a little ground,
That measures four by four by six,
And a grassy-covered mound.

My pals who came down here with me,
One lad was just eighteen,
He got a bed he'll never lose,
The coverlet is green.

Another one we'll see no more,
Another lost his arm;
And hundreds more I do not know,
Are now safe from all harm.

When I hear of a bunch of guys,
That are safe and far away,
Refuse to work because they want
Two dollars more a day,

I only wish we had them here,
For just a week or two,
To let them live in Guinea jungles
And see what we go through.

We'd give them all malaria,
Let the mosquitoes have a feast;
We'd make them bury many a lad
From north, south, west, and east.

We'd make them sleep in fox holes,
We'd feed them from a can;
We'd let the hot sun blister them,
'Twould be no Palm Beach tan.

We'd let them hear the wounded moan,
We'd let them see them die
With sniper bullets whizzing close,
With star shells in the sky.

Then we'd send them home again,
To their ten bucks a day,
To tell the others what they'd seen,
Way down New Guinea way.

I'll bet those guys would have enough,
At home they'd gladly stay,
They'd start no strikes right soon again.
For two more bucks a day.

Pvt. Leo Frohriep, who hasn't had a furlough in 40 months, is in the thick of the fighting in the Philippines. His parents, Mr. and Mrs. Fred Frohriep, R. F. D. 3, have had two letters from him the past few days.

In the first one, written December 14, Leo says: "Am in the Philippines and it's plenty tough here. We have air raids every night, sometimes three or four; dead Japs lying everywhere, even floating in from the ocean. I've got a lot of Jap money. I'll send you some in my next letter. All I have for a bed is the ground and that's mud. All the time it rains here, and all the time I've been here I've been dry only 1 day. Am feeling fine, only lost a little weight, so don't worry about me. On the way here we stopped in the Marshalls and Carolines. I haven't got your box of candy yet. I got a letter from you the other day. My address is the same only the A. P. O. is 72 now."

The next letter, written 2 days after Christmas, follows: "Received your letter the other day and also the Christmas package. Came on Christmas Day, and was slow coming. Am still all right and feeling fine only don't get any too much sleep. The Japs are over every night bombing. They really kept me up Christmas night better than half the night. That's a Christmas I'll never forget. They come over every night about the same time. It's getting so if they come late we wonder what is wrong with them."

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered January 29, 1945, over Station WKOK, Sunbury, Pa., by Dr. Ruth Miller Steese, State membership chairman, American Legion Auxiliary, Department of Pennsylvania:

Abraham Lincoln. As we merely mention the name, we pause in wonder, in reverence, in honor to the man of the ages. As we think of Lincoln, we realize that he is the one human being whose honest, steadfast, and rugged perseverance as well as whose stanch and unswerving Americanism furnish us an example which we may all do well to emulate.

When we consider this great, strong homely man, this man of destiny, our thoughts go to his own words, spoken in his second annual message to Congress and I quote "We cannot escape history. Ne personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation."

When we consider the judgment of history, we are faced with the fact that the greatness of Lincoln has increased with the years. Unwanted by the intellectuals, Lincoln said of himself and I quote: "I hold myself without mock modesty the humblest of all the individuals who have been elected President of the United States." Horace Greeley opened a letter to him with this word of greeting: "You are not considered a great man." But the thoughts of the masses, of the great body of common people, were expressed by the enthusiastic westerner who at the White House reception for Lincoln said and again I quote: "Out our way, the people put their trust in God and in Abraham Lincoln."

Unwanted, despised, and rejected as he entered the White House and upon his duties as Chief Executive, when he died but a few years later, the first statement made concerning him and at his death bed, was made by the Honorable Edwin Stanton, Secretary of War, in the immortal phrase, "Now he belongs to the ages."

Emerson later said of Lincoln, and I quote: "By his courage, his justice, his even temper, his fertile counsel, his humanity, he stood a heroic figure in the center of a heroic epoch. He is the true history of the American people of his time—father of his country—the pulse of twenty million throbbing in his heart, the thought of their mind articulated by his tongue."

But Lincoln is considered great not only in America but throughout the world. At a time of the dedication of a statue to Lincoln in Westminster, Lloyd George made this pertinent comment, "In a few moments we shall see unveiled before our eyes a presentment in bronze of the best-known historical face in the Anglo-Saxon world, in fact one of the few best-known faces in the whole world. He is one of the giant figures, of whom there are very few in history, who lose their nationality in death, they belong to mankind."

When we mention the name of Abraham Lincoln, our thoughts naturally include that immortal address delivered by him here in our own Pennsylvania on the consecrated and dedicated soil of our national cemetery at Gettysburg. We think of it because it epitomizes the greatness of the character which is Lincoln.

Let us consider briefly the circumstances which led to the writing and to the rendition of this address.

The occasion was the dedication of the Soldiers' National Cemetery. Formal invitations were sent to the President of the United States, to his Cabinet, to all Members of the Senate and House of Representatives, to the diplomatic corps and to many other distinguished personages. Dr. Edward Everett, the most outstanding American orator of the day, was asked to deliver an appropriate address.

Six weeks after Dr. Everett was invited to speak, and just 17 days before the ceremony, it was decided by the board of commissioners of the cemetery to ask President Lincoln, and again I quote, "after the oration, as Chief Executive of the Nation, to set apart formally these grounds to their sacred use by a few appropriate remarks." May I repeat the statement of invitation "by a few appropriate remarks."

The day arrived—November 19, 1863. An estimated throng of 100,000 persons stood while Dr. Everett delivered his 2-hour oration. Then when the people were weary from the long ordeal of standing, the majestic Lincoln rose and uttered "his few appropriate words."

How few! Let us study them. This masterpiece of English composition contains but 10 sentences—268 words, of which 197 are words of one syllable.

And yet in those 10 sentences, what did Lincoln do? He carried out the request of the Commission "to set apart formally these grounds to their sacred use." But he went so much further. In the last 5 sentences he dedicated the living "to the unfinished work"—"to the great task remaining."

Fair indeed was the expression of the orator of the day, Dr. Everett, in his note to the President the next day, when he made this statement, "I should be glad if I could flatter myself that I came so near the central idea of the occasion in 2 hours as you did in 2 minutes."

No oration in history has ever expressed so much in so few words. No other address is so well known. Printed in books with the most expensive binding or on a scrap of the cheapest paper, its message remains the same. Today, more than ever before, it is being read and reread, studied and studied again.

The Lincoln Memorial in Washington contains only the statue of Abraham Lincoln and the words of his Gettysburg Address and his second inaugural speech. Bernard De Voto described his recent visit to this memorial in these words: "Impressive as the statue is, one presently ignores it; the texts count more. One sees them working an effect on the uniformed boys. On the approaches and

the steps there is a good deal of talk, laughter and horseplay. It becomes a whisper and presently dies out; the place is quiet. They stand reading those texts, they loiter for a while, and few of them say anything as they go away. There are those ribbons and stars—north Africa, the Solomons, the Aleutians, the sea frontiers, Sicily, the sky over France and Germany. Some of these boys have been there, the rest are on their way—and they might have spent this half hour with their friends, their wives, or their girls. They don't talk much as they go away, and as one becomes aware that they came here to be in touch for a moment with the highest expression ever made of what gives them meaning. A man is speaking to them out of an earlier testing, an earlier proof. They know what he is talking about."

Yes, the men in uniform know what Lincoln is talking about. They, too, have stood in countless cemeteries, the world over, dedicated as memorials to those who lost their lives that this Nation, yours and mine, might live. They have stood there and rededicated themselves "to the unfinished work"—"to the great task remaining," for they are in uniform today that "that government of the people, by the people and for the people shall not perish from the earth."

Yes, the men in uniform pause before Lincoln. The men in uniform honor and salute him.

Let us pause this evening and rededicate ourselves "to the great task remaining before us"—"that from these honored dead we take increased devotion to that cause for which they" in 1863-65, in 1917 and 1918, and in 1941-45 "gave the last full measure of devotion."

Let us pause in honor to the courage, fortitude, sacrifice, sympathy and love which are the price of greatness and which lay in the heart of the man of the ages, Abraham Lincoln.

Suppression of Vice in the District of Columbia

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. D'ALESANDRO. Mr. Speaker, I wish to commend Major Kelly and members of the Metropolitan Police Department for the splendid work they are doing to rid the District of vice.

In this connection, I would like to insert a letter addressed to Major Kelly by Mr. Ray H. Everett, executive secretary of the Social Hygiene Society, which is self-explanatory.

Metropolitan Police Department,
DISTRICT OF COLUMBIA,
January 26, 1945.

Major EDWARD J. KELLY,
Metropolitan Police Department,
Washington, D.C.

DEAR MAJOR: Law enforcement in Washington against commercialized prostitution rates well in the report of a routine undercover study made last month. Here are a couple of excerpts:

"Those who knew the city in its palmy prostitution days and know it now cannot refrain from making a comparison. The essence of their remarks is: 'Money's plentiful * * * Possible customers never were more numerous * * * And hustlers never scarcer. Why? Only reason is that the law never was hotter.'"

"Methodical search for exploiters and prostitutes proved conclusively that flagrant activity has been eliminated, and that here and there where there may be some hustlers operating surreptitiously, their mode of action is so clandestine that a prospect has to offer gilt-edged documentary proof of identification before he can obtain an immoral offer."

These comments from trained and impartial investigators speak well for Washington's current status in this field. I expect a second report soon dealing with Negro prostitution specifically.

Cordially,

RAY H. EVERETT,
Executive Secretary.

More Stringent Antitrust Laws Needed

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks, I am enclosing a presentment which was submitted by the August 1944 grand jury to the District Court of the United States for the Southern District of New York to Judge Vincent L. Leibell of that court. It was accepted, approved, and ordered filed by the court on November 13, 1944.

The presentment discloses a careful study of the facts and a proper appreciation by the grand jury of the dangers of hidden control or ownership of stock in American corporations by foreign nationals, especially enemy nationals.

I am thoroughly in accord with the presentment, which reads as follows:

To the District Court of the United States for the Southern District of New York:

Whereas the undersigned constitute all the present members of the Second August 1944 Grand Jury of the District Court of the United States for the Southern District of New York; and

Whereas there was presented before this grand jury testimony and evidence with respect to dealings between certain American companies and individuals and certain foreign corporations and individuals, which resulted in a severe shortage in the United States of a vital raw material used in the manufacture of modern military radio equipment; and

Whereas this testimony and evidence have led this grand jury to certain conclusions deemed proper and imperative to be brought to the attention of Congress and the executive department of the Government for such action as may be necessary or appropriate.

Now, therefore, the undersigned members of this grand jury respectfully show and allege as follows:

1. Numerous agreements, in violation of the antitrust laws, between foreign and American corporations have resulted in restricting the production in the United States of many products of vital wartime necessity and great peacetime value.

2. American companies which are parties to these agreements are in some instances under foreign ownership or control as a result of stock ownership.

3. The registered foreign owners of the stock of American companies are in many cases not the real owners of such securities.

4. Foreign nominal owners of shares in American corporations are in a position, under the laws and business practices of certain foreign countries, particularly Switzerland, to refuse to disclose the names of the true or beneficial owners of such stock, so that it is often impossible to determine the identity or nationality of the foreign individuals, corporations or governments exercising control over American corporations.

5. In many instances, the penalties now provided by the antitrust laws are not commensurate with the gravity of the crime and with the extent of the injury to the public welfare, nor are they sufficiently severe effectively to deter enemies and prospective enemies of the United States from future attempts to inflict grave harm upon this country through the use of restrictive agreements and international cartels.

6. In view of the considerations herein set forth, the grand jury recommends that the Congress consider the desirability of providing greater maximum penalties for violations of the antitrust laws.

7. The grand jury also recommends that the Congress and the executive department of the Government take such action as may be necessary and appropriate to make it unlawful and impracticable for foreign nationals, particularly enemy nationals, secretly to own property in the United States through the instrumentality of foreign banks or holding companies or by any other means.

8. The grand jury, therefore, respectfully petitions the court to accept this presentment and order it filed, to authorize the Federal Grand Jury Association for the Southern District of New York to print and send copies of it to the Members of Congress and to the proper officers of the executive department of the Government and to permit such other use as may be properly made of this document.

(Signatures omitted.)

Bipartisan Responsibility for the Peace

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of January 30, 1945:

BI-PARTISAN RESPONSIBILITY

There's a very fine idea behind a 75-word resolution Representative BROOKS HAYS, of Arkansas, introduced in the House at the beginning of the Seventy-ninth Congress. It declares that:

"Whereas it is the sense of the Congress that measures involved in the establishment of a peace to follow the present hostilities should be considered without reference to partisanship: Therefore be it

"Resolved by the House of Representatives (the Senate concurring), That all legislation pertaining to the participation by the United States in international agreements and machinery to establish and to maintain peace shall be the joint responsibility of the majority and minority parties."

The Arkansas Congressman has been joined by Minnesota's WALTER JUDD, a Republican Member, in this effort to eliminate some of the political maneuvering that centers around the present discussion of the Dumbarton Oaks and the Vandenberg proposals.

It is obvious that they believe there is a national need for such a limited type of coalition government, and that even after it should be agreed on, there is still enough left on the domestic front for the two parties to argue about.

The recent visit of these two men to the European war theater increased their determination to diminish partisanship in the congressional consideration of the peace to come. "The simple fact of history," HAYS says, "is that partisanship was one of the determining factors in losing the hard-won peace of the last world war. By this step we Democrats would invite the minority to join us in perfecting the policies of peace and making it secure—and to share in the credit for it."

HAYS is quite right about it. There is a bipartisan responsibility for what the President has well termed a "just and honorable peace."

Poland

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. SCRIVNER. Mr. Speaker, Americans of Polish ancestry emphasize the sad plight of Poland in the following telegram:

POLISH DRAMATIC SOCIETY
OF KANSAS CITY, KANS.,
January 27, 1945.

Hon. ERRETT P. SCRIVNER,
House of Representatives,
Washington, D. C.:

Americans all around us agree that Poland is being sold down the river. We appeal to you to raise your voice in defense of the rights of this unhappy land whose people were the first to brave Hitler's might.

STANDLEY SADECKI,
President.
BLASE MICHALAKI,
Secretary.

Deferment of Agricultural Workers

REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. MICHENER. Mr. Speaker, a few days ago I called the attention of the Congress to the alarming condition in agricultural sections because of the interpretation being placed by local draft boards on General Hershey's directive of January 3, requiring the reclassification and induction of boys 18 through 25 years of age who were deferred because of agricultural occupation.

Over 200 Members of the House represent districts vitally affected by that order. As a result of the cooperation of these Members, General Hershey issued a clarifying directive on January 22, which directive states in clear, unequivocal language that boys are not to be taken from the farm under the draft except in accordance with the provisions of the Tydings amendment.

Together with many other Members of Congress, I was personally assured by General Hershey that this last directive would be strictly adhered to, and that the right of appeal under the law would guarantee those who were ordered inducted by the local boards ample opportunity to present the merits of their cases and receive just verdicts on the part of the authorities.

After this second directive was issued, the local draft board in my home county issued a clarifying statement which was given wide publicity in the county, and which seemed to be a fair appraisement of the situation. The statement is as follows:

[From the Adrian (Mich.) Daily Telegram of January 29, 1945]

THE FARM DRAFT CLARIFIED—YOUNG FARMERS NOT YET IN I-A

Because of confusion and misunderstanding over their draft status that has developed among some 328 Lenawee County farmers in class II-C in the 18 through 25 age group, the Lenawee draft board today issued a clarifying statement. The board has learned that some farmers in the group are selling livestock and preparing to leave for service, when actually they have not yet been classified in I-A and listed as subject to call. The board emphasizes that every deferred farmer in class II-C will be notified in writing when he is reclassified and will have an opportunity for a hearing and appeal. The board's statement, signed by Dr. F. S. Kellogg, H. D. Moran, and N. N. Raymond follows in full:

1. There is no reason for immediate alarm because farm registrants, ages 18 through 25, are being sent to Detroit for physical examinations. This does not mean that these registrants are now in I-A and subject to call. It is only to see if they are physically fit.

2. Your local board has been ordered to reopen and reclassify all registrants 18 through 25, in accordance with new farm directives received.

3. Your local board assures each farm worker, their families, or employers, in this age group, that when each registrant's case is reopened, it will receive the board's careful consideration, and that reclassification will be based on information in the file, and upon the registrant's necessity on the farm, in light of the Tydings amendment, and the new farm directive.

4. Each registrant will be advised of his new classification in writing after his case has been reopened, with full rights given to appear before the board or to appeal.

5. All farm workers, ages 18 through 25, are advised to visit the extension office at the courthouse, within the next 5 days, to file a new 1945 farm questionnaire, bringing with them income tax records and sales slips, showing their records of farm production sales. As continued deferment is based on production, not points or man days, as formerly, this is important.

6. Your local board wishes to suggest to our farmers that they recognize the agricultural importance of Lenawee County and that they realize the full importance of food in wartime. They assure every registrant in this younger age group that his reclassification will be based upon his own importance to agriculture.

7. The board also asks that our farmers sincerely consider the serious situation now at hand, as by our new directives the induction of young men under 26 years at this immediate time is considered more imperative and critical in the armed services than in their production of food. The board also asks that farmers realize that because of the manpower need of the armed services, that all II-A cases of our registrants in towns have been reopened, and we are calling to the servicemen up to 38 years of age who have families. Also, that men 18 through 25 years have already been called from industry, and that we are now calling up men in industry 26 through 29 years. We also wish to remind you of the deep obligation we owe to our nearly 4,000 men now in the armed services from Lenawee County who have served years of painful suffering and hardship in constant combat. The board sincerely feels that these men are worthy of replacement, and their sufferings should be considered, in its call for new men.

8. The local board asks your understanding in the task that now lies before it, and we hope, trust, and pray that in our decisions, based carefully upon your importance, that you will in return help us by understanding the serious task of decision ahead of us.

9. Your local board also firmly believes that even with the loss of a portion of the young farm registrants we will be forced to take, the older farm workers will continue, and even enlarge upon, their untiring efforts on the farms toward winning the war.

Mr. Speaker, it will be noted in subsection 3 of this statement that reclassification will be based on information in the file, and upon the registrant's necessity on the farm, in the light of the Tydings amendment, and the new farm directive.

This last sentence states the law exactly, as well as the attitude of the local board in its desire to comply with the law.

The above statement by the board was published on January 29, and in the evening of the same day Maj. Nick A. Luscombe, representing the Michigan State director of selective service, addressed a meeting in Lenawee County and made it clear that all farm registrants 18 through 25, who were physically qualified, were to be inducted into the military service, the Tydings amendment and the statutory law of the land to the contrary notwithstanding. The Adrian (Mich.) Daily Telegram in a front-page news article tells the story better than I can, and it is as follows:

THE ARMY NEEDS THEM—YOUNG FARMERS MUST GO, MAJOR SAYS

Young farmers in the 18 through 25 age group are destined for military service if they can pass physical requirements, Maj. Nick A. Luscombe of the operations section of the Michigan State selective service told a group of 100 businessmen, supervisors, draft board and country war board members at the courthouse last night.

"This meeting has been called to discuss the status of II-C farmers," said Major Luscombe. "In the last 4 weeks Selective Service has had to change its thinking and go back to the original purpose of furnishing men for the armed services. We believed we had reached a peak with some 12,000,000 men in service but the Germans threw a monkeywrench into things. Whereas our estimates were that 60,000 men a month from last July to next July would be sufficient it now appears this must be revised upward to some 160,000 to 180,000 men a month.

"Our casualties have been heavy, men are cracking in 15 days in the combat areas; the weather is a big factor and our replacements must come from the younger men. Failure to meet our quotas would prolong the war for 2 or 3 months, maybe a year.

"I wish to state right here that this decision is not that of your local draft board,

nor the State Selective Service nor the national office but higher up. The President of the United States after conferring with his aides advised General Hershey that further deferment of men 18 to 25 because of farm occupation is no longer needed and ordered a review of the men.

"The Tydings amendment is no more important than other sections of the Selective Service Act. We have been liberal for the last 6 months and now the needs of the moment mean more stringent application of the act. Local boards must order for induction all men in II–C. They will review and consider the evidence in the files and classify men accordingly."

Judge M. E. Tripp, Prosecutor L. B. Kuney, and Judge G. Arthur Rathbun as well as laymen pointed out that in their opinion the various sections of the Selective Service Act and the Tydings and other amendments were in conflict.

THE PRESIDENT'S POWER

"However you construe the act," said Major Luscombe, "the fact remains that Congress has empowered the President of the United States to issue the directive he has."

It was pointed out that while II–C's have the right to appeal their cases, the appeal in the final analysis must go to the Presidential board which issued the directive. This, it was claimed by farmers, would be like appealing to the judge who has just sentenced you.

While the II–C has the right of appeal, the State selective service board also has the right of appeal. Asked if they would appeal deferments made by the local draft board, Major Luscombe said, "I will say this, that they will consider an appeal in every case."

"In a nutshell, gentleman," said Major Luscombe, "the Presidential board has decided that the 18 to 25 age group is no longer as essential to food production as it is to the Army. In Lenawee County there are approximately 328 men affected and of these some will be rejected for failure to meet physical requirements. This would take a small percentage of the agricultural workers of the county and I do not believe that food production would be seriously affected.

ADVISES W. F. A. PROTEST

"If you gentlemen believe otherwise and can prove that this is the case I believe it is up to you to present your case to the War Food Administration and leave it to them to fight it out with the President."

A farmer in the rear of the room declared that by the time that could be accomplished the season would be fall, there would have been no crop, and the II–C might be a casualty.

"Drafting of some of these men is going to hurt and hurt a great deal," said Major Luscombe. "It may hurt food production to a certain extent but we need men in the Army more than in agriculture. It doesn't please us to know that in some individual cases there will be hardship, some cattle sold, some acres untilled, there may be the third or fourth boy of a family will be taken. There is a mission to be performed and if my taking the II–C's we can shorten the war a single day I believe the step well worth while."

To rate as a II–C, Major Luscombe said a farm worker must now be actively and fully engaged in essential agricultural endeavor; the farm operation must be essential to the war effort; if a man is inducted and a large section of land would remain untilled, and if no replacement is available, then deferment will be granted only until a replacement can be found.

In short, Major Luscombe, the official representative of the Michigan director of selective service, advised the Lenawee County Draft Board, the War Board, and interested citizens, that there was no discretion lodged in the local draft boards as to these farm registrants, that neither the State selective service nor the national office had any jurisdiction, but that the decision to take these boys, contrary to the Tydings amendment, was made by those "higher up." In short, he pointed out that the President of the United States, who is also the Commander in Chief of the Army and Navy, had determined that "further deferment of men 18 through 25 because of farm occupation is no longer needed."

Under date of January 30, the day following Major Luscombe's announcement, I received a letter from the secretary of Lenawee County Draft Board No. 1, which reads as follows:

DEAR MR. MICHENER: Last night at a meeting in the circuit court room at the Court House in Adrian before the supervisors, the War Board, heads of various farm groups, representatives of county banks and milk companies, Major Luscombe, of the State selective service at Lansing told us that we must draft every farm boy 18 through 25 who was physically qualified.

He quoted a section of the Selective Service Act of which the Tydings amendment is a part, which in my own words reads something as follows:

"The President has the right to defer any group or groups of registrants as he sees fit for the betterment of the war effort, and also he has the right to cancel the deferment of any group or groups as may be necessary in the best interests of the war effort."

He stated that the National Selective Service has ruled that they have the right to cancel farm deferments at the instruction of the President.

He further states that National Selective Service has definitely and explicitly ordered the State Selective Service to instruct all local draft boards to act accordingly and further that all local draft boards must carry out those orders and induct all physically fit men in that age group or the State Selective Service will remove such boards from office.

It is my understanding that Major Luscombe is now personally calling on all county draft boards, giving them these instructions and has already contacted many, including the appeal board.

Other letters and telegrams you will receive will tell you what a serious blow this will be to Lenawee County agriculture.

I need not point out to you that our only hope is for congressional action. We in Lenawee have no one to look to for aid except our Congressman.

Major Luscombe emphasized that the only way to change this order was for those in Washington to reverse their orders to the State selective service.

It appears plain, therefore, that your efforts must be to bring pressure on the Food Administrator and National Selective Service to reverse themselves, or to pass a law that the President cannot evade or bypass if we are to keep essential farm workers on the farms.

We believe that there are quite a number of farm workers who are not producing enough to warrant further deferment but we do believe also that there are many essential workers who should be deferred and a serious blow will be dealt our food-production program if the blanket order is allowed to stand.

May I emphasize that drastic action must be taken at once or it will be too late. These boys will have completed their physical examinations next week and are subject to immediate induction.

Yours truly,

HENRY N. RAYMOND,
Secretary, Lenawee County Draft Board No. 1.

Mr. Speaker, I am receiving many, many similar letters and telegrams, as well as letters stating the facts in many individual farm operations where deferred men are to be taken.

The attention of General Hershey and War Food Administrator Marvin Jones was immediately called to the pronouncement of Major Luscombe, and they both agreed that this statement, so far as it makes reference to the Tydings amendment, is wrong, and that the local boards still have and are expected to exercise all power given to them under the Tydings amendment.

I wired the Governor and the Michigan State director of selective service urging that statements like that attributed to Major Luscombe be discontinued, and that local boards be instructed to comply with the Tydings amendment. On yesterday, in response to one of these complaints made by my colleague, the gentleman from Michigan [Mr. WOLCOTT], Director Lewis B. Hershey signed the following statement:

The instructions issued pursuant to Justice Byrnes' letter did not direct local boards to induct all agricultural registrants under 26 years of age. We have, however, directed the review of the classifications of agriculturally deferred registrants, ages 18 to 25 inclusive, to make absolutely sure that they fully meet the requirements of the Tydings amendment, i. e., that they are necessary to an agricultural occupation or endeavor, that they are regularly engaged in it, that it is essential to the war effort, and that no replacement can be obtained.

This morning I am advised by General Hershey's office and by War Food Administrator Marvin Jones that the Governor of Michigan, in response to the telegrams which were sent to him, has interceded in behalf of absolutely necessary farm deferments, and that further action will be taken by General Hershey immediately to insure compliance by local boards with the provisions of the Tydings amendment.

Mr. Speaker, the young farmers of the country are not slackers. Proportionately there have been more farm boy volunteers than volunteers from any other group. In many instances it has been a real problem to persuade young farmers that they could serve best by producing food on the home front. Of course there are some young farmers, just the same as there are young men in other vocations, who possibly have avoided military service because of alleged farm essentiality. There can be no objection to a review of all farm deferments in order to eliminate any who are not needed on the farm. No one can complain about this and, so far as my district is concerned, no one is complaining. No one is asking that all farm boys be deferred. We are asking that the local boards, whose members live in the community and know the facts, be permitted and required to draft or defer under the provisions of the law provided by the Congress. The boards in the congressional district which I have the honor to represent are ready and willing to do their full duty. In these circumstances, such statements as Major Luscombe made are most disconcerting, and I can report to my constituents that I have the assurance of the Washington authorities

that the local boards in my district at least will be immediately directed to follow the law and not erroneous statements isued by those unfamiliar with the law or who exceed their authority.

A Letter From a War Plant Worker

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 2, 1945

Mr. REES of Kansas. Mr. Speaker, ordinarily I do not extend copies of my correspondence in the RECORD. I am today, however, including as a part of my remarks a copy of a letter from a personal friend whom I have known for a number of years. For obvious reasons I am not including the name of the author of this letter. He and his family are hard-working, upstanding citizens of my community. This man left an important job to work in a war plant. He and his wife are both employed. They have four boys—three in the armed forces, all overseas, and the fourth boy who will be 18 in the near future will be called before long. I feel the opinion of the writer of this letter is at least worth considering. It follows:

JANUARY 22, 1945.

Congressman E. H. REES,
Washington, D. C.

DEAR ED: Knowing you as we do and having had business dealings with you in the past, I know you do not believe in wasting time and money. Well, the Mrs. and I have each spent over 1 year each in airplane factories.

We have three sons in service, two overseas and one on a ship in the Atlantic, and we feel like we have a right to complain a little.

It is true we are short of help in many lines of business, but the set-up we have in small war factories is shameful. A person don't have to be in one of these factories one day to see that they are not run on a business basis. It is evident they are on a cost-plus basis or some other basis that means the same thing, for any individual or corporation would not waste money and manpower the way it is being wasted in some of these factories if they had to make a profit.

I personally believe any of these war plants could take 60 percent of the help they now have employed and let this 60 percent actually work which most of them would rather do (rather than stand around or act busy when foreman is around), we would be getting more war equipment for our money. Of course, there has been a big turn-over in employees in these factories and one of the big reasons for this is more employees like to work where they can see they are doing something for the war effort and after a few months they realize there are other things they could do to help the war effort more than wasting time at this job, so they become disgusted and terminate.

In these plants there are many young physically fit men being deferred because they are classed as essential, well, there is a few of these young fellows that are essential and hard to replace, but it is the ones that are really doing something with their hands, mechanical or technical. There is a great number of young men that are foremen, assistant foremen, and crew chiefs that have the seniority to hold these jobs that are nonessential, and the factory would be better off if it had older men in these jobs because the older man has more background and experience handling employees. These young men holding these foreman and crew chief jobs get the idea they are executives instead of an employee.

If Congress will send some special investigators to these plants and really go into this, they will find conditions like I have tried to picture them. The way to investigate these conditions is not to have a committee of Congressmen come to the plant and have the general manager take them through the plant. The proper way is to have some factory experts come and stay in the plants a week or 10 days and really get the facts.

Seeing these big ads in the newspapers and hearing the radio appeals for more help in these airplane plants, and seeing by the papers that the Government is planning to take farm boys that are really working many hours a day and you can see what they really do, while at the same time these young fellows in plants are working or I should say putting in their time. This makes us all think something is rotten somewhere.

Summing up our story we think stopping this cost-plus business would do a lot to solve the critical manpower problem, and I know it would cut the costs of the war equipment, and we taxpayers are going to pay for all this waste (or I should say we and our children and their children, etc).

The boys over there fighting and dying on the battlefields really believe we are running our war plants to furnish equipment instead of wasting money.

With best wishes, very truly yours.

Nurses at Walter Reed Hospital

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 1, 1945

Mr. BROOKS. Mr. Speaker, some adverse criticism has been made of Walter Reed Hospital, and much publicity has been given this criticism. It has been said, for instance that many nurses, who are employed by patients at the hospital and are wives of Army officers, are not needed by these patients, and, at the same time, are badly needed by the armed services.

I have felt it my duty to make a check of conditions at this Army medical center and have obtained a report from Brig. Gen. Raymond W. Bliss, Acting Surgeon General of United States Army, which shows that 18 special nurses were on duty at Walter Reed Hospital January 28, 1945. Of this number, 12 were practical nurses and not graduates. Only six graduate nurses were employed in this group and of this number one is over age for military service and two have minor children. Only three of the number were eligible, if found fit, for military service.

These special nurses are employed only in very serious cases and only where prescribed by physicians as necessary.

So that the Congress may have a full insight into this situation, Mr. Speaker, I set forth the letter of General Bliss, as follows:

FEBRUARY 1, 1945.

DEAR CONGRESSMAN BROOKS: In compliance with your telephone request of Colonel Carpenter yesterday, the following information regarding the special nurses on duty at Walter Reed General Hospital is submitted.

Of the 18 special nurses presently on duty at that hospital, 12 are practical nurses and 6 are graduates. Of the 6 graduates, 1 is over age for military service and 2 have minor children. Three are eligible for military service if physically qualified. Of these 3, 2 are married.

These special nurses are employed in the care of patients hospitalized for the following conditions: Hypertension, cardiovascular disturbance, fractured hip and arteriosclerosis, fractured hip and uremia, carcinoma of breast (bilateral), ureteral lithotomy, hysterectomy.

Sincerely yours,
RAYMOND W. BLISS,
Brigadier General, United States Army,
Acting the Surgeon General.

Soldier Service Center at Fort Wayne, Ind.

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 2, 1945

Mr. GILLIE. Mr. Speaker, I am pleased to call to the attention of the Members of the House the splendid program set up in the city of Fort Wayne, Ind., to provide advice and assistance to our returning servicemen. Under the Fort Wayne Municipal Veterans' Aid Commission, a soldier service center has been established in each of 11 fire department stations, and the fire department personnel in cooperation with the Veterans' Aid Commission counselors will provide service on the neighborhood level.

The following letter to the V. A. C. counselors from Mayor Harry W. Baals, director of Veterans' Aid Commission, gives details about the operation and purposes of these service centers:

Authorities now agree that soldier service must be at the community level. To make that formula other than a mere term, the leveling must continue to the neighborhood level, and reach its most efficient point at the zone level. There is an average of 6 blocks and 30 soldiers in each of the zones in the city. To organize the zones at the neighborhood level, the 11 fire stations have been made neighborhood information centers, for each of the 11 V. A. C. counseling districts. Through this type of leveling no soldier will be overlooked.

Most of our soldiers, of course, are still in the armed forces—11,282 at the present time. The V. A. C. program provides counseling service to them and to their families as well as to the discharged totaling 767 to date.

The V. A. C. counselors in charge of the neighborhood information and counseling centers recognize that there is nothing mysterious or intricate about the information to be dispensed. For, after all, the counsel to the veteran on jobs, education, loans, etc., is the same type that the same individual would have desired if there had been no war, and he had been given selective preference. He would have sought counsel then as he will now. The only difference being that the

preferred status is new and comes in a larger volume at one time.

Every V. A. C. counselor understands that each soldier, on his discharge, and upon leaving the separation center knows—

1. Report to draft board: That he must report to his draft board 6 days after his discharge. After this he is not required to report to any governmental agency or anyone else and may take any job of his choice that is available.

2. Mustering-out pay: That he must, if he has not already done so, apply for his mustering-out pay.

3. Old job: That if a veteran desires his old job, he can go directly to his old employer; that if any controversy occurs, which may exist only in extreme or rare cases, he is to contact his selective-service board.

4. New job: That if a veteran desires a new job, he can go directly to the employer of his choice or contact the United States Employment Service for counsel.

5. Educational benefits: That if the veteran wants educational benefits under the G. I. bill, he is to contact the local office representative of the Veterans Administration. However, he can previously receive counsel from the V. A. C. educational direction committee or other similar sources as to the type of study course or the educational institution to enter.

6. Loans: That for information on loans under the G. I. bill the veteran should be referred to the bank with which he has had connections or to the one he prefers to contact.

7. Other G. I. benefits: That for other benefits under the G. I. bill the veteran can directly contact the Veterans' Administration or solicit the aid of the Red Cross, V. A. C., American Legion, Veterans of Foreign Wars, or such groups.

8. General aid: That if any other type of aid is desired, the same information is to be given the veteran as given other citizens, such as reference to family service bureau or other branches of the community chest, township trustees, Red Cross, and other appropriate social agencies. In an informed community the family head in many instances, will be the soundest soldier counselor. Often it is the intelligent or unintelligent attitude of the returning veteran's wife, sweetheart, family, or friends that spells the difference between successful and unsuccessful adjustment. It is a function of the V. A. C. counselor to impart to the head of the veterans' family the information that will aid the members of the family in intelligent counseling.

9. Family allowances: That with reference to soldiers in service, applications for family allowances can be referred to V. A. C. headquarters and contact will be made with the O. D. B., Newark, N. J., for Army allowances, and for Navy allowances with the Navy Family Allowance Division, Cleveland, Ohio.

10. Eleven centers clear through V. A. C. headquarters: That each center will be qualified to give information on the foregoing. Where requests are made either for information or for service to the center or the counselors in the field, reports of such preliminary or final applications will be made to V. A. C. headquarters on blanks furnished. Such reports will serve as a log book of service requests, both at the neighborhood center and at headquarters. Emergency requests, which make up a very small percentage can be phoned direct to V. A. C. headquarters, A-7403, 328 East Berry Street.

IMPLEMENTING THE GOOD NEIGHBOR

With the counselors and soldiers following the foregoing outline, with revisions adjusted by circumstances, much useful and helpful information can be furnished at the neighborhood level, eliminating in many instances the need for the applicant contacting downtown agencies. If the preliminary application indicates that the latter contact should be made, then the V. A. C. headquarters staff can, in advance, shape up the application from the facts transmitted to it by the neighborhood center, to be presented to any Federal or other agency.

COMMUNITY ATTITUDE

Finally, the value of any service depends upon the community attitude, reflected through the V. A. C. counselors and citizens generally. Such service should be leveled to the personal level of one neighbor serving another. The element of case work must be completely eliminated in the neighborhood approach. The veteran will "reject charity but welcome help; resent pity but welcome friendliness. He will want work and he will want to take his place in the community, but on equal term with all." In short, the V. A. C. counselor is simply performing as a good neighbor with a new title. To do so, no new rules or technique have to be learned or followed.

Labor-Management Committee of War Manpower Commission for Sixth Region, American Federation of Labor, and National Association of Manufacturers All Opposed H. R. 1752

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, on yesterday this House passed H. R. 1752, a bill known as the work-or-fight bill. Its sponsors said it was designed to produce the weapons of war for our fighting men on all war fronts. It was supported chiefly by the military services and opposed by labor and management—by those who are responsible for the production of war material. It has been, and is, conceded that labor and management have done a superb job. On the other hand, it is freely admitted that H. R. 1752 was necessary because of certain shortages which resulted from overoptimism in the War Department as to the war's end.

Mr. Speaker, H. R. 1752 should have been defeated, if for no other reason because of the inclusion therein of section 6, which gives to those drafted for labor purposes the benefits of the Soldiers' and Sailors' Civil Relief Act of 1940. This is an insult to our men and women in uniform and to the loyal worker who has been doing his patriotic duty on the production lines even before Pearl Harbor. It is to be hoped that the Senate will correct this grave injustice and delete it from the bill.

Mr. Speaker, as part of my remarks, I include herein a copy of a resolution, a statement by the American Federation of Labor, and a copy of a letter by the National Association of Manufacturers:

Whereas the War Manpower Commission has endeavored to perform the enormous task of mobilizing and allocating the labor force of this country for war; and

Whereas the War Manpower Commission has effectively performed the task of training the labor force of this country to meet the needs of war production; and

Whereas the War Manpower Commission has effectively performed the task of increasing the utilization of war workers by extending the minimum workweek and bringing about better personnel practices; and

Whereas the War Manpower Commission is taking the steps necessary to meet current manpower problems; and

Whereas the War Manpower Commission has accomplished all this by means of a voluntary program, with full cooperation of labor and management: Now, therefore, be it

Resolved, That the management-labor committee of the War Manpower Commission for the sixth region, composed of L. H. Hill, vice president in charge of industrial relations, Allis-Chalmers Manufacturing Co.; J. L. Palmer, first vice president, Marshall Field & Co.; Lester N. Selig, president, General American Transportation Corporation; J. T. Gillick, chief operating officer, Chicago, Milwaukee, St. Paul & Pacific Railroad; H. S. Vance, chairman, Studebaker Corporation board; Joseph Germano, district director, District No. 31, United Steel Workers of America, C. I. O.; George A. Haberman, president, Wisconsin Federation of Labor; Paul Russo, international representative and assistant director, Region 4, United Automobile Workers, C. I. O.; Reuben G. Soderstrom, president, Illinois State Federation of Labor; Thomas S. Roe, secretary-treasurer, Illinois State legislative committee, Order of Railway Conductors, hereby declares its opposition to any type of legislation providing for compulsory service by civilian workers; and be it further

Resolved, That the secretary of the committee forward copies of this resolution to every Senator and Representative in the United States Congress representing the States of Illinois, Indiana, and Wisconsin, and to the President of the United States.

Mr. Onarheim, alternate for Mr. L. H. Hill; Mr. G. Bergen, alternate for Mr. J. L. Palmer; Mr. Kramer, alternate for Mr. Lester N. Selig; Mr. J. P. Kiley, alternate for Mr. J. T. Gillick; Mr. Joseph Germano; Mr. Frank Ranney, alternate for Mr. George A. Haberman; Mr. Paul Russo; Mr. Thomas S. Roe.

I hereby certify that the foregoing is a true and correct copy of a resolution adopted by the regional management-labor committee of the War Manpower Commission for the sixth region, this 17th day of January 1945.

PAUL RUSSO,
Acting Secretary, Management-Labor Committee, Region VI.

CHICAGO, ILL., *January 17, 1945.*

AMERICAN FEDERATION OF LABOR SUPPORTS VOLUNTARY MANPOWER CONTROL

The American Federation of Labor opposes H. R. 1752 (the May bill) and supports H. R. 1803 for the following reasons:

1. A voluntary manpower system is more effective on the production front. Voluntary enterprise in America—free labor and free employers—has outproduced all other countries. Compulsory measures would not help but would break down this teamwork.

In Britain, compulsory labor is in effect. Contrasting results obtained by compulsory labor in Britain with free labor in United States we find:

Absenteeism: In Britain, 10 percent in 1943 and 1944. In United States of America, 6 to 7 percent in 1943 and 1944.

Strikes: In Britain in 1944, loss by strike was 16 percent greater than strike loss in United States of America (in man-days lost). (Source: British Ministry of Labor, W. P. B., Labor Department.)

Morale: British employers report: "Labor is unwilling because it is drafted. A minority of conscripts are satisfactory."

United States report: "We call our secret weapon the initiative, intelligence, and 'know how' of the free American workers." (Donald

Nelson.) Labor's "morale, their sense of participation * * * have been so heightened that they broke all records." (Joseph Keenan, W. P. B. Vice Chairman.)

The American way: Labor has voluntarily supplied thousands of men to jobs on time: At Twin Cities Ordnance, 15,000 men were supplied by unions as fast as they could be hired. (December to January.) At Knoxville, Tenn., 812 workers were supplied to du Pont in 12 days—all the company could take. Examples like these could be multiplied.

2. Waste of labor keeps thousands of men from jobs that need them. Our production record was achieved in spite of manpower waste in plants on a cost-plus basis, and waste in Government controlled plants, navy yards, etc. These wastes can no longer be tolerated.

A federation representative in Los Angeles reports: Skilled carpenters and other skilled workers in shipyards are being kept in enforced idleness. Management refuses to release them although shortage of skilled carpenters in nearby crating yards delays the crating of munitions of shipment to the Pacific war front. Airplane parts and equipment of all kinds are piling up, waiting to be crated, while skilled carpenters in shipyards are told by management to hide themselves and are not allowed to do the work they ask permission to do.

This condition exists in Navy yards and in many other plants working on a cost-plus basis as we know from our representatives. Their experience is confirmed by Senator MEAD'S statement to the United States Senate. This bill gives the legal authority necessary to correct this condition.

3. Estimates of manpower needs are exaggerated. We have many examples of companies which overestimate their manpower needs: Crown Can Co. of Philadelphia reported as needing 250 workers, actually needed only 50; Consolidated Vultee Aircraft in San Diego, reported as needing 2,774 has been laying off its higher paid workers—is this company claiming a manpower shortage in order to replace high paid workers? Scores of such examples could be cited. Such figures have been the basis for demands for compulsory labor.

4. The manpower supply is adequate to meet the demand under a voluntary system. There is no need for compulsion. Even the exaggerated demands could be met.

The manpower demand, as stated by the War Manpower Commission, is:

From January through June 1945:

Critically needed in war plants	300,000
In war-supporting industries	400,000
To be drafted into armed services	900,000
Total	1,600,000

We note that only 300,000 are critically needed in war plants and that most of the 900,000 drafted will be taken from nonwar industries and agriculture. We note also that the supply of manpower is more than adequate to meet the demand.

Manpower supply, January through June 1945 (estimated from Government figures):

Veterans released, returning to industry	400,000
Young persons coming of age and new workers	550,000
Workers released by cut-backs and run-outs	350,000
Increasing productivity will release	100,000
Those unemployed and released from Government employment	100,000
From nonessential industries	100,000
Total	1,600,000

We note that many more than 100,000 could be taken from nonessential industries if necessary. There are 44,000,000 workers in nonmunitions industries and farms; the above estimate counts on 100,000 less than three-tenths of 1 percent. The supply is ample.

Lay-off due to cut-backs have released thousands. In September, 34,000; in October, 43,000; with lay-off of 350,000 expected for the first half of 1945. Increasing productivity is releasing thousands. In airplanes alone, 300,000 were released from November 1943 to September 1944, while production increased.

5. The War Manpower Commission, if strengthened, is competent to meet the need. The Manpower Commission has manned the plants which created the Nation's miracle of production for the last 3 years.

There is no over-all manpower shortage, no manpower crisis. There are hundreds of manpower problems in hundreds of individual plants. The task of supplying labor is fourfold:

(a) To find what men and what skills are needed.

(b) To recruit qualified workers in the community and outside.

(c) To find what plants can release men with the skills required.

(d) To arrange for the transfer with fairness to all concerned.

The Manpower Commission is equipped to do this work. Through its management-labor committees, it has the cooperation of management and labor. These two groups can use their organizations to find men who can be released without injury to industry or undue hardship, and to adjust the transfer.

Selective Service is not designed to select men for industry. Selecting workers for industrial jobs requires technical experience in placement. W. M. C. has 1,500 local offices with experienced personnel. Each office has information on the labor supply and demand throughout the country. Selective Service has no such information, nor has it management-labor committees through which employers and workers can cooperate.

Arbitrary removal of key workers from industrial plants could do immeasureable damage. This difficult task should be assigned to those who know industry and labor.

6. Transportation pay needed. Critical manpower needs will require transfer of workers from their homes to distant plants. The cost of transportation and of living away from home while on the job place such a burden on workers that they cannot afford to take distant jobs. Provision of pay for transportation and per diem allowance while living and working away from home will liberate thousands to go to war jobs.

7. Critical production problems are chiefly technical. In the 14 critical war industries listed by W. M. C. in January, manpower was not a major problem in 13 of the 14 industries. The chief bottlenecks were technical, growing out of the constantly changing needs of the battle front. Major bottlenecks were: Design change in aircraft, tanks, and airborne radar. Stepped-up program in naval ordnance, cotton duck, dry cell batteries, combat leaders, and field wire. Components in heavy-heavy trucks and naval ship repair. Facilities in heavy artillery, ammunition, tires. Manpower in foundries—because the low wages and bad labor conditions make recruitment of labor difficult. This list shows once more that there is no manpower crisis.

Technical problems arise constantly as battle experience shows the need for changes in equipment. With manpower control in the hands of the Manpower Commission, workers can be shifted to meet needs without disrupting industry.

8. Armed services do not plan contract awards so as to use facilities fully. In awarding their contracts, the armed services frequently permit a well equipped plant with skilled manpower to close down for lack of contracts, while work which the plant could do is awarded in a tight labor market creating a labor shortage. An example is the 9 shops releasing 70,000 men, thousands highly skilled, because the landing craft program is completed and the procurement services have not awarded new work to these plants. The plants are equipped to make fuses, castings, ordnance, and do a wide variety of war work requiring modern machine shops. Such work is now being awarded in tight labor markets. Plants are laying off men as follows:

Name of corporation and number of employees to be released	
Dravo Corporation, Neville Island, Pa.	12,500
Missouri Valley Bridge & Iron Co., Evansville, Ind. (and subcontractors)	26,000
Chicago Bridge & Iron Co., Seneca, Ill.	9,000
American Bridge Co., Ambridge, Pa.	6,500
Bethlehem Steel Co., near Boston, Mass.	7,000
Zenith Dredge Co., Duluth, Minn.	700
Jeffersonville Boat & Machine Co., Jefferson, Ind.	9,000
Island Dock Co. & Hildebrand Yards, Kingston, N. Y.	1,500

At the Kingston, N. Y. yards, well-equipped machine shops are being abandoned while an unused building 40 miles away in Poughkeepsie is being equipped to do the work which this plant could handle at least in part.

The Jacobs aircraft plant in Pittsburgh, Pa., was equipped and manned to make aircraft engines. Although plants are needed for aircraft engines, it is being stripped of its machinery and reequipped to make rubber tires. Its experienced work force, which has developed a high degree of teamwork, is being laid off, for few of the skills can be used to make rubber tires. A new work force must be recruited, trained, and developed into an efficient team.

Failure of the procurement services to work out a program for full use of facilities already in operation, creates unnecessary manpower problems. When skilled and disciplined work forces are broken up, much valuable time is lost before a new team of workers can be recruited, trained, and developed to efficiency in a new shop.

Labor insists that civilian workers be directed by civilian agencies.

NATIONAL ASSOCIATION
OF MANUFACTURERS,
January 29, 1945.

SENATE COMMITTEE ON MILITARY AFFAIRS,
Senate Office Building,
Washington, D. C.

GENTLEMEN: This is in response to the invitation extended by your chairman to submit our views and comments on the bill H. R. 1752, reported to the House from its Committee on Military Affairs on January 24. We recognize that the bill is still in tentative form and may be substantially revised. Consequently, we would appreciate an opportunity to comment further on the legislation if and when it may be passed by the House.

American industry, as represented through the National Association of Manufacturers, has given careful study to various plans for a more complete utilization of civilian manpower to the end that the war may be brought to an early victory. The association has considered suggestions for national service legislation, as well as more limited proposals such as contained in H. R. 1752. We have viewed such plans with only one objective in mind—would such legislation contribute to winning the war by assisting American industry to produce the supplies and equipment needed by our military forces?

The National Association of Manufacturers has consistently emphasized that industrial management has a heavy responsibility for producing all the arms, ammunition, and supplies of war demanded by our armed forces, as quickly as procurement methods and productive resources will permit. It is

with this responsibility, and this responsibility alone, in mind that the association has approached the subject of manpower control.

Managers of American industry have been extremely reluctant to embrace any form of compulsofy labor. This has been based on its long experience in dealing with American workers and because this experience has convinced management that compulsory labor does not produce as efficiently as freemen. The record of production since Pearl Harbor justifies this belief.

Nevertheless, management is acutely aware that serious local shortages in manpower are threatened; this is due not only to recent increases in production schedules, but also to rapid changes in schedules and in items needed by the Army and Navy. Industry has therefore proposed a program which it believes would supply the manpower without injury to war production.

INDUSTRY'S RECOMMENDATIONS FOR LEGISLATION

The National Association of Manufacturers has proposed and, to the extent within its power to do so, has already launched a Nation-wide five-point program to meet current and anticipated manpower shortages. This program contemplates not only the fullest cooperation between labor and management but the enactment of supporting legislation. Our program is summarized as follows:

1. Legislative authority for War Manpower Commission: The association has recommended legislation to provide for the more effective enforcement of existing regulations and procedures of the War Manpower Commission by giving statutory authority for

(a) establishment of employment ceilings;

(b) use of controlled referrals to regulate hiring;

(c) authorizing compulsory release of employees in excess of the number permitted individual employers under manpower ceilings; and

(d) enforcement of such regulations—not against the employee, but against the employer—through court proceedings comparable to those used to enforce price ceilings under the Price Control Act.

Surveys conducted by the association throughout the country demonstrate that manpower shortages are purely local in character and change from week to week. The situation calls for flexibility and this can best be accomplished by local administration. It is recommended, therefore, that a large measure of responsibility and authority for administering statutory powers should be vested in local offices of the War Manpower Commission in full cooperation and consultation with industry and labor—on the local level—in those areas designated as critical.

2. Reemphasis by management on in-plant practices to increase production: In the judgment of management, a substantial improvement in the existing manpower situation can be accomplished by management itself through reanalysis of work methods, manpower scheduling, and the elimination of labor hoarding. In addition, the more accurate estimate of needed manpower would eliminate much of the confusion and aid materially in identifying and solving existing shortages. These recommendations have already been circulated by the N. A. M. to its some 12,500 individual member companies and, with the cooperation and support of 150 State and local industrial associations, to an additional 40,000 manufacturers.

3. Reemphasis by labor on increasing production with workers now available: Production can be materially increased by an active and organized effort by labor to reduce absenteeism, to eliminate artificial restrictions upon individual output and to promote strict adherence, in letter and spirit, to labor's no-strike pledges. While it is the firm conviction of management that labor and management working in cooperation can solve present and prospective manpower difficulties by voluntary methods, this can be done only if both management and labor will assume responsibility in their respective fields of activity and control.

4. Operation of work-or-fight principle: The association has emphatically endorsed application of the work-or-fight principle as now permitted under section 5 (k) of the Selective Service Act. This can be done within the framework of present laws, with the cooperation of the armed services and the Selective Service System. The enactment of special work-or-fight legislation, such as that contained in H. R. 1752, will add new complications, increase confusion and endanger war production.

5. Community publicity campaigns: In the firm belief that American workers will respond wholeheartedly to meet the requirements of war production, the N. A. M. has recommended, throughout its membership and through 150 State and local industrial associations, that strong community publicity and public relations campaign be instituted in critical areas to recruit needed manpower and to obtain the voluntary transfer of workers to more critically needed production.

This program was formulated early in January after consultation with many Government officials and after thorough discussion with representatives of some 150 industrial organizations. It subsequently received careful consideration by the board of directors of the National Association of Manufacturers at a meeting on January 25 and was approved without dissenting vote.

COMMENTS ON H. R. 1752

Since H. R. 1752 did not become available until January 25, time has not permitted adoption by the association of an official position with respect to the bill in its present form. As our suggested legislative program indicates, the N. A. M. is not opposed to manpower legislation as such, so long as such legislation will not be detrimental to maximum production. Our comments, therefore, relate to those features of the bill which have a direct bearing on plant personnel, efficiency, and war production.

H. R. 1752 undertakes to keep men between 18 and 45 in their present jobs in war work or war-supporting activity, it authorizes draft boards to order men of the same age group into war or essential work if not already so employed, and rewards men ordered into such jobs with travel allowances, veteran reemployment rights and benefits under the Soldiers' and Sailors' Civil Relief Act.

It is our sincere and honest conviction that this legislation, as now drafted, will breed discord and confusion, will be inadequate as a solution to the manpower problem, and may seriously interfere with war production.

The bill will breed discord

In spite of shortages in a few specific items, industry is still performing a miracle of production. (See attached release of W. P. B., January 22, 1945, exhibit B.) Approximately 80 percent of war production is on or ahead of schedule. It would be a national tragedy to adopt any program which would endanger this present scale of output. Yet the bill H. R. 1752 could do precisely that.

As described in the attached exhibit C, the bill would discriminate seriously and unfairly against the most loyal, patriotic, and efficient workers who have contributed so much to our present production achievement.

For example, men ordered into war work under this bill will receive travel allowances, veteran reemployment rights and the benefits of the Soldiers' and Sailors' Civil Relief Act. Women, men over 45, and even men between 18 and 45 who have already been employed in war work, are eligible for none of these benefits. This and other forms of unfair discrimination can breed friction and discord, and even wreck the morale and efficiency of war plants. This legislation might well become a fight-at-work bill. In our judgment, such inducements will complicate—not aid—the recruitment of manpower needed to meet and maintain war production schedules.

The bill will confuse the manpower problem

The attached exhibit C discusses in greater detail those sections of H. R. 1752 which, by adding further uncertainty and confusion, will obstruct recruiting of workers for urgently needed war production and will jeopardize efficient operation of essential civilian production and service.

This bill covers only men between the ages of 18 and 45, and places regulation of their employment in the hands of the Selective Service System. All other workers would presumably remain subject to regulations and procedures of the War Manpower Commission. Coordination of this divided control will take valuable time of draft boards and other agencies of the Government. More important, recruiting of labor would be seriously impeded pending adoption of new policies and procedures.

For example, the bill requires draft board approval before men (18 to 45) can move from jobs in war production or war-supporting activities. Today such men can be and are being transferred from less essential to critical occupations by compliance with known W. M. C. procedures. Enactment of this legislation would end such emergency transfers. In addition, men between 18 and 45, wherever employed, would be under no immediate incentive to accept jobs in war production until requested or ordered to do so by their draft boards. To do otherwise would mean to give up the benefits provided them by H. R. 1752. Also the unfair award of benefits only to persons "drafted" for war work would not assist recruitment of prospective workers not eligible for such benefits.

Production could be seriously hampered by other aspects of the bill, as illustrated in the attached analysis (exhibit C). It should be emphasized, however, that the bill does not deal with absenteeism, restrictions of worker output, or with time lost because of strikes. Resort to compulsory control of individual workers, as proposed in H. R. 1752, with no attention whatever to such waste of manpower, will stimulate friction and reduce efficiency and production.

Conclusions

In considering this bill, and proposals for universal national service legislation, the problems of war production have been our chief concern. Management has no responsibility for the conduct of military operations. It does have a heavy responsibility for production.

Arguments have been advanced that compulsory service legislation is needed to boost the morale of our armed forces; or that it is needed to mobilize or punish a minority of Americans who may not be contributing their full share in the war. Our position is that such legislation will not help war production, whatever else it might do for national morale, either overseas or at home.

This association firmly believes that if the Nation has a manpower problem, it should be solved as such. On the other hand, if the country confronts morale difficulties, they too should be met, but not by endangering war production.

Responsibility, of course, rests upon the Congress to weigh and appraise these arguments and objectives. It is only with the desire to cooperate that we express our firm conviction that enactment of H. R. 1752, in its present form, will interfere with

industry's ability to produce the requirements of our armed forces.

The following documents are attached: (1) Outline of NAM–NIC manpower program (summarized on pp. 2, 3, and 4 herein); (2) W. P. B. release of January 22, 1945 (relating to December war production); (3) detailed comments on H. R. 1752 (summarized on pp. 4, 5, and 6 herein).

Respectfully yours,

IRA MOSHER, *President.*

WASHINGTON, January 30.—"The May-Bailey work or fight bill if fully enforced will cut—not increase—war production," according to Ira Mosher, president of N. A. M. "It would turn out to be a 'fight at work' measure by rewarding conscript workers and penalizing the free workers in our war plants. Instead of aiding war production, the bill could become the national slow-down bill," said Mr. Mosher.

The association sent a letter today on the legislation to the Senate Military Affairs Committee, at the invitation of the committee's chairman, Senator ELBERT THOMAS, of Utah. The Association at the same time suggested a course of congressional action which would enable the War Manpower Commission to control civilian employment in localities where manpower is needed most.

"The May work-or-fight bill," said Mr. Mosher, "would give almost foxhole standing to those last-minute men who chose to work rather than fight, for under this legislation they would, as work draftees, get such G. I. benefits as transportation allowances, reemployment rights, and moratorium on obligations. This would be rank discrimination against millions of loyal workers who have stood by their gunmaking for 3 years, as well as thousands of IV–F's already employed on war work.

"Imagine the serious morale and efficiency problem in plants in which people who have been loyally on the job for years are forced to work side by side with drafted labor who are rewarded with special benefits. Or picture the effect on the women, either those employed or who come back to help out the manpower situation. The bill would seriously discriminate against these women workers, who are excluded from any consideration.

"We realize that the mere phrase 'work or fight' has immense appeal to a public bent on victory. We recognize as well that to those with sons and daughters in the thick of battle it seems only just. Management also has sons and daughters at the front, and is as anxious for victory as any other group of citizens. However, our experience in the so-called miracle of war production causes us to point out that ill-considered pressure legislation to get 300,000 workers would backfire badly and could ruin the production efficiency of the hard-working millions in war production.

"The net of such legislation would be a gain of 1 to 5 percent more workers at the expense, in the considered judgment of management, of a 15- to 20-percent slump from current production—the exact reverse of what is sought, and is at a cost far too high for a psychological experiment. Instead of forcing labor through such legislation and creating strife among the good producers, the association has suggested legislation to Congress that would enable the Government to place a ceiling on civilian employment, the only big source of trained help. Workers thus released from civilian production would have a choice in war jobs without creating the compulsion complex in employees, which might generate a national slow-down of a dissatisfied worker.

"The public popularly hold to the belief that if you can conscript to fight, you should be able to conscript for work.

"Yes, you can conscript for work. But this is not the issue. The point is what will bring the most production. The letter sent to the Senate committee had this to say:

"'Managers of American industry have been extremely reluctant to embrace any form of compulsory labor. This has been based on its long experience in dealing with American workers and because this experience has convinced management that compulsory labor does not produce as efficiently as free men. The record of production since Pearl Harbor justifies this belief.

"'Arguments have been advanced that compulsory-service legislation is needed to boost the morale of our armed forces; or that it is needed to mobilize or punish a minority of Americans who may not be contributing their full share in the war. Our position is that such legislation will not help war production, whatever else it might do for national morale either overseas or at home.'"

The letter suggests that men presently employed in civilian industry can be made available by giving the W. M. C. statutory authority, with enforcement through existing courts with respect to the establishment of employment ceilings on all employers; use of controlled referrals; compulsory releases.

"The operation of this authority," the N. A. M. letter suggests, "should be determined through and administered by W. M. C. in full cooperation and consultation with industry and labor on the local level.

"The N. A. M. and its affiliates in the National Industrial Council recently developed a program for local action. Work is now going on to bring together management, labor, and the War Manpower Commission in the communities where shortages exist."

Mr. Mosher emphasized that the problem already was being met at the local level by just such activity.

"The N. A. M. has just completed a survey," said Mr. Mosher, "which confirms the W. M. C. figures on manpower shortages, but which shows definitely that the problem is being met at the local level, even in those communities in which shortages are most acute.

"In 22 cities in which the most serious shortages are reported replies show that the problem, almost without exception, is in the process of being met on a community-by-community and plant-by-plant basis.

"This is also confirmed by some 400 manufacturers in 90 additional war plant cities where local cooperation by management, labor, and W. M. C. is showing results.

"The N. A. M. survey also corroborates the War Production Board report of last week which showed that American industry was making progress in meeting the increased demands of the fighting forces. This W. P. B. report showed production in almost every category of arms and equipment is showing progressive monthly gains.

"On the 'must' list these gains in production have ranged from 20 percent for tires and trucks to more than 150 percent for aircraft and mortars, and more than 200 percent for rockets. Such critical items as have fallen behind schedule, the W. P. B. points out, have been because of changing requirements by the armed forces and alterations in designs and specifications.

"On the basis of these facts, it seems obvious to us that the manpower problem is being solved locally and that by the time national legislation could be made effective the problem will have ceased to exist.

"Management, being practical-minded and experienced in production, feels a responsibility to warn people of the danger of enacting legislation for psychological reasons which can badly impair our whole production program."

Transportation in School Busses

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Concurrent resolution memorializing the Congress of the United States to request a modification of the rules and regulations of the Office of Defense Transportation barring the transportation in school busses of the classes of instrumental music, high school bands, and other recognized school activities

Whereas the Office of Defense Transportation, and the various agencies thereof, has ordered among other provisions that school busses cannot be used for the transportation of classes of instrumental music, high school bands, and other regular school activities; and

Whereas such action on the part of the Office of Defense Transportation tended to destroy the interest in instrumental music and other needed school activities on the part of students, and is detrimental to the best interests of the public school systems of the State: Therefore be it

Resolved by the House of Representatives of the General Assembly of the State of Indiana (the Senate concurring), That the United States Senators and Representatives in Congress from Indiana earnestly urge and urgently request a modification of the rules and regulations of the Office of Defense Transportation barring the transportation in school busses of the classes of instrumental music, high school bands, and other recognized school activities, and that the Office of Defense Transportation survey such conditions existing in the State of Indiana to the end that the best interests of the public school systems of the State, with due regard to the interests of national defense, may be served in accordance with this resolution.

SEC. 2. That the principal clerk of the House is hereby instructed to transmit a copy of this resolution to each of the Senators and Representatives in Congress from the State of Indiana.

William Penn

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech at Mabel Smyth Auditorium Tercentenary, October 24, 1944, by J. G. Anthony:

Three hundreds years may not be a long time in the history of the race but it does represent a sizable segment of the history of western civilization. From such a vantage point we meet today in memory of that spiritual knight of the seventeenth century, William Penn. The fact that we are

gathered here is some evidence of the vitality and validity of the ideals for which he stood.

Fate has a habit every so often of producing an individual with certain qualities of universality who by his character and deeds leaves an indelible print on the web of time. Such a man was Penn.

I should like to consider tonight two aspects of Penn's versatile character, for they may be worthy of reexamination at the moment as we approach the time when we are thinking about what will happen at the end of the war and what kind of peace will follow. These are his religious tolerance and his statecraft.

Just as we must look for the roots of our American polity to the England of the Stuart kings and beyond, so I believe the key to an understanding of Penn is to be found in his steadfast struggle against the mores of that day.

Born to a life of high station, son of an admiral in the British Navy who had rendered distinguished service to his country and won the gratitude of the King, Penn might naturally have been expected to follow the life of a well-to-do member of the upper class—to have become a seventeenth century courtier. This, however, is a fruitless speculation, for Penn was what he was for the reason that he had within him the tough moral fiber that made him a man of conscience, an articulate and effective dissenter from the hypocrisy and tyranny of his day. It would be idle to think of him in the abstract apart from the stream of life in which he moved as Oliver Wendell Holmes once said "a great man represents a strategic point in the campaign of history."

The young Penn entered Christ Church, Oxford, as a gentleman commoner. There he met John Owens, the Puritan head of the college, who had been recently removed with the restoration which had revived the strict statutory prohibitions against one holding public office who was not a member of the Anglican Church. Penn, along with other undergradutes, rebelled at the system that required the subordination of religious thoughts and beliefs to regimentation under the Anglican Church, and, accordingly, in his second year, was expelled for nonconformity. Samuel Pepys in his diary reported that his neighbor, Admiral Penn, was "much troubled" by the boy's opinions and considered removing the young man to Cambridge. However, a tour of the continent was to be the supplement of a curtailed college education. No doubt the admiral figured that a round of gaiety at the French Court would cure his son of his nonsense about Quakerism and he would be ready to settle down to a life fitting an English gentleman. Returning to his father's house, Pepys observed that the young man had "too much of the French garbe and affected manner of speech and gait."

Penn entered upon the study of law at Lincoln's Inn, where he continued until the outbreak of the plague. He acquired a basic knowledge of the common law of England, which was later to stand him in good stead in his memorable trial at Old Bailey. The admiral sent his son on a mission to manage his estates in Ireland, probably again with the view to purge the young man of his unorthodox notions about religion, but it was at Cork he made his final decision to join the Society of Friends.

The next few years were to be troublesome ones. Much of his time was spent in jail for no offense other than holding beliefs that did not conform with the Church of England. His trial at Old Bailey is one of the landmarks in the institution of trial by jury. He was indicted under the Conventicle Act for preaching to an "unlawful and seditious assembly which met in force of arms." The act actually prohibited meetings in churches or buildings but the British troops had closed the Graystreet Church where the meeting was to be held and it was in fact conducted in Graystreet. At the trial the judges endeavored to coerce the jury into bringing a verdict of guilty but the 12 men good and true stood their ground and returned a verdict of not guilty. For rendering a verdict contrary to the liking of the judges, the jury were imprisoned. The action of court was later reversed and that case established the province of the jury as exclusive judges of the facts in a criminal case.

I referred a moment ago to the England of the Stuart kings. Upon the restoration of Charles II both the Church of England and the King were restored. Existing legislation already pressed hard on the Roman Catholics but the new legislation was to bear down on all nonconformists. The Presbyterians could expect no mercy for they had shown none under the Commonwealth and as one Puritan divine put it toleration was nothing short of the "grand design of the devil." Holders of public office were obliged to take the sacrament according to the Church of England. The Book of Common Prayer was prescribed for all ministers. Heads of colleges were obliged to subscribe to the thirty-nine articles of faith. The Test Act was enacted to compel the acceptance of the Church of England. This last was no mere bit of governmental red tape like our own loyalty oath, the administration of which seems to accomplish nothing other than to consume paper and occupy filing space, it had real consequences—jail sentences and banishment from the realm were the penalties for its infraction. The Conventicle Act made assembly for the exercise of religion in a manner other than according to the practice of the Church of England likewise punishable by banishment for years. Special penalties were designed for preachers who came within 5 miles of their schools or churches without taking the prescribed oath. Penn along with several thousand other Quakers to say nothing of hundreds of other nonconformists and Catholics spent months in jail rather than surrender their beliefs. It was little wonder that Penn came to the conclusion that America was a land of promise for his "holy experiment"—the asylum for those holding unorthodox religious beliefs. There he would found a colony forever free of religious and political oppression.

Penn had already been active in connection with the colonies of west New Jersey and east New Jersey. Upon the death of the admiral his chance came. Among the assets of the admiral's estate was a claim of £16,000 against the King. Charles was glad to liquidate the debt by a royal grant in 1681 conveying to Penn a vast domain in the New World "bounded on the east by the Delaware River and on the west limited by Maryland and northward as far as plantable." This description in the grant, as might be expected, was to cause trouble later.

Before setting sail with his company on the ship *Welcome,* Penn was careful to publish a political constitution for the immigrants to know what manner of government they would live under in the New World.

Penn's government was not to be a Puritan commonwealth like Massachusetts, where witches were burned (or, as they claim in Salem, "squeezed") and Quakers were hung for their religious beliefs nor an Anglican aristocracy like Virginia, but a government which would be satisfactory to the British Crown and, at the same time, square with Quaker philosophy which encompassed the equality of man in the divine sight. This logically lent itself to a democratic form.

His frame of government stated:

"Any government is free to the people under it (whatever be the frame) where the laws rule and the people are a party to these laws, and more than this is tyranny, oligarchy, or confusion."

The germ of Jefferson's immortal words declaring that governments derive "their just powers from the consent of the governed" is discernible. Penn also discloses his firm grasp of the science of government by the statement:

"Governments, like clocks, go from the motion men give them. Let men be good, and the government cannot be bad; if it be ill, they will cure it."

His conclusion is also noteworthy:

"We have * * * composed the frame and laws of this government to the great end of all governments to support power in reverence with the people and to secure the people from the abuse of power."

Penn and his 100 followers, one-third of whom died of smallpox in passage, finally arrived at New Castle on the Delaware in 1682. From there they made their way up the river to the site of his future city which he had already named Philadelphia.

In his relations with the Indians, Penn exhibited statesmanship of the first order. He lost no time in meeting with the native chiefs and made plain to them what he had already said in a dispatch sent the year before his arrival, that he and his followers had come without hostile weapons and would deal justly with them. As Voltaire said, it was "the only treaty never ratified by an oath and never broken." Pennsylvania's relations with the Indians, under Penn, was unique among all of the American colonies, standing out in sharp contrast with the violence, injustice, and oppression the natives met with at the hands of the Spanish, French, and other English colonists.

The colony in Pennsylvania prospered. Philadelphia was laid out according to Penn's plan for a "green country town" with streets that intersected at right angles and parks for the public benefit. Within less than three-quarters of a century it was to become the second city in the British Empire.

As might be expected the vague description of the boundaries of the grant caused difficulty particularly with Lord Baltimore and Penn himself was obliged to return to England to adjust matters. The boundary itself was not finally settled until the famous Mason and Dixon's line was established and surveyed in 1767.

The government of Pennsylvania established by Penn continued a wise and successful administration for some 75 years. Penn himself was obliged to return to England where he spent his declining years with little or nothing to show by way of pecuniary gain from his domain in the New World.

The religious toleration of Penn was not limited to the Quakers for unlike the other American Colonies that were settled by those who had fled England to escape religious and political tyranny, Penn insisted for his government upon complete freedom of conscience and complete toleration of the religious views of others. The swing of the pendulum from the Puritan intolerance of the Commonwealth to the Anglican intolerance of the Restoration was too fresh in the minds of the Quakers to want theocratic government in Pennsylvania or regimentation of religious beliefs.

As late as 1776, Penn's original domain stood alone in affording complete toleration of all religious sects that professed belief in a divine being. No doubt it was out of a profound respect for what Penn had been able to accomplish and a vivid recollection of his own struggle for religious freedom in Virginia that led Thomas Jefferson to call Penn "the greatest law giver the world has produced."

Freedom of religion is apt to be looked upon by some as a museum piece in our

modern life, particularly among those who have no regular religious affiliation. However, in the last analysis religious liberty is essentially no different than civil or political liberty. Our constitutional guarantees of civil liberties are as the Chief Justice recently said "but guarantees of freedom of the human mind and spirit and of a reasonable freedom and opportunity to express them." As history amply demonstrates if one may be imprisoned or banished for his religious beliefs it is an easy step to extend this to political beliefs, freedom of speech, or freedom of the press or to thoughts generally. We, living under a constitutional democracy, have placed limitations upon the will of the majority, limitations beyond which the majority may not pass.

Some may take lightly the recent struggles of the Jehovah's Witnesses against saluting the flag. This sincere and loyal group would suffer jail rather than risk God's displeasure by violating the injunction of Exodus 20 against bowing down to any "graven image." Most of us believe that their fears are not well founded, but it is not for Government to compel expressions of loyalty contrary to the individual's sincere religious conviction. As a matter of substance, I suppose that no one would be so naive as to think that such an expression wrung from a person by compulsion would promote love of country any more than the infamous Test Acts of the seventeenth century instilled love of the British Crown in those dissenters who were willing to go through with that ritual. There is a very real danger in saying that tolerance should only extend to religious groups that have received general acceptance in society, for one has no assurance that it might not be his particular faith that will shortly meet the disapproval of the crowd.

The discipline which ascetic groups prescribe for themselves is frequently tragic and may appear to the uninitiated pointless. No group waged a more relentless warfare against the sham of ecclesiastical Christianity than did the early Quakers, but as William James once said, "The battle that cost them most wounds" was in defense of "thee-ing and thou-ing and in not doffing the hat." The resistance to symbols cannot always be brushed aside as a useless tilting with windmills, sometimes the acceptance of a symbol is not as superficial as it seems but involves the acceptance of a system for which it stands.

There have been those who would have us ape the dictators in the prosecution of this war; they would have us discard our faith in democratic processes as useless, which would have meant the surrender of our most powerful weapon and which, I have no doubt, would have greatly impaired the employment of our material strength.

I would not for a moment belittle the cultures of other lands. We entertain no delusions of the master race, but I believe we can say with reason that in the field of government the English-speaking people do excel. Anglo-American polity owes much to the bitter struggles for the liberty of the individual that have marked our history in the lives of such men as William Penn.

Our chief claim to greatness lies in our political institutions bottomed upon the rights of the individual and insistence upon the observance of the fundamentals of fair play; the Germans on the other hand with all their rich background in the arts and sciences are still politically immature. Perhaps this is the reason they have run amuck twice in our lifetime.

Why is William Penn of any importance to us in this year of our Lord 1944? The first thing that comes to mind is the finding of a rational solution of minority problems in America. As the late Mr. Willkie said, "The platforms of both major political parties are woefully inadequate on this subject." We in Hawaii with our diverse races are accustomed to a community in which race tolerance is a social norm. With our presently swollen population recruited from all parts of the country it would be remarkable if there were not inroads on this concept. The newcomers to our shores frequently are skeptical of Hawaii's matter-of-fact attitude to this subject but the patient processes of experience will not be denied.

I often think when I hear a recital of Hawaii's claims to admission in the American Union, the listing of our shipping tonnages, figures on the production of sugar and pineapple, population statistics, and taxes paid the Federal Government, that we press for a decision on a minor issue and thus obscure the true substance of our cause. Emphasis is laid on the wrong values. Hawaii has, I believe, a real contribution to American democracy, and that is its traditional race and religious tolerance.

One cannot witness the spread of the cancer of intolerance without genuine concern. It is the order of the day in the Fascist world, and we have not escaped some infection. We must either choose a solution in the spirit of William Penn or prepare for such excesses as apparently have the blessing of the Native Sons of the Golden West. It would seem that now is the time to repair the social damage, not to reopen the wounds.

Again, what is to be our role as a nation in the Pacific. What, for instance, do we propose as a government of the mandated islands wrested from Japan? Are we to embark on an imitation of the British imperialism of the nineteenth century? Are these places to become like prostrate Roman provinces under a permanent military or naval government, or are we prepared to extend to these peoples the kind of government which Penn founded and which was embodied in our own organic documents?

We should not forget that when the last shot is fired in the present conflict the ultimate peace will be made at a conference table. While the term "unconditional surrender" is an apt expression by a military commander in the field it is hardly helpful in the settlement of large international issues. Sheer force of arms never has and probably never will organize anything except on a temporary basis. One who should know from experience once said:

"There are only two powers in the world, the sword and the spirit. In the long run the sword will always be conquered by the spirit."

These were not the words of an impractical visionary; this was the considered judgment of the greatest military commander of his day—Napoleon Bonaparte.

We have traveled a hard road since 1919 when we turned a deaf ear to another spiritual and intellectual leader who would have had us assume our just moral responsibilities in international affairs. We are now paying the price of our default with the blood of our youth. The future is just what we make it; we must either approach it with a will to succeed in the making of a just peace enforced by a world organization or sow the seeds for a more terrible conflict.

We with our allies have built up the greatest concentration of power the world has ever seen, power which will reach its zenith with the victory over our enemies and the days that immediately follow. Once again there will rise in our midst those who would have us shirk our moral responsibilities and, like the ostrich, bury our heads in the sands of isolationism. Let us hope that such a day will never come, but that we go forward as faithful stewards of the trust which is ours to wield with all humility the vast power we have in the spirit of the man of conscience.

Eccentric Economics of the T. V. A.

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun of January 27, 1945:

ECCENTRIC ECONOMICS OF THE T. V. A.—REVEALED IN ITS ANNUAL REPORT AS BASED ON USE OF THE NATION'S TAXPAYERS FOR FREE WHEELING

To the EDITOR OF THE SUN:

SIR: I have observed with growing interest the avalanche of governmental publicity about the T. V. A. at a time when the Federal Government is frantically, and very properly, urging the rest of us to forget everything else and to concentrate on winning the war. My suspicions have been aroused by the fact that most of this publicity comes from employees of the T. V. A., who, naturally, have a vested interest in it, and in extending the T. V. A. idea. All of it is couched in glitteringly general terms and its tone smacks strongly of the Alice-in-Wonderland school of literature. Nor were my suspicions allayed when, a few days ago, Mr. Ickes, of all people, branded the T. V. A. chairman as "the busiest propagandist the United States has ever produced."

All in all, this campaign seemed to have the earmarks of another one of those things wherein the Government itself violates all the rules of its Federal Trade Commission as to "truth in advertising," and of its Securities and Exchange Commission's "full disclosure" requirements, as they are so assiduously applied to all the rest of us.

Noting that the T. V. A. had recently issued its annual report, I was at some pains to secure a copy in the hope that it might provide some specific factual data that I could get my teeth into, as contrasted with the laudatory generalities of which I had seen so many and so much. The annual report contains 180 pages, and much of it is a rehash of, and written in the same Frank Merriwellian vein, as that which seems to pervade all T. V. A. publicity. Nevertheless, it is possible to extract many significant facts, of which only two or three can be considered here.

MANY FINGERS, MANY PIES

I suspect that most of us laymen think of T. V. A., primarily, as an electric-power operation and will be surprised, as I was, to learn the extent to which it has gradually branched out into a whole flock of other lines of business. Among others, it is in the business of producing and distributing ammonia, ammonium nitrate, calcium carbide, and cattle feed. It is mining more than half of the phosphate raw materials produced in the entire State of Tennessee. It is operating river freight terminals. It is licensing farmers to operate on its land and is otherwise engaged in the real-estate business in a large way, extending even to the operation of entire villages. It is in the park and recreational business. It has a long finger in the agricultural activities in the T. V. A. area, duplicating largely the functions which the Department of Agriculture was set up to perform. It is, of course, in the construction business in a very big way. And, believe it or not, it is even designing powerhouses for the Russian Government.

All of these extracurricular activities are mentioned only in passing, and to show again the sprawling functions into which the bureaucratic camel always extends himself once he has got his nose into the tent. All T. V. A. publicity is cleverly designed to make it appear that everything it does is in the way of cooperation with local citizens or local government or local industry. However, one cannot study its annual report without getting the very definite impression that T. V. A. provides most of the money for these experiments, and that since it pays the fiddler it calls the tune.

As one specific example, the report states that during the year T. V. A. approved reductions in electric power rates in 4 local communities, although these communities evidently own their own power systems and merely purchase their power at wholesale from T. V. A. I gather from T. V. A.'s report that, altogether, it sells electricity in bulk to 139 local communities, all of which own their own electric systems. Having paid for the electricity they buy from T. V. A., why should the citizens of these local communities then have to ask T. V. A. or any other Federal bureau what they shall charge themselves for the electricity they use from an electric system which they themselves own? In my book that isn't "cooperation," it is statism.

Our metropolitan press has recently carried a publicity release from T. V. A. concerning its tax payments, conveying the distinct impression that T. V. A. is a very prolific source of taxes. What are the facts? The facts are that T. V. A. does not pay a dollar of taxes, as you and I understand the word. What it does is to make a donation (which its own report says is "in lieu of taxes") to certain local areas in which it owns property. However, further investigation develops the fact that this payment is merely a handout; its size and the conditions surrounding it are fixed—not by the local tax assessor, as your taxes and mine are fixed, but by the Federal Government itself. The Federal Government can, therefore, withdraw part or all of this donation whenever it decides, for reasons of its own, political or otherwise. This is another example of how local communities are held in line, and again it isn't cooperation. As a practical matter this donation, in lieu of taxes, serves much the same purpose as the fish serves with the trained seal.

TAX-FREE COMMUNITY

But what about Federal taxes? After all, today it is Federal and not local taxes that are breaking our backs. Here we find that T. V. A. doesn't contribute so much as one thin ruble in taxes to finance the war effort—not even "in lieu of." The T. V. A. enjoys complete freedom from all Federal taxes, even to sales taxes on the gasoline it uses in its automobiles. It is one of the "freedoms" that haven't yet been proposed for you and me.

My last point has to do with the way T. V. A. handles—or fails to handle—the interest on the money that has been put up by the Federal Treasury.

The latest annual report of T. V. A. shows that, so far, $767,634,039 has been invested in it, including some $37,000,000 in property transferred to it when it was set up. This investment is steadily increasing, with no ceiling in sight. However, the report shows that T. V. A. pays interest on only $63,072,500, or one-twelfth of its total investment. Furthermore, as to $56,500,000 of this latter amount, it pays interest at an arbitrarily fixed rate of only 1 percent a year, although this particular part of its debt consists of serial bonds calling for interest payments of from 1¾ to 2½ percent a year. On 11 out of every 12 dollars of T. V. A.'s investment you and I pay the interest in our Federal tax bills.

UTOPIAN MORTGAGE

This sounds so fantastic that perhaps it should be simplified. So let's assume that your neighbor, Joe Doakes, owns a home with a $6,000 mortgage on it. Under the T. V. A. plan Joe would pay interest at 1 percent a year on about $500 of his mortgage. On the remaining $5,500 of Joe's mortgage you and the other neighbors would pay the interest for him.

There are many more variegated gentlemen in the T. V. A. woodpile, but this ought to be enough. Even a layman's investigation will show, among other things:

1. That T. V. A. has all the tools needed to control the economy of the area in which it operates, including an absolute, unregulated monopoly of the area's electric power supply.

2. That T. V. A. is not a business but a combination eleemosynary institution and a super-duper political fund with you and me as the contributors, but with no control whatever over the size of the contribution we shall make. It is a hidden item in the bill of every individual who pays a Federal income tax.

3. That Winston Churchill really had something when he said: "We must beware of trying to build a society in which nobody counts for anything except a politician or an official, a society where enterprise gains no reward and thrift no privileges."

4. That maybe Mr. Ickes has something, too.

ORSON BUGGY.

NEW YORK.

Resolutions of National Reclamation Association

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. ROBINSON of Utah. Mr. Speaker, I call the attention of the House of Representatives to two resolutions adopted recently by the National Reclamation Association at its annual convention which are of tremendous importance to the 17 Western States that are concerned with the conservation of water for irrigation and other beneficial consumptive uses.

The first resolution, No. 7, recognizes the leadership of President Roosevelt and Secretary of the Interior Ickes in urging that the Congress recognize the prior rights of irrigation and other beneficial consumptive uses of waters in the area of the arid and semiarid regions west of the ninety-seventh meridian. This principle was written into the Flood Control Act passed by both Houses of the Congress and approved by the President on December 22, 1944. No legislation since the enactment of the Reclamation Law of 1902 has shown more emphatically that the Congress recognizes the importance of the conservation of western water resources for irrigation, and that the development of the West as an integral part of the Nation is dependent on the vigilance of Congress to support the President and Secretary Ickes in carrying out the policy that was enunciated in the so-called O'Mahoney-Millikin amendment written into the Flood Control Act.

The second resolution, No. 10, commends the leadership of Commissioner of Reclamation Harry W. Bashore and Maj. Gen. Eugene Reybold, Chief of Engineers, in bringing about the reconciliation of the differences in the reports of their respective agencies for the conservation and use of the waters of the Missouri River basin. Commissioner Bashore and General Reybold presented a coordinated plan for the development of the Missouri and its tributaries which was approved in section 9 of the Flood Control Act. The plan for the Missouri River which will serve as a precedent for the development of other western river basins gives full protection to the interests of irrigation and other beneficial consumptive uses of the waters of the Missouri and its tributaries. The resolutions are as follows:

Resolution 7

Whereas President Franklin D. Roosevelt in his letters to Senator JOHN H. OVERTON, chairman of the Senate Commerce Committee, and Representative JOSEPH J. MANSFIELD, chairman of the House Rivers and Harbors Committee, has proclaimed sound national policy in stressing the prior rights of irrigation and other beneficial consumptive uses to the waters of the arid and semiarid regions of the 17 Western States on the principle embodied in the O'Mahoney-Millikin amendment; and

Whereas Secretary of the Interior Harold L. Ickes has stanchly supported the President's position on the O'Mahoney-Millikin amendment and has advocated before Senate committees that the differences between plans of the Bureau of Reclamation, of his own Department, and the Corps of Engineers, of the War Department, for the Missouri River Basin, be removed by joint action of the two agencies, which has resulted in a reconciliation of the two reports on the Missouri River, in keeping with the President's views for coordinated plans for river-basin development to protect the use of water for irrigation and other beneficial consumptive purposes; and

Whereas the Water Conference at Chicago on September 7 and 8, composed of representatives of 29 States, endorsed the O'Mahoney-Millikin amendment as a means of assuring to the individual States a voice in the control of their waters for beneficial consumptive use and Members of the Senate and of the House of Representatives, from the West as well as other States with water problems, have taken the leadership in supporting this principle: Now, therefore, be it

Resolved, That the National Reclamation Association commends the statesmanship of the President and the Secretary of the Interior, the forward-looking view of the Chicago Water Conference, and that of the Members of Congress who have taken the leadership for a solution of this vital problem; and be it further

Resolved, That the National Reclamation Association wholeheartedly endorses the action of the Chicago Water Conference and urges the adoption of the O'Mahoney-Millikin amendments with any further changes consistent with their principles.

Resolution 10

Be it resolved, That the National Reclamation Association commends Commissioner of Reclamation Harry W. Bashore and Maj. Gen. Eugene Reybold, Chief of Engineers, for their

leadership in bringing about the reconciliation of the differences in the two reports for the conservation and use of the waters of the Missouri River Basin and for the presentation of a coordinated plan for the development of the stream and its tributaries with full protection for the interests of irrigation and other beneficial consumptive uses of their waters as set forth in their joint letter of October 25 to the Secretary of War and the Secretary of the Interior, and be it further

Resolved, That the National Reclamation Association recommends that the pending flood control or rivers and harbors bills be amended to incorporate the authorizations for construction by the Bureau of Reclamation and the Corps of Engineers of the projects as set forth in the joint recommendations of Commissioner Bashore and General Reybold; and be it further

Resolved, That the National Reclamation Association urges that the Bureau of Reclamation and Corps of Engineers proceed promptly to reconcile any conflicting reports on all other western river basins to the end that coordinated plans for the development and use of vital water resources may be presented to Congress in connection with postwar programs for employment and settlement opportunities on irrigated land in the West for returning servicemen and demobilized civilian war workers.

The Soldier Ballots

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

THE SOLDIER BALLOTS

Secretary Stimson's report on the use of absentee ballots by service men and women, while expressing dissatisfaction with some complexities of the present law, indicates that the President was very wide of the mark when, a year ago, he told Congress that the soldier-vote bill was a fraud on our fighting men and on the American people.

Severely criticizing the State ballots and the voting procedure set up in 1942, Mr. Roosevelt said it would be no less difficult for soldiers to vote under the 1944 law. Perhaps he was right, but the fact is that, difficult or not, about 2,800,000 service ballots were cast in the 1944 Presidential race. In 1942 the service vote was negligible, some estimates placing it at less than one-half of 1 percent of those eligible to vote.

Mr. Stimson said that he had no "authentic" figures for the total number of State absentee ballots and Federal ballots cast last year. It is interesting to note his assertion, however, that in 10 States which approved the Federal ballot and reported to the Army, 28,136, or 2.2 percent, of the eligible persons used the Federal ballots, while 446,974, or 34.6 percent, used the State absentee ballots.

That would indicate that the State ballots were not as objectionable to the troops as some of the pre-election partisans would have had the country believe. No doubt these partisans were convinced that the service vote would be preponderantly for the President—it was about 3 to 2 in his favor—and feared that any difficulty in voting might prejudice his election. Now that the campaign is over and the verdict in, their more extreme complaints against the voting law can be dismissed. Some valid criticisms remain, however, as indicated by Mr. Stimson, and appropriate steps should be taken to meet them before 1946, in the unhappy event that we should still be at war when the elections of that year are held.

Setting the Pace

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an article by Grantland Rice titled "Setting the Pace," which was published in the New York Sun on January 17, 1945:

SETTING THE PACE

(By Grantland Rice)

NEED OF AN OVER-ALL SPORTS POLICY

What this country needs today, in addition to several other things, is an over-all sports policy at Washington. The Government at Washington admits it. And I'm not referring to unimportant leaders or to unimportant committees. In its job of handling sports, the Government has been a badly baffled and bewildered bunch, with only a vague knowledge of what it is all about. Yet in this country we happen to have over 90,000,000 persons deeply interested in some form of sport.

When some higher up or some committee is given a decision to make, the decision is promptly shuffled over to someone else. And from there the buck is passed again.

"There has been no over-all sports policy in Washington," one of the top leaders told me, "and there has been no sports coordinator named to handle or help out the situation. But we need this over-all policy first. Does the Government at Washington want baseball continued? Yes. But no one there knows what to do about it. Did the Government want racing stopped? No. Not outside of war-production centers, such as Hollywood. It was the Hollywood track that stopped racing, and everyone knows it. It won't be forgotten later. I can promise you that. Strube at Santa Anita was willing to do his share. Hollywood wasn't.

"We know that a lot of mistakes have been made. We also know that the Army and the Navy, especially the Army, have made more than their share of such mistakes in connection with manpower, the IV–F situation, and many other details.

"I can give you one specific example. Many of the IV–F's were put in a false position by Director Jimmy Byrnes and General Marshall. Both denounced IV–F athletes who could play baseball or football but who couldn't carry a gun. There are some 250 big-league ball players classified as IV–F's. Yet the Army has had more than 480 star athletes—such stars as Joe Louis, Billy Conn, Glenn Dobbs, Dippy Evans, and many great baseball players who have been relieved from duty on the fighting fronts for more than 2 years.

"These men are not IV–F's. They are the pick. The total comprises more athletes than baseball or professional football have been using. And these are the ones about whom the returning wounded, and others on furlough from many fighting fronts are complaining. Again I'd like to say it isn't their fault. The fault goes much higher. These men, or most of them, would like to carry guns, or fly planes, or get in some form of fighting action. But they must do what they are ordered to do. And a IV–F can't get into service when they won't take him in."

SITUATION IN WASHINGTON BADLY TANGLED

It is for all these reasons that I say that the country's main demand is an over-all policy as far as all professional sport is concerned. If Washington wants all professional sport stopped—baseball and football in particular—why not say so? But Washington doesn't want these sports stopped. England and Germany tried this system out, ran into a snag, and promptly reversed their positions.

Certainly anything that interferes with the progress of the war should be immediately curbed. Everyone understands that. But this has nothing to do with the badly tangled situation that now exists in all the overlapping boards and committees in Washington which haven't the faintest idea of something that is close to over 90,000,000 American citizens, including at least 10,000,000 servicemen.

Sport has made every possible effort to cooperate with the War Department, from which all orders come.

"And I would like to add," interjected my Washington adviser, "that it is no fault of Judge Patterson or Mr. Stimson. Certainly everyone knows that President Roosevelt is a strong believer in continuing all possible forms of sport. The queer part is that the Washington Government heads, including the Army and Navy departments, are strong for sport.

"For example, everyone knew that the Hollywood track, located in the midst of one of our leading war industry areas, should never have opened. A sane over-all sports policy, plus a coordinator or a head man, would clear up the matter very quickly. And I can tell you that both War and Navy Departments, plus the Manpower Commission and the rest of them in Washington, would like to see this happen. It should have been done at least a year ago. It is a little late now, but not too late."

The main trouble is that, due to the confusion prevailing in Washington today, there may be an even longer delay. This would be unfortunate. It remains to be seen, as someone has said before, just what Washington will do about it—in line with a winning war effort, of course. That part of it is beyond discussion.

I understand that many forms of professional sport don't want any such policy or any coordinator at Washington. Well, these had better wake up. Under such conditions, with the right policy and the right man on the job, racing, in the right places, would still be alive and professional baseball would know just what its place was, with a certainty of holding on. Along these lines Governor Dewey had the right idea when he named Eddie Eagan as the chairman of New York State boxing. Sport could use more Eddie Eagans—if sport could find them.

America, Italy, and the Atlantic Charter

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following resolution adopted at the general membership meeting of the Italian-American Labor Council, held on January 27, 1945:

On the eve of the coming historic meeting of the Big Three, it is appropriate to place before the American people and the public opinion of the United Nations a grave situation which we must begin to remedy at once. This is imperative in order to hasten victory and secure an endurable and enduring peace.

The critical conditions in Italy, the possibilities of Italian political, social and economic rehabilitation and the entire question of the role of the new Italy in the world of tomorrow—all of these are issues which transcend in importance and scope the interests and boundaries of Italy itself. On the solution of these issues the fate of Europe and the future of mankind are, in no small measure, dependent.

In his address on the state of the Nation to the Seventy-ninth Congress, President Roosevelt declared: "It is true that the statement of principles in the Atlantic Charter does not provide rules of easy application to each and every one of this war-torn world's tangled situations. But it is a good and useful thing—it is an essential thing—to have principles toward which we can aim."

The Italian-American Labor Council regretfully declares that in their treatment of Italy, the Allied Powers have to date not been guided by the sound approach proposed by President Roosevelt.

The Atlantic Charter first of all pledges the United Nations to "seek no aggrandizement, territorial or other." In its second point, the United Nations—all of whom are signatories to the Atlantic Charter—specifically pledge themselves "that they desire no territorial changes that do not accord with the fully expressed wishes of the peoples concerned."

All the world knows that the Allied Powers and other United Nations have in their treatment of Italy, paid little attention to these first two principles of the Atlantic Charter. In their relations with Italy, the Allied Powers have, to a dangerous degree, disregarded these basic points of the Atlantic Charter as principles towards which they can aim. The extremely harsh armistice terms imposed upon the Italian people after they overthrew Mussolini, and the campaign to take by force from Italy Trieste and Fiume are flagrant violations of the letter and spirit of these principles.

We appeal to our own Government and to all the Allied Powers to lose no time in making it clear to the Yugoslavian regime of Tito that the guiding principles of the Atlantic Charter rule out the proposal of the Yugoslavian Foreign Minister Josip Smodlaka to take away Fiume and Trieste from democratic Italy and annex it to Yugoslavia.

Point 3 of the Atlantic Charter provides that the adhering nations are to "respect the rights of all people to choose the form of government under which they will live; and they wish to see the sovereign rights and self-government restored to those who have been forcibly deprived of them."

The Italian people were the first ones to be forcibly deprived of their sovereign rights by a Fascist dictatorial regime; the first people in Europe to overthrow a Fascist dictatorship were the Italian people. Certainly, such a nation is entitled to every consideration in its efforts to rewin its sovereign rights and the restoration of self-government. But what do we find? It was painfully revealed in the recent Sforza case that the government of the new Italy has been allowed to exercise authority more in name than in fact. To date, its power has been more fiction than reality. The dominant Allied power in Italy has not allowed the Italian people even to choose its own cabinet members without approval by outside governments.

The fourth point of the Atlantic Charter declares "the United Nations will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and raw materials of the world which are needed for their economic prosperity." Furthermore, the Atlantic Charter expresses in its fifth point the desire of the United Nations "to bring about the fullest collaboration between all nations in the economic field with the object of securing for all improved labor standards, economic adjustment, and social security."

We cannot emphasize too strongly that these have not been the guiding principles of all the Allied Powers in their treatment of the reviving democracy of Italy. The Italian people are paying a dreadful price in suffering and destruction. Their country is a theater of bitterest warfare; they are subjected not merely to all the havoc of military devastation, but also to the vengeful wrath of Hitler and his Mussolini Quislings. Their wealthiest and most industrialized provinces are being ravaged and looted. They are making a gallant effort to contribute decisively to the common victory and to speed the reconstruction of their country. So far, the United Nations have rendered only pitifully inadequate assistance to, and, on occasions, even hampered Italian democracy in its efforts to secure the raw materials and the industrial equipment with which to lay a firm foundation for the return of their economic prosperity.

It is distressing to note the thoroughly insufficient collaboration with resurgent democratic Italy by the United Nations. Anti-Fascist Italy is not being permitted to do its full part in the destruction of Axis tyranny. Hundreds of thousands of her best sons, behind the Nazi lines as well as in the freed areas, are eager to fight against the German hordes but are not being given the proper equipment and are not allowed by the Allied Powers to constitute themselves as an effective national democratic Italian army. What is more, the thoroughly unfair and unsound rate of exchange imposed upon the Italian people has served to depress cruelly labor standards and to block seriously all efforts at economic readjustment in Italy. The military authorities, particularly the British group which is dominant, have imposed wage policies which paralyze all possibility for advancing the social security of the people of liberated Italy.

We hail the declaration made by President Roosevelt to the Seventy-ninth Congress that our country "shall not hesitate to use our influence—and to use it now—to secure so far as it is humanly possible the fulfillment of the principles of the Atlantic Charter. We have not shrunk from the military responsibilities brought on by this war. We cannot and will not shrink from the political responsibilities which follow in the wake of battle."

The Italian-American Labor Council calls upon our Government and all its departments to act in the spirit and manner herewith emphasized by President Roosevelt and to pursue vigorously the above course in their relations with all the United Nations.

Our pleas for a forthright and energetic application of the principles of the Atlantic Charter to democratic Italy spring from our desire not only to assure a better life for the peace-loving industrious people of Italy, but, above all, from our devotion to America as the hope of the world in its aspirations and strivings for the triumph of democracy in war and peace and the organization of lasting world security and the enhancement of human progress.

ANNUAL REPORT (1944)

Within the last year, the Italian-American Labor Council has expanded and intensified its activities in behalf of the ideals inspiring America to victory and animating firm friendship between the American and Italian peoples as a cornerstone of lasting world peace.

In this spirit the Italian-American Labor Council has striven to have our country vigorously adhere to and consistently champion the principles of the Atlantic Charter so as to insure their application by the Allies in the treatment of the resurgent Italian nation. Similarly, we have spared no effort to secure adequate, speedy, material relief—Government as well as voluntary individual—to the needy in freed Italy.

Recent developments have only emphasized the value of our work and the urgency of redoubling our endeavors to strengthen the bona fide democratic forces in Italy and to restore the Italian people to their rightful place among the world's great democracies.

Toward attaining these objectives, the Italian-American Labor Council continuously worked for:

1. Just and honorable treatment of Italy, by our own country and the other United Nations, on a number of occasions critical in the regeneration of Italian national freedom and democracy.

2. Overcoming all barriers to prompt and sufficient shipment of food, clothing, and medicines from America to the ailing and hungry in liberated Italy.

3. Facilitating the reestablishment of genuine free trade-unions as the bulwark of reviving Italian democracy.

4. Establishing close relations and active cooperation between organized labor in America and the truly liberal forces and the democratic elements in the labor movement of Italy now being rebuilt.

5. Energetic and generous assistance to the heroic underground and democratic resistance forces in Nazi-occupied northern Italy.

1. Toward a virile, independent Italian democracy

The trials and tribulations of the reborn Italian democracy are too numerous and difficult to recount. Italy is a theater of desperate warfare. The country has suffered the heaviest hardships and most cruel losses as a result of two decades of Fascist dictatorship, a disastrous adventurist war brutally forced on the people, terrible devastation incurred through the clash of hostile armies, savage depredations and massacres at the hands of the Nazis and their Mussolini Quislings, the persistent danger of reactionary domination and Fascist revival, as well as the menace of totalitarian dictatorship of a different stripe constantly hovering over the land.

These tragic and trying circumstances have been further aggravated by the false policies of the United Nations—particularly those of Britain, the dominant Allied power in Italy.

The Italian-American Labor Council has been on the alert to mobilize American public opinion and the prestige and power of our country in support of the full sovereignty of the Italian people and in behalf of their uphill struggle to establish firm democratic institutions in their land.

A. Thus, in several instances the Italian-American Labor Council has written to and interceded with the President of the United States and the State Department, and has issued special statements to the press centering attention on the critical conditions in liberated Italy and on the best ways of overcoming them. We need only recall our letter of December 7, 1944, to President Roosevelt on the occasion of Britain's unwarranted veto on Count Sforza and the subsequent declaration by Secretary of State Stettinius dissociating the American Government from this high-handed British maneuver against Italian national sovereignty and self-government.

B. In this vein, our Columbus Day celebration and the "four freedoms" award were

utilized effectively and aroused splendid international response. With President Roosevelt accepting our award and addressing America and the world through the Italian-American Labor Council, with Premier Bonomi speaking to the American people through our Columbus Day celebration, and with Attorney General Biddle and a galaxy of other renowned personages addressing us on the occasion of the "four freedoms" award to the President of the United States, we were able to spotlight world-wide attention on the needs of the Italian people on the imperative necessity of Italo-American friendship and the urgency of according democratic Italy the status and rights of an ally, a full-fledged member of the United Nations.

C. On October 18, 1944, United States Attorney General Francis Biddle and President William Green, of the American Federation of Labor, accompanied a delegation of the Italian-American Labor Council to the White House where President Roosevelt in person accepted the "four freedoms" award. This proved to be another occasion for arousing American public opinion to the faith and hope placed by the Italian people in our country and to the burning need of rushing relief to Italy and restoring her to an honorable place among the great nations.

D. As Americans we naturally were very active in the historic Presidential elections. In this moment of intense interest on the part of the American people in international affairs, we, as Americans of Italian descent, endeavored to arouse our country to the tremendous responsibility and opportunity it has—to do everything in its power to hasten victory and enduring peace by having the Allies apply in Italy and other liberated lands the principles of the Atlantic Charter and the "four freedoms."

E. Our participation in the national elections proved effective and helpful in bringing home to American labor in general and to Americans of Italian lineage in particular the vital necessity of reelecting President Roosevelt in order to avoid chaos and confusion at home and irreparable disaster abroad.

2. Relief for liberated Italy

A. The Italian-American Labor Council affiliated to the American Committee for Italian Relief and mobilized all its forces and resources for securing best results in helping the sick and famished in the land of our forebears. Posters, leaflets, and other literature were provided and circulated. The radio was used to the fullest extent.

B. There were set up more than 50 depots to receive the clothing and contributions. Thanks to the courtesy of the I. L. G. W. U., the building at 3 West Sixteenth Street was transformed into a general warehouse.

C. All constituent units of the Italian-American Labor Council cooperated actively with various Italo-American institutions and organizations throughout the country to put over a magnificent relief drive.

D. It is conservatively estimated that we have collected and consigned 308,694 pieces of wearing apparel of the approximate value of $1,500,000 to the American Relief for Italy, Inc.

E Besides this, we have raised $16,997 for food, medicines, and clothing to be purchased and shipped to Italy. Local 39, one of our affiliates, at its jubilee celebration raised and gave to the American Relief for Italy, Inc., $40,000.

F. Realizing the tremendous needs of Italian relief and recognizing that even the most generous private relief is insufficient, the Italian-American Labor Council has been doing everything in its power to secure U. N. R. R. A. and other official United Nations agencies and American Government assistance to freed Italy.

3. Helping Italy's democratic and free trade union forces

A. Behind the Nazi lines there is a magnificent Italian resistance movement rivaling in number and strength the best of other resistance movements on the European continent. Obviously, we cannot disclose details, but we have been rendering substantial material and other aid to the heroic democratic forces within this army of resistance battling ever-more effectively against the German armies and Nazi-Fascist terror in the northern provinces.

B. Our drive to aid the rebirth of genuine free trade unions in Italy has received considerable international attention.

C. To date the Italian-American Labor Council has raised $132,064.90 for helping the establishment of an Italian free trade union movement—free from all Government and political domination. An itemized statement of accounts is herewith attached.

D. As can be seen from the itemized report, the response of the I. L. G. W. U. and its locals has been particularly generous. They contributed with $99,905.10. Another outstanding donation of $10,000 was received from the Labor League for Human Rights. It is to be regretted that we are still far from our goal of one-quarter of a million dollars.

E. A most vital part of the drive to help restore bona fide Italian trade unionism was the trip by our president, Luigi Antonini, as A. F. of L. representative to liberated Italy. As a result of this trip, we have been able to render invaluable services to regenerated Italian labor and democracy and to the friendship between the two nations.

F. On the basis of full compliance with the Pact of Rome, we are confident Italian labor will be able to register real successes in building a mighty section of the world's free trade union movement.

4 Italo-American labor solidarity

A. A great forward step toward real cooperation between American and Italian labor was made, when the American Federation of Labor decided to select our President Luigi Antonini as its official representative to the emerging free trade union movement of Italy.

B. This trend was considerably strengthened through the energetic activities of Brother Antonini in Italy and through his written and oral report to the last convention of the American Federation of Labor held at New Orleans in November 1944. In confirmation of this friendly American Labor attitude to the rising Italian Free Trade Unions we herewith reproduce in part, from the report of Matthew Woll in behalf of the Committee on International Relations unanimously adopted by the American Federation of Labor Convention, the following:

"1. The American Federation of Labor should give its full support to the democratic elements in the Italian labor movement, to those elements which are opposed to totalitarian organization and domination.

"2. Italy is economically ruined and its economy is at a low ebb. The Italian people are hungry, ill-clothed, and despairing of the future. For months after the fall of fascism, the frantically anticipated relief from the Allied countries has been coming over only in dribblets. Lately, this help, especially from America, has increased. It is terribly urgent that this help be multiplied during the coming months. The splendid movement undertaken by the American Committee for Italian Relief, with the cooperation of the Italian-American Labor Council of New York, to collect clothing for the stricken Italian population, which has resulted in hundreds of thousands of garments already forwarded to Italy, deserves hearty commendation. Such help, however, meets only a small fraction of the vast needs. We call upon the agencies of our Government charged with distribution of relief abroad to consider the tragic situation in Italy and to redouble their efforts in that direction without delay and procrastination.

"3. We must not fail to realize that the Italian people are eagerly awaiting the hour of restoration of their national sovereignty and that such a restoration is incompatible with the thought of protracted military occupation. Moreover, our policy toward Italy must be such that would make it clear to the Italian population of every political belief and economic group that America will not support either dismemberment of their country or the imposition of a form of government to which they are irrevocably opposed.

"Such an open and declared policy will strengthen immensely the elements of democracy throughout Italy and infuse hope and confidence among the democratic contingents in the trade unions. For, as Brother Antonini has succinctly stated in concluding his report: 'Only in the atmosphere of a truly democratic country free of the perils of totalitarianism, is there hope for a truly democratic and free trade-union organization to develop and prosper.'"

This historic declaration will serve as a beacon light not only for the American labor movement but for the entire American people.

C. In collaboration with the British Trade Union Congress, the International Federation of Trade Unions, a representative of the Congress of Industrial Organizations, and the most authoritative spokesmen of Italian labor, Brother Antonini was able to survey conditions, prepare instructive material, and make valuable proposals for assuring the triumph of bona fide free unions in the new Italy. During his stay, Brother Antonini helped all deserving forces without any discrimination in behalf of the Italian-American Labor Council.

5. Social services

A. It is unnecessary for us at this point to go into the countless details of our efforts in behalf of many scores of Americans of Italian extraction in connection with the Red Cross, United States Immigration Department, United States Post Office Department, Office of War Information, Office of the Army Provost Marshal, and prisoners of war, etc.

B. In this connection, we can also refer to the considerable amount of work done by the Italian-American Labor Council to secure better treatment and justice for the sailors of the Italian Government ship *Saturnia*.

C. For some time, the Italian-American Labor Council has been aiding refugees from Italian fascism who had fled to countries like Switzerland and Mexico.

4. After the Italian people overthrew Mussolini and the German army of occupation swooped down upon the northern sections of the country, thousands of the finest fighters for democracy and labor had to flee the savage vengeance and terror of the Nazis and their Fascist quislings.

We responded to the urgent needs of this terrible emergency by rallying substantial support for these victims of Nazi tyranny. Through our recommendation and request and with the aid of the League for Human Rights, the National War Fund allocated the sum of $74,800 to be distributed by the Unitarian Service Committee among the political refugees in Switzerland.

E. During the past year, the Italian-American Labor Council has become more widely known in the ranks of organized labor in particular and the American public as a whole.

F. This is confirmed by the many inquiries we have been receiving from sundry Government institutions, by the mounting interest manifested in our work and reports by an ever-larger number of public libraries throughout the country.

CONCLUSION

The above outline report of our principal activities is in no way a full picture of the

fine efforts and help rendered by the various organizations constituting the Italian-American Labor Council. We are proud of their work. In this regard, we express our special appreciation to the various locals and joint boards of the I. L. G. W. U. for their timely support of our campaigns. We need but cite the exemplary solidarity manifested by the Dress Joint Board of New York in allocating $35,000 to help the underground labor and liberal movements of Italy. It is most inspiring to note that American workers of Italian and other origins worked side by side for 2 hours for funds earmarked to aid the democratic resistance and underground movement of all oppressed lands.

Today, the Italian-American Labor Council is the only organization in America that provides systematically moral and material assistance for the widespread activities of the underground forces courageously battling the Nazi barbarians. We devoted ourselves to this task in addition to continuous vigorous cooperation with other organizations in providing material help to the hungry and sick in liberated Italy.

In all our activities we come forward and serve not as an Italian organization in America. We function as an American organization interested above all in our own country pursuing shound domestic and foreign policies so that it should be able to fulfill its great world mission as a mighty force for international human decency, welfare, and progress.

At the moment, Italy is a crucible—the testing ground of American and United Nations policies in war and peace. In this light we have emphasized with special vigor the indispensibility of the United States and other allied powers pursuing in Italy, and in all other liberated lands, a course based on the Atlantic Charter—the only road to speedy victory and a just and enduring peace.

Luigi Antonini, president; Arthur Esposito, vice president; Eduardo Molisani, vice president; John Gelo, treasurer; Joseph Procopio, secretary; Silvo Battini; Frank Bottaccini; Alex Di Brizzi; Alberto Campobasso; Philip Ciaccia, Anthony Cottone; Louis F. Donato; Umberto Gualtieri; Salvatore Ninfo, the executive committee;

JANUARY 27, 1945.

The Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. CHENOWETH. Mr. Speaker, under leave to extend my remarks, I wish to include an address delivered by my colleague the gentleman from Ohio [Mr. SMITH] before the annual convention of the Colorado State Mining Association in Denver on January 27, 1945, on the subject of the Bretton Woods agreement.

The distinguished gentleman from Ohio has spent a great deal of time in the study of this proposal. His observations have attracted Nation-wide attention. In view of the importance of this subject, I include the full text of his Denver speech, which follows:

Mr. Chairman and gentlemen, it is a pleasure for me to come to Denver and participate in the proceedings of your annual meeting of the Colorado Mining Association. I wish to express to you my gratitude for being afforded the opportunity to address you on the subject you have assigned me. Seeing that you have a full schedule, I shall immediately proceed with my discussion.

Before doing so, however, I should like to say that from all I can learn in Washington about the mining industries in Colorado and the other Western States, you are performing a wonderful job in aiding the war effort. For this, the whole Nation salutes you.

THE KEYNES-MORGENTHAU SCHEME OR THE BRETTON WOODS AGREEMENT

For many years prior to the outbreak of war in 1914, the world maintained a free gold market internationally, as did also the more industrially advanced countries in their domestic economies.

The right of individual ownership of property was more secure, men in all walks of life were afforded a greater protection in the enjoyment of the fruits of their labor, and the distribution of wealth was more equitable than at any time in history.

Came the war, and all that was changed. Statesmanship broke down. Politics came into the saddle. The free gold market was completely destroyed in the domestic economies and largely internationally.

Along with this have gone competition, the sanctity of contract, monetary and financial integrity in government, and all the social protective forces for the preservation of liberty.

Financially distressed governments, true to their tradition, resorted to their old tricks—coin clipping, printing press money, and stabilization schemes of one kind or another, etc. And now comes the panacea for most, if not all, of our domestic and international ills, the Keynes-Morgenthau scheme, or so-called Bretton Woods proposal for an international monetary fund and bank for reconstruction and development.

THE SEVERAL DRAFT PROPOSALS FOR AN INTERNATIONAL MONETARY AUTHORITY

Simultaneously during the first week in April 1943 two proposals for an international monetary authority were made public in the United States. One came from London and was called International Clearing Union, the formulating of which was credited to Lord John Maynard Keynes, advisor to the British Exchequer and Governor of the Bank of England. The other originated in Washington and was credited to Mr. Harry D. White, Assistant to the Secretary of the Treasury.

In July 1943 Secretary Morgenthau released a revised draft of the so-called White plan, and in April 1944 a rerevised draft.

A study of the British and American proposals showed that our Treasury officials had done little else but copy from the Keynes' plan for an international clearing union, as outlined in the Whitish white paper.

Nor has the Bretton Woods fund proposal changed this situation. There is nothing of importance in it that does not stem from Lord Keynes' plan.

I shall confine my discussion to the fund proposal. This is so complicated and involved, and embraces so much territory, that it would require a goodly sized volume to fully discuss it. In the short time at my disposal, I can do not more than briefly touch upon a few of its more important provisions.

PURPOSES

The stated purposes of the Bretton Woods fund proposal are the promotion of international monetary cooperation, facilitation, expansion, and balanced growth of international trade, promotion of exchange stability, avoidance of exchange depreciation, establishment of a multilateral system in respect of current transactions between members and the elimination of foreign-exchange restrictions.

These are all praiseworthy objectives. They comprehend those principles of international intercourse to which all of us subscribe. The trouble is, however, that the proclaimed purposes of the scheme are not much in accord with its provisions nor with the approach taken to their attainment. Especially does the record of past and present performances of most of the governments concerned fail to check with these avowed high purposes.

MEMBERSHIP

Forty-five countries would become members of the fund. It would become operative when those countries having 65 percent of the total quotas had signed the agreement, but not before May 1, 1945. The United States, British Empire, Soviet Union, and China would be given 65 percent of the quotas. Therefore the fund would be established when these four powers had signed the agreement.

CAPITALIZATION AND QUOTAS

The fund would have a capitalization of $8,800,000,000. Each member country would be allotted a quota, or an amount of shares, to be subscribed to it. The projected quotas are not based on economic considerations—amount of foreign trade, gold holdings, etc.—but on military strength, power politics, and national self-interest.

ALTERATION OF QUOTAS

The fund could at intervals of 5 years raise or lower the quotas of members. Or it could at any other time at the request of a member change its quota. So that our quota could be changed at any time upon the request of the President through his representative on the fund.

This is an important provision, since it could be used to increase the quota or lending power of the United States, and will be mentioned again later.

COMPOSITION OF FUND

The capital subscription of each country would be composed of gold on the one hand and political promises to pay in the form of paper currency or government obligations of some sort on the other.

Each country would have the choice of paying in gold either 25 percent of its quota, or 10 percent of its net official holdings of gold and United States dollars, whichever of these two was the smaller.

No official figures are available to show the amount of gold each country would be required to pay into the fund. Even the Treasury does not know what the gold holding of the Soviet Union is, as Stalin keeps that secret. From my studies of such data as are available respecting the gold holdings of the prospective members of the scheme, I am convinced that the amounts of gold many of them would subscribe to the fund would be almost negligible.

CAPITAL SUBSCRIPTION OF UNITED STATES

The capital subscription of the United States to the fund would be $2,750,000,000. Since dollars are internationally convertible into gold on demand, our total subscription would be composed of gold and paper representing full gold value. This would not be true of most of the other subscriptions. The paper that would be subscribed by the other countries would vary in quality from full convertibility to almost complete inconvertibility. Yet the poorest quality paper in the fund would buy as much goods as the best. As has been pointed out by others, the poorer currencies would tend, internationally, to drive out the better ones.

FUND AS LENDING AGENCY

The fund would largely serve as a lending agency. The participating countries would be divided into two groups, lenders and borrowers. The United States would become

the principal, if not almost the sole lender. Most of the other nations would become borrowers.

Neither the amount of gold subscribed by a member nor its record in fulfilling its contractual obligations in the past would play any part in determining its credit worthiness. More than 20 of the prospective member countries have been in default on loans made to them by the United States.

A member could borrow just as much whether it paid its full subscription in gold or none at all. It seems the poorer its credit, the better off a country would be.

It should be noted that while the formula provides for the payment of gold in some amount, under another article this could be amended so as to eliminate any gold requirement.

Each debtor country would be allowed to borrow from the fund an amount equaling its quota, and only up to 25 percent of its quota in any 1 year. These limitations, however, could be set aside since it is further provided that the fund may, in its discretion, waive these limitations.

That there likely would be strong demand by debtor members for increasing their borrowing capacities has already been indicated by the dickering and scrambling for higher quotas in which they indulged at Bretton Woods.

PAR VALUES: BANCOR OR UNITAS?

The proposal provides that "The par value of the currency of each member shall be expressed in terms of gold as a common denominator or in terms of the United States dollar of the weight and fineness in effect July 1, 1944."

Here the way would be open to the fund for adopting an international bank money or unit of account and call it bancor, as Lord Keynes suggested in his proposal for an international clearing union, or unitas, as suggested by Mr. Morgenthau for an international stabilization fund, or any one of several other designations which have been mentioned.

As will be recalled, Morgenthau's unitas was severely criticized by some American writers.

It is easy to see why London should prefer unitas to the dollar, considering the international position of the pound sterling, but it is difficult to see why Washington should chime in with London, considering the international position of the dollar.

Why should we be asked to give up the great prestige in international trade and commerce which the dollar sign has so meritoriously earned for us? If conditions were reversed, would Lord Keynes be suggesting bancor?

PROMOTION OF EXCHANGE—STABILITY OR INSTABILITY?

One of the stated purposes of the fund is to promote exchange stability. However, it should be observed that the Bretton Woods proposal places much less emphasis on exchange stability than the Treasury did in its draft proposals, especially the first one.

Recall that Morgenthau's two first draft proposals were titled "Stabilization Fund." The very first item under "Purposes of the fund" in his first draft started with "to stabilize the foreign currencies."

In the Bretton Woods agreement, exchange stability is the third item listed under "Purposes of the fund," and reads: "To promote exchange stability."

Morgenthau's first draft also provided that the guiding principle in fixing the rates at which it (the fund) will buy and sell one member's currency for another, and the rates in local currencies at which it will buy and sell gold, shall be stability in exchange relationships.

In the Bretton Woods proposal nothing is said about any guiding principle, but only that "each member undertakes to collaborate with the fund to promote exchange stability."

Maybe Mr. Morgenthau and his experts became a little allergic to currency stabilization, since it raised a question as to their policy of pre- and post-war deficit financing. Historically speaking, Government deficit financing and stable exchange rates can hardly be said to be congenial bedfellows, and surely the gentlemen in the Treasury must know that the general public is possessed of some awareness of this fact.

At any rate, as will be mentioned in a moment, whereas exchange stability was in Mr. Morgenthau's first draft, one, if not the principal, objective to be sought, the Bretton Woods proposal provides so much leeway to countries for debasing their currencies that it is difficult to see how it can be claimed that stability in exchange rates is one of the objectives of the scheme.

The fund proposal would make legal provision giving to each member country the right to change, that is lower or debase its currency. A member could debase its currency 10 percent without consulting the fund. It could debase it an additional 10 percent with the concurrence of the fund.

Then it is specifically provided that "the fund shall concur in a proposed change * * * if it is satisfied that the change is necessary to correct a fundamental disequilibrium. In particular, provided it is so satisfied, it shall not object to a proposed change because of the domestic, social, or political policies of the member proposing the change."

What other grounds than those relating to domestic, social, or political policies could there be for objecting to a member's request for debasing its currency? The fact is that the fund proposal not only fails to provide any prohibition against members debasing their currencies, but actually provides an easy way for them to do this, and on top of it legalizes debasement to give it respectability.

The language dealing with exchange stability had to state in clear and reassuring terms to prospective members that the fund would not permit any country from debasing its currency, for otherwise not many could have been induced to interest themselves in the project.

Exchange stability is possible only when governments keep their budgets balanced and refrain from printing money.

How many governments are there in the world who would join anything which prohibited them from spending more than they collected in taxes, and which took away from them the power to manufacture money with a printing press? Surely not many.

How would our own Government stand on that kind of proposition? Judging from its pre-war record of spending, and its projected post-war spending, is it likely that it would fall over itself to become a charter member of an international fraternity that had the power to make it live within its income?

The fund proposal envisions a stimulation of production and trading by means of fiat credit, in accordance with Keynes' "expansionist" theory as outlined in the British white paper. Lord Keynes is perhaps the most effective apostle of phony money that has ever lived. I think he has John Law backed clear off the map.

This proposed scheme would extend the process of currency and credit inflation that has been so rampant in most of the domestic economies into the international domain, which could not help but intensify exchange instability throughout the world.

UNIFORM CHANGES IN PAR VALUES OF CURRENCIES

We now come to some most remarkable provisions in the Bretton Woods agreement. One of these provides that the fund could by a majority of the total voting power make uniform proportionate debasements in the currencies of all members, provided each such debasement was approved by every member which had 10 percent or more of the total of the quotas.

The United States, United Kingdom, and the Soviet Union would be the only countries having 10 percent or more of the total quotas. Therefore, these three powers could effectuate a uniform debasement of the currencies of member countries. They could lower the gold value or content of the dollar at will. The Congress could do nothing about it.

WORLD-WIDE REPUDIATION OF DEBTS

This provision for making uniform reductions in the par values of the currencies of member countries would provide the way for them to repudiate their international debts, and do so with the sanction of law. That is the purpose of this provision.

Do we as a nation want to defile our long record of faithful performance in meeting our international commitments by becoming part of a scheme, one of whose sinister purposes is universal welshing on international debts and giving to such deed respectability by legalizing it? I cannot believe it.

SURRENDER OF OUR SOVEREIGNTY

But the proponents of the scheme will tell us that our money could not be tinkered with except with our consent, that we would have the veto power over any attempt that might be made to do this. Who would have the veto power? The Congress? No. The President, as a member of an international body, would have the power to say whether our money should be debased or not. The Congress would be shorn of its power over our money.

There is no provision in the Constitution that is more believed in, or better known to the American people than the one which vests in the Congress sole power over our money. Time and again our courts have been called upon to consider this grant of power and without a single exception have ruled that Congress and Congress alone possesses all power over our money.

Yet, here we have this brazen Keynes' proposal, embodied in the form of a tentative international agreement, to which our President has subscribed, to make it possible for a group of self-seeking internationalists to usurp from the Congress of the United States the soverign power over our money, the very essence of the entirety of our sovereignty, which the Constitution vests in it. Has our Nation so completely lost its soul that it is willing to abjectly hand over to the neo-internationalists our sovereignty, the power over our money? I cannot believe it.

INTEREST CHARGES

In Morgenthau's draft proposals no provision was made for interest charges on loans made by the fund. The Bretton Woods agreement makes provision for interest charge on loans. However, through the amendments provision the interest charges provided for in the agreement could be altered or eliminated altogether.

CONTROL OF CAPITAL TRANSFERS

Capital transfers would be controlled. This means that all exports and imports would be under strict surveillance. For this provision to be effective it would be necessary to exercise a virtual dictatorship over all international dealings, including censorship of mails.

SCARCE CURRENCIES

One of the stated purposes of the fund is the elimination of foreign exchange restrictions. Yet, the proposal provides that in the event a member's currency became scarce, it would be rationed. Suppose the scarcity involved our currency. Let me here quote Dr. Benjamin M. Anderson on this point:

"Now this means that when dollars grow scarce in the fund all the countries needing dollars must ration out their supplies. It is by this method that the fund would prevent

the depreciation of the weaker currencies in terms of the dollar. This means price-fixing of dollars, and rationing of dollars as part of the price-fixing, in all the weaker countries. It destroys a free foreign exchange market in the dollar in those countries.

* * * * *

"With the free foreign exchange markets of 1919 and 1920 the exporter, selling in francs or lire, might find that the foreign exchange market had gone against him and that he got less dollars than he expected for his francs or lire or sterling, but, at all events, he could take his losses, sell them for what they would bring in the foreign exchange market, and liquidate his own debts. But with this new arrangement, designed to encourage exports and promising stabilized exchange rates, he might suddenly find that he had no market at all, that his foreign currencies were blocked, and that he himself, with his assets in the form of illiquid blocked foreign currencies, was a bankrupt unable to pay his own debts. There would be indeed a fixed exchange rate, but there would be no exchange market."

Provision is made for replenishing the fund's holdings of scarce currencies. This could be done in several ways, one of which would be for the fund to borrow currency from the affected country. Suppose the fund's holdings of dollars became scarce. Then the President, through his representative on the fund, could authorize the fund to borrow dollars from the United States. Resort would be had to the Federal Reserve banks for such borrowing.

No congressional action would be required for authorizing the Federal Reserve banks to extend the requested loans. This would virtually give the President the power to appropriate money which is now vested in the Congress by the Constitution.

Nor is there is any limit on the amount of dollars the fund could borrow. The funds so borrowed would represent further pyramiding of Federal Reserve bank credit and would be highly inflationary.

But as previously stated, the fund could increase our quota, that is, our lending power. This could be done by the President with the support of 53 percent of the voting power of other members, which should not be difficult to get, considering that most of the members would be borrowers. The Congress would then be legally obligated to vote the funds for the subscription necessary to meet the increase in our quota.

DISTRIBUTION OF VOTING POWER

The allocation in the fund proposal of voting power to the members is, like the size of the quotas, not predicated on economic considerations but on military strength, power politics, and nationalistic self-interest. The United States would be given about 27 percent of the total voting power and the British Empire 25 percent. Since most of the decisions would be made by a majority vote, these two countries would be in control of the fund.

The Soviet Union would be given 12 percent of the voting power.

To illustrate the disregard that was had for foreign trade in fixing the voting powers of members; Russia exported in 1938 about as much as Poland, yet, Russia was given seven times more voting power than Poland.

The borrowing countries would have a majority of the voting power. They would be in complete control of the fund and could formulate its lending policies.

It is conservatively estimated that the gold holdings of the fund, plus its holdings of those currencies that likely would be in greatest demand, approximately $4,000,000,000, and that the United States would supply about 70 percent of this amount. Yet, we would have only 27 percent of the votes.

Why should the United States allow itself to be inveigled into a crazy one-sided scheme like this?

INITIAL SUBSCRIPTION ONLY A STARTER

The initial amount of our subscription to the International Monetary Fund and Bank would be about $6,000,000,000, a sum of money which will again look large to us if we ever get sobered up from our drunken spending spree. But probably $6,000,000,000 would be only a starter.

Once this scheme was established we should be prepared to continue to pour more and more of our gold and goods into its bottomless pit.

MOTIVATION FOR SCHEME

The primary motivation for the creation of this scheme is the financial distress and weakened trade position in which Great Britain fears she may find herself after the war and her desire to restore London as the world's banker. We are for the moment concerned only with her blocked sterling balances, that is her foreign unfunded debts. Lord Keynes has given the figure of $12,000,000,000 as the total of Britain's external debt, four billion of which is accounted for by India's credit in blocked sterling. South American and other countries hold large sterling balances in London.

The first thing Lord Keynes listed under "Objects of the plan" in his proposal for a clearing union was the need for an instrument of international currency having general acceptability between nations, so that blocked balances are unnecessary. As stated he suggested "bancor" as the international currency, while Morgenthau suggested "unitas."

The Treasury's two first draft proposals for a stabilization fund contained a provision for dealing with these blocked balances which were of so much concern to Keynes. What this amounted to was an artful arrangement to induce the United States to underwrite and assume the British foreign debts which were involved in these blocked sterling balances.

The language used in drawing up this provision was extremely technical. It was a most remarkable device. Certainly nothing like it had ever been attempted before. It is one thing for us to give Britain financial aid, but it is quite another for her to try to secure such aid from us in the manner provided for in the blocked balances arrangement contained in Morgenthau's draft proposals.

Mr. Morgenthau dropped that proposal in his third draft, and, of course, it is not contained in the Bretton Woods proposal. But this is not saying that, should the Bretton Woods scheme go through, it would not provide a way whereby the United States could be made to assume these British debts. On the contrary, it appears to me that the fund could and would be so operated as to bring this about.

If the English pound sterling were unblocked and left to find its true value in a free market, its exchange rate would probably drop considerably.

One of the main objects of this scheme is to place the United States' gold stocks at the disposal of the British Government for the support of the pound sterling. It certainly should by now be no secret that London hopes, through this scheme, to help it regain its position as the world's banker and financial center.

Here I should like to quote Lord Keynes, the spearhead of this scheme. In presenting it to the House of Lords, he said:

"So far from an international plan endangering the long tradition, by which most empire countries, and many other countries, too, have centered their financial systems in London, the plan is, in my judgment, an indispensible means of maintaining this tradition."

I have been criticized for opposing this scheme; for not offering a substitute. Gentlemen, there just is no substitute for a monstrous proposal like this. If England needs our help she should come to us with her proposition face up, so that we can both see what we are signing. The greatest good we can do England right now is to refuse to have anything more to do with Lord John Maynard Keynes and all of his kind, because I believe he is as dangerous to his own country as he is to ours. But the question of real and lasting aid to England is a matter foreign to any discussion relating to the Bretton Woods proposal.

The Bretton Woods proposal is of much concern to India, Egypt, Latin-American, and Scandinavian countries because of their large holdings of blocked sterling balances in London. The gold and credit resources which the United States would make available through the fund to Great Britain would be of material help to her in funding, servicing, and paying off her debts to those countries. This is one reason why those countries are pressing so hard to have the United States effectuate this scheme. The making available to them loans by the United States through the fund is the other reason.

It must be realized that the money which the United States would lend to member countries could not be paid back to the United States except in goods. Furthermore, we would have to take the kind of goods they had to sell, whether we wanted them or not, or nothing.

We see here what so many of the foreign countries who are interested in promoting this scheme mean when they argue that unless the Bretton Woods proposal is adopted in its present form the opportunity for setting up an organization for international cooperation will be lost.

Plainly speaking, they want the United States to pay debts which Great Britain owes them and to lend them money. This is for many of the prospective members of the plan about all the meat contained in the Bretton Woods proposal. It should be easy to see why they don't want any substitute. For them there couldn't be any.

When we get somewhere near the heart of this scheme, we can also sense the reason for the great secrecy in which Mr. Morgenthau has shrouded his movements in promoting it, and also his anxiety to put it over just as quickly as possible. Time and darkness are to him the essence of success in having it approved by the Congress. Given sufficient light and time, the Keynes-Morgenthau scheme will be turned down by the Congress and the people in no uncertain terms.

CONTROL OF WORLD PRICE OF GOLD

The proposal would vest in the international monetary authority operating the scheme the power to control the world price of gold. This would constitute the ultima ratio of political power, and to the extent that the men in control of the scheme were capable of exercising it they would possess the power of life and death over each and every country in the world.

To presume that a group of men is endowed with sufficient intelligence that, if given the power, it could improve upon the control of the world price of gold, which power has been exercised by the social forces in process of evolution for 5,000 years, is to invest it with attributes superior to any possessed by God.

POSITION OF GOLD

What would be the position of gold should the Bretton Woods proposal be adopted? Would it have the effect of further demonitizing gold internationally? You gentlemen representing gold mining interest in the United States may be especially concerned in knowing the answer to this question.

We know what has been the position of our Treasury respecting the gold standard. Harry D. White, Mr. Morgenthau's expert, has severely criticized it and we know that the Treasury's entire fiscal and monetary policy has been to annihilate it, so far as our domestic economy is concerned.

Perhaps it would be better to quote again the father of this scheme. In the same speech from which I have just quoted and after explaining the manifold advantages that would accrue to his country by its adoption, he said:

"I hope your lordships will trust me not to have turned my back on all I have fought for. To establish those three principles which I have just stated has been my main task for the last 20 years. Sometimes almost alone, in popular articles in the press, in pamphlets, in dozens of letters to the Times, in textbooks, in enormous and obscure treatises I have spent my strength to persuade my countrymen and the world at large to change their traditional doctrines and, by taking better thought, to remove the curse of unemployment. Was it not I, when many of today's iconoclasts were still worshipers of the calf, who wrote that 'Gold is a barbarous relic'? Am I so faithless, so forgetful, so senile, that at the very moment of the triumph of these ideas when, with gathering momentum, governments, parliaments, banks, the press, the public, and even economists, have at last accepted the new doctrines, I go off to help forge new chains to hold us fast in the old dungeon? I trust, my lords, that you will not believe it."

Then further on in his speech, in order to remove all possible doubt as to his position on the gold standard, he said:

"If I have any authority to pronounce on what is and what is not the essence and meaning of a gold standard, I should say that this plan is the exact opposite of it."

ABANDONMENT OF GOLD STANDARD

Practically every nation in the world has already abandoned the gold standard in its domestic economy. Before the House Banking and Currency Committee, after I had put the direct question to Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve System, as to whether there was any relation between our gold reserves and bank and circulating currency, the following colloquy took place:

"Mr. ECCLES. I do deny that the amount of the gold reserve, the gold requirements have anything to do with the price level, which means it has nothing to do with the value of the currency.

"Mr. SMITH. Aren't you in effect saying there is no relation whatever between the gold in this country and our currency?

"Mr. ECCLES. That is right.

"Mr. SMITH. There is no relation whatever?

"Mr. ECCLES. That is right.

"Mr. SMITH. You then take the attitude we are completely off the gold standard?

"Mr. ECCLES. Yes; completely."

In this I think Mr. Eccles is correct. There is no doubt in my mind that we have abandoned completely the gold standard, so far as our domestic economy is concerned, and that we are just as completely on a political promise-to-pay standard.

Is this situation encouraging to the gold-mining interests? Why should our people be taxed to pay for digging gold out of the earth in one part of the country, only to be buried in the earth in another, where it remains as useless to our economic life as it was in its natural state?

WORLD-WIDE TRADE AND MONETARY CARTEL

The proposed international monetary fund has all the earmarks of a world-wide trade and monetary cartel. It would control trade, supply and demand of foreign exchange, rates of exchange, capital transfers, and the price of gold. Like all cartels, its main purpose is to annihilate competition—that is, liberty.

Two other world-wide movements are now in process which must be considered in connection with the Bretton Woods proposal to establish a world-wide trade and monetary cartel. These are the many commodity control schemes, such as the international tin agreement, international rubber agreement, the Chadbourne sugar plan, etc., and nationalistic monopoly of foreign trade as existent in the Soviet Union.

All of these schemes involve the basic principles of a cartel, and like all cartels, are moving in the direction of international barter arrangements. No one, of course, can tell how far this may go or the extent to which it will push gold out of the international economy. It appears to me, however, that these international schemes have the prospect of completely demonetizing gold internationally and setting up a world-wide political monopoly of ownership and control of gold on the order of the individual political monopolies of gold which now exist in the several countries. Should such an arrangement eventuate, is it not possible that this would have the effect of completely destroying the free market for gold in the international economy and make it useless to add more gold to the existing store the same as has taken place in the domestic economies?

The proponents of this scheme talk much about the need for international cooperation. They tell us this is wanting so much that it is causing all sorts of evils, even war itself. One would almost think from their protestations that the idea of international cooperation had never entered men's minds until they came on the scene.

Now they declare to high heaven that they have found something, which if they can only get people to adopt, will usher into the world this much-needed international cooperation and bring to us all everlasting peace and good will.

But I believe if these people cared to look into the matter a little they would find that we have had something in the nature of cooperation between nations. Indeed, if they did this they would probably find that there has been very much such cooperation.

The trouble is that these neo-internationalists are not talking about the kind of cooperation of which we have been in the past accustomed to think. Heretofore, the term cooperation meant a voluntary working together of private individuals. That is the kind of cooperation that made America the fine country it was—and which we hope it will be again—and which brought about the most equitable and greatest amount of international trading and good will the world had ever experienced.

But that is not the kind of cooperation the advocates of this international venture have in mind. They are thinking of an entirely different kind of cooperation. They do not want the sort of cooperation where men voluntarily work together to supply their mutual wants. They want politically forced cooperation in human endeavor.

The only voluntary cooperation that is involved in their scheme is in respect of the several governments interested in promoting it. Getting all these governments to join it must be done on a more or less voluntary basis.

But after the governments had combined they would destroy what is left of voluntary international cooperation and replace it with politically coerced international cooperation, just as they have severally been destroying voluntary cooperation and replacing it with politically forced cooperation in their respective domestic economies.

Gentlemen, I hope you will understand that it is not my intention to indulge in any special pleading. It is but natural that those of you who have interests in gold mining should have more immediate concern about the Bretton Woods proposal than some of the other interests. But I believe the problem involved here is so fundamental and vital to the very existence of our social organism that we should not approach its solution from any angle of special interest. I think it is just as much in the interest of silver, copper, oil, manufacture, agriculture, salary, and wage earner, and all other interests to defeat the Keynes-Morgenthau scheme to set up an international trade and monetary cartel as it is in that of gold mining.

It is primarily the political monopoly of ownership and control of our gold stocks, and the forcing upon us of inconvertible paper currency that is so rapidly destroying our free enterprise process and regimenting us into a totalitarian regime.

It is when we examine the Bretton Woods proposal in connection with this phase of the gold problem that we see looming before us the challenge to our common interests. Until we can break this monopoly and restore a free gold market we should expect nothing but a continuation, at an accelerating rate of speed, of the abolition of private property and its replacement by communism.

In closing I should like to quote a bit of rare monetary wisdom. This was spoken by Francis Horner in the House of Commons in 1811:

"With respect to the word coin, what is it? Does it make any difference as to the standard? The coin is the King's assurance to his subjects that their property shall be protected; that the coin shall be of that fineness and weight necessary to give to all in their dealings an equal security and an equal participation of justice."

How the People Feel Back Home

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. STEVENSON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following letter from a constituent which is expressive of the sentiment of a great segment of the people of this country:

LACROSSE, WIS., *January 30, 1945.*

Hon. WILLIAM STEVENSON,
Wisconsin Congressman.

DEAR MR. STEVENSON: Just a few lines to let you know how many people will be happy to have social security expanded.

The teachers do a very great work and should be included. Many of them are getting old, the pensions are small, and they would feel much more secure if they were sure of a little more income.

Would like to see many more occupations included in social security.

Hope you receive the proposed raise in salary.

Thank you.

Cordially,

A VERY GOOD FRIEND.

Peacetime Military Conscription

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement which was

adopted by the Milwaukee (Wis.) Federated Trades Council, American Federation of Labor, at its regular meeting of January 17, 1945, relative to peacetime military conscription:

The adoption of a system of permanent compulsory military service through conscription would effectuate a great fundamental change in historic concept of our Government. Such a fundamental change should not be made without the most careful and calm consideration of the necessity and the results of such change. Neither should such a change be undertaken without giving all of our people a chance to express their views under normal conditions.

If our hopes for the complete defeat and disarmament of the aggressor nations and for the setting up of an international organization to maintain peace and security are realized then there will be little necessity for peacetime military conscription in our Nation. To urge peacetime military conscription now means that we either doubt our ability to set up an international organization to maintain peace and security or that we doubt the ability of such an organization to achieve its purpose. Either doubt expresses a defeatist attitude.

It seems to us to be self-evident that in the midst of this global war with its consequently natural war psychology no calm and dispassionate consideration can be given to this proposal. To act on such a proposal now would be an effort to transpose the war psychology into the peacetime period.

Millions of our citizens are now serving in our armed forces. These citizens have no adequate means of expressing their opinions and wishes on this vital matter while they are in the service of their country. In our opinion it would be a breaking of faith with them to impose such a fundamental change in the historic concept of their Government on them during a time while they are voiceless and voteless, because they are in the service of their country.

For the reasons set out above the Federated Trades Council of Milwaukee and vicinity, representing 85,000 members of American Federation of Labor unions in the community emphatically goes on record against any congressional action on peacetime military conscription during the war period and until the results of peace treaties and international commitments are definitely known.

Broadening Absentee Voting

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial published in the Daily Times of Mamaroneck, N. Y., on January 16, 1945, titled "Broadening Absentee Voting":

BROADENING ABSENTEE VOTING

It will be recalled that during the last political campaign every effort was made on the part of New York and other States to get ballots into the hands of our men in the armed services, wherever they might be. Scenting partisan advantage, the supporters of the New Deal sought to have the electorate of the Nation believe that the Republican candidate for the Presidency, Thomas E. Dewey, of New York, was loath to expedite these ballots, on the presumption which was never proven that a smaller vote would favor the Republican chances.

As a matter of fact, the record of New York State in getting applications for ballots to those in armed service, both in this country and abroad, was excellent. Further, these State ballots carried the names of candidates for State and local offices, whereas the Federal ballot, which was favored by the New Deal and exploited to the fullest as more advantageous, contained only the names of candidates for Federal offices.

With the election past and their Presidential candidate elected, little has been heard from the New Deal supporters to bolster their false claim that Governor Dewey was not cooperative in getting absentee ballots overseas. The record which this State made in that respect would now make such claims obviously untrue.

But along this same line it should be noted that there is now pending at Albany legislation which would broaden the ranks of those eligible to receive absentee ballots outside this country—and this legislation comes from a Westchester Republican, at that. The bill in question, from Senator Pliny W. Williamson, of Scarsdale, would give the same voting rights while away from home to members of the merchant marine and the Red Cross.

We believe the principles behind this legislation sound. A sailor of the merchant marine or a worker of the Red Cross is just as much entitled to an absentee ballot, when forced by national emergency to be away from his or her voting precinct, as are those actually in the armed services. We trust the amendment will become law.

At the same time, we suggest to other States which favored the Federal ballot that now is the time to alter their election laws along this same line, in order that absentee voting by those called away by the war may be done constitutionally, and not left as a forgotten item to be revived again in 1948 as an emotional appeal to prejudices.

Compulsory Military Training in Peacetime

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the executive board of the Milwaukee Archdiocesan Holy Name Union with reference to proposed compulsory military training legislation:

Whereas there are now being put forward in several quarters and for many widely different reasons, certain plans for several kinds of universal, compulsory, peacetime, military training, or governmental service for all American youth or for boys only; and

Whereas present wartime legislation is capable of meeting every wartime emergency for military or civilian service until the declaration of peace; and

Whereas compulsory, universal, peacetime, nonmilitary, governmental service is unnecessary and hazardous to the youth of America and to the American way of thought and life under any plan; and

Whereas any system of compulsory, universal, peacetime, military conscription and training offers great hazard to the fundamental American institutions of the home, the church, and the school, as well as to the moral welfare of the youth themselves, and the democratic way of living and thinking; and

Whereas there will be no need for a heavily armed United States in the post-war world of a just and realistic peace is consummated; and

Whereas the security needs of the United States in the post-war world can be neither wisely nor definitely determined at this time: Therefore be it

Resolved, That this executive board representing 40,000 men of the Milwaukee Archdiocesan Holy Name Union hereby and unequivocally protest against any type of compulsory, universal, peacetime, nonmilitary service for all youth, but especially for girls; and be it further

Resolved, That the executive board protest against the adoption of any plan of compulsory, universal, peacetime, military conscription and training that is not based on a clearly discerned and critical need for national security; and be it further

Resolved, That this executive board join with the bishops and archbishops of the United States in respectfully requesting that any consideration and vote on this matter be postponed until the war has been successfully concluded and the actual needs of national security are made manifest; and be it further

Resolved, That a copy of these resolutions be addressed to the President of the United States, the chairman of the Military Affairs Committee of both Houses, and to the Senators and Representatives of Wisconsin serving in the National Congress; and be it further

Resolved, That a copy of these resolutions be forwarded to every branch president of the Holy Name Society in the archdiocese of Milwaukee.

Arkansas Legislature Rescinds Former Resolution on Limiting Taxing Power of Congress

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. PATMAN. Mr. Speaker, in my extension of remarks contained on page A278 of the CONGRESSIONAL RECORD of January 24, I mentioned I had been advised that the Legislature of the State of Arkansas had passed house concurrent resolutions Nos. 3 and 4, introduced by Hon. Emory Thompson, which totally rescinded the prior action of the 1943 Arkansas General Assembly favoring the passage of the so-called twenty-second amendment.

I believe that the members of the present assembly are to be commended for this action in removing the State of Arkansas from the group of States which have gone on record as favoring the passage of the twenty-second amendment. You will note that the Arkansas rescinding resolution contains reference to their former action having been taken because the purport of this resolution was misunderstood by various members of the house and senate. It is not surprising that many members have misunderstood the real intent of the proposed twenty-second amendment; the gentlemen at

the head of the movement to put over this amendment are masters at deceptive propaganda and the subtle manner in which they have waged their campaign is to be respected, if not to be admired, for its cleverness.

When the truth was brought to the attention of the members of the Arkansas assembly, it did not take them long to show their courage in correcting their former action.

I have had numerous requests from members of various State legislatures of other States which have passed an endorsing resolution as to how they might rescind their original action. I therefore reproduce below a copy of the rescinding resolutions—House Concurrent Resolutions 3 and 4—passed by the State of Arkansas so that other legislators who may wish to take similar action may consider its form:

House Concurrent Resolution 3

Whereas Senate Concurrent Resolution No. 10 by Senator Abington was adopted by the Fifty-fourth General Assembly; and

Whereas the purport of this resolution was misunderstood by various members of the house and senate: Therefore be it

Resolved, That the adoption of the Senate Concurrent Resolution No. 10 by the Fifty-fourth General Assembly be, and is hereby, rescinded by the Fifty-fifth General Assembly.

House Concurrent Resolution 4

A resolution memorializing the Congress of the United States not to amend the Constitution of the United States relative to taxes on incomes, gifts, and inheritances

Whereas there is now pending in the Congress of the United States proposed legislation to repeal the sixteenth amendment to the Constitution of the United States and to amend said Constitution relative to taxes on incomes, gifts, and inheritances by providing for a limitation of taxes thereon to 25 percent; and

Whereas the people of the State of Arkansas are opposed to such amendment to the Constitution of the United States being passed at this time: Now, therefore, be it

Resolved by the House of Representatives of the State of Arkansas (the Senate concurring), That the Congress of the United States be and is hereby memorialized and petitioned to defeat the efforts now being made to repeal the sixteenth amendment to the Constitution of the United States and the effort to submit a proposed amendment which would limit the maximum rate of gift, income, and estate taxes to 25 percent; be it further

Resolved, That the secretary of state of Arkansas be, and he is hereby, directed to forward a duly certified copy of this resolution to the Senate of the United States and to each Arkansas Member thereof.

Free Labor Has Made America the Greatest Industrial Nation in the World

EXTENSION OF REMARKS

OF

HON. D. EMMERT BRUMBAUGH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. BRUMBAUGH. Mr. Speaker, the mobilization of civilian manpower provided for by H. R. 1752 is, in my humble opinion, contrary to the traditional American concept of liberty and freedom. This young and growing Republic has the enviable record in the family of nations of being the greatest productive country in the world, while the genius of our industrial leaders and the skill of American labor are universally respected and fully recognized as models of efficiency and worthy of emulation.

This remarkable industrial growth of our Nation has been accomplished by the free labor of a liberty-loving people, and the astounding record of production in all phases of our industrial life is mute testimony of the fact that our system is infinitely more successful than the results achieved by nations where labor is conscripted and forced to work under the iron rule of a dictatorial form of government.

The shackling of free people by using coercive means to secure the fruits of their labor is apparent in the provisions of H. R. 1752, and despite my great respect and deep admiration for the military and naval spokesmen who favor its enactment, I find that I cannot in good conscience support this bill in its present form. It is the essence of discrimination and I seriously question the constitutionality of such a drastic proposal. It is directed solely to the male segment of our population within the age brackets of 18 to 45 years and affects specifically men in IV–F classifications of the selective-service law who, because of no fault of their own, find themselves in such a category.

Under section 6 of H. R. 1752 the provisions of the Soldiers' and Sailors' Civil Relief Act of 1940 as amended are extended to cover these labor draftees, thus placing them on a par with the servicemen in our armed forces who may be serving for as little as $50 a month as a private in the United States Army and subjected to the perils of front-line duty. In addition, from a civilian standpoint such a so-called labor draftee may find himself working at a machine in a defense plant alongside a fellow-workman who because he accepted his job prior to enactment of H. R. 1752 finds he has a different status than the labor draftee and that he is not eligible for benefits such as provided in the Soldiers' and Sailors' Civil Relief Act of 1940 which is to be extended to those drafted in industry. Such a condition will certainly not be helpful to improving the morale of employees and, as a result, production will be seriously impaired and definitely retarded.

So-called labor draftees under H. R. 1752 will be paid the prevailing wage rate of the industry to which they are assigned and given the distinction of being regarded in the same light as members of our armed forces, millions of whom are making heroic sacrifices by facing shellfire in the front lines on our far-flung battle fronts at a wage rate of $50 a month.

This bill was originally termed as a work-or-fight measure, but due to its inconsistencies and discriminatory provisions it is now before us as a compromise in that it has been changed to a work-or-jail proposal, thus giving the opportunity to a person affected by its provisions the right to go to jail rather than submit to its provisions.

There is no denying the fact that the inefficient manner in which the manpower situation has been handled accounts for the alleged shortage of manpower in certain sections of the country. It is freely admitted that the so-called manpower shortage is spotty and prevalent only in certain sections of the country, while in many communities there is surplus manpower available if the proper agency would cope with the situation by employing an intelligent approach to the problem through a detailed investigation which would reveal the true facts and then by proper administrative procedure seek to correct the situation without resorting to coercive legislation as exemplified by the provisions of H. R. 1752. Even the Federal Government is revealed as an archhoarder of manpower, with the result that a poor example is being furnished to private industry which is charged with the same sin.

It is doubtful in my mind whether men in the armed forces who are making untold sacrifices to preserve America as a free nation will find any sympathy in the efforts being exerted to conscript their fathers, relatives, and friends and force them into virtual labor battalions on the pretext that there is a grave manpower shortage.

I am opposing H. R. 1752 because I am convinced that a sincere effort has not been made to properly utilize existing manpower and that instead a drastic and totalitarian idea is being forced upon us under the guise of aiding the war effort. As an overseas veteran of World War No. 1, I yield to no man in loyalty to my country and its cherished ideals. I am opposed to the enactment of H. R. 1752 because I am not convinced that the patriotism of American workmen has sunk to such a low ebb that it is necessary to herd them into virtual labor battalions and force them to bow to the tactics of totalitarian countries, whose first step in bringing about their ultimate downfall was to shackle free labor, thus destroying its effectiveness and finally reducing it to a state of abject slavery.

National Cemeteries

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial of the St. Louis Globe-Democrat of January 29, 1945, on the subject of national cemeteries:

NATIONAL CEMETERIES

Congress now has before it numerous bills calling for the creation or expansion of national cemeteries. They range from a proposal to return to this country and bury in Arlington Cemetery in a tomb identical with

the tomb of the Unknown Soldier of World War No. 1, the body of an unknown American warrior of this war, to the demands of individual States for the establishment of national cemeteries.

Although the maintenance of national cemeteries has been a national policy since shortly after the start of the Civil War, there has never been a well-defined program to distribute them equitably among the States. There are now 92 national cemeteries, of which 79 are under the jurisdiction of the War Department and 13 under the Department of the Interior. More than 50 of these cemeteries are located in 6 States, while there are no national cemeteries in 20 of the States. Many of the existing cemeteries are relatively inaccessible to railroads and highways.

Because of their inaccessibility and the limitations of expansion, the War Department has recommended that all but 9 of the existing cemeteries be inactivated and 72 new cemeteries be developed, of which 69 would be in the United States.

Missouri has three national cemeteries—at Jefferson Barracks, at Jefferson City, and at Springfield. There is, however, no provision in any of the bills before Congress to provide for the expansion or development of any national cemetery in this State. Certainly this State is entitled to consideration in the location and expansion of national cemeteries recommended by the War Department.

St. Louis is particularly interested in the cemetery at Jefferson Barracks. This is one of the historic military burial grounds of the Nation. It serves a large and populous area of the State.

If assurance is given by Congress that the national cemetery at Jefferson Barracks is to be expanded, citizens of St. Louis might well consider in planning their war memorials to the veterans of this war an appropriate memorial to be erected in the cemetery at the barracks. One form which such a memorial might take would be a chapel in which funeral services might be held for our soldier dead.

The first step, however, is to insure Missouri's participation in the national-cemetery program projected by the War Department. This is a matter which should receive the attention of the Missouri delegation in Congress.

The Altoona Plan Provides Careers for G. I. Joes

EXTENSION OF REMARKS

OF

HON. D. EMMERT BRUMBAUGH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. BRUMBAUGH. Mr. Speaker, under leave to extend my remarks, I include the following article by Miles Hollister, of Altoona, Pa., appearing in the March 1945 issue of the American magazine:

The article titled "Careers for G. I. Joes" describes in an interesting manner the initiative, patriotism, and unselfish devotion of 50 prominent citizens of Altoona, Pa., located in my congressional district, in their determined efforts to be of practical aid to returning service men and women through a well-organized and highly efficient Veterans' Counseling Committee.

Altoona, Pa., is the site of the largest railroad shops in the world, operated by the Pennsylvania Railroad, while the famous Horseshoe Curve, located on the outskirts of the city, has elicited keen interest as a model of efficient engineering skill.

The city of Altoona has a splendid record of enlistments in the armed forces, and it is authoritatively stated that one out of every four male citizens is wearing the uniform of some branch of our armed forces.

The splendid service rendered by the Veterans' Counseling Committee has focused national attention on the methods employed, and from the interest manifested the Altoona plan is certain to be adopted by countless other communities eager to render a real service to returning veterans.

The article referred to is as follows:

CAREERS FOR G. I. JOES

(By Miles Hollister)

One of the greatest economic losses and tragedies in American life has been the number of people who've spent their working time as square pegs in round holes. As a personnel counselor of several large corporations for 10 years I'd say that at least 60 percent of all Americans are misfits in their jobs! Many other personnel men have reached the same conclusion. That 60 percent adds up to a lot of misery when you thing that the average person spends at least 50,000 hours during a lifetime on his chosen job.

Ten years of trying to rescue these misfits from their plights convinced me that something should be done to prevent this appalling waste of human energy and talent in the future. And the post-war period seemed like a good time to make a start, for then there would be 10,000,000 returning servicemen and millions more war workers looking for new jobs.

So in Altoona, where I am now an employer, I set to work. I found that we had 12,500 men from our county in the armed forces. At least 4,000 of these were kids who had gone right from school into service. They had never had a job in their lives except carrying a gun. Another 2,500 of them had less than a year of civilian-job experience before induction, so they mostly were still in the groping stage. And, of the remainder, hundreds no doubt had been in jobs before the war that they had already found unsuitable.

I found as I talked to other businessmen that I was not alone in my worrying. The idea of getting these thousands of youngsters settled in careers they liked was intriguing, but the difficulties were somewhat frightening. What the returning veteran would need most, we agreed, was expert vocational guidance. But who could provide such guidance? Our first thought, of course, was the professional psychologists. That was obviously impracticable. There weren't enough of them in the county to make a dent in the problem.

The solution we finally achieved was a bit amusing, but hard-boiled. It is now widely known as the Altoona plan. We—a group of business and professional men in the county—decided that we would all go to school and train ourselves to be job counselors. We approached the department of psychology at Pennsylvania State College, 40 miles away, and asked them if they would give us a practical, down-to-earth course in vocational guidance. They agreed with enthusiasm, and there followed 7 weeks of intensive training—with one session each week.

In the class were 50 business and professional men and women making up what we called the Veterans' counseling committee. The members were selected from every business and profession in the county.

There were, for example, coal dealers, retail merchants, automobile men, factory managers, and eight executives from the Pennsylvania Railroad. The Pennsy was so well represented because almost half of the county's breadwinners work for the railroad. (Altoona's Pennsylvania Railroad shops are the largest in the world.) On the committee were also the principal of our high school, the head of our local undergraduate center, doctors, lawyers, psychiatrists, and members of the clergy—Catholic, Protestant, and Jewish.

After we had taken the course, we realized our committee of 50 was in some respects better qualified to guide our young people into jobs than professional psychologists or vocational specialists would be. We have an intimate knowledge of the county and all its job opportunities. In short, we are the employers of the county. We have at least one man or woman with years of experience in any field of work a veteran might name. As a group, we know the skills and talents required in our respective industries, businesses, and professions. For this reason, we are in a unique position to analyze each veteran's aptitudes and interests and place him where they will be used to the best advantage for both the veteran and his employer.

Already more than 500 of Blair County's 12,500 servicemen have returned, and we've had an opportunity to counsel many of them. The results so far are good, indeed. We have our own headquarters with a full-time secretary. Our expenses, which are surprisingly low are met by funds raised by our chamber of commerce and other community organizations.

This group of ours is more than just a committee to counsel veterans. We expect to work with all young people in our community who are starting out in life. If the rush of returning veterans is not too great, we hope to counsel high-school seniors this coming spring. As we see it, the veteran problem is just the springboard for us to set up a permanent counseling agency which all young people in our community can consult if they wish.

In handling veterans we've already learned that we have a tough, human problem on our hands. A few of the boys are antagonistic to civilians. Others are high-strung or irritable.

Most of them are what I would call ill at ease. It is a terrific strain to move from a regimented life, ruled by bugles and superior officers, to a normal civilian life. In a mild sense, it is like coming out of jail.

When a boy comes to our headquarters he is met by a charming secretary who was selected primarily for her qualifications as a hostess. She puts him at his ease, obtains a brief record of his background, and introduces him to the counselor on duty who seems best qualified to counsel him. (Counselors rotate. At this time each serves a half-day every 6 weeks; when full demobilization comes, each will serve a half-day every 2 weeks.)

The counselor takes Joe into a private office which is not an office at all but really a cozy den. No desks. Just a couple of soft chairs and a soft light. First, the counselor makes Joe feel he is at home and with a friend. But definitely no glad-handing. They chat about old times and mutual friends. Our counselors are warned to lay off the boy's battle experiences unless the boy brings them up himself. Perhaps he's had a nightmarish experience he is trying to forget.

Gradually our counselor brings out the boy's ambitions, and then probes into his education, his hobbies, his record at any previous job, and his progress in the armed forces. The counselor must not make any decision himself about a career for the boy. His job is simply to guide the boy's thinking and supply him with facts which will make it possible for the boy to reach an intelligent decision for himself. The decision must be the boy's. If it isn't, he'll never be satisfied.

We had one boy who knew what he wanted: A job where he would be handling other people. However, his background showed no experience along this line. His school record gave no indication of leadership and in 2 years of Army service he had advanced only to private, first class. We asked him why he insisted upon supervising the work of others. His answer was surprising. He said, "Well, I've been ordered around for 2 years in the Army, and I swore to God that when I got out I wouldn't work anywhere unless I was the boss."

Obviously, his desire hardly qualified him for a supervisory position. Further probing revealed that in school he had done excellent work in manual training. With this as a starting point, we gradually uncovered the fact that he had a very unusual aptitude for mechanics, but had never done much about it. Today he is serving a machinist apprenticeship—and he likes it.

We had another case where the situation was exactly opposite. A 37-year-old chief petty officer came to us from the Navy. Stan Ruth, the secretary of our chamber of commerce, was his first counselor, and Stan did a swell job. A study of his pre-war record showed several years' experience in bookkeeping. He had some experience in selling, but on the face of his civilian record there was no indication of executive ability. It was his Navy record that definitely showed an aptitude for organization and leadership.

A closer study of his pre-war experience showed that while he was rated a bookkeeper, he had given excellent cooperation to other departments in the business and had always assumed work not required of an ordinary bookkeeper. Moreover, the particular type of bookkeeping work he had done gave him a close association with retail merchandising.

A neat job of putting two and two together added up to a man who had more ability than he knew anything about. A company operating a chain of hat stores wanted a local manager right away. But Stan wanted to be sure.

He called in Art Johnston, manager of J. C. Penney's. Art has been hiring people in the retail field for years. He had a long talk with our Navy man, and together they decided that he could handle the job. And he is handling it—in a way that very much pleases his district manager, and he is more enthused about his work than he has ever been before in his life.

This case illustrates one of the basic principles of our counseling system. We call it specialized counseling. When the counselor to whom a veteran first talks has reached the stage where the boy's aptitudes and interests point to a particular field of work, he is then turned over to a man with years of experience in that field. This specialized counselor turns his business inside out for the veteran. He tells him the good and the bad. He cites examples of the progress the average person makes in that field. In other words, he gives the veteran down-to-earth facts upon which to make his own decision.

Then there are the boys who have too many interests. One very intelligent lad came to us after a medical discharge from the Army. I happened to be the counselor assigned to him. He presented a regular patchwork of vocational desires. At various times he had wanted to be a salesman, a journalist, a teacher. Just before entering the Army he seriously thought about becoming—of all things—a male nurse. He had also been a salesman for a bakery and had spent one semester in college. He wanted to continue his education. But for what?

Here was a stickler. After a lengthy interview I decided to call in some help. The boy was given I. Q. and aptitude tests by the Penn State experts, and a compromise was worked out. This lad is now in college studying to become a teacher of history and English. He is majoring in these subjects because he feels they will help him in writing if he ever decides to switch from teaching. A new world has been opened to this boy.

The American Air Forces have provided us with some of the most ticklish of all cases. These are the 23-year-old captains and majors who are accustomed to lots of responsibility, high tension, and $5,000-a-year salaries. Some of them come back expecting a $5,000 job in civilian life. But doing what? We sit down and tell them something like this:

"Yes; you made $5,000 a year and you were more than worth it to America. You carried heavy responsibilities and you risked your life every day. But you were doing a highly specialized job that has no equivalent in civilian life. And unfortunately you have no civilian experience to fall back upon.

"However, your situation is not too difficult, because you acquired good tools to work with. You have had valuable training in the armed forces. You have learned the meaning of responsibility. You have gained experience in handling men and in organizing work. You should make rapid progress once you learn the ground work of your new job. And, besides, you are young, you have time on your side. That $5,000 will be more valuable to you 5 or 6 years from now than it would be at present. We can find you jobs that will have a promising future, but they will require a little patience." Usually they get the point, because they are intelligent lads.

Since our counselors are community men themselves, we know the prejudices and peculiarities of every employer in the county. Things a stranger couldn't know. We know bosses to whom we wouldn't send a high-strung kid, because they are too impatient. Unfortunately, we know two or three that we wouldn't send anyone to, because they are chronically unfair with their employees.

If a field is already overcrowded, we warn the boy about it. We suggest a very similar type of work where the chance of steady employment is better.

If a veteran wants to take advantage of the G. I. bill and buy a business or a farm, we guide him carefully and make sure that he doesn't become the victim of some overzealous salesman. We also have committees that try to make him feel that his home town is really home. If he acquired a wife in Georgia or Iceland, we see that she is introduced to all the neighbors.

We had some trouble trying to decide how to sell this program to the service men and women from Blair County. We wanted them to know about it before they got back—but they were scattered to all corners of the world. We finally decided to compile the names of all our service people from the induction records of our local newspapers. Then we sent letters to the whole 12,500. These letters were mailed to their homes to be forwarded. Each letter contained a booklet describing the plan and telling our fighting folks what we hoped to do for them when they got home.

The answers we have already received are very gratifying. We intend to write to our service people about every 90 days until they return

Of course, no one can predict tomorrow's economic conditions nor say with any degree of certainty how many jobs will be available. But we hope to place all our boys and girls who come back from the service. That doesn't mean we shall have to find 12,500 jobs because we have that many people in the service. Some of the boys aren't coming back—I'm not speaking of the casualties—and some who do come back will not be looking for jobs right away.

Probably 20 percent will stay in service for at least a couple of years after the close of the war. I think we're safe in assuming we'll have at least 2,000,000 men in our armed forces for some time to come. Many of these may be men who want to stay in the service.

Then there are a lot of boys who won't want to come back either to their old jobs or their old town. Some have been stationed in Oregon or Texas and like it there. A War Department survey revealed that perhaps 40 percent of all veterans now being discharged aren't going back to their old towns. Some estimates place the percentage even higher.

At present it's anybody's guess as to how many of our veterans will actually come back looking for jobs in our county, but it certainly won't be anywhere near the number who are in the service. At any rate, we in Altoona are resolved that we are not going to bungle the job of absorbing the boys into our community as it was bungled throughout America after the last war. Our treatment of veterans was disgraceful. I know. I was one of them. I finally got a job—after being pushed around by half a dozen agencies—by answering a newspaper ad.

We need not muff the veteran problem this time, not if we can get it into our heads that to the individual veteran the final aim in life is happiness, and if we can remember that no man can be happy unless he likes his job.

We in Altoona feel, frankly, that every community in America should take some sort of realistic action to get their returning veterans into jobs that will provide the satisfaction and happiness they deserve. By doing this, American business in the various communities will be taking advantage of the greatest opportunity it has ever had to win supporters for free enterprise.

And there are other important angles. Our scheme to give young people of our community this homespun vocational guidance is paying off in some intriguing ways we hadn't even thought of.

We have found that this counseling work has already aroused in the businessmen on our committee a new consciousness of responsibility toward their own employees. Some of them are already better employers than they ever were before. I know one in particular who has become much less interested in dollars and much more interested in people.

When the tumult and the shouting of World War No. 2 has died away, we hope to go on counseling our youth. As the years go by we hope, through our citizens' counseling group, to forge a real bond between our schools and the businesses and professions that employ their students. We hope that through this counseling service we can build a bridge of human understanding between the old and the new generation.

We hope, too, that our young people will no longer be poured from our schools into a cold and indifferent community—to roam our business streets looking for "anything."

Will it work? Only time can tell. It will work if human nature can become unselfish enough—if the average American on Main Street will forget his own selfish interests for a half day a month—and lose himself in the problems of a kid who needs his help.

It may be only a dream.

And still—we may have something.

America's Most Needed Superhighway to Northwest Pacific Via Gulfport

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a

speech made by a constituent of mine, Dr. Frank O. Kreager, of Pateros, Wash. Dr. Kreager delivered this address for the Gulfport Rotary Club and it contains real food for thought for all those interested in post-war highways:

Highway construction is generally approved and supported as a post-war project for preventing unemployment during the period of industrial readjustment. Several highway construction bills are before Congress. One, the Snyder bill, calls for the expenditure of $12,000,000,000 (about $90 per capita) for six north-south and three east-west superhighways.

Post-war highways should be and can be built, not only to give employment but to give full value for cost to the people.

Of all possible transcontinental superhighways, the most needed, most useful is a northwest-southwest diagonal extending from the State of Washington through Oregon, Idaho, Utah, Colorado, New Mexico, Texas, and Louisiana, thence along the Gulf coast of Mississippi and Alabama and diagonally across Florida to Miami and Key West and connecting:

1. At Oroville, Wash., with the Okanagan Valley Highway of British Columbia, which should be extended to become the real Alaska Highway. ("Alcan" is on the wrong side of the Rockies and unusable about 8 months of the year because of cold and snow.)

2. In Texas with the Mexican highway at Laredo extending to Mexico, D. F., and beyond—and ultimately to the Canal Zone and South America. From Bering Sea to the Straits of Magellan.

3. At Key West by ferry to Havana with the Cuban highways.

Why this northwest-southeast transcontinental superhighway?

1. Many north-south, east-west, and northeast-southwest Federal highways, but no northwest-southeast highway. One can go by car from Gulfport to Seattle if he doesn't get lost in the maze of the sections of 15 or 20 different highways over which he must travel. An airline superhighway would be several hundred miles shorter than the shortest present route.

2. Trade development: Refrigerator trucks on such an airline superhighway would carry fresh and quick-frozen seafoods, citrus fruits, figs, yams, strawberries, winter vegetables to the Pacific Northwest and intermediate points, and return with tree-ripened apples, apricots, peaches, prunes, cherries, pears, and berries—with increased profits to producers and lower costs to consumers all along the line.

3. Tourist exchange: Over the world's scenic highway, from Everglades to glaciers, from citrus groves to apple orchards, from sagebrush deserts to dense forests, snow-capped mountains, canyons, roaring rivers, and mirror lakes! No other highway in the world offers such a wealth of unique and varied attractions.

For Southerners a summer in the "Land of Snowy Peaks and Big Red Apples" is a lifetime experience.

And several millions of Northwesterners have never experienced the Teche Country, Natchez, the French Quarter, Mardi Gras, the Gulf Coast, Bellingrath Gardens, and the Florida beaches and citrus groves.

Before the war an increasing number of Northwesterners were making winter trips to Florida by rail because of northern snows and blizzards, through Chicago and Cincinnati, thus missing the Gulf Coast entirely. Over this northwest-southeast transcontinental highway many would make the Florida trip by car, thus through the Gulf Coast.

By taking delivery on a new car at the factory a Northwest buyer gets a reduction in price of about $170—which goes far toward meeting traveling costs. The big demand for new cars is from November to March, the time of low temperatures, snows, and blizzards in the northern Rockies and Plains. From Detroit to Cincinnati is 265 miles—and once across the Ohio the new car owner is out of the blizzard area and on his way for a tour of the Deep South and return to the Northwest over northwest-southeast superhighway.

4. Trade and tourists: Tourist consumption is big business. Michigan before the war had an annual tourist business of over $300,000,000—with no Gulf coast.

The quickest way to develop a yam market in Seattle is to feed Seattle tourists candied yams in Gulfport. The pleased tourist is the best of all advertisers. Trade follows the tourist.

5. National defense: The Nation's danger points are Alaska, the West Indies, and the Panama Canal. A superhighway connecting these with the military training zones of the Nation, over which large movements of troops, armament, and supplies may be quickly made is a national defense necessity.

6. The know your country highway: Social intelligence is the hope of democracy. Accurate thinking and sound conclusions are based on first-hand knowledge of facts, conditions, causes, and forces. Travel is the great civic educator. Americans must better know Americans.

7. The highway of international good will and fellowship: From Patagonia to Alaska and by ferry across the Bering Sea with China and Russia. Intelligent travel brings the realization that regions, countries, peoples all have more in common than in difference—more to unite for than to fight for:

Steps in making the northwest-southeast superhighway a reality:

1. Get the facts.

2. Formation of public opinion all along the way.

3. Obtain War Department cooperation for a military highway.

4. Realization of the opportunity to contribute in making America a nation worthy of sacrifices now being made in its defense.

One Big River Needs One Big Plan

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. COCHRAN. Mr. Speaker, I have been told on several occasions by Members who represent rural districts that the farmers and the farm organizations are not in favor of a Missouri Valley Authority.

The Missouri Farmers Association has been in existence for a long time. It issues a paper known as the Missouri Farmer. In the issue of January 15 I find an article on this subject and, under the permission granted me, I include it as part of my remarks. It follows:

ONE BIG RIVER NEEDS ONE BIG PLAN

President Roosevelt has just signed a flood-control bill that is of vital concern to every man, woman, and child in this State. But he did so with the understanding that the subject will be reconsidered by the new Congress, and very shortly new bills providing for a Missouri Valley Authority will be introduced. This is fortunate, because the new law has shortcomings and there will now be time for further consideration of the problem.

During past months the State legislative committee of the Missouri Farmers Association has studied the flood problem quite thoroughly, and we have come to certain conclusions. They include these:

1. Floods are caused by uncontrolled run-off.

2. The place to start dealing with floods, therefore, is on the uplands in the entire Missouri River Basin, where the run-off begins.

3. It is too late to control floods after the surplus waters have swept down into the valleys. To deal with them then by mechanical means (such as gigantic levees and the 36 high dams planned for Missouri) is to deal with effects rather than the cause.

4. Water is a valuable natural resource which should be utilized by all the people on its journey from the hilltop where it falls to its destination in the Gulf of Mexico, and should not simply be allowed to waste away, carrying with it the fertile soil which constitutes the State's and Nation's foundation.

5. Rivers, like all natural things, know no boundary lines, cannot be dealt with by States or other subdivisions of government; hence, flood control in the Missouri River Basin is a responsibility of the Federal Government.

Your legislative committee believes that the newly enacted flood-control bill is inadequate, does not meet the needs of the Missouri River Valley. We believe it is a patchwork compromise between those people interested in irrigation and river transportation, and a "shot-gun" compromise between the Reclamation Bureau, which is to deal with irrigation high upstream, and the Army engineers, who will construct the high dams and huge levees lower downstream. What little soil conservation that will be done under the law (as a seeming afterthought) will be done by the Department of Agriculture. Three different governmental agencies will be attacking the big problem in a piecemeal fashion, with the one hand scarcely knowing—or caring—what the other hand is doing. Can we expect good results from such a hodgepodge of authorities?

We strongly suspect that the new law pleases the big power interests, since only one of the 36 big dams that would be constructed in Missouri, and which will ruin numerous towns as well as a half dozen counties, provides for electric power. The one exception is at Osceola, where a local power plant will be inundated and is to be replaced with a new one. The irrigation people upstream were made happy, and so were those interested in cheap transportation. In order that too much water is not used upstream, which would reduce the Missouri River to a trickle below Kansas City so that barges could not operate, numerous huge dams in Missouri and Kansas will impound the surplus waters after they have run off our hills and slopes, to be released gradually so as to maintain a 9-foot channel for barges from Sioux City to St. Louis. Enormous levees, set back a half mile from the river banks, will keep the river between two walls.

Your legislative committee believes these big dams will, in a few years, prove to be a waste of money because of silting. Without extensive soil conservation measures in the watershed, silting will occur rapidly. * * * Army engineers told Congressman MAX SCHWABE at a hearing in Washington that the dams will be completely silted up within 50 years, and after that it is "somebody else's worry." If they will be fully silted up in 50 years and be made useless, they will be half gone in 25 years, which means they will be half as effective. After that, will other Army engineers build more dams elsewhere on our rivers?

And this is leaving out of account the 900,000 acres of Missouri's most fertile farm land that it is estimated will be permanently flooded, and its 20,000 citizens who will have

to move away from their old homes, and the towns and counties and business enterprises and property that will be ruined. The lakes made by the dams will be of enormous size when full and a mere frog pond after the waters are released during the dry seasons. The largest one of the dams, located at Osceola in St. Clair County, for example, will impound water covering 260,000 acres during the winter and spring seasons, and after the water is released, say in July and August when the dry season occurs, the lake will be about 60,000 acres in size. In the wet months there will be a lake of water; in the summer months there will be a sea of mud. And this will be true in corresponding degrees of all the 36 lakes planned for the State of Missouri.

We have no doubt that for several years after these dams are completed floods will be controlled downstream. But farmers living in the river bottoms will lose all their land between the levees and the river, a distance of a half-mile. And then a few years hence, when their children take over their farms, they'll find the floods recurring because the big lakes will be filled up with the top soil from our upland farms.

In view of the inadequacies of the new law, and after considering all of these things and more, your legislative committee believes Missouri farmers ought to urge their Congressmen and Senators to support a Missouri Valley Authority. Such an Authority would at least take all factors into account. If we should get an M. V. A., and it should be managed comparably to the Tennessee Valley Authority, attention would be given to flood prevention and water utilization. Water would be provided for irrigation out west; any large dams built would provide cheap electricity where it is needed; provision would be made for river transportation; and emphasis would be placed on soil conservation and all that it implies—such as contour farming, terraces, farm ponds, detention dams high up on our creeks, small lakes, reforestation, check dams, etc. While a few people in the valley might be discommoded, as will inevitably happen if the big stream is to be harnessed, millions of people in the region will benefit.

The millions spent for flood control and water utilization would then comprise an investment because we would eventually get our money back with interest, whereas under the Pick plan, which is embodied in the newly enacted law, our expenditures will be mostly an expense. Soil conservation would make our farms more productive and valuable; cheap power would make electricity available to thousands of farm families and to new industries; water would be available to thirsty farms upstream; low-cast transportation on our rivers would encourage the establishment of new industries along the big river, which would spell better markets for Missouri farm products.

All of this is assuming M. V. A. would be comparable to T. V. A., with allowances duly made for the differences in the two regions, and assuming we should get an Authority as competent as that of the Tennessee River region. No doubt the law will be modeled after that which established T. V. A., and no doubt T. V. A. will be used as a pattern throughout, so these assumptions, therefore, seem reasonable. In any case, we can have no such assumption if the Army engineers are to have charge * * * any thinking farmer living in the Missouri River bottoms can tell you that. Army engineers have spent millions on the river already, and about all that one can credit them with is that they have stabilized the river banks.

This is a big problem which deserves the serious thought of every farmer in Missouri, and in future issues we shall have more to say about the matter.

F. V. HEINKEL,
President, Missouri Farmers Association.

Compulsory Military Training

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, inasmuch as the President has indicated his desire for a compulsory military-training program and given publicity to the same, this question is now being debated throughout the Nation. In a desire to render as far as possible the views of the people of the State I represent, in order that in the sum total the people of the Nation will arrive at a common ground on this very important question by the time this legislation reaches the floor of this Congress for our attention, under unanimous consent, I include in the RECORD resolutions passed by the post-war planning committee of the State Teachers College of Dickinson, N. Dak., the same having reached me from its president, Mr. Charles E. Scott:

Whereas the proposed compulsory military training program will likely involve emphasis on physical fitness, mathematics, and the natural sciences; and

Whereas academic training is of special significance in modern warefare; and

Whereas the colleges are well adapted to provide this type of training; and

Whereas the administrative machinery and equipment is already at hand; and

Whereas the colleges have had signal success with Army and Navy training programs during the course of the war; and

Whereas a special 1-year program, including vocational and industrial training could easily be devised to meet the requirements of compulsory military training; and

Whereas it would be economy to use existing institutions: Therefore be it

Resolved, by the Post-War Planning Committee of the State Teachers College at Dickinson, N. Dak., That any program for compulsory military training should make provision for the college student or prospective college student to get the major part of his training in a collegiate institution; and

Whereas permanent collegiate institutions are well distributed throughout the country; and

Whereas they could easily be staffed with the necessary military personnel; and

Whereas the college equipment and housing could be expanded to meet the needs of trainees more economically than to maintain separate institutions for military training; and

Whereas training at collegiate institutions would be more in keeping with American tradition: Therefore be it further

Resolved, That collegiate institutions should be considered as possible training grounds for all those who are required to complete a year of military training.

R. L. LOKKEN, *Chairman*,
E. S. HATCH,
L. G. PULVER,
A. C. SELKE,
I. I. GRINDSTUEN,
Post-War Planning Committee,
State Teachers College,
Dickinson, N. Dak.

The Great Salmon Experiment

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. ANGELL. Mr. Speaker, one of the great industries in the Pacific Northwest is fisheries. The Columbia River, which is one of the boundaries of my district, is not only the second largest river in the United States and the greatest potential source of hydroelectric energy but is also the greatest river in the production of salmon. Richard L. Neuberger has written an intriguing article on salmon, with particular reference to the program of our Government in preserving this important industry notwithstanding the development of our great waterways of the West for navigation, power, and reclamation. The article appears in the current issue of Harpers Magazine and is as follows:

THE GREAT SALMON EXPERIMENT
(By Richard L. Neuberger)

The first white men to journey down the Columbia River were a pair of American Army officers named Meriwether Lewis and William Clark. They were amazed by what they saw. From shore to shore the vast river was clogged with fish. The arching backs of these fish flecked the water like waves as they surged upstream in hordes which took 3 weeks to pass a point where the river had trenched a gorge a mile wide. Twenty-foot falls they surmounted in mighty leaps, and they turned the shallow creeks of the headwaters into a seething mass of fins, tails, and silvery flanks.

Lewis and Clark knew they had seen the greatest fish resource in the land. "Never," they reported, "have so many fish been collected together in one place before." They told President Jefferson that there were enough Chinook salmon in the Columbia River to feed Americans for infinite generations to come.

But the frontiersmen were unaware that in the swift water inhabited by the salmon there lurked, too, a mysterious force capable of transforming the face of the continent which they had explored. Lewis and Clark knew nothing about hydroelectricity. They did not know that the river they had followed through the mountains to the Pacific contained more latent water power than any other stream in North America. Nor could they possibly realize that full development of this unseen energy might bring about the unbelievable day when the last Chinook would flip its fins in the Columbia.

Two huge Federal dams now span the Columbia River—Bonneville, at tidewater 152 miles from the sea, and Grand Coulee, 400 miles upstream from Bonneville. These dams make possible 40 percent of the aluminum production for America's military aircraft. In the top priority post-war drawers of both the United States Army engineers and the Department of the Interior are plans to construct 8 more dams on the Columbia, notching the river into a giant staircase and generating 5 times the power produced in the whole T. V. A. If this proposal materializes—and many public works may be needed to cope with post-war unemployment—the United States Fish and Wildlife Service is ready with a corollary plan which calls for the most tremendous biological experiment in American history.

To save the principal fish runs in the Nation, a commercial resource capitalized at $250,000,000, the Fish and Wildlife Service may have to transplant downstream to rivers near tidewater all the salmon and trout that now spawn in the tributaries of the Columbia between Bonneville and Grand Coulee.

What does this involve? Why is it so unprecedented in magnitude? Why does a committee of ichthyologists and fishermen recently appointed by Secretary of the Interior Ickes regard it as "a very difficult and extremely hazardous undertaking"? How good are the chances of success?

To understand the reasons for the experiment, it is necessary to understand the life cycle of the most remarkable creature of this hemisphere—the great Chinook or king salmon of the Pacific seaboard. No other beast, bird, or fish has so incredible an existence.

The baby salmon emerge 4 or 5 months after the adult fish have deposited millions of eggs far back in one of the mountain ranges which drain into the Columbia River. This is generally at the bottom of a foaming, gravel-strewn creek. After a year in what biologists call "the parent stream" the fry have developed into fingerlings 5 or 6 inches long. They drift down the creek, down innumerable other tributaries, and finally into the main stem of the Columbia. So at last they reach the sea, and there they remain for the bulk of their life. Exactly where they go no one is sure. They may range off the Alaskan coast. Possibly they swim to the Kamchatka. Perhaps they do not stray far from the Columbia's stormy mouth. After 3 years in the Pacific the salmon—a fingerling no longer but a strong, fighting fish powerful enough to conquer rapids and tear a hook from an angler's line—heeds the call of the river, just as once it responded to the urge of the sea.

The salmon fights its way upstream, stemming freshets and dodging nets and traps. Beside it swim all the other salmon which drifted down the Columbia more than 3 years before and have survived the perils of river and ocean. They thrash through rapids, over falls, up the ladders at Bonneville Dam, and deep into the uplands. Each fish hunts a particular creek or lake. This is what makes the Pacific salmon unique among wild creatures. The migrating Chinook does not seek any creek or lake, although the Columbia is ribbed with 10,000 tributaries, but rather the one creek or lake where half a decade earlier it emerged from the egg.

Sometimes a salmon will swim for miles up some canyon tributary, only to discover that this is not the parent stream. In such a case, it retraces its course and pokes into another creek in search of its birthplace. Biologists have clipped the fins of fingerlings in the Kicking Horse River in the Canadian Rockies, the last glacial tributary of the Columbia. Five years later—in the British Columbia autumn—fish with these same marking have come back again, wanderers that found their home 1,500 weary miles from the ocean.

After it enters fresh water across the Columbia's bar a chinook never feeds again. It will strike at a lure, but will not take bait. The oily tissue beneath the salmon's scales must power it all the way to the parent stream. This oil is its fuel. Thus for countless epochs the strongest, stoutest-hearted, and biggest salmon specimens on earth have spawned in the final headwaters. Once the female fish has laid her eggs and the male has fertilized them, the life cycle of the chinooks is completed. They drift downstream, tail foremost, and die within 24 hours.

Only one factor ever varies the pattern of this strange existence. If the salmon cannot reach the parent stream, it perishes without spawning.

If a series of dams is strung across the Columbia the Fish and Wildlife Service believes the one solution may be "to transplant the salmon runs inhabiting the upper tributaries to the rivers of the lower Columbia." Can this be done? Extraordinary though the experiment sounds, a similar one on a smaller scale has been going on for the past 5 years, and has met with remarkable success.

II

When Dr. Ira N. Gabrielson, director of the Fish and Wildlife Service, first saw Grand Coulee Dam looming above the Columbia like a great crenelated fortress, he knew that no chinook ever would spawn again in the ultimate headwaters of the country's main salmon waterway. For as long as steel and concrete might endure, the 800 miles of river and the 100,000 square miles of watershed behind Grand Coulee were cut off as a spawning ground.

Bonneville Dam the fish could pass via wide, watery ladders. Bonneville, despite its 518,000-kilowatt capacity, is only 72 feet in height. Grand Coulee, largest edifice ever reared by man, towers 550 feet above the Columbia's granite bed. Water crashing over its parapet tumbles twice as far as Niagara Falls, with a roar heard for miles across the arid plateau of the Inland Empire. Not even the biggest salmon, which since time immemorial have spawned in the headwaters of the Columbia, could pass this battlement. In addition, the 151-mile lake formed back of the dam so raised the temperature of the river that most of the migrating salmon would be sure to die before they attained the spawning grounds. Chinooks en route to spawn are extremely susceptible to water variations.

Gabrielson and his associates answered this unique challenge with a unique solution. In 1939 they began trapping all the fish ascending the upper Columbia. The salmon were caught in specially designed cages at Rock Island Dam, a small structure a little below Grand Coulee built by the Puget Sound Power & Light Co. This dam was fitted with the best fish ladders ever constructed by a private-utility corporation, and the traps were wedged into the ladders.

From the Rock Island traps the salmon were poured into long, 1,000-gallon tank trucks. Oxygen pumps and ice chambers kept the water in the trucks at the same temperature as the Columbia River. Aluminum paint warded off the glare of the sun. At a speed of 45 miles an hour, the fleet of eight silvery vehicles rolled up into the Cascade Mountains to the little town of Leavenworth, Wash., where the Fish and Wildlife Service had built the biggest fish hatchery in the world. Here the salmon were artificially propagated. Each female fish was hit on the head and split open for the precious eggs, approximately 10,000 to the female Chinook, considerably fewer to the smaller species. The sperm from the male salmon then was squirted onto the eggs. In fields of troughs and pools, the fingerlings thus were hatched and reared. To keep the water in Leavenworth's array of ponds at low temperature, the Forest Service drove a long rock tunnel tapping Ice Lake on the divide of the Cascades.

Finally the baby fish made their own excursion in the oxygenated tank trucks. They were driven to the sources of the Methow, Entiat, Okanogan, and Wenatchee Rivers and there dumped into the water. These streams join the Columbia below Grand Coulee Dam—the essential fact of the whole experiment. It manifestly is impossible for salmon ever to spawn again above Grand Coulee. The naturalists of the Fish and Wildlife Service were attempting to school the offspring of the salmon that spawned above Grand Coulee to take as their own parent streams tributaries which flow into the main river below Grand Coulee.

Frank A. Banks, the white haired Bureau of Reclamation engineer who constructed Grand Coulee, once called this undertaking "Uncle Sam's Fish College."

Has Uncle Sam's fish college trained its pupils? This past spring and fall told the tale. Up the Columbia forged the salmon which 5 years before had been the first class in the fish college. They were the offspring of the fish originally trapped at Rock Island.

The weirs in the Rock Island traps were lifted for these voyagers. They were allowed to swim on through. The naturalists watched breathlessly. The critical question was whether the salmon would turn into the mouth of the Entiat, Okanogan, Methow, and Wenatchee Rivers or whether they would migrate on to Grand Coulee and perish in the man-made Niagara billowing over the crest of the dam.

Like well-drilled battalions, the fish swung up the rivers in which they had been liberated as fingerlings 4 years before. No stragglers swam on to Coulee's impassable barrier, answering the upland call that had had lured their ancestors. Chinooks marked for the Entiat and Methow swam unhesitatingly into those white-watered streams. Blueback salmon, a Columbia River version of the small but meaty Alaskan sockeye, spawn only in rivers with a lake at their source—rivers like the Okanogan and Wenatchee, into which the bluebacks turned as though they had been coached by a West Point drillmaster.

A few weeks ago Elmer Higgins, chief of the Division of Fishery Biology of the Wildlife Service, pronounced his verdict: "None of the salmon attempted to return to their ancestral spawning grounds above Grand Coulee Dam. The fish entered their appropriate streams, and it is expected that natural spawning now under way will be successful. We believe that the answer is conclusive—that the entire run of Columbia River salmon which formerly passed the site of Grand Coulee Dam has been transferred to the four major tributaries below the dam.

No longer will fish ascending the upper Columbia be trapped at Rock Island and artificially hatched at Leavenworth. The gates in the traps have been lifted permanently. The parent streams of these salmon are now rivers on the downstream side of Grand Coulee. After operation of Uncle Sam's Fish College from 1939 until 1944, five complete cycles of salmon have been put through the process. Yet Higgins interposes a few warnings:

"Present success does not mean, of course, that the races of salmon which through the ages have been adapted to conditions in the higher British Columbia tributaries of the Columbia River are equally adapted to conditions found in the streams to which they have been transplanted. It may well be that some of these races have suffered high mortality on being transplanted and may disappear from the Columbia River runs. We are hopeful, however, that most of the upriver fish have found conditions in their new parent streams sufficiently congenial to permit survival."

For the time being the experiment has succeeded—beyond their wildest dreams, some ichthyologists say. But this, after all, solves only part of the problem of saving the salmon runs.

In the past only about 10 percent of the Columbia's salmon have spawned back of Grand Coulee. They have been the largest fish in size but comparatively few in numbers. What about the others? Most of the salmon find their parent stream between Bonneville and Grand Coulee. These are the fish which must be transplanted if the other projected dams are built. Will artificial propagation and transplanting be successful when the number of salmon involved is multiplied many times? Hatchery fish seldom have the vitality and stamina of their wild brethren.

III

There are other obstacles to be overcome if the vast salmon industry is to be kept alive. The incursions of civilization on the miraculous life cycle of the salmon are not limited to cutting off the upland breeding grounds. Survival of the salmon depends on three conditions: (1) Enough fish must escape the commercial nets at sea and near the mouth of the Columbia to get upstream to spawn; (2) the upstream spawning grounds must be protected from pollution and diversion, as well as blockade; and (3) the fingerlings must be able to migrate safely to the ocean.

These conditions have not been met for many years. They are not being met now.

In 1885, when the first trains of the Northern Pacific were swaying through the Columbia Gorge, canneries scooped out of the Columbia's wide waters 31,493,000 pounds of Chinook salmon. The canneries are still hauling fish out of the river—though by 1940 their output had been reduced by almost half. And the salmon are subject to peril from other sources, too. Trollers take a deadly toll at sea. Cannery fishermen at Swiftsure Bank, off the entrance to Puget Sound, have caught nearly $10,000,000 worth of salmon every year for many decades. Swimming upstream, the fish must run another gauntlet of nets. Indian spearsmen at Celilo Falls have a treaty with the United States Government, negotiated in 1855, which allows them to fish in the Columbia River for "as long as grass shall grow on the hills and the sun shall set in the sky."

Will the salmon last that long?

"Civilization and salmon don't mix," I was told by Grady Miller, hawk-nosed forest ranger at Wallowa Lake in Oregon, as he stood below a dam constructed across the lake's outlet, a dam built by a private utility company that completely destroyed one of the most valuable runs of blueback salmon in the region.

In recent years the settlement and exploitation of the Pacific Northwest have been greatly accelerated. Developments which might logically have required several decades have been compressed into a dozen months. The war has brought about an intensive demand for food, raw materials, and manufactured products of all sorts. Factories and shipyards have sprung up where not so long ago heron waded and deer foraged. Trees marked by forest rangers for protection and preservation have been sawed into beams, crates, and deck planks. Water which once a tired hiker could drink now bears the chemical residue of paper mills and metal plants and the sewage of new mushrooming war communities. Cattle and sheep have grazed off the bunch grass anchoring the silt on a thousand hillsides. War demands minerals, too, and the slag from mines helps to fill up creeks and choke rivers. Neither salmon nor the insect and crustacean life which sustains them as fingerlings can compete with this pollution and waste.

Not so long ago a large salmon run surged up the Willamette River each fall, leaping the 19-foot cataract at Oregon City in spectacular flips. Now no autumn Chinooks invade this major tributary of the Columbia. The offal, chemicals, and junk poured into the water at Portland have killed them off. One afternoon the Oregon State Game Commission released a batch of fingerlings in the Willamette below the interurban bridge. A few minutes later they floated bellies up. There had not been enough oxygen in the river to sustain them.

Even the fingerlings that do not have to cope with hazards of this sort must take their chances with man-made obstructions on their way down to the sea. At Bonneville Dam, where the fish ladders have proved successful and the returning salmon traverse them quickly and easily, the little fish on their way to the sea are at the mercy of the river. They cannot pick out the ladders. They must take the course of least resistance. Often they do not find the fingerling bypasses provided especially for them—concrete flumes which honeycomb the powerhouse. Most of the fingerlings are swept over the spillway. In the maelstrom at the base of the dam some of the baby fish die.

When Bonneville first was completed, the Oregon State Fish Commission released batches of fingerlings both above and below the dam. There were 50,000 fingerlings in each batch. The fins of the fish were clipped in distinctive patterns so that the two groups could be distinguished. Awards were paid both commercial and sports fishermen for salmon with marked fins which they turned in. At the end of the fourth year they had turned in a considerably larger number of the salmon released below the dam than of those released above it. From this test biologists have come to the conclusion that perhaps 25 percent of the fingerlings going down the Columbia are killed by the stunning impact of the Bonneville spillway. How great an effect will this have on the future of the salmon runs? Here again, the certainties are not yet known.

The fish ladders at Bonneville have made possible for the first time in history an accurate count of the salmon ascending the upper Columbia. These are wide watery staircases which cost $7,022,000 and were built by the Army engineers with the constant advice of the Wildlife Service. Since the dam was completed in 1938, every salmon passing it on the way back upstream to the spawning grounds has been clocked by fish-counters who sit in doghouse-like structures, tapping a meter whenever a fish flips through the grating at the top of each ladder.

The fish count at Bonneville during the past 7 years has just been released by the Bonneville Power Administration. This is it:

Year	Chinook salmon	Blueback salmon	Silver salmon	Steelhead trout
1938	271,709	75,040	15,185	107,003
1939	286,216	73,382	14,382	121,922
1940	391,595	148,808	18,822	185,174
1941	461,713	65,741	17,011	118,087
1942	403,938	55,464	12,041	151,346
1943	313,123	39,845	2,547	92,131
1944 [1]	238,191	15,071	4,073	93,047

[1] Up to and including October. (By this month the main run has gone up the river.)

What do these figures mean? What story do they tell a biologist? Inasmuch as the Bonneville Dam first barricaded the river in 1938, the progeny of the first fish passing through the ladders came back upstream 5 years later. That was 1943, a year the count of Chinooks went tolerably high. Why has the count been so low for 1944? Did Bonneville in any way cause these discouraging figures? Why was the count comparatively low in 1938, long before the dam could have had any effect at all? Why has the number of bluebacks dropped so sharply? Why have silver salmon almost completely disappeared from the Columbia? Why did the Bonneville count in Chinooks soar from a low total in 1938 to its highest point in 1941 and then gradually descend to an even lower level for 1944?

"I wish I could answer these questions," declared Elmer Higgins, "but we are in the dark, too. This is the first time we ever had a salmon count on the Columbia. Considerable variations may be normal over a span of years. We have no previous standards to go by. But it is far more probable that the small 1944 count is due to the cumulative effect of uncontrolled commercial fishing for many seasons, as well as to the excessive exploitation of mineral, soil, and forest resources which guard the watershed."

But the naturalists do know several facts for a certainty so far as Bonneville Dam is concerned. First and foremost, the Bonneville fish ladders have been a success. Few fish on their way upstream collect in baffled schools at the base of the dam. Virtually all of them find the entrance to one of the big watery staircases. On a single September day in 1940 the ladders were spanned by 33,900 Chinooks, which turned the passages into a boiling melee of fins and backs. Even men who claimed the Government was going "dam crazy" now concede that the Bonneville ladders are by far the best fishways ever built.

IV

On the wall of Dr. Gabrielson's office hangs a map showing how man-made encroachments have gradually shrunk the spawning areas available to salmon in the Columbia Basin. An impassable dam here, unscreened irrigation ditches there, indiscriminate dumping of sewage and chemical wastes of a hundred towns, logged-off slopes, dredging for minerals—all this has blocked off nearly two-thirds of the lakes and creeks where fish originally spawned. Today only a few major tributaries still offer sanctuary to the fish which come home from the sea with the autumn equinox.

In December the Fish and Wildlife Service reported, "The piecemeal destruction of the Columbia River spawning grounds has proceeded to such a point that no more tributary streams can be sacrificed if the largest salmon river in the United States is to continue to contribute materially to the Nation's food supply."

To provide adequate spawning ground it may be necessary to move the entire salmon run downstream and to blow up the dams on the Clackamas, Sandy, and several other rivers near the tidewater. The plan contemplates trapping all migrating salmon in the Bonneville Dam ladders and propagating them in a series of immense hatcheries far larger than the facilities at Leavenworth. Then the resultant fingerlings would be released in the few available rivers near the sea.

The likelihood of successful transfer downstream is subject to many imponderables. Is there room in the lowland tributaries for the immense aquatic life of the Columbia? Will fish adapted to the high mountains spawn in rivers at tidewater? How many salmon will be lost in the elaborate transplanting process? Will the vitality of the species be irretrievably sapped by the intervening hatchery propagation? At what point does biology rebel against man's intrusion?

And at what point does the biologist rebel at the intrusion of the dam-builder? A vast new project imperils the salmon that survive. There exists the possibility that the construction of new dams is the wise course. The proposed structures would generate 5,894,300 kilowatts of power at the cheapest rates on earth. This hydroelectricity might rehabilitate countless other resources spent by the waste of war. It is claimed that the Grand Coulee Dam will turn arid sagebrush into 40,000 productive farms; that Umatilla Dam will cut down the cost of fuel shipped to the inland empire and reduce the price of wheat, fruit, and beef that are transported out of that spacious region.

With these benefits in mind, the Fish and Wildlife Service has admitted that "the economic importance of water for purposes other than the propagation of fish is such that it cannot and should not be used solely for the sake of maintaining salmon runs. If conservation is wise use, it is the part of true conservation to choose the more valuable use of a resource whenever two or more uses conflict in such a way as to be mutually exclusive."

If the dam project is undertaken the vast salmon experiment will go on. Millions of eggs will be fertilized, millions of fingerlings sent on their way down to the sea, their fins clipped for identification. Each year, as one class of Uncle Sam's Fish College is graduated, alumni of a previous class will return for their quinquennial reunion on the tidewater tributaries of the Columbia. Each year the faculty will be that much wiser.

Address by Hon. Claude Pepper, of Florida, at Bogota, Colombia

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. CONNALLY. Mr. President, the distinguished Senator from Florida [Mr. PEPPER] made a notable address at Bogota, capital of the Republic of Colombia, on December 4, which I think would be of interest to Senators, and I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, it is symbolic of the hospitality of Colombia that you have opened to Mrs. Pepper and me and to our friends accompanying us the gates of your country and city and the doors of your distinguished Senate and your hearts as well. I shall always cherish this honor you bestow upon me as one of the high lights of my life. Of course, I understand that this warm gesture of friendship which you have extended me in thus permitting me to come and to speak to you is an honor which you have selected me to receive on behalf of the United States Senate and my country, the United States, as well as my State of Florida. It is an honor for which the Senate of the United States and Florida will be grateful when they learn of it, as they soon shall. We will not consider that we have discharged our debt to you until all of you of the Colombian Senate shall visit the Senate of the State of Florida and the United States Senate in Washington. We shall hope that your visit to us will come in the very near future.

The State of Florida, which I have the honor to represent in the Senate of the United States, not only lies very close to you in Colombia geographically, our very name "Florida" came from the ever rich beauty of your language. We are very close to you in affection as well. You know the long history of Florida and of those who were its first settlers and how the Spanish tradition has lingered in the State. There are some of our people who hold even now Spanish grants of land. We have at St. Augustine the oldest city in the United States, and as you well remember, it was for so long a Spanish city. Even today, many of the descendants of those early Spanish citizens remain as distinguished citizens of our State and country. Many places in Florida proudly bear Spanish names and many of our people speak the music of the Spanish language.

Just as you are the gateway to South America, Florida is the gateway to the United States. Each of us therefore must keep close to the other, that we may not only be friends ourselves but may be the ties through which the two Americas may be held close together in interest and in esteem and friendship.

We have already seen at Barranquilla and in flying here and at Bogotá much of the rare beauty of your fair country, and already we have come to feel the pull which makes those who come to visit you so reluctant to depart. We have had the honor to visit your distinguished President and many of your eminent ministers. Now, I am privileged to see that part of your Government with which I feel so much at home because I am a part of the same branch of Government in my country, your Senate. I have had the honor to serve 8 years in the Senate and am happy to say that I have recently been reelected to a new term of 6 years.

I am sure I find you busily engaged with your heavy responsibilities, as we are in the United States. Both your country and mine, indeed almost all our hemisphere, are in one way or another at war—the worst war in the history of the world, a war against the most evil tyrants the world has ever produced. At last we have proved to the world the solidarity of the Americas, for the exception only proves the rule, as we have always heard. That dream of Simón Bolívar that there should be unity among the people of the Americas and that that unity should extend to the vast community of nations has come true. Indeed the United Nations established in the Western Hemisphere by George Washington and Simón Bolívar have grown into the United Nations of the world. The spirit of the Americas today has become the spirit of the real new order of the earth.

Now the world will know that the security of the Western Hemisphere will be defended and preserved against all who would attack or threaten our freedom and independence by peoples who, although they speak somewhat different languages and may live many miles apart, yet are one in unity and in determination that they shall be free and good neighbors.

Now enemies of the Americas who have designs upon us and our rich and fair lands will know that they cannot divide us and break up our friendship. Experience in this war has proved how little progress those nations have made who tried that policy.

And if there are those among us anywhere who have erred or sinned against the unity of the Americas, then let us remember that our religion teaches us two great virtues: one, to forgive those who repent and, two, faith that the sinner will reform. Let us hope therefore that any sinner amongst us in the Americas will repent and be baptized again into the old faith of American democracy.

When we have won this terrible war, with all that it has cost in life and treasure, we would dishonor the dead if we did not this time build a lasting peace. But we know from experience that such a peace can come only from our setting up an international organization which shall be strong enough to prevent war. Such an organization we are now building and we are all determined that we shall build it to completion even before the war itself shall end. That organization will be open to large states and to small states. In that organization all states will stand upon an equal status and each will be expected to discharge its burdens and its obligations according to its ability. There will be a chance for all to speak and to seek redress against wrong. In this organization there will be a judicial tribunal whose duty it shall be to decide disputes among nations by peaceful means, which is the civilized way of settling arguments.

This organization shall have force at its command, a part of which force shall be held available by each member state according to the ability of such member to provide such force. This force will be subject to instant use against any nation which may be an aggressor and threaten the world with war. At long last when the blood bath of this war is by the kindness of Providence ended, all of us together are going to make the world a lawful world where justice under law shall prevail, as it prevails in the courts of our countries.

This organization of nations of which I speak will have its struggles and its problems. It will need, therefore, faithful and stanch friends. The people of my country know that Colombia, where was set up the first republic in all of South America, the country of Simón Bolívar, can be depended upon to help to build and to defend against all enemies this new organization of united nations which noble men and women all over the world are now earning with their sacred lives.

The future will hold many problems for us, and one of those practical problems will be how we may all overcome the burdens of war and enjoy prosperity. That battle, too, we must win. We shall win it as we are winning the war, by working together, by understanding of one another's problems, by helping one another, by continued friendship, by continuing to be good neighbors.

You know what is in the heart of our President, Franklin D. Roosevelt. You know how, with his great Secretary of State Cordell Hull, who has had to pass his mantle on to his distinguished successor, he launched the good-neighbor policy. You know he has in good faith endeavored to live by that policy. The results speak for themselves and they do not need words from me to bolster them up. If we have erred, we shall always try to do better. If we perchance have succeeded, we shall try to pursue the policies which have proved wise. The good-neighbor policy has worked. It has worked for the people of North America and of South America. You know that now for 4 more years you may count upon Franklin D. Roosevelt, who began that policy, to continue it. I am sure our unity shall grow more perfect as the days stretch out before us, for you may depend upon it that no United States Government will ever change the good-neighbor policy.

This future, while it will present problems, is bright with hope and promise. It offers us all safety, peace, prosperity, and happiness. We are indeed entering upon the promised land of the future, not only with hope but with faith. This victory, too, we shall gain.

Hasta luego.

Our Aged Folks Are "The Forgotten Man"

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. PITTENGER. Mr. Speaker, from time to time someone who calls himself a humanitarian or friend of the common people, or a philanthropist, undertakes to tell us of the great humanitarian work of the Government bureaus and bureaucrats during the past several years. While advising our aged citizens—and this means the women as well as the men—that the administration leaders are doing so much for them, at the same time Government agencies and Government leaders are quick to make the claim that Congress is responsible for things that go wrong. This alibi, of course, is used in connection with every problem and among some folks who do not think the problem through it has a great appeal.

When the Social Security Act was passed several years ago, it was hailed by administration leaders as a great solution for all troubles of the underprivileged, the unfortunate, and those people who, by reason of old age were no longer able to earn a livelihood. Even assuming that these claims were sincere, condi-

tions very early indicated that payments to our aged citizens were wholly inadequate.

The Government records are devoid of any efforts made by the proper Government bureaus to change this situation. Just to keep the records straight, so far as I know, no administrative official has ever proposed legislation that would properly do justice to our aged citizens. Neither has the administration endorsed any proposed change in existing law. Without such endorsement such legislation cannot be considered or passed, because the administration has had and now has the majority of the votes in Congress. Those who know how the party system of Government operates will readily understand that responsibility for changes in existing law rests on the political party in power.

The bureaus and the bureaucrats are too busy writing new regulations, drawing their salaries, and otherwise following the highways of least resistance so that it has been convenient to neglect and overlook those men and women who have really had to live on a dole over a period of several years.

I am prompted to make these remarks because the Legislature of the State of Minnesota is now in session and a news item under date of January 30, 1945, states that the Federal Government has threatened to withdraw all funds for old-age assistance for Minnesota unless the Minnesota Legislature repeals a provision in existing State law permitting recipients of old-age help from the State to earn if possible not more than $100 a year, if they can find someone who can use their service to that extent. This notice was served by some head of the Federal bureaus stationed in Minnesota. Such an attitude on the part of the Federal bureau head and such a development is perfectly natural under our bureaucratic form of government. It disregards entirely the human element and the facts and everything else.

An editorial in the Duluth News-Tribune, of Duluth, Minn., on February 1, 1945, is very much in point in discussing these developments and in presenting the problem which confronts all of us not only as Government officials but as American citizens as well. This editorial reads:

OLD-AGE PENSION SQUABBLE

The regional director of the Federal Social Security Board in Minnesota says that unless the State legislature passes legislation barring "beneficiaries" of the old-age pension (the quotation marks are ours) from earning outside money, the Federal Government will refuse to pay its half of the sum devoted to the fund.

Members of the legislature best acquainted with the situation refuse to have anything to do with such restriction, and say, with much truth, that it does not matter enough in dollars and cents to either the State or the Federal Government if somebody who comes under the law earns a few dollars on the side or manages to eke out a living under the pension. How they manage to live on the pension allowed is a lesson in economics that should be the basic for study by some of our experts. It would be revealing and instructive. The average hand-out is $29.24 per month. Lavish, isn't it?

It seems to us that the Federal Government, instead of assuming such a squeamish and niggardly policy, should encourage the old-age beneficiaries to earn a few cents themselves if they can without injury to themselves. Is the Government determined to hold them down to the pittance given out? Perhaps the fact that the oldsters, because of age, will not long be with us and therefore cannot vote many more times, is one thing that counts.

Why should Uncle Sam kick about it? The State paid one-third and the counties one-sixth of the amount expended. And nobody besides Uncle Sam's employees and some officious employees on the cases investigated seem to worry about the amount paid out. We can better afford to pay heavily for assistance of people who have helped build up the Nation than to see them in want.

While the editorial does not say so, it approaches the problem from the standpoint of local government and amounts to condemnation of outside interference. Outside interference in this case happens to be the Federal Government.

One of my first contacts with this problem of bureaucratic interference with State and local subdivisions in social security came when regulations were promulgated from Washington requiring all employees of welfare agencies in the State of Minnesota to take examinations, the examination questions being prepared by high-powered college graduates employed by the high-powered bureaus in Washington. Many of the employees could not qualify in such an examination because they did not have two or three college degrees, although they may have had a lot of good horse sense which more than equalized the situation. Anyhow, authority to perform these acts of domination and tyranny was claimed under legislation passed by the Congress of the United States. The procedure was all a part of the program to streamline social security so that the Federal Government would tell the State agencies how to operate. In the end, the bureaucrats down here had their way about this matter.

Last summer I visited a courthouse in one of our Minnesota counties and one of the county officials unburdened himself. He pointed out that the encroachments of Federal Bureaus and Bureaucrats on local governmental problems and agencies have been so great that it is only a question of time until State lines disappear. As I recall it, he said in substance, that in his particular county $250,000 was being spent every year for social-security work, including old-age assistance, and that the whole matter was handled by high-powered, high-priced, and high-salaried employees who were imported from some other State, and who, of course, knew nothing about the background of the different families or their needs, or other factors involved in a relief program. This naturally resulted in too little money in some cases and probably more than was deserved in other cases. My friend who has been a county official for 35 or 40 years concluded his oration with the statement that the different local agencies were in much better position to determine these matters than were good folks who might come from South America or some State in this Republic of ours.

Our problem is how to prevent regimentation of the American people by Washington, bureaus, boards, and commissions. Congress through its Appropriation Committee would do well to check the number of employees in and the different kinds of activities carried on by these bureaus. We would do well to reverse the policy of giving unlimited authority and almost unlimited appropriations to these different agencies which operate to destroy America and our system of government.

We will never get rid of the existing confusion in government until some effort is made by congressional leaders to decentralize some of the functions and powers of our Federal administrative officials. Unless this is done the bureaus are going to continue to grow and prosper, and in corresponding degree the American people are going to suffer.

In the Seventy-eighth Congress I introduced legislation which would provide that a committee of the House and a committee of the Senate should be empowered to confer with particular administrative officials and make a study of their methods, why they wanted legislation enacted and just how much time they spend in trying to figure out enough ways in which they could spend the taxpayers' money.

When I talked with a newspaperman who is well known on Capitol Hill he laughed and made the comment that it took a lot of courage for any Member of Congress to suggest that a New Deal agency should permit Congress to have anything to do with a policy-making program of the agency. This man was correct, because my suggestion was never treated seriously by the people who control the governmental program.

However, to conclude this short discussion, let me say that the agency which controls the expenditure of Federal funds in our different States would be a very good agency on which to start the proper investigation by Congress.

The Compulsory Work Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. LUDLOW. Mr. Speaker, I deem it is my duty to state to the people of the district I represent my attitude, not only on this compulsory work bill which we have before us today, but on similar bills that are expected to follow and which in my opinion would imperil the Constitution of the United States.

Never in my life, in peace or in war, will I cast a vote that would wreck the Constitution, or weaken its processes.

The Constitution of the United States, whether we realize it or not, is the cornerstone of our national welfare and the sheet anchor of our liberties. If we lose it we lose everything.

I have no criticism of the proponents of this measure, nor do I doubt their good faith. Those of us who do not agree

with them in respect to this bill also want to win the war in the briefest space of time, but what will we gain if in winning the war we destroy constitutional guaranties of liberty at home—the very thing our soldiers are fighting for?

The thirteenth amendment of the Constitution says:

> Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist in the United States or in any place subject to its jurisdiction.

If the pending bill is not a violation of that amendment, I am unable to sense the meaning of language. Certainly if the bill does not violate the expressed wording of the Constitution, it is a transgression of its meaning.

Our Constitution has a spirit as well as a letter. There have been altogether too many times when the letter of the Constitution has been observed but its spirit has been outraged in a thousand ways. In our American concept of government there is no room for a labor draft, which is another form of involuntary servitude, expressly prohibited by the thirteenth amendment. It would be in my opinion a gross violation of the spirit of the Constitution, a nullification of the objective for which our boys are giving their precious lives overseas, namely, that America shall forever remain a free country.

I believe it is entirely possible to achieve by voluntary cooperation what this work-or-fight bill proposes to accomplish by force and compulsion, and I have no doubt that the voluntary way is the better way. We must be extremely careful to see that no foreign ideologies take root in our free American soil. The boys in IV–F are not there because they are trying to dodge their obligations. They are there because they were put there by the operation of the Selective Service System. Many thousands of these men already are in defense work, and now that the need for more defense workers has been brought so forcefully to public attention I feel confident that as rapidly as possible more and more of those classified in IV–F will voluntarily change to defense employment. All they want is opportunity, and they will do their duty. Before we violate the thirteenth amendment of the Constitution let us try out the possibilities of the American way of doing things—the voluntary way. Give industry and labor the facts and they will give the Army and Navy materials in ever-increasing proportions.

I opposed the packing of the Supreme Court as being, in my opinion, violative of the spirit of the Constitution. The idea of enforced labor is certainly no less violative of the spirit of the Constitution than was the packing of the Supreme Court, and if Congress gives its sanction to this pending bill, I, for one, shall despair of the safety of the Constitution in the future.

On January 3, 1945, I took an oath for the ninth time to protect and defend the Constitution of the United States. I am going to remain true to that oath. I am anxious that we shall have the same free country after the war that we had when we entered the war, and I want those who sent me to Washington to know that I shall do everything I can to preserve and safeguard the Constitution in all of its meaning and implications.

It is my considered opinion that the sooner we get back to the fundamentals of government as exemplified in our Constitution, and to the fundamentals of religion as exemplified in the teachings of Christ, the sooner we will usher in a better world.

Winning the War—First in Order of Importance

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. PITTENGER. Mr. Speaker, in this morning's mail I was favored by a copy of the resolution adopted by a national retail organization, at its recent convention held January 11, 1945. The members of this group are to be congratulated. At their meeting, held during the week of January 8, 1945 this was the only resolution which was prepared and adopted, declaring the war and the needs of the Nation to be paramount at this time.

In common with other patriotic Americans, the retailers of this country recognize the quicker the war ends just that much closer comes the day when men and women in our armed forces may call their job ended and return to civilian life in the United States of America.

This resolution adopted by the retailers reads as follows:

> We have come to the most critical hour in our history as a Nation when, in the balance of fate, no individual interest must be permitted to weight against the security and well-being of the Republic.
>
> American men, the flower of our youth, are suffering the stark horror of the world's most terrible war and are yeilding up their lives for those historic principles which are the dearest considerations of our people.
>
> Robbed of liberty and the dignity of freemen, life to Americans would be worthless.
>
> Therefore, waiving all controversial issues, the members of the National Retail Dry Goods Association call upon retailers everywhere, and all other forms of American business, to rededicate themselves, and all that they have and are, to the one supreme task of speeding the day of complete victory over the forces of brutality which have destroyed the peace of the world.
>
> The retailers of the Nation have thus far staunchly supported the war, contributing in numberless ways to the Nation's objective, but the time now has arrived which calls for even more generous sacrifice.
>
> We call upon the members of our trade to redouble their zeal in the loyal discharge of every obligation laid upon them by the national need, to the end that the great power and influence of the country's retailers shall be mobilized in all-out support of the war.
>
> In their important field of service to the civilian population, it is the obligation of retailers to take all steps possible, within the limits permitted by the concentration of facilities on the production of war supplies, to insure the equitable flow of necessities to the public.
>
> This service must be maintained to assure unswerving morale on the home front that the determination to support the war effort shall not falter through any fear of the spector of want.
>
> Retailers are urged to discharge this grave responsibility as a public trust. The knowledge of unselfish service is more satisfying than profits and no degree of individual success can be so important as the speedy ending of the war with complete victory at the lowest cost in the blood and lives of our fighting men.

Mr. Speaker, the sentiments expressed in the foregoing resolution should meet with full approval on the part of every citizen of the Republic. While we note that the retailers waive all controversial issues, we must not overlook the fact that right now they are circumscribed by numberless regulations and directives issued by numberless bureaus and bureaucrats operating under the administrative branch of our Government. The one agency of Government which can and should protect the small merchants and small business, as well as other public interests in America, is the Congress of the United States. We already have too many confusing and unnecessary orders issued by emergency war bureaus and very often by people who are not fitted to direct the different business enterprises over which they occupy governmental jurisdiction. It is our duty as Members of the legislative branch of our Government to keep a check on these numberless bureaus with their numberless regulations. Otherwise they may hinder instead of help the war effort.

In the economic life of America the retailers of the country play an important part. They are the ones who have to supply the economic needs of the average American family, and unless those needs are supplied there is an interference with the efficiency and American way of life which actually hinders the war effort.

I want to congratulate the retailers upon this resolution and pledge and assure them that their work is not a nonessential activity but that, in my opinion, it has to do with our war effort and with maintaining the morale of the war workers on the home front.

Do We Need Work-or-Fight Legislation?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following round-table discussion on the American Forum of the Air, broadcast from the Shoreham Hotel in Washington, D. C., on Tuesday evening, January 30, 1945:

Mr. MAY. Mr. Granik, we are now engaged in the prosecution of a world-wide or global war, and while the Constitution is effective even in wartime, I have no doubt whatsoever

of the constitutionality of the pending bill. In the first place, the Constitution expressly provides that Congress shall have power to declare war and to provide and support armies. I call special attention to the word "support."

The other question involving constitutional construction is hinged around the thirteenth amendment. That amendment provides that neither slavery nor involuntary servitude shall exist except as a punishment for crime whereof the party shall have been convicted, anywhere in the United States or any of its possessions.

Now, if the Congress can declare a war, it must necessarily have the power to maintain an army to carry on the war. In this war it is essential that we provide vast amounts of equipment and supplies never heretofore thought of in any war, and in order to provide those supplies we of necessity must utilize the facilities of private industry, and to do that it requires the services of men.

Mr. SHORT. Mr. Granik, Judge MAY is a very able lawyer and I am no lawyer at all, but I have read the Constitution and I think there is a distinct difference between drafting men in the armed services whereby they serve the Government of the United States and drafting men to work in industries for private individuals or corporations for their profit. It is entirely different, and that fundamental distinction must not be lost sight of.

Mr. SPARKMAN. Mr. Granik, I don't fully agree with my friend Mr. SHORT. I think the act is constitutional. As a matter of fact, it has been tested out—not this particular act, but similar matters relating to the conduct of war have been tested in our Supreme Court in a number of cases, dating back to the earliest days of our country, certainly back to the Civil War times. There were a number of cases after the World War and during the World War. There have been cases in the present war relating particularly to the use of conscientious objectors, assigning them to work of national importance, and the Supreme Court has uniformly adhered to the rule that when the Constitution gave power to Congress to raise and maintain armies; that is, to wage war, it meant to wage war successfully and therefore to do whatever was necessary to make that waging of war successful.

Mr. SHORT. Of course, my good friend JOHN SPARKMAN, from Alabama, I am reluctant to mention the Constitution these days because it has been torn to shreds and thrown into the wastebasket so many times in recent years that no one knows what is constitutional or unconstitutional, but we do know this: That this particular bill before us is not a war measure; it is a peace measure. The men who are to be drafted are not placed in uniform; they are not employees of the Government; they are simply to be forced and coerced to enter private industries to work for other private American citizens for their individual profit, and because of that I think it is clearly unconstitutional.

Mr. HOLIFIELD. The very fact that the constitutionality of this law is being questioned makes all of us stop and pause. Every constitutional government and provision of protection within constitutional government has been eliminated by the totalitarians under the guise of necessity. Of course, we should consider whether this is necessary or not. But I think that it is unconstitutional because it very clearly breaks the thirteenth amendment of the Constitution against involuntary servitude.

Mr. MAY. Mr. HOLIFIELD, may I interrupt to say this about your thirteenth amendment? I have repeated already the contents of that amendment, and it is undoubtedly admitted by everybody, at least lawyers throughout the country, that the States as sovereignties and members of the Union can impose criminal penalties upon men for penal offenses, and enforce them by imprisonment or by labor on public works. Now, if a man for the mere cause of infringing upon somebody's peace of the community or upon his property rights can be imprisoned and required to render public service as a worker on public works, why isn't it reasonable to conclude that when the life of the Nation and the liberty of all of its people are at stake the Congress can provide the means of maintaining an Army by employing the ability and the capacity of its people to perform labor?

Mr. HOLIFIELD. Mr. MAY, I would say on that point that it hasn't been proved yet that it is necessary, and I believe that the Constitution clearly says that in the conduct of war, as in the conduct of peace, we have to abide by the rules laid down by the Constitution. Of course, it is a difference of opinion as to what those rules are tonight.

Mr. SHORT. Mr. Granik, Chairman May, and Mr. Sparkman have cited certain cases that have been ruled by the Supreme Court heretofore, but they must admit, and everyone knows, that never before in the history of the United States have we resorted to such a drastic measure as this, never before have we drafted civilians and coerced them to enter private industry for the profit of other private individuals. It is something entirely new.

Mr. SPARKMAN. Dewey, I think you will admit that never before in the history of our Nation have we been confronted with the difficulty with which we are confronted now, the danger.

Mr. SHORT. I certainly do agree to that, and it seems to me, Mr. Granik, we shouldn't waste too much time on the constitutionality, but simply ask ourselves whether or not this drastic legislation is necessary, be it constitutional or unconstitutional.

Mr. SPARKMAN. If it is necessary, you admit it would be constitutional?

Mr. SHORT. If I were convinced that it would absolutely achieve its purported objective, I would support it wholeheartedly. On the contrary, I have always believed, and I think history shows and experience has proved, that free labor is more efficient and productive than slave labor, and we have demonstrated to the world under our American system of free enterprise that we can out-produce and have out-produced the slave labor of Japan, Italy, and Germany combined.

Mr. MAY. Will my colleague yield to me?

Mr. SHORT. Gladly; always to my chairman.

Mr. MAY. I would like to answer that argument by saying this: That we are told by those who are the leaders and in charge of the campaign of this war and in the prosecution of it that we must have 900,000 men for the armed forces between now and next June 30 as replacements. We have more than 450,000 men in hospitals at this particular time. If we can authorize our leaders, our military chieftains, our Chief of Staff and the Navy and all the rest of them to maintain a fighting force and prosecute the war, we can certainly do the things that are essential to enable them to successfully prosecute it, and that means to win it.

Mr. SHORT. Chairman MAY or any other member of the House Military Affairs Committee or of the Congress has no higher regard or greater admiration than I have for General Marshall, Admiral King, and our other great military and naval leaders so long as they stay in their own respective fields; but when it comes to the matter of production, I'd rather take the advice and counsel of the workers and the employers of America who deal specifically and daily with that particular problem.

Mr. SPARKMAN. Dewey, I wonder what you would say in connection with that statement with reference to Under Secretary of War Patterson, who is charged with the job of getting out production so far as the Army is concerned, and what about Mr. Krug of the War Production Board, and various others who are charged by our Government with the responsibility of seeing that the production comes out?

Mr. SHORT. Robert Patterson was a judge of the United States circuit court of appeals before becoming Under Secretary of War, and I don't think he knows much more about production than I know myself, or you, and that is very little, but I do want to take the advice of the National Manufacturers' Association and other business organizations, of the C. I. O., of the American Federation of Labor, of the Brotherhood of Railroad Trainmen; all labor, and all industry, are against this legislation, and I think they are better qualified to speak about the problem of production than any of our military leaders.

Mr. MAY. Does my colleague remember that in several of the instances when these representatives of labor and of manufacturers appeared before our committee, that even the president of the National Manufacturers' Association testified at length against the measure and at the end of his testimony in effect he was questioned by a member of the committee as to whether he had read the bill, and he said he had not even read it?

Mr. SPARKMAN. And as a matter of fact (pardon me for breaking in)——

Mr. MAY. Yes; I yield.

Mr. SPARKMAN. As a matter of fact, the whole line of his testimony was exactly what the bill sought to do. His recommendations were along that line.

Mr. MAY. He said in effect, and not only in effect but emphatically, that he was in favor of work or fight legislation.

Mr. SHORT. Yes; and right at this point, this bill is misnamed. It isn't a work or fight bill. The whole fight element has been taken out of it completely. It is a work or go to jail bill.

Mr. SPARKMAN. Would the gentleman object to taking out the fight part of the bill?

Mr. SHORT. No; I believe if we are going to have total mobilization we should adopt the American Legion bill to conscript wealth as well as labor and to take the profits out of war, and if we had had that bill presented immediately after Pearl Harbor it would have been passed overwhelmingly by the Congress of the United States.

Mr. SPARKMAN. And yet the same people who are opposing this bill today opposed that bill when we reported it out in 1938.

Mr. SHORT. Yes; but this is a piecemeal and a discriminatory measure that applies only to male citizens between the ages of 18 and 45.

Mr. SPARKMAN. I will go along with you——

Mr. SHORT (interposing). And I want to say there are many men between the ages of 45 and 50 who are mentally and physically better qualified to perform manual labor and other tasks for the war effort than a lot within the age group of 18 to 45.

Mr. MAY. Mr. Short, will you yield to me?

Mr. SHORT. Sure.

Mr. MAY. I would like to say this: That this legislation would have been enacted long ago had it not been for the opposition of the minority groups about which you speak. It is undoubtedly true that Congress would have enacted it shortly after the declaration of war on the 8th day of December 1941, and on the 11th day of December as to Germany, but since then there has been a campaign on and the only opposition expressed by the labor leaders, including Mr. Phil Murray, who is a high-class gentleman and an able labor leader, was that it was coercive in its effect, that it resorted to compulsion, when as a matter of fact compulsion doesn't enter into the picture at all until all reasonable efforts have been made to obtain the services of these men by voluntary methods.

Mr. HOLIFIELD. Of course, I will have to disagree with my chairman on that point. Coercion enters into the bill immediately upon passing of the bill, because it automatically

freezes every man into the job that he is in. That is where coercion starts. Now, he may mean criminal coercion, but coercion actually starts when the bill is passed. He cannot leave his job unless he gets permission from his local selective-service board, and then in order to overcome the ruling of his board he has to carry it through the United States Attorney General to the district court, he is indicted on a criminal complaint by the grand jury, and he is a criminal until his status is cleared by a trial.

Mr. SHORT. Subject to severe penalties, 5 years' imprisonment and a $10,000 fine.

Mr. HOLIFIELD. That is right.

Mr. SHORT. We would have to build jails all over the country to hold them.

Mr. SPARKMAN. Mr. HOLIFIELD, I wonder if I may ask you this question: You are in favor, are you not, of some kind of legislation to give statutory authority to the directives of the War Manpower Commission?

Mr. HOLIFIELD. Yes.

Mr. SPARKMAN. You would advocate that, would you not?

Mr. HOLIFIELD. Yes. I would qualify it in this way, that I am in favor if it is necessary to give the War Manpower Commission additional authority to enforce directives, but that doesn't include putting a man in jail because he doesn't obey a directive.

Mr. SPARKMAN. What would be the idea of giving statutory authority to enforce directives if you didn't attach some penalty to it? How are you going to enforce them?

Mr. HOLIFIELD. It is very easy. They are enforcing penalties at this time. If the W. P. B. will allocate materials away from nonessential, luxury-making industries and into essential industries, that will be penalty enough to drive, if it is necessary to drive—and I don't think it is—American workers into the defense plants.

Mr. SHORT. And if Mr. HOLIFIELD will yield for a second, if the War Manpower Commission were given statutory authority and would place a ceiling over the number of men who could be employed in a factory, that wouldn't throw a man in jail; that would simply keep him from finding employment there and force him to go somewhere else.

Mr. SPARKMAN. But suppose he didn't go somewhere else voluntarily. What would you do with him?

Mr. SHORT. The reason they haven't gone other places in the let-down of this production is due to many things. One is low wages, particularly in our foundries. They should be increased. Secondly, to bad housing, to insanitary surroundings, and to difficult transportation problems. Another is absenteeism caused by illness or accident or other factors which legislation cannot reach. Another is turn-over in plants caused by change in design and methods of production. Another thing that I think perhaps has contributed more than anything else to the let-down or the cut-back has been the termination and cancelation of contracts by the Government itself last year. The aluminum industry closed many of its factories, the Weldon Springs Ordnance Plant in St. Louis, the Small Arms Plant, the Ordnance Plant at Lowell, Mass., and many other of these munitions plants were closed, and thousands were forced out of work.

Mr. MAY. Now, will my colleague permit me to ask him this question: We have been told by our Army leaders and by the Navy leaders that they need 700,000 men between now and the 1st of June for industry.

Mr. SHORT. Yes.

Mr. MAY. That are not available.

Mr. SHORT. Your Army and Navy——

Mr. MAY. Just a moment. Let's say that the Constitution provides, just as I quoted it a while ago about the right of Congress to declare war, also that it shall provide for and maintain a navy. Now, if you are going to maintain a navy and you have provided a battleship, you certainly have got to have men to operate it. You can tie it up to an American shore in a harbor or on a dock and you can leave it there unless you have the manpower to operate it, and it is a dead duck. What are you going to do about the need for 700,000 more men that we haven't got in industry?

Mr. SHORT. Under Secretary of War Patterson says we need 700,000 more, and the Army and Navy men do, but the War Manpower Commission, on which is represented Government, industry, agriculture, and labor, who know this problem intimately, say that we need only 148,000. The truth is, no one knows exactly how many men we need because no census has been taken, no scientific, thorough, exhaustive survey has been made, and this whole legislation is built upon opinion rather than factual data.

Mr. SPARKMAN. Now, Dewey, I think you have made a mistake there. I know you didn't do it willingly. I think you have misquoted a figure. The 148,000 that you refer to, as I recall, was a figure given by the Bureau of Labor Statistics as to the actual shortage in certain critical plants as of December 30, 1944. As a matter of fact, I hold a memorandum here from the War Manpower Commission and I am looking at the figures, and it shows demand from January to June 1945, 1,600,000, including 900,000 for the armed forces and 700,000 for the industrial production end of it.

Mr. SHORT. The testimony of Judge Hay, who appeared for Paul McNutt, who was in Europe at the time, was that for the next 6 months we need only 148,000. The figures have run anywhere from 90,000 to 700,000 men.

Mr. SPARKMAN. This recommendation is over the signature of Judge Hay and is dated January 9, 1945.

Mr. SHORT. It seems very strange to me, Mr. SPARKMAN, that we should have this bill before us now, when Congress has just set up a board comprised of former Senator Gillette, former Governor Hurley, and Lieutenant Heller, to dispose of $10,000,000,000 worth of Army equipment and goods which the Army and Navy themselves have declared surplus.

Mr. SPARKMAN. Oh, no!

Mr. SHORT. Oh, yes! And when thousands of citizens in many of these States—and I have the figures here, 14,000 in New York, 13,000 in Michigan, 11,000 in Illinois, 5,000 in New Jersey——

Mr. HOLIFIELD. Eighteen thousand and seventy-four in California are drawing unemployment compensation.

Mr. SHORT. Yes; unemployment compensation, and still we are crying about the shortage of manpower. I want to say that government itself and the armed forces have been guiltiest, are the biggest sinners when it comes to hoarding labor.

Mr. MAY. Listen, Mr. SHORT, there are two phases of this manpower need. One is for industry and one is for military purposes.

Mr. SHORT. That is right.

Mr. MAY. And we are having today at least 30,000 men each month or 1,000 a day coming back from the ranks of our fighting forces, either wounded or killed or displaced in some other way. Now, we have got to keep up those stopgaps, and we have got to have 700,000 men between now and June 30. Therefore, I think that the legislation is necessary in view of the fact that it has been established that there is no other way of obtaining it.

And in reference to your manpower situation in the Manpower Commission, I would like you to answer this question. They have been dealing with the labor problem now for 3 years and we still have the troubles. Why haven't they solved it?

Mr. GRANIK. Did you want to answer that, Congressman HOLIFIELD, or did you want to comment?

Mr. HOLIFIELD. I'll say this much: That the troubles we are now having are less than we have ever had before. We have at this present time more facilities, more trained personnel, a higher production per man, than we have ever had in the United States in the way of production for war; and, further, on the subject of possible sources to obtain this labor, let me say that 65,000 veterans per month are being discharged—that makes a total of 390,000 by June; we are getting 60,000 per month, or about 360,000 by June, of new boys in at the age of 18. We are having cut-backs in large-ship production. Calship in California, as you know, has recently turned off eight or ten thousand men, and we are not utilizing workers in many parts of the United States in defense-plant work because of their racial origin. Neither are we at the present time using women and people over 45 years of age that are in the nonessential industries who can be drawn into the work voluntarily if we will hold out to them the same protection in the way of seniority and pensions, transportation, and housing that we are now offering in this bill to the forces.

Mr. MAY. Mr. HOLIFIELD, will you permit me to interrupt you to ask you this question? In view of the fact that our supply lines leading to our battle fronts range all the way from 3,000 to 12,000 miles, and we have to have both replacements of men and replacements of vast quantities of materials that are necessarily destroyed in combat, we certainly have a dual or a double problem on our hands. Are you going to argue and do you contend here that we don't need additional men in order to provide the equipment and to transport it to our forces, and the men to take the place of replacements?

Mr. HOLIFIELD. I certainly do not argue that. I believe that, and I am willing to do anything that is necessary to provide those men, providing we follow the American pattern, and I believe we can follow the American pattern and get those men and put them into industry and put them into the Army, just like we have done the past 3 years when we have accomplished the greatest miracle of production of any nation in the world, including England, who has forced labor; and it was the testimony before our committee that we are all familiar with that the American workers, free workers, are producing five times the production of the English workers under a compulsory system.

Mr. SPARKMAN. Well, Chet, even though what you say may be true, you are bound to admit that in spite of that wonderful production—it it is something to be proud of—we are running far behind in many of the critical materials. I don't believe you question that, do you?

Mr. HOLIFIELD. I would say that we are not running so far behind as they would have you think. I have the figures the same as you have: 6 percent in some industries, 10 percent in others; but I want to call your attention to the fact that those figures include other factors besides manpower. Manpower is only 22 percent of that particular figure. The rest is facilities, the rest is materials, changes over to new weapons, and the further production of weapons which we are now needing badly.

Mr. SPARKMAN. There has been no change-over. Let's get to some of the standard weapons. Heavy artillery ammmunition—there has been no change-over on that, and yet, according to Judge Patterson's statement, in all deference to the lack of confidence that my friend, Mr. SHORT——

Mr. SHORT. Oh, no; the gentleman now is putting words into my mouth that I didn't utter.

Mr. SPARKMAN. Well, I certainly apologize, but I thought that is what you said. You said he knew nothing more about production——

Mr. SHORT. I said——

Mr. SPARKMAN. You said he knew nothing more about production than I do, and if you make that statement you are bound to say that he doesn't know very much about it.

Mr. SHORT. About production.

Mr. SPARKMAN. Yes; and that is what I am talking about. Judge Patterson said in connection with heavy artillery ammunition (and I submit to you that that is one of the most vital needs on our war fronts today, to save American lives) that we were 54 percent low on our stock pile.

Mr. HOLIFIELD. That is on the reserve.

Mr. SPARKMAN. That is on the reserve. You can't get ammunition to the front unless you have got a reserve to draw from. And furthermore, he said that in order to meet our requirements during the first 6 months of 1945 we had to step production up 89 percent over what it was for the last half of 1944.

Mr. SHORT. I will admit there are shortages in certain industries and along certain requirements in particular places, while there are surpluses perhaps of certain other munitions or commodities in other places. I think if there are any shortages in anything it is due not to a shortage in manpower; it is due to miscalculation and to maldistribution. I think that the Government has made a mistake by letting these cost-plus-fixed-fee contracts, because industry has hoarded labor. An employer who is guaranteed the wage of a man doesn't care how much it costs or how many he hires as long as he gets his 10-percent profit. So you find a lot of idle men in these plants all over this country.

Senator MEAD and Senator KILGORE, they are not Republicans like myself either, found the Paul Reveres down at Norfolk; they will find them in a munitions plant; and how the telephones will ring and give an advance warning that a congressional committee or an investigating committee is coming. I say if we had an efficient or full utilization of our present manpower there would be no shortage of anything.

Mr. SPARKMAN. Let me ask you this. How, without some kind of service legislation, are you going to prevent the hoarding of labor? How are you going to impose ceilings? How are you going to regulate the recruitment and placement of labor in any way?

Mr. SHORT. By giving the War Manpower Commission statutory authority.

Mr. SPARKMAN. By using coercion.

Mr. SHORT. No, sir; by going in there with industry and labor and the representatives of agriculture and Government to determine whether or not a certain plant is utilizing its manpower and is producing——

Mr. MAY (interposing). I come back to my question that the War Manpower Commission and those other groups downtown that are acting without statutory authority have been on the job for 3 years and we still have the shortage. I repeat, why haven't they brought a solution?

Mr. SHORT. The manpower problem is in a muddle; it is a man-made problem and has been created by the overlapping, conflicting, and duplicating agencies of this Government because the Commander in Chief has never appointed a single responsible head who can speak with final authority.

Mr. HOLIFIELD. And this will add another agency to refer manpower and to take charge of the classification of manpower into industry, namely, the Selective Service Board, but I don't want to speak on that now. I want to address myself to this artillery shell program.

I called up the Smaller War Plants today and asked them if the small plants of America were being used fully in this shell program, because that is an article that can be made by small plants. I have some in my district, for instance. And they told me this, that 220 small plants in America offered their facilities; 104 of these plants were approved by the ordnance engineers as being capable of performing the duties. How many got contracts for these artillery shells and small munition shells that they are short of? Twenty-five got contracts. In other words, one out of eight got contracts that offered their services; one out of four that were approved got a contract. Let them use the small plants in the small towns of America and stop backlogging orders in the big plants in the critical labor areas and they will get their shells.

Mr. SPARKMAN. Mr. HOLIFIELD, I don't know whether you have discussed this matter with Mr. Maury Maverick or not, who happens to be the head of the Smaller War Plants Corporation. I certainly think that he is in favor of smaller plants being utilized every way possible, and yet there is no more ardent supporter of this legislation in this country than Maury Maverick.

Mr. HOLIFIELD. Yes; and I'll tell you why. Maury Maverick wants to support this bill because the small plants all over the country are being closed and he thinks that if this bill is passed the small plants will be allowed to open and they can force workers into them, but I say that if you give the small plants the orders they will turn them out.

Mr. MAY. Mr. HOLIFIELD, May I intervene here to make this statement? The smaller plants are the producers of many of the articles we use in war, but the bulk of our production is in the vast plants of the big industries. Of course, we want to take care of the small war plant as much as possible. But it is a question of getting the equipment to our fighting forces on time and not too little too late. That has been the problem that we have had all the while, and with our vast distances that we must cover in the transportation of war materials and men and supplies, undoubtedly you will have to agree that with the break-down that we have had and the lack of supplies and the lack of manpower, there has got to be some form of legislation, and this legislation is not mandatory at any time and doesn't become effective until the War Mobilization Director in collaboration with labor, agriculture, and industry has failed to find a solution and has then certified——

Mr. HOLIFIELD. That is on new recruitment.

Mr. MAY. No; that is on the question of getting the available manpower.

Now, in answer to your assertion that we are going to set up a lot of Government agencies and duplicate them, this bill expressly provides that it shall be administered by the Selective Service Bureau so far as directing the men where they shall work, and we have more than 6,000 boards, local boards, throughout the country. We don't need to set up a single additional group of personnel anywhere to carry into effect the provisions of this bill when it does become effective, after it has run the gauntlet of getting by the Manpower Commission.

Mr. HOLIFIELD. But my chairman will agree with me at the present time the War Food Administration refers workers, the U. S. E. S. refers workers, and now we are going to have the selective service refer workers. There are three conflicting units, and I will call your attention that in the last case there will be several boards in one large city that will be referring workers possibly to the same plant. It seems like to me this is heaping confusion on confusion.

Mr. MAY. You have an equal number of War Manpower boards in the same city, and it is a question——

Mr. HOLIFIELD. But they work through U. S. E. S.

Mr. MAY. Regardless of their name, they are there just the same and the effort in this bill is to maintain the administration of this act in the Selective Service System that has the man's history, they are the neighbors of the man involved and concerned with the work job as well as the performance of his duty to his Government, and they, themselves, know whether he is an essential man or whether he has got hardships surrounding him with his family or whether there is some other good reason why he should not be called.

Mr. SHORT. Mr. Granik, I asked Under Secretary Patterson if the break-through in the middle of December by von Rundstedt was due to our lack of manpower on the western front. He said, "No." I asked, "Was it due to our lack of munitions or equipment?" He said, "No." Last week, General Somervell in Paris issued a statement that "Ike" Eisenhower at this moment has sufficient supply to begin a major offensive. We know that warehouses in this country are bulging with war materials, that trainloads are lined up on our sidings, that they are stacked high at our ports of embarkation. We also know that if anyone would go to England and see all of the war materials we have accumulated there, he would wonder how the island keeps from sinking. It is not a matter of manpower or production. The problem is one of transportation. It is as difficult to get the material from the ports of Europe to the front line as it is to get the material from here to Europe.

Mr. MAY. May I ask my colleague from Missouri if he doesn't think or at least if he doesn't know that it requires manpower to provide transportation.

Mr. SHORT. Certainly I do.

Mr. MAY. And it requires manpower to transport equipment from the ports of entry to the battlefronts. Now, if you are going to handle all of these vast quantities that have gotten these warehouses crowded, as you say, you have got to have manpower to handle it.

Mr. SHORT. You have got to have a little intelligent management and direction, too.

Mr. HOLIFIELD. I want to ask my friend, JOHN SPARKMAN, a question. Would you send Philip Murray and William Green and Fred Crawford over to the front line to handle our armies?

Mr. SPARKMAN. Why, no; I wouldn't send them over there to handle our armies.

Mr. HOLIFIELD. I am glad to hear you say that, because they are not expert in military affairs. Neither would I bring in the military generals to tell us how to produce the guns and tanks and shells, because they know nothing about production.

Mr. SPARKMAN. Neither would I, but I certainly would bring in Judge Patterson, who is charged with that job. I would bring in the War Production Board officials who are charged with that job. I would bring in Mr. William S. Knudsen, one of the great production geniuses of all time, who is charged with that job, and they are the men who have been telling us as to what our needs were in industry. Generals have been telling us what they needed on the battle fronts to win. It is up to these back home who are charged with the job of producing that stuff to get the materials to them.

Mr. HOLIFIELD. I agree with you, my friend.

Mr. SPARKMAN. And all down the line they have told us that they needed these supplies on the battle fronts, and I believe them. Not only that, but I want to say this to you, regardless of what anybody may say about there being no shortage or its being simply a matter of transportation, or whatever it may be: I heard General Patton say that he needed ammunition and he said, "For God's sake, get us heavy caliber ammunition!" And I heard General Eisenhower say the same thing; and I heard General Bradley say the same thing; and I heard Gen. Mark Clark say the same thing; and I heard those G. I.'s right out in the front line who were firing those artillery pieces say the same thing; and I am not going to stand up in the face of experts who have told us that we need the manpower recruitment and placement in an orderly manner in order to produce the material, when General Eisenhower and General Patton and General Clark and General Bradley and those G. I.'s are calling for it.

Mr. SHORT. Wait just a minute. The time is about up.

Mr. MAY. Now, I am your chairman. Keep quiet here.

Mr. SHORT. Why did this Under Secretary of War in whom you have such implicit confidence tell us we have shortages of nothing, that the break-through was not caused by any lack of material or men? General Somervell only last week said they had a sufficient amount. I want to say this: That conscription is the quintessence of the Axis method, of the Nazi-Fascist philosophy of government, and when you take a drafted man and place him by the side of a voluntary worker on the production line in a factory you are going to weaken the morale of both. It is like putting a rotten apple in a barrel of sound apples.

Mr. SPARKMAN. Now, with all due regard to my friend—and he is my good friend——

Mr. SHORT. Sure.

Mr. SPARKMAN. I heard him use exactly that same argument when the bill was up to draft men for the armed forces, and I heard him use it a year later when the bill was up to extend that draft, and you are using the same argument now.

Mr. MAY. May I ask a question?

Mr. SHORT. Just a minute. I say it is entirely different from drafting men into the armed services and drafting men in private industry.

Mr. MAY. Let me ask this general question. We have got men fighting and dying on every battle front in the world. We have got men at home earning wages unprecedented in the history of this country. Which side are you going to be with? Are you going to take care of the fellows on the other side just because somebody doesn't want to work in this country, or are you going to require the man that is not in a job (and that is all that this bill does, it affects only men who are not in some war production job) to work, or are you going to let them lay off the job?

Mr. HOLIFIELD. I would like to say to my chairman, that if the condition is as critical as he says it is, let's draft the men and the machines and the finances of this country and solve the problem; let's not go at it piecemeal and only take the men and let the factories and the profit-makers of war go unattended.

Mr. MAY. We don't need to draft industry in this country. You have already admitted that the wealth of this country has done its part of the job, and everybody admits that. They have done it in a great fashion; and labor has done a good job. But the men that we are trying to utilize in this legislation are the men that are not engaged in some war effort.

Mr. SHORT. You can't legislate patriotism, industry, or morality, and the minute you take a bowery bum or a pool-hall loafer and put him into a plant where honest and industrious Americans are working, you will have to spend twice the effort on him that you will get out of him.

Mr. MAY. Let me say that I think a $10,000 fine and a 5-year jail sentence will handle a good many bums, if you call them bums.

Mr. SHORT. You can force a man into the factory, but you can't force him to work.

Heroism of American Prisoners on Luzon

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement by Rev. Father John Dugan, S. J., captain, United States Army Chaplain Corps, appearing in the Washington Post of February 5, 1945, revealing the heroism, fortitude, courage, and patriotism and fine spiritual outlook of members of our armed forces during the period of their captivity on the Island of Luzon. His dramatic statement is the best evidence of the love of the Filipinos for America; of the terrible conditions our boys underwent, and of their courage and fortitude. It also constitutes best evidence of the cruelty of the Japs, which we should not forget.

How dramatic and impressive is Father Dugan's utterance on freedom when he said:

You just cannot put into words what your heart feels when freedom—the last thing you have learned to expect after 3 years of prison—is suddenly yours.

The statement of Father Dugan, whom I last saw in Boston just prior to his leaving to enter the United States Army, should be read by every American. It follows:

ARMY CHAPLAIN REVEALS HEROISM OF YANKS DURING CAPTIVE PERIOD ON ISLAND OF LUZON

(By Capt. John Dugan, as told to Lee Van Atta)

A REST CAMP ON LUZON, February 4.—I can tell the whole story of my comrades during these past three terrible years in a few simple words.

Those words are these—they proved themselves real Americans; Americans with honesty, courage, Godliness, and fine common sense; Americans who never faltered and who may have feared, but were too proud to admit it.

Many of them found God in death; others found their God with me in the simple service we were allowed to hold in our rude little prison chapel.

LIVED HELLISH EXISTENCE

Yes, we lived a barbaric, cruel, and often bestial existence. But we lived a life which bound each unto the other and we shared the pain and suffering of imprisonment under our ruthless Japanese captors with the same community feeling with which we are now sharing our freedom under the Army officers and men who are almost too kind to be real.

I was one of those few fortunate men who missed the Death March—I was ill, too ill to walk, and even the Japanese apparently feared to infringe greatly on the church.

But everywhere around me I saw what they did to our men. First, they confiscated everything we had—our few precious remaining valuables and keepsakes, what little food we had saved aside, and, yes, even our medicines.

Not then, nor weeks later, nor months later, did they ever give us that medicine we needed so badly for our wounded and our dying.

They did everything they could to starve us, but they forgot one thing—the American spirit. Our boys had that from the start to the finish and they absolutely refused to let the Japanese crush that spirit.

Deliberately, in the first days, they did all they could to confuse us. They were frequent moves, disquieting reports which they circulated of what our leaders were doing, propaganda about how America was about to surrender.

It achieved them no good except to create an even deeper distrust and dislike.

Our death toll at first was staggering. In the early days at Camp Cabanatuan, second only to the terrible scenes at Camp O'Donnell for savage administration, our soldiers were dying at the rate of 50 a day.

Then, in late November of 1942, we were given our first Red Cross parcels—parcels with food, medicine, cigarettes, and even some reading matter which the enemy troops let pass.

JAPS TOOK THEIR MEDICINE

Nothing was received in all the time we were imprisoned that did so much to lift our morale, to increase our confidence and to cut our death rate.

That medicine meant the difference between life and death for many scores of our men.

All the officers, chaplains, and doctors had to do manual labor in the fields every day, working from dawn to dusk.

Our jobs ranged from cleaning latrines to farming and wood chopping. And those who failed to meet the schedule the Japanese had set were beaten and sometimes executed.

I've seen more than one American beaten to death because he lacked both the strength and the will to keep up the back-breaking physical labor our captors demanded.

Certain memorable highlights stand out in those 3 years we were in captivity, but not many. In time, often in a very short time, the sheer weight of living becomes so heavy you strive to let each day pass with as little notice as possible, except for a thankful prayer that you are still alive.

I could tell of tens and tens of thousands of terrible things we saw and heard, of little events which we magnified so much at the time, but which seems so small to us now, of more of that same type of camaraderie I mentioned before.

But fortunately, while the hardships of those years will always remain, somewhere deep within us it's the brighter things we like to remember.

FILIPINOS WERE KINDLY

For example, the wonderful kindness of all the Filipinos who willingly sacrificed their lives and freedom to bring us gifts of food or medicine.

I cannot find words to praise too highly their unselfishness, their loyalty, and their friendship for us when we were the representatives of what seemed to everyone but them and us, a great lost cause.

I can give the time right down to the minute when our captors knew that our cause was not a lost one. It was 10:30 a. m. on September 21 of last year. We were working in the fields when that hope flew past high above us in the form of at least 150 carrier-based planes.

We would have been beaten to death had we showed the least outward signs of happiness, but can you imagine what joyfulness seethed within?

That moment, I think, we all knew better than ever before that the Americans were on the way back to us for sure.

It was an unforgettable day in all our lives.

I like to recall Christmas Eve of 1942 also, an evening which will live in my mind as one of the great experiences of all my imprisonment.

We secured permission from the prison authorities to hold Christmas services in the fields near Cabanatuan. All the churches and all denominations were represented in that picturesque setting and 6,000 American soldiers came to that single service of belief.

I am sure God looked down on us that night, and today I'm equally sure that He answered our prayers.

Of course, Tuesday night, January 30, was our night of redemption and there'll never be another quite like it for any of us.

If all Americans are pouring into this war the same efforts those 120 Rangers gave, individually and collectively, to rescue us from almost certain death, then I know why we are winning this war.

They did an absolutely Herculean task with truly beautiful teamwork.

You just can't put into words what your heart feels when freedom—the last thing you have learned to expect after 3 years of prison—is suddenly yours.

What perhaps made it most realistic to me was that two friends—Lt. John Murphy, of Springfield, Mass., and Lieutenant O'Connell, of Boston—were among the first to recognize me and tell me it was not a dream, but reality.

Then I knew that even though there was a long march ahead of us, home lay at the end of the road.

Our Government cannot reward too highly Colonel Mucci and his rangers for what they did.

I want to say once again that the morale of our men the night we left Cabanatuan was the same strong, unflinching morale they'd showed throughout, and I want to say again how proud they make me feel to be an American.

How do I feel about this new freedom? It's like walking in a new and wonderful world.

(EDITOR'S NOTE.—Capt. John Dugan, 47-year-old Army chaplain from Milton, Mass., the author of this article, is one of the three Catholic chaplains who stayed with their men through most of the hardships after the fall of Bataan and Corregidor.)

A Citizen's Views on Current Problems

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. KNUTSON. Mr. Speaker, under permission granted, I submit for the RECORD a letter recently written me by a gentleman living in Minneapolis that I feel should be read by every man and woman in the country. The writer shows an unusual grasp and understanding of the problems that confront us and the evils that beset the country. The letter follows:

MINNEAPOLIS, MINN., *January 20, 1945.*
Hon. HAROLD KNUTSON,
United States House of Representatives, Washington, D. C.

DEAR REPRESENTATIVE KNUTSON: Believing that each of us should take time out to express our opinions on matters of public policy, I am writing this letter to you to give you, not the opinion of a special pressure group, but the opinion of a person who attempts to study both sides of every issue and one who believes strongly in America, what it has done and what it can be.

It is my good fortune to travel often and meet many well-known, intelligent people with whom I have the opportunity of exchanging ideas and also get a fair cross-section of what people are thinking.

During the past few years I have noticed a definite trend in this country away from individual thinking, expression, and work, and toward a controlled, regimented way of life.

This just hasn't happened—this has been planned. You might say that people desire this trend to continue. The last election can be held up as justification for continuing this trend. But before this is accepted as a fact, let's look at a few factors. First, almost 50 percent of the people that voted didn't want the New Deal continued. Second, many voted for Roosevelt thinking the war was just about over and he should finish the job. Third, everything possible was done to create an air of freedom and to make people think that all the controls were wartime controls and would be dropped as soon as the end was in sight. For instance, before the election:

Most foods were taken off rationing;

There was much talk of reconversion.

Many critical items were going to be made again;

A beautiful job was talked about how well the production job was being done and how well our free enterprise system had worked;

The Montgomery Ward-War Labor Board case was dropped; it was a hot potato;

The New Deal's foreign-relation program was whitewashed, and everything possible done to hush up current events.

For the above reasons, many people reluctantly placed the New Deal in office again; they, like myself, with my tongue in my cheek, thought the cat had actually changed spots.

Now let's see what has happened.

Where is our foreign policy? Look at Italy and Greece.

Look at the power politics in Europe. What are we fighting for—the continuance in the world of empires and kings, or has it turned out that this is just another war being fought on the same basis as all past wars?

We are now being told that we have not done a good job in production—that it is necessary for a labor draft to get the job done.

There's a food shortage (not according to the War Food Administration, Kiplinger, or the farm leaders), and therefore rationing must be put on again.

We need more men in the armed forces, so all business, except direct war manufacturing businesses, must be stripped to get the manpower the Government says it needs.

Is all the above really necessary, or is it getting to be a crime in this country (as in Europe) to question the powers that be? Is Congress just a rubber stamp, a flock of sheep that like to follow the leader, or are they doing the job they've been given to do?

What's been wrong with our war effort that was so excellent up to the election?

Have any of you thought of what can be done about the following?

1. There's supposed to be a shortage of labor, but has anyone bothered to look into the actual labor situation; as a few examples:

One large Minneapolis plant just 2 weeks ago curtailed production from 70 hours per week to 48 hours per week.

At another, the employees have so little to do that time is spent making knives, rings, and other souvenirs. People that are disgusted can't quit, they wouldn't be allowed to get another job.

At another plant, this I personally observed at 9 a. m., 1 hour after starting time, at least half the office staff was having breakfast. In a so-called civilian plant, this wouldn't be tolerated, and I'm safe in saying one-third of the force could be dropped and not missed.

At one of our largest engine plants in the East, I was told last Thursday that at least 30 percent of the workers had very little to do, and many wanted to get into other work but couldn't.

What has been done about feather-bedding practices of unions to spread out manpower? This is serious, but everyone's eyes appear to be closed.

This, and many others, suggest to me that Washington is laying another smoke screen. We are not being told the real purposes of this push for more regimentation.

Is the debt going to be paid off to Sidney by having all labor told what to do, everyone told where to work and for how much, and what union to belong to?

We talk a lot about opportunities for the servicemen when they come back. If the Government goes through with its threat of drafting everyone to work where the powers that be say to work; if IV-F's which are the backbone of many large civilian enterprises are forced into semiidleness in a so-called war plant, isn't there a good chance that many of these businesses will fold up, leaving only W. P. A. for the servicemen to return to, or, and I believe this is the main objective, this is what the planners planned so they can step in and the people will all be under their thumb.

It is my opinion that you men in Congress must look into this crying of wolf before it's too late. Let's make sure drastic steps are necessary before they are taken.

People will put up with much now, due to the war, but there is going to be an accounting to the people, not only to two or three large pressure groups, after the war is over.

Have Washington go to work and stop kicking morale down in the basement. Unload your many Government agencies of excess manpower and you'll have an excess for production.

Also stop treating the American public like a bunch of school kids; from actions of the Government, one is led to believe that the Government's opinion is that no one knows what's best to do and that all the intelligence is in Washington. There's an overabundance of evidence that shows very little intelligence goes to Washington.

I would suggest that you talk to returning servicemen and get their side of the story, what they think and believe about what has been going on at home. These boys are going to be fed up with regimentation and expect to come back to an individual life with opportunities to work where and as they please.

This Congress could rise to the heights of greatness. All it needs is leadership; is it going to meet the challenge?

From here, and what has been happening, the sky looks black and the outlook is pessimistic. We need immediate action by Congress; we need men to measure up to the stature of Jefferson; we need an open, questioning mind, even if it means our political life or individual freedom.

Thank you for taking the time to read this. Every word of it is written with the greatest sincerity. I'm not worried about myself, I can take care of myself, but I am worried about what's going to be here for the youngsters who are just growing up.

As a last suggestion, I'd like to recommend a book to you that is going to be very much discussed in the near future. It outlines very capably what has and is happening to the western world. It is The Road to Serfdom by Friedrich A. Hayek.

Yours very truly,

Farm Labor Shortage Is Acute

EXTENSION OF REMARKS
OF
HON. CHARLES E. McKENZIE
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. McKENZIE. Mr. Speaker, we are all familiar with the old adage, "An army travels on its stomach." We all know that the most urgent primitive instinct of all creatures, whether man or beast, is the quest of food. Food is indispensable to survival. Food is produced on the farms.

Whether it be wheat, corn, or other grains, fruits, or vegetables, milk, butter, eggs, poultry, beef, mutton, or pork,

whether it be carbohydrates, proteins, or animal or vegetable fats, all food originates on the farm. Food is essential. Food is essential to the Army, it is essential to the war worker, and it is essential to the civilian population. It is essential to the maintenance and preservation of the physical strength, health, and morale of the entire people engaged in the war effort. It is not only essential, but it is critical. If food is critical then the production of food is also critical.

Twice last month I called the attention of this Congress to the farm-labor situation. Twice I pointed out that farm labor was critically short. Twice I made reference to statements by Major General Hershey that farm labor was in a special category and had been specifically dealt with by this Congress when it passed the Tydings amendment. In spite of all this, certain powers put the pressure on the selective service and the local draft boards to take more men from the farms, which had already furnished 43 percent of the entire personnel of the armed forces, a matter of 40 percent more than the farm quota based on a pro rata computation.

It now appears that the Department of Agriculture has also become alarmed over the acute shortage of farm labor and the threat to the Nation's food supply. I quote herewith an article from the Washington Post of this morning:

FARMS FACE ACUTE LABOR SHORTAGE, OFFICIALS WARN

The Agriculture Department listed scores of critical farm-labor shortage areas yesterday as food officials warned that an early end of the war in Europe would not ease a tightening food-supply situation.

Farmers will need, the Department said, part-time help from at least 4,000,000 nonfarm workers in town and urban areas if they are to come anywhere near meeting production goals set up by the War Food Administration.

Contrary to expectations of many, a German surrender would not lessen demands on American food. Such an event would bring about increased demands for foreign relief feeding at a time when the armed forces were stepping up their purchases of reserves for the final campaign in the Pacific against Japan.

The Department is emphasizing that agriculture has its shortest labor supply in nearly 40 years.

Now, Mr. Speaker, what does all this mean? The most naive city slicker knows that food planted this spring will not be harvested until next fall. He knows that as prolific as even hogs are that the pigs farrowed now will barely be large enough for market by next winter. He knows that the work put in on the farm from now until the end of the season is necessary to the production of food. Surely if the city man knows this then our high and learned officials of government must also know it, too. So what does this order mean? Does it mean that someone in high office is deliberately trying to confuse the picture? Does it mean that through a food shortage they are planning chaos and the need for further regimentation? Does it mean that the United States is going the way the dictatorship-dominated nations of Europe trod? I certainly hope not, but I can't help but wonder.

However, Mr. Speaker, the above referred to high officials are without authority. There is a law on the statute books known as the Tydings amendment. This act provides as follows:

Every registrant found by a selective-service local board to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained.

Mind you, sir, I said this was the law of the land. It has not been changed, amended or repealed. The local draft boards are composed of honest law-abiding citizens who are laboring day and night, without pay, at the most thankless job any patriotic citizen can undertake for his country. I have absolute faith in their judgment and in their integrity. I think it very unfortunate and certainly un-American for any governmental official to attempt to confuse them. The war cannot be won without food. Food cannot be produced without farm labor. What can be more plain? Besides it is the law.

Rural Phase Inverters Cut Phone Induction

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. HOBBS. Mr. Speaker, it is with pride and joy that I call the attention of the House to just another piece of excellent work that has been done by a distinguished electrical engineer, Mr. Lee M. Moore, formerly of Selma, Ala., but now and for some time past a member of that small staff of technicians, known and respected in their profession, who constitute the Technical Standards Division of the R. E. A.

It is gratifying to note again an instance of achievement where a man in Government service has diligently applied his expert knowledge and skill to the solution of a problem to the end that improved service may be rendered the public.

Knowing how interested our constituents will be in this development, I beg to call your attention to an article that was published in Electrical World of January 6, 1945, entitled "Rural Phase Inverters Cut Phone Induction."

For your convenience, the article is set forth at length. I wish it were possible for the diagram and the chart appearing in the article to be reproduced in the RECORD.

The article was written by an electrical engineer for readers who know their electricity. So it is quite technical and means little to me, but as I understand it, it describes a new method of preventing disturbing noises in telephones and mistakes in telegraph messages which are brought about by interference with electrical communication due to the proximity of electric power lines. In the past it has frequently been necessary to provide and install complex corrective measures. This new invention is comparatively simple and inexpensive. It was conceived, perfected and placed in operation by the author of the quoted article. Mr. Moore should and will receive the grateful thanks of all rural telephone users whose service will be improved by this invention and by all others who benefit by improved electric service.

RURAL PHASE-INVERTERS CUT TELEPHONE INDUCTION—TWO 75 KILOVOLT-AMPERE TRANSFORMERS BALANCE INDUCTIONS AND REDUCE EFFECT ON THE PARALLEL COMMUNICATION CIRCUIT EXPOSED TO THE POWER LINES

(By Lee M. Moore, principal electrical engineer, Technical Standards Division, Rural Electrification Administration)

A combination of phase-inverting transformer and resonant shunt installations on a 12,450/7,200-volt rural line of the Black River Electric Cooperative in Missouri served to reduce the induction experienced by open wire communication circuits when a multigrounded single-phase extension was energized. Railroad signal and communication and Western Union Telegraph circuits are exposed to some 4 miles of 3-phase, 10 miles of V-line and 16 miles of single-phase; separations averaged less than 300 feet throughout the 60-cycle exposure. The Bell System lines are standard-transposition and some circuits are arranged for C and J carrier operation; the major toll line carries long-distance messages and wide-band programs. It parallels 5 miles in the three-phase section, 10 miles in the V section, and 8 miles in the single-phase section; average separation throughout is ⅛ mile; harmonic induction was the primary concern.

RESONANT SHUNTS

As a possible remedial measure for correcting the noise induction, 300-cycle resonant shunts were installed on phases "A" and "C" at the Pilot Knob substation. The shunts were effective in reducing the over-all TIF from 15 to 6.9, the 300-cycle component from 510 to 162 volts, and the 420-cycle component from 32 to 16 volts. The residual IT of phases "A" and "C" was reduced from 360 to 150, and the over-all IT of phase "A" from 360 to 160. The noise-to-ground on exposed telephone lines was reduced from 42 to 35.5 decibles (message weighting) with the tuned 300-cycle shunts connected during the heavy load period. A 10-decible reduction was obtained when the rural power lines were deenergized. The major reduction in noise-to-ground for both conditions was in the 300-cycle component. The use of 30 kilovolt-amperes capacitors instead of the resonant 300-cycle shunts produced no appreciable change in noise-to-ground on telephone lines.

In order to further reduce the induction on both communication systems, it was decided to transpose the multigrounded rural power line in the single-phase exposure by the use of phase-inverting transformers at a point in the single-phase line which would result in a minimum induction to the communication circuits, the principal component of induction being produced by phase "C," thus:

Component due to phase "C" = $25.61 + j0$
Component due to phase "B" = $-3.01 + j5.21$
Component due to phase "A" = $-5.06 - j8.75$

Resultant (total induction) = $17.54 - j3.54 = 17.9$ volts

Therefore, if the current in phase C could be shifted approximately 180 degrees at a point along the line so selected that the resultant component of voltage due to phase C would be equal to 8.07+j0, then the voltage induced in the communication wires would be a minimum.

SATISFACTORY RESULTS

Tests results with the 75-kilovolt-ampere phase-inverting transformers showed a reduction in noise-to-ground level of 6 to 10 decibels (50 percent—67 percent) while the metallic noise level was reduced 3 to 16 decibels thus indicating a substantial improvement in noise conditions on the telephone circuits. Measurements of the induced voltages of the telegraph wires between Arcadia and Piedmont indicated reduction in the induced voltages of 75 percent at 60 cycles and 84 percent at 300 cycles. The reduction of induced voltages by the phase-inverting transformers is variable due to the fluctuating loads on the rural power system, but sufficient reduction is obtained to warrant their continued use.

Development of International Law

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. BURTON. Mr. President, on January 27, at the Pan American Union, there was a meeting of members of the Inter-American Bar Association and the section on International and Comparative Law of the American Bar Association. At that meeting a very scholarly address was delivered by Dr. Marcial Mora, Chilean Ambassador to the United States, dealing with the development of international law, and concluding with an invitation to the members, particularly of the American Bar Association, to participate in the forthcoming Inter-American meeting to be held in Chile, which is to be attended by lawyers from various countries of the Americas from October 20 to 29, 1945.

I ask unanimous consent that the address of Dr. Mora be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD as follows:

In the history of human relations, a long and obscure period appears characterized by the axiom: "Dura lex, sed lex"—the law is hard, but it is the law.

The severity of this maxim did not emanate from a universal juridical conscience, but conformed to the false identification of the law with the will of a Caesar.

The precepts had, therefore, the narrow significance of a rigid mold which imperatively constrained the life of the peoples. History was nothing more than a succession of struggles between the princes, a continuous collision of authoritarian forces, whose conflict would scarcely permit even a silent and thin sediment of culture to slip through.

It has been necessary for many centuries to pass in order that this fecund sediment might settle itself upon the outer crust of the world. Innumerable conflicts have had to be resolved, and the blood of many generations spilled, before the princes might be superseded by the concept of the "Nation", which implies a moral category.

Only by this difficult and painful road has the law acquired meaning as the expressive norm for the existence of peoples, ceasing to be a rack of torment.

And the majesty of the juridical conscience only now brings up the ancient aphorism according to which the law is hard, since the legal precept now represents a safeguard of the people and a protection of their collective interest.

In past epochs, the law was hard for all who lacked the favor of Caesar; it was rigorous for the people or for the man of no particular caste.

At the present time, the law is hard for whomsoever wishes to leap the barrier of respect due to the collectivity, for whomsoever rises up against the national category, for whomsoever, ignoring human values, seeks a mandate which does not emanate from the will of the people, but endeavors to submit the people to the domination of his own will.

Thus, also there has had to occur an evolution in the concept that the law, being hard, is always the law; because in ancient times this meant the perpetuation of servilism, whilst at the present time it constitutes an admonition to the powerful that points out a social duty superior to their mere will and a force much superior to that available to their princely resources.

This conquest so transcendental for the destiny of humanity is due in great part to the patient work of the jurisconsults, to the tenacity with which the men of law have been defending, step by step, the prerogatives of human dignity.

Therefore, it is not strange that in our collectivities, which are the masters of their own destinies, and make their own determinations respecting the authority that is to govern them, the meeting of legal experts is appreciated and encouraged with increasing enthusiasm, in order that the law may reach greater perfection, to further tranquillity and the social good.

Our continent, which so many times has been selected as the stage of the future, and a builder of a new historical era, may take pride in its juridical tradition, of its republican institutions, of the meaning that the legal precept acquires among all its peoples.

And this is due to the exercise of democracy as well as to the cooperation that the legislators have received constantly from the forensic sectors.

Thus, it is that inter-American meetings of professional groups of lawyers, constitute in the political and diplomatic sense, a valuable contribution to the mutual knowledge, understanding, and friendship of nations; and at the same time have historical projections even more important, because they serve to agree upon actions, to deal with initiatives, and to make even more valuable the juridical heritage which we shall pass on to the new generations.

Should the building of a new historical epoch be the task of the Americas, there is the absolute assurance that such contribution must be carried out on the basis of the law, that will conform not only to national standards, but also will adjust itself to continental existence, to better serve civilization and the world.

The satisfaction with which the Government and the people of Chile will welcome the next Inter-American meeting of jurisconsults is justifiable, because they offer to Chileans the always pleasant opportunity to affectionately receive their brothers of the three Americas, and because at the same time it permits collaboration in the best possible measure in the success of this task of such noble and transcendental significance.

Because in my person there coincides the quality of ambassador with that of lawyer, I may enjoy the most singular satisfaction of assuring you that in my country our profession develops harmoniously, parallel with the sense of dignity and respect with which the authorities and all classes of the people attend upon the exercise and the perfecting of the law, and that the Order of Chilean Lawyers is a guaranty of the capacity and rectitude of its members in the defense of life and interests that are the essence of the exercise of this noble profession.

In greeting on this occasion the representatives who will gather at the forthcoming Inter-American meeting, and in wishing them a happy stay in my country, I desire to anticipate their trip in some degree, assuring them that they will find there, not only a friendly, hospitable and cordial country, but also, and above all, a country resolved and determined that her international life, as well as her own internal existence, shall be based on the majesty of the law, on the recognition of the law as the only source of happiness and justice for all men.

Foreign Policy of Mexico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by His Excellency Ezequiel Padilla, Secretary of Foreign Affairs of Mexico, on January 7, 1945, on the subject of the foreign policy of Mexico.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I deem it an imperative duty for me to define the foreign policy of Mexico. International problems are now foremost among the interests of the people, and more than ever it is necessary to keep those problems before an enlightened public opinion.

Mexico is at war. It is natural that in these times our country should have as uncompromising critics of its foreign policy all those who are in heart and mind against the cause Mexico defends. I am not referring to wholesome criticism, to the just demand of information on issues vitally concerning all of us, but to that unmistakable poisoned kind that betrays the unconditional foe, and to perfidy at work. The purpose of this address is to defend our foreign policy against such destructive machinations.

President Avila Camacho, from the outset, was for the cause of the democracies. He did so with the determination that issues from an undeviating path of a conviction. Such was his invariable position throughout the various stages of our onward march; when relations were severed with the Axis Powers right after the treacherous attack on Pearl Harbor, when Mexico defined its stand at the Rio de Janeiro conference, when the measures for collaboration and defense subscribed at that conference were swiftly carried out, when it was formally stated that a state of war existed in answer to the sinking of our ships. Every one of these decisions has involved a tremendous responsibility in the judgment of history, which the President of Mexico and his Secretary of Foreign Affairs have faced unhesitatingly. It is easy

to say all this now but, at the fateful hour, how many somber presages barred the way. Fifth columnism brought all its resources to bear, advocating neutrality, predicting an Axis victory, constantly stirring up historical resentments. With unutterable impudence, when our ships were sent to the bottom, it went so far as to assert that they had been attacked by submarines of the United States. Such rumors were spread, and continued to be spread, with wicked Nazi mastery. "This is not our war," they repeated everywhere, as if the designs of the aggressors for the subjugation of humanity were a threat foreign to our destinies and to those of all the Americas. They carried out this propaganda to such an extent that it may be asserted that the decisions taken by the Mexican Government in the early days of the war had the appearance of unpopularity.

There is nothing further from the truth than that stock phrase by which attempts are made to belittle the resolute action of Mexico—"that there was no other road open to us." There was. We had it; and took it in the First World War. There were other courses open to us and, among them, those suggested by the enemy, i. e., neutrality, isolation, wavering, misrepresentation, bargaining as advised by certain critics of our decisions, as if trafficking in the sacred principles and interests of the Nation were an honorable course to follow. But Mexico chose the path of honor, not for geographical reasons nor for mercenary opportunism. Had we dwelt six thousand miles away from this Continent, Mexico would have acted in the same manner in accordance with her tradition of defending resolutely the liberty and dignity of mankind.

True to its position of a nation at war, Mexico raised to the status of reciprocal agreement the duty of Mexicans residing in the United States to enroll in the latter's Army. This agreement is similar to those entered into with France, Great Britain, Holland, Canada and other nations at war, and is likewise similar to those concluded between other countries. Immediately that same poisonous propaganda was subtly and cleverly instilled into the channels of domestic opposition. But now the people know that the Mexican soldiers fighting under the banner of the United Nations, as the pilots of Squadron 201 who are soon to reach the battle front to share with their brothers-in-arms all hazards and the glory of a common cause defended against the would-be enslavers of mankind, are the pride of their native land, and their heroism shall be a contribution to protect the future of Mexico. A nation with a gallant tradition of courage, such as ours, could not have acted otherwise.

When it was decided to alleviate the manpower shortage, the old maneuver, concealed, objected thus: "We are going to impoverish our agriculture." As though war were merely an opportunity for profit. The international agreement subscribed by us, a pattern for the security of our workers, either was misunderstood by those who challenged it or else they pretended to do so; all they did was to spread rumors. Mexican workers understood it quite well; for them it was an opportunity to earn high wages, a gallant adventure for youth, and, above all, further evidence of cooperation toward victory.

In time of privation and hardships for all countries, the Ministry of Foreign Affairs has concluded agreements that have safeguarded Mexico from the most terrible repercussions. Even when certain action was not taken directly by the Ministry of Foreign Affairs, who can doubt that it was this Department that created, and continues to create, the proper atmosphere of international cooperation to develop the constructive plans of the administration and of private individuals? And yet, in the meantime, what did the invisible enemies do? Acknowledge the truth? No; they grumbled, criticized, and spread falsehood.

Industrialization of the country has made remarkable progress, notwithstanding difficulties inherent to wartime. The Mexican-American Commission for Economic Cooperation has carried out its program satisfactorily. The press constantly announces how new industries spring up throughout the country.

And all this represents opportunities for new jobs, for economic expansion, for the development of Mexican private initiative, for material greatness. These incontrovertible results, however, mean nothing to the systematic objectors. Forgetting that we have been living through tragic days in which all peoples gallantly accept all sacrifices imposed by war, they have, demagogically and fully aware of the effect to be obtained, attempted to destroy the sentiments of international friendship.

While at the Ministry of Foreign Affairs we endeavored to obtain success beyond question in all activities required by the most pressing needs of the people, they spread their stories throughout. In the streets they flooded naive minds with their misleading propaganda; for this purpose the watchword was given out even at the public market. If there was no corn or wheat or lard or gasoline, they whispered the slanderous charge: "There is nothing because everything is shipped to the United States."

And this went on at the very time we were obtaining from the United States supplies needed for its soldiers at the front. In 1944 that country sent us, in addition to appreciable quantities of sugar, rice, and lard, 52,000 tons of flour, 134,000 tons of corn, 587,000 tons of wheat. And at that time the gasoline used in the North was imported mostly from the United States. We can assert that in these dark moments of the history of mankind the Mexican people, without the reciprocity of this friendly Nation, which was extended in an effective and cordial manner, would have gone through critical hours.

Our foreign policy, without impairing its universality, clearly advocated Pan-Americanism. What was it these ambushed babblers of mistrust did then? By underground means they disseminated vituperation upon that continental doctrine, alleging that a Latin American alliance was indispensable, a thesis coinciding with the reactionary defense of Hispanidad. When they speak of such union, they do not pretend to refer to a laudable sentiment of cohesion, of fraternity among those peoples of the same race, language, and religion in America. No indeed. With perverse intentions they only try to stir up ill-feelings, to weaken the solidarity of the peoples allied for the cause of liberty. Latin Americanism, understood as a negative doctrine of abstention and resentments, could have been justified in the face of excesses of United States imperialism; but it is out of date in the presence of the good neighbor policy. Furthermore, I am certain that were Mexico to promote such a Latin Americanism, no other American nation would follow.

They begin to spread confusion over the case of Argentina. And here I wish to state categorically that our foreign policy faithfully interprets the sentiments of the people when I say that our position and our actions toward the Argentine people are wholly based upon fraternity, admiration, and hope. The day when the authentic will of the Argentine people clears away the distrust aroused in the American nations by the failure of the Farrell government to identify itself with the destinies of our hemisphere, shall be a day of rejoicing for all the Americas.

It might have been expected that the victories of the United Nations would have given them sorrow but at the same time wisdom. However, it is not so. They are not stopped even by the consideration that the name and prestige of Mexico constitute a bulwark and a treasure for the uncertainties of the future. Mexico has occupied a place of honor in this war and is entitled to a place of honor in the peace. Its resolute attitude as well as its adherence to the noblest tenets of humanity, have won for our country such international standing as it never enjoyed. We must remember, besides, our enhanced fraternal friendship with the American peoples and with all other United Nations, the interviews of President Avila Camacho with various chiefs of State of this Continent, the expressions Churchill had toward Mexico at our Embassy in London, the cordial intercourse between Mexico and the Union of Soviet Socialist Republics and our excellent relations with the provisional government of France and with the Chinese Government. There is nothing more just than to endeavor to maintain Mexico in the peace at the height of its position recently reached of a nation endowed, if not with considerable military power, with such moral power that insures for it an important role in the world.

The policy advocated by adversaries of the Government would on the contrary, imply our sinking into a position of inferiority, in which resentment against powerful countries would not suffice to counteract the bitter realities of a new world to which we would not belong. In spite of all this, I know that the foes of the cause of Mexico and of the United Nations shall not rest. Their hopes of victory for Germany and Japan having vanished, they no longer can say that "this is not our war," but they can continue to promote dissension and distrust. The people must be aware of the existence of a constant and renewed onslaught against our foreign policy. That onslaught consists in designating the policy of Mexico as "entreguismo," i. e., turning one's country over to a foreign power. This word is tossed about throughout the country, financed by and under the sly impulsion of the disciples of Goebbels. But you cannot fool the people all the time. What is meant by that word? What is "entreguismo?" Have we turned a single slice of Mexican soil over to a foreign power? Our national flag gracefully waves everywhere. Even in these times when the United Nations, without impairing their sovereignty and honor, place their own geography at the service of the Allied cause, have we permitted that Mexican territory be occupied by foreign armed forces? Throughout the whole country only soldiers of the national Army, wearing the national insignia, uphold the honor and maintain the security of the Republic. Have we jopardized any of the principles of dignity and respect to the Nation? None. On behalf of the President and in my own behalf, I challenge the slanderers, authorize those still harboring the slightest suspicion of the conduct of the Government, to point out or denounce a single line, a single action not representing national honor and integrity. It is their duty to do it if they have cause; if they fail to do it they are responsible for guilty silence. But they know that they lie, and it is enough for them, with typically Nazi tactics, to circulate everywhere the word "entreguista."

They pretend not to know that I share the work of the Ministry of Foreign Affairs with spirited and patriotic collaborators. The members of the Foreign Affairs Committee of the Senate, to whom I report on international matters from time to time, constantly extend to me their encouragement and valuable cooperation. There is not one single secret item in our foreign policy. And over us all there is the vigilant responsibility, the safeguard, of the President of Mexico. The people must realize it is a fifth-column machination when they consider that this undermining campaign is only carried out within the country. For in the outside

world Mexico receives nothing but honorable distinctions, confidence, and warm friendship. We have raised our missions in all the Americas to the rank of embassies and we have renewed or established relations with great peoples—Great Britain, Russia, China, Canada. Our policy has been significantly independent. Here I shall not enumerate irrefutable facts, but I wish to emphasize the attitude of Mexico in such cases as the establishment of relations with the De Gaulle government, effected before any other country; the attitude of Mexico in the case of Spain, by refusing recognition to the Franco regime when nearly all nations maintain relations with it; the cordial but independent opinions expressed in all consultations among our American nations and, more particularly, in the case of Bolivia, of Guatemala, of the Dumbarton Oaks proposals. The positive results achieved by the Ministry of Foreign Affairs through its decorous friendship with the United States are without precedent in our diplomatic history. Problems as difficult as the compensation for agrarian claims and the oil expropriation claims have been settled equitably and satisfactorily. We have secured credits, armament for our army, an invaluable collaboration, technical as well as economic, for the rehabilitation of our railways, for the construction of a network of first-class airports which, while of great strategic value in wartime, remain from now on for the benefit of Mexico without the slightest impairment of her sovereignty. We have concluded a trade agreement which has proved highly beneficial to the economic expansion of the Nation, and are about to conclude the treaty covering the waters of the Rio Grande and of the Colorado River, an equitable treaty for both countries which represents for Mexico splendid opportunities. We have received assistance to solve serious problems of sanitation throughout the Republic and the future is heavy with possibilities and good will.

All this transcendent work, to be recognized by history, rests on cordial and dignified reciprocity in which Mexico contributes with the utmost effort and collaboration. The people, therefore, must determine who are the "entreguistas." Mexico has boasted of being champion of the loftiest principles of mankind, sustaining an authentic Mexican doctrine, free from false alien ideologies; it has upheld in the highest forums of contemporary history, liberty, dignity, cooperation. It has struggled against imperialism, against the oppression of man. And this is what my slanderers call "entreguismo." To them our attitude would have been brave had we joined the Axis Powers—that is, had we turned Mexico over to the opprobrious dictatorships.

All this, however, the enemies of our foreign policy feign not to see; many of them are foreigners fulfilling their subversive mission, but unfortunately there are also Mexicans who, in their campaign to discredit the country, forget that they are Mexicans. One might properly ask of them what they want, what they are plotting, whither are they trying to lead the destinies of the nation. Is it Ezequiel Padilla whom they wish to assail? But then they are lacking in common sense and patriotism, for they have not attacked me in any way whatsoever. The work of the Ministry of Foreign Affairs has been carried out under the direct and constant inspiration of the President of Mexico. It is an honor and a source of pride for me to have my name linked in this historic march of immense consequence, of dignity and success, with the name of President Avila Camacho.

In the course of the past 4 years, the country has never been subjected to the slightest menace of having its sovereignty outraged. Had such menace arisen, the Government of the Republic would have repelled it with firmness. As to myself—and let my enemies have the blame if I speak thus in self-defense—in my duties as counselor and collaborator of the President I have acted with profound devotion for the destinies of my country and for the cause of liberty. My life, in these 4 years, has been one of concentration, of disinterestedness, of honesty without which no civic devotion is genuine, of constant work dedicated always to the ideal of serving the people, from whose ranks I come. Many friends and men of good will have come to tell me that the enemies of the Government, or my own personal enemies, spread false interpretations of our foreign policy. "This insidious propaganda is very effective—they tell me—because the people do not understand international matters." I do not believe so; on the contrary, I share in the same faith the President of the Republic has in the judgment of the common man. And should we want evidence, the firm support the President has felt in the Army, in the labor organizations, in both Houses of Congress, in organized farm labor, would suffice. But even if it were true that the work I carry out was to be paid with unpopularity, I should not care. I do not work for transitory rewards nor for lowly ambitions. If I did, I know how I could become a demagog, how to court unwholesome emotions. But then the benefits would be for myself, and the irreparable damage for my country.

International and local fifth columnism condemn the close friendship Mexico has achieved with the Government and the people of the United States. This friendship, based upon mutual respect, with a people whose defense of human liberties carried out with epic greatness deserves the gratitude of the whole world, is a consequence of our position in this war. When fighting for the same historical principles Mexico has always upheld, when encountering the same fate, when finding themselves on the same craft in the midst of the storm, men and nations fraternize and a common adherence to interests and responsibilities unites all souls. In the face of curses loosened by war, there are some compensations and, among them, few are as valuable as insuring the friendship of those nations fighting for the same cause. I am in the Ministry of Foreign Affairs, not to surround my country by powerful enemies, but to secure for it the friendships needed for its grandeur. Thus Mexico comes forth in the certainty that the noblest peoples of the earth are its friends beyond doubt.

But all this infuriates those who attempt to defile the Government and its policies. And I ask, Is there any of them who advises a policy of aggression or hostility to the United States? Let them not reply that they want a policy of dignity, because Mexico has never enjoyed greater international respect. What they are engaged in is a demagogic campaign. They who, in the dark and uncertain hours muttered, incited, and advocated a policy that would have been most harmful to Mexico, now that they are confused by the imminence of a final victory for the United Nations and the victory of Mexico over their perfidious suggestions, now they try to revert to the events of the past.

All of us must bear in mind that international life is one of the most difficult struggles upon which the destinies of peoples depend. In the same manner that we have here individuals who advocate and practice hatred against the United States, we must not forget that there is in the United States a powerful sector with imperialistic tendencies. And those who for spite, for their unconfessed Nazi-fascism, or for envy, stir up animosity against our friends, the people of the United States, what they do is encourage that imperialistic sector and thus weaken, before the public opinion of that country, the good-neighbor policy so loyal and evident on the part of President Roosevelt and of the greater majority of the American people.

Let us keep constantly in mind that Mexico needs the reciprocal cooperation of the whole world. Without it, what hope can we nourish of redemption from the many iniquities in which we live? Let us face with fortitude and courage the realities that surround us. Mexico has demolished, through its revolution, enormous obstacles to fulfill the glorious destiny our country can reach; but the constructive task is yet to be developed in its entirety. The progress made on the farm and in the factory is not enough as yet to protect sufficiently the heads of our humble families. We need higher wages, more yield in production, more opportunities of work, and more social justice. Mexico continues to be an archipelago of privilege, large and small, in the ocean of misery and suffering of the people. There follow behind us, dazed, impatient, the youth of the Nation, the workers of the country, a tortured middle class, who find all doors shut. Deprived of new horizons where men may strive successfully for their own happiness and that of their families, the creative revolution will run the risk of degenerating into vested interests. And those new opportunities are being forged by international cooperation; for our country they shall come forth, fundamentally as an imminent and positive fact, from the coordination of energies and resources of all the American nations.

Now I wish to return to the press, to the other sectors of culture in our country, to our manufacturers, to our workers in the city and on the farm, to all forces forging our destinies. I address them to exhort all of them, in this decisive hour, together with the purest sentiments of true patriotism, to the most unyielding consciousness of human solidarity. Mexico must be a standard-bearer of the new ideals that inspire mankind. The whole world is devoted to the fervent hope of a new life, a life of collective security from which wholesale slaughter and recurrent immolations shall be barred, an existence of cooperation in a peaceful world. These hopes are based upon a new spirit the peoples and statesmen have. Hatred, rivalries, distrust, that have been the sources of war, are the negative values working against that overwhelming will of the world, bathed in tears. Let us proclaim the new gospel; let us reject those who would have us return to the dark forest wherein all hope is lost.

Plight of the White-Collar Worker

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Edwin H. Cheever, one of my constituents, containing verses in which he discusses the plight of a citizen who comes within the category of what we often term white-collar worker. I was very much impressed with this letter. I believe it will be of interest to every Member of the Senate to have the privilege of reading what this citizen says. It calls to our attention again very forcefully the plight of the white-collar workers or salaried people, who, I think, in our efforts to hold the line and maintain stabilization, have possibly suffered greater injustice and discrimination than any other class of our people. It impressed me, as I think it will impress my colleagues, with

the fact that the Congress should give this question serious consideration and take appropriate action to bring to this class of our citizens the relief to which they are entitled, based on comparison with standards of wages and earnings in industry, in agriculture, and in all other aspects of our economy.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LITTLE ROCK, ARK., *December 23, 1944.*

DEAR SENATOR MCCLELLAN: This is the plaint of a "Collar, once white, now frayed":

According to rulings of W. L. B.,
It's foolish, or must be a joke,
That I should expect a slight thought of me—
Unless it's to tighten my yoke.

I see people spend—
The crowds without end;
The money that each must be making!
But I cannot buy
At prices so high,
Yet buyers all records are breaking.

To grant me a raise
In these troublous days
Would be sowing the seed of inflation.
My judgment is such
That I'd spend too much—
Bringing dearth and ruin to the Nation.

I'd buy more to eat—
Fruit, groceries, meat,
In a wider and better selection;
I'd buy my wife hose,
And children some clothes—
Though their old ones still give some protection!

My sights are too high,
Yet I don't deny
I expect as a just compensation,
A check that will pay
At least a small way
Toward dispersing my fear—desperation.

I can't cook, drive a truck;
I'm all out of luck—
From pursuing the wrong education,
So my little check
Is merely a speck
In delaying my disintegration.

If the powers that be
Would look they would see
That I surely must be a magician
To live (yet I do),
On dollars so few,
But mere tricks cannot ease my hard mission.

What will W. L. B. gain by destroying us?

This isn't designed as a literary gem, but merely expresses my feelings. I wrote it just after a distribution of bonuses made by my company—in which I could not participate.

I hope I have not burdened you in my plea for some consideration for the truly forgotten man so inelegantly dubbed "white collars."

Respectfully submitted,
Yours very truly,
EDWIN H. CHEEVER.

United States Participation in Foreign Affairs

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that certain editorials relating to a letter addressed to the President of the United States by the 16 new Members of the United States Senate, on January 23, 1945, regarding the affirmative participation of our Government in foreign affairs, may be be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of January 25, 1945]

THE SENATE'S SERVICE

It is a good augury for the next meeting of the big three, and beyond that for the making of tomorrow's peace, that President Roosevelt is now in a position to say to Prime Minister Churchill and Premier-Marshal Stalin that the membership of the United States Senate, with very few exceptions, has made it abundantly clear that it favors the most affirmative and active kind of American participation in a world organization to check future aggression and maintain international order and security through the long years to come.

The latest evidence of this is the excellent and unequivocal letter just addressed to Mr. Roosevelt by the 16 freshmen Senators—10 Democrats and 6 Republicans. The letter places its signers on record as supporting, first, the prompt formation of a United Nations organization along the lines tentatively drafted at Dumbarton Oaks; second, the giving of assurances to our allies that we intend to share in the direction and responsibility of the next peace; third, the early negotiation of treaties among the major Allies—as originally advocated by Senator VANDENBERG—to demilitarize Germany and Japan, and fourth, the affirmative participation of America in all decisions affecting the establishment of law and order in liberated and enemy countries.

Coming on top of the far-reaching proposals made recently by Senator VANDENBERG, these views of the Senate's new Members should go far to impress other lands, particularly Britain and Russia, with this country's very genuine determination to continue to play a major role in the world. The "freshmen" in the Senate have rendered a real service.

[From the New York Times of January 26, 1945]

THE NEWCOMERS TAKE THE LEAD

To the 16 "freshmen" Members of the Senate who have sent a round-robin letter to the President on the subject of American foreign policy we offer our congratulations on a fine performance, excellently timed. Explaining that they have not previously had an opportunity to make their own position clear, these 16 newcomers have drafted a statement which is admirable for its clarity, its conciseness, and its understanding of the real American interest in the peace.

There are three major points on which these Senators concur. First, they favor the formation of a new league of the United Nations, along the general lines drafted at Dumbarton Oaks, "at the earliest possible moment." With this declaration they throw their support—rightly, we believe—to the view that the American interest requires our participation in the enforcement of the peace, whatever the terms of peace may be, because even an imperfect peace, adequately enforced, is better than the isolation and the irresponsibility and the anarchy that followed the last war. Second, they "suggest that treaties among the major allies be concluded as soon as possible, to demilitarize Germany and Japan and to keep them demilitarized." This is an endorsement of the sound proposal already made by Senator VANDENBERG. Third, they believe that our Government "should, as soon as possible, arrange to participate affirmatively in all decisions affecting the establishment of law and order in the liberated or enemy countries." This is a recommendation that we come out of our ivory tower, stop criticizing our allies when the results they achieve fall short of perfection, and share with them the making of day-to-day decisions in those difficult situations where compromise is necessary and responsibility should not be shirked.

This statement is signed by freshmen Senators of both parties representing every section of the country, two from New England, two from the Middle Atlantic, three from the South, six from the Middle West, and three from the Pacific coast. Its publication at this time ought to strengthen the President's hand in his forthcoming conference with Mr. Churchill and Marshal Stalin, and its candor, its realism, and its foresight give the rest of the Senate a mark at which to shoot.

[From the New Orleans States of January 26, 1945]

A HELPING HAND

The action of 16 freshmen Senators in assuring President Roosevelt that they will back formation of a United Nations organization to preserve world peace will strengthen the President's hand at the Big Three parley table.

A long-recognized soft spot in the armor of any American delegate to conferences involving decisions on affairs of world importance has been the inability of the delegate, right on up to the President himself, to commit the Nation to a line of action that might later be revoked by the Senate.

In taking the action the 16 Senators explained they thought it advantageous to prove that there is agreement about the substantial, fundamental things which must be done to end the war and write the peace, and to give other nations our assurance that we will definitely participate in post-war security organizations.

The President will need all the good wishes he can get to come out of this parley with American war ideals intact. Churchill and Stalin have announced agreements, of which the President was kept informed, which practically amount to a dividing up of Europe into spheres of influences despite their protestations to the contrary. If the American policy of free elections for all is to be even considered, the President has his work cut out for him.

Uncle Joe Stalin will go into the conference sitting in a very sweet position. His troops are away out in front in the race for Berlin. His new offensive has gone so well that he can easily afford to take a few days off—if only to point out to his conferees the validity of the old saw about possession being nine points of the law. With Red armies overrunning the Baltics, the Balkans, and Poland, Messrs. Roosevelt and Churchill may not feel like pushing too vigorously any literal interpretation of the Atlantic Charter.

In matters regarding the form of the pattern to guarantee future military impotence of the Reich, Churchill and Roosevelt are liable to find the Boss of the Kremlin insistent upon strictness. They should have no trouble agreeing on a formula for the control of Germany on that basis.

[From the Christian Science Monitor of January 26, 1945]

SIXTEEN FOR SECURITY

Those convinced that the United States Senate rather than the American people repudiated the Wilsonian ideal after World War No. 1 will note with special satisfaction the letter sent by the 16 freshmen Senators this week to President Roosevelt. The President of the United States, more than any

other world leader, needs such assurances of support for a progressive foreign policy as this letter provides—and particularly when he is preparing to discuss with the heads of other nations the terms on which American cooperation for world peace can be secured.

The American system of divided authority is a source of bewilderment to many European leaders. And the surprises it can produce in foreign relations are all too graphically illustrated in the history of the effort to construct a world security system from 1919 onward. Therefore, it is all to the good that Mr. Roosevelt will attend the coming three-power parley fortified not only with a clear popular mandate for American participation in a post-war security system, but with assurances the United States' tortuous technical process of formulating and ratifying treaties has been geared in advance to speed the production of a dependable weapon against future war.

Continuous adherence of the 16 new Senators to the ideal of collective security can make it all but certain that no Senate minority will be mobilized large enough (33 out of 96 Senators) to enable the sad history of Wilson's time to repeat itself. But their letter does more than offer support for the President. It urges him to assert the intention of the United States to take a share "in the direction" of the peace settlement as well as responsibility for its maintenance. This is in line with senatorial responsibility as defined by the Constitution, which provides for Senate advice on as well as consent to treaties.

Of course, it cannot guarantee, nor can any move in the Senate or elsewhere, that if much time should intervene between the end of hostilities and the launching of a world organization, the temper of the American people or the mood of Congress will remain so favorable. The Harding administration was able to interpret the landslide vote that placed it in power as evidence that the American people were no longer unitedly insistent on American participation in a world peace agency.

The Senate today can make a great contribution to international security because of public awareness of the national need for world organization. The Washington portents are good; their fulfillment remains not only a Senatorial but a public responsibility.

[From the Washington Post of January 27, 1945]

FRESHMAN SENATORS

Both in content and timing, the letter addressed to President Roosevelt by the 16 "freshman" Senators, Republican and Democratic alike, is a document of real significance. It proves that on major matters of foreign policy, particularly on the question of this country's role in the coming peace, partisan differences have disappeared in the United States. It might be said, of course, that this needed no further proof. The rival party platforms in the late Presidential campaign, the speeches of the two leading candidates, before that the Connally and Fulbright resolutions which were overwhelmingly approved by the Senate and the House—all these pointed in that direction. Yet the fear that after this war the United States might pursue a course similar to that pursued after World War No. 1 has by no means disappeared, and has undoubtedly been a factor both in the policies and in the activities of our allies.

The action of the "freshman" Senators shows that this fear lacks substance. These men have just taken their seats. They come straight from the electorate. Some have long been identified with the internationalist point of view, but others have been suspected, in the past, of isolationist leanings. Yet all of them have put their signature to a document favoring the establishment at the earliest possible moment of a United Nations organization along the lines of the Dumbarton Oaks agreement; urging this Nation "to assure our allies and the other nations of the world that we intend to share in the direction of and responsibility for the settlement of this war and the maintenance of peace"; favoring an alliance with our principal allies to demilitarize Germany and Japan; and supporting affirmative participation by the United States in "all decisions affecting the establishment of law and order in the liberated or enemy countries."

Designed to strengthen President Roosevelt's hand at his forthcoming meeting with Prime Minister Churchill and Marshal Stalin, it will do just that. For the greatest asset which the President will have at that meeting will be the certainty that the entire Nation is behind him. That is just what the letter of the 16 new Senators clearly underlines.

[From the Pittsburgh (Pa.) Post-Gazette of January 27, 1945]

FRESHMAN SENATORS

For newcomers in the Upper House of Congress, the 16 new Senators who wrote President Roosevelt pledging their support to international collaboration designed to preserve the peace showed a wholesome maturity which should take them out of the freshman class immediately.

The fact that the 10 new Democratic senators and the 6 new Republican Senators could get together so quickly and so easily on a statement of objectives is added proof that last year's election was conclusive and decisive in at least one respect. However much they might disagree about other matters, the overwhelming majority of the American people want the United States to join with the other United Nations in bringing a durable peace out of this global war through a permanent international organization set up to maintain law and order, by force if necessary.

Because these new senators have received the freshest mandate from the people, this unequivocal statement of objectives which does not bog down into argument over controversial details is especially significant when it shows that the citizens of Pennsylvania and Oregon, Massachusetts and Missouri, North Carolina and Connecticut, Arkansas and New Jersey, Washington and Idaho, Indiana and Iowa, North Dakota and South Carolina are thinking alike on a question which is no longer an issue in this country.

Present Draft Confusion Inexcusable

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. HOFFMAN. Mr. Speaker, in the administration of any law, due to honest difference of opinion as to interpretation and administration, there are bound to be some inequities, some confusion. This is especially true when the welfare and the happiness of millions of our people depend upon the just and fair interpretation and administration of the Selective Service Act.

Experience has demonstrated that when Congress passed the present Conscription Act, it did not make proper provisions for the deferment of those upon whom falls the burden of producing the food for the Army, our allies, and our civilian population, hence the Tydings amendment. That amendment provided that:

> Every registrant found by a selective-service local board, to be necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort, shall be deferred from training and service in the land and naval forces so long as he remains so engaged and until such time as a satisfactory replacement can be obtained.

The interpretation of that amendment was by Congress left to the local boards, who know, or have means of knowing, the farms, the men, and what they are doing. Neither the President, General Hershey, nor any State director has any authority to tell the local board how the act should be interpreted or applied. The only authority with the power to change the local board's findings is the appeal board.

Now, I am not criticizing members of the local board nor their handling of individual cases. They serve without pay, do the best they can in almost every instance, and are, or should be, more familiar with the facts in each individual case than anyone else.

But, unfortunately, the President, General Hershey, the State director in Michigan, and his representative, Major Luscombe, each took it upon himself to interfere and complicate the difficulties confronting the local boards. The President, through Mr. Byrnes, in substance instructed General Hershey that men in the 18 through 25 age group were not as essential to the war effort as was the need of the Army and the Navy for young men, and that instruction was passed on to the local boards.

When the Agriculture Committee of the House and some 250 Congressmen called General Hershey's attention to the fact that his action had resulted in calling from the farms, through improper induction, thousands of men needed for the production of food, he sent to the State directors a modified interpretation of Directive 288, which was intended to liberalize the action of the local boards.

But when some of the local boards gave notice that those coming under the Tydings amendment would be deferred, Major Luscombe, on January 29, speaking for the Michigan State director of selective service, told representatives of local boards and others that the 18 through 25 age group must be classified I–A. The major's statement was not true. He had no authority to make it.

When General Hershey's attention was called to Major Luscombe's erroneous directive, he promised to correct it, and to issue a statement that those who met the requirements of the Tydings amendment would be deferred. Unfortunately, General Hershey, whether he intended it or not, made a bad matter worse. He made it more difficult for the board to defer farm workers. He wrote:

> We have, however, directed the review of the classifications of agriculturally deferred registrants, ages 18 to 25, inclusive, to make absolutely sure that they (the farm registrants) fully meet the requirements of the Tydings amendment.

Even a man accused of crime cannot be convicted until the Government proves, beyond a reasonable doubt, that he is guilty. A registrant claiming deferment is not a criminal and he cannot be required to produce evidence sufficient to make the local board absolutely sure that he should be deferred.

Is General Hershey so dumb that he did not realize, when he told the local board to make absolutely sure that the registrant meet the requirements of the Tydings amendment, that he was imposing an additional restriction upon their deferment?

If General Hershey felt called upon to use the words "absolutely sure," and if he wanted the local boards to give effect to the Tydings amendment, then why did he not in his instructions to the State boards, advise that the registrants should be deferred unless the local board was asbolutely sure that the registrant was not necessary to an agricultural occupation or endeavor and so forth?

The truth is that if in the opinion of the board, the registrant falls within the Tydings amendment, it is the unqualified duty of the local board to defer him.

General Hershey has no right to add one word, one punctuation mark, to the Selective Service Act. Presumably, General Hershey is a good soldier and the first duty of a soldier is to obey orders. General Hershey gets his orders, by virtue of a law, from Congress and it is about time he begins to follow them.

Local boards are given sole authority, subject to an appeal, and subject, of course, to the action of any Federal court, to determine in accordance with the fact in each case, whether a man should be inducted, into what class he should be put, or whether he should be deferred and, if so, for how long.

Need of Constitutional Limitation

EXTENSION OF REMARKS

OF

HON. E. H. MOORE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. MOORE. Mr. President, I ask unanimous consent to have printed in the RECORD an article prepared by Robert B. Dresser, an able lawyer of Providence, R. I., on the need of constitutional limitation on the power of Congress to tax incomes, inheritances, and gifts. If a limitation be not set on this power in peacetime, business may be totally destroyed through confiscatory taxation. The power of the States may be rendered completely sterile if the Federal Government should exercise its unlimited powers in the direction of taxation. As the Honorable HATTON SUMNERS, Representative from the State of Texas, has so aptly stated:

By making the units of State government financially dependent on the Federal Government, that Government is acquiring the power to control the State governments. When this is fully consummated, the sovereignty of the States will be liquidated.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Bulletin of the Tax Institute of December 1944]

NEED OF CONSTITUTIONAL LIMITATION

(By Robert B. Dresser, trustee, Committee for Constitutional Government, Inc.)

The proposed twenty-second amendment, limiting maximum peacetime Federal income, inheritance, and gift tax rates to 25 percent, should be adopted.

1. It would provide needed assurance, which statutory law cannot, against recurring abuse of the Federal taxing power—the "power to destroy."

2. It would increase the national wealth and, over the years, the Federal revenue.

3. It would aid in saving our free-enterprise system.

4. It would free the States from Federal domination and aid in preserving our present form of government.

Legislatures of 17 States have passed resolutions requesting Congress to call a constitutional convention to propose such amendment for ratification by the States. This is one of the two ways for amendment provided by article V of the Constitution.

While 32 States can compel the calling of a convention, it is my hope that popular demand will induce Congress to propose the amendment and submit it to the States for ratification, which has been the method followed in all previous cases.

LOWER RATE PRODUCES GREATER REVENUE

In formulating a sound and effective tax policy, the all-important consideration is to promote an increase of the national income and an expansion of the country's wealth and productive capacity. Both reason and experience demonstrate that in peacetime a moderate rate of tax on income will, over the years, produce more revenue than a high rate.

The explanation of this seeming paradox is (1) that the lower rate leaves in the hands of the taxpayers more income which when invested and put to work produces more wealth, and (2) that the lower rate encourages investment and the production of wealth. This increase in wealth, when invested, produces additional income, which in turn when invested produces still more income, and so on. By thus increasing the national income, which is the base on which the tax is levied, more revenue is obtained and the wealth of the Nation is increased to the benefit of the people as a whole.

By way of illustration, let us take the case supposed by Dr. Irving Fisher and Mr. Herbert W. Fisher in chapter 9 of their book, Constructive Income Taxation. It is said that in 40 years the fortune of Henry Ford increased from a thousand to a billion dollars, which is at the average annual rate of 41.42 percent compounded. In the hypothetical case, using round figures for simplicity, it is supposed that an automobile business was started in 1900 with an investment of $1,000 and that, with no income tax, its net worth increased at the compound rate of 40 percent a year. This would give it a value at the end of 40 years of $700,500,000.

Then, by contrast, it is supposed that there was a 100-percent tax and that despite this the business continued to produce income before taxes of 40 percent a year, or $400. This is admittedly an impossible case, since no one would operate without a chance of profit. It is chosen merely for simplicity of exposition.

At the end of the 40 years, instead of having a net worth of $700,500,000, the business would have its original net worth of $1,000, and the Government would have collected in taxes $16,000, at the rate of $400 per year. Had the Government not collected these taxes, it would have had to obtain the money elsewhere. Assuming that it borrowed the money and paid as high a rate of interest as 5 percent, the $16,000 with compound interest at this rate would have amounted to but $48,320 at the end of 40 years. Compare this with the revenue which might have been obtained from an estate or inheritance tax of 20 or 25 percent on $700,500,000, the net worth of the business at the end of 40 years with no income tax.

With an 80-percent income tax, instead of a 100-percent tax, the net worth of the business at the end of 40 years would have been $21,700 and the Government would have collected $82,600 in taxes. With a 50-percent tax the net worth at the end of 40 years would have been $1,470,000, and the taxes collected $1,470,000. With a 20-percent tax the net worth at the end of 40 years would have been $66,500,000 and the taxes collected $16,600,000. In other words, as the tax rate decreases, both the revenue and the net worth of the business increase.[1]

In all of these cases, in addition to the revenue from the income tax, there would, of course, be the revenue from the estate or inheritance tax upon the death of the owner.

GENERAL BENEFIT FROM LOWER RATES

It should be noted that by increasing the national income the Federal Government, the States, the municipalities, and the taxpayers all benefit. For example, a Federal tax of 50 percent on an income base of $50,000,000,000 would produce $25,000,000,000, leaving $25,00,000,000 for division among all the other parties in interest. A Federal tax of 25 percent on an income base of $100,000,000,000 would produce exactly the same amount of revenue and would leave $75,000,000,000 for division among the others.

The principle here involved is the same as that governing the operation of a successful business, namely, that within certain limits the greatest profits come from charging a low rather than a high price for goods sold.

As high prices lessen the ability and incentive to buy, so high tax rates lessen the ability and incentive to produce.

IMPORTANCE OF CAPITAL

For a nation to be prosperous there must be an ever-increasing supply of new capital for investment in productive enterprise. With the capital invested in the industries of this country the American workman has been provided with improved machinery and equipment that have made it possible for him to produce an ever-increasing amount of wealth, to earn higher and higher wages, and to attain a standard of living surpassing that of the wage earners of any other country. Take, for example, the case of the railroad industry, which has an average capital investment of $25,000 per employee. By means of the improved machinery and equipment purchased with this capital, the American railroad worker is able to move freight so economically that he can be paid 50 to 100 times the wage of the Chinese coolie transport worker, who has no machinery or equipment other than a simple bamboo pole.

It is these high wages that provide a market for the farmer's products at good prices. Likewise it is the good prices received by the farmer that make possible an adequate market for the products of the factory. In fact, all groups are benefited.

The capital needed for these purposes can come only from the savings of corporations and individuals. Studies by Dr. Carl Snyder and by Dr. Williford I. King, of New York Uni-

---

[1] For the results at lower rates of growth than 40 percent, see table in Constructive Income Taxation by Fisher and Fisher, p. 74.

versity, indicate that the great bulk of the capital supplied by individuals comes from those having the larger incomes. Excessive taxation not only discourages the investment of capital in industry but it reduces these savings which constitute the source of supply.

It is the so-called venture or risk capital, of course, that is the most important—capital required by new and hazardous enterprises, such as the railroads, the automobile industry, the aircraft industry, and many others which have provided jobs and good wages for millions. According to 1939 reports, which are the most recent available, the number of jobs created directly and indirectly by the automobile industry was 6,105,000.[2] This is 10 percent of the total number of persons now employed in all classes of employment, including over 10,000,000 in the armed forces.[3]

Such enterprises, however, are risky. Many of them fail and the investor loses his investment. If high taxes take the great bulk of the profits where the enterprise is successful, all incentive to invest is destroyed.

Where the needed capital is not forthcoming, business stagnation and large-scale unemployment result, with a consequent lowering of the national income and a reduction in the revenue from taxation.

EXPERIENCE SUPPORTS THESE VIEWS

Our own experience supports the views herein expressed. For this purpose, the period to consider is that prior to the starting of the national defense program in the spring of 1940. Since then our economy has been subject to the artificial stimulus of war—a stimulus which will cease, of course, when the war is ended.

In 1924 President Coolidge, stating that experience shows that the lower rate produces the larger revenue, expressed the view that the point of diminishing returns is reached at 25 percent, if not sooner. This conclusion, he said, was based upon "the experience of the Treasury and the opinion of the best experts." That the 25-percent rate would produce more revenue than the higher rate was demonstrated by the experience under the tax act passed by Congress 2 years later in 1926, reducing the maximum individual income-tax rate from 46 percent to 25 percent.

For the 6 years, 1926 to 1931, inclusive, the maximum individual income-tax rate was 24 percent in one year and 25 percent in the remaining five. For the 6 succeeding years, 1932 to 1937, inclusive, the rate was 63 percent in the first 4 years and 79 percent in the last 2. Despite the much lower rates and the substantially smaller population during the earlier period, the national income and the revenue, as shown by the individual income-tax returns, were higher than in the later 6-year period with the higher rates and increased population.

From a study by Dr. Carl Snyder[4] it appears that every 10 years from 1790 to 1930 the national income showed an average rate of growth not differing greatly from one decade to the next. The rate of growth was about 4 percent per annum compounded. So for 140 years the national income doubled approximately every 18 years.

During the 11 years from 1930 to 1940, this astonishing growth was arrested for the first time in the Nation's history. In no year during that period did the national income reach even the level of the last part of the preceding decade. The principal cause of this was undoubtedly the great increase in tax rates. Had the growth of our national income continued at the rate prevailing during the 140 years prior to 1930, there would have been a national income of over $125,000,000,000 in 1940 instead of $77,000,000,000.

DEATH AND GIFT TAXES

The ill effect of high rates is not confined to the income tax. High death taxes and excessive gift taxes are extremely destructive of capital and will in the long run destroy the accumulations of capital that are so necessary for industrial activity and expansion and for the full employment of labor.

Furthermore, the heavy taxation of large estates compels the rich to seek comparatively safe, liquid investments in order to provide for the heavy taxes that will be imposed upon their estates at death, thus further reducing the capital available for hazardous business ventures which have done so much to improve the lot of the American people.

Moreover, the amount of the revenue from the estate and gift taxes, even at the present high levels, is but a trivial part of the total budget.

MUST INCREASE NATIONAL INCOME

If we are to solve the serious financial problems that will confront us in the post-war period and avert national disaster, we must restore the progressive increase in capital investment and national income that prevailed during the 140 years prior to 1930. The importance of this cannot be too strongly emphasized. It outweighs every other consideration.

By all odds the most important factor involved in accomplishing this objective is that of taxation. Tax rates must be kept within reasonable bounds, and the people must have confidence that this will be done. Otherwise, the needed venture capital will not be forthcoming.

WHY A CONSTITUTIONAL AMENDMENT IS NEEDED

There can be no such public confidence, no such assurance against confiscatory taxation, without a constitutional amendment. Even if for a time it should be possible to get the rates reduced to a reasonable figure, there would be but little chance of holding them there when the next depression comes. Generally speaking, an advance in rates will increase the revenue for a short time. If past experience is a guide for the future, the temptation of our Government to take advantage of this in times of depression would be irresistible. The harm done to the economy, however, would far outweigh the temporary gain in revenue and would result ultimately in the production of less revenue.

The Constitution is filled with curbs on the power of Congress, which were placed there to protect the people's rights. There is no curb more important to the people than one on the taxing power. Congress should no more have unlimited power over one's property than over his person. Such a curb is the only way of giving assurance to business that it will not at some future time be subjected to excessive or confiscatory taxation. Such assurance would have the invaluable effect of attracting venture capital into new and hazardous enterprises to an extent possible of achievement in no other way.

HIGH FEDERAL TAXES WEAKEN STATES

A further effect of high Federal tax rates is to make the States dependent upon the Federal Government by draining the wealth of the people of the States into Washington and then doling part of it back to the States on conditions. If continued long enough, the inevitable result will be to deprive the States of all independence.

The proposed amendment would serve the double purpose of limiting the power of the Federal Government and at the same time restoring to the States the power to be financially independent and to free themselves from Federal domination.

When Democracy Breaks Down

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following editorial by David Lawrence, which appears in the United States News of February 9, 1945:

WHEN DEMOCRACY BREAKS DOWN

(By David Lawrence)

The American people have been taught to believe that totalitarianism is bad and that democracy can wage war without adopting the Fascist formula of forced labor.

The American people have been taught to believe that involuntary servitude is bad. The Constitution explicitly forbids it.

Military service is not involuntary servitude because service for one's country is not service for anybody's individual profit.

But enforced service in a civilian plant, operated by civilians and in which civilians have a stock ownership and seek to make profits, is involuntary servitude.

The cry that in the midst of war the Constitution must be abrogated is the same cry of expediency that the totalitarians use when they abrogate human rights.

The House of Representatives has passed a manpower bill which calls for forced labor. It is a grave mistake in policy and marks a tragic chapter in the history of American democracy.

The truth is that our system of selecting manpower for war has not lived up to its name—a selective-service system. Congress must share some of the blame but, on the other hand, it is a fact that ample law to induct men by age groups has existed almost from the very beginning of the war emergency in 1940. Instead of applying the law, men were taken from nearly all ages up to 38, and hence many of the best troops—the younger men—were not inducted until recently. This was a waste of valuable time.

Delay in drafting youth: Thus the country finally got in 1944 a systematic plan for drafting younger men. After an inexcusable delay, all able-bodied persons from 18 through 29 are at last subject to immediate induction and only a few are deferred who are in essential positions in industry.

But what of those above 29?

Existing law gives the Military Establishment power to induct anyone up to the age of 45. The manpower shortage is directly traceable to the blunders of the military men, who announced first that men over 35 were not useful for the Army, and then last year agreed to an announcement that persons 30 and over would not be inducted until the supply of physically fit men under the age of 30 had been exhausted. The prospect of using that supply seemed remote.

This action, however, virtually promised exemption from military service to millions of persons in the age groups between 30 and 45, and it is small wonder that the exodus from essential jobs began, especially when military men abroad as well as on this side of the Atlantic were giving the American people last autumn stories of how the European war would soon be over.

Simple manpower plan available: There are no mysteries about manpower control. We went through a series of painful changes at the War Production Board before a plan to control materials was adopted. A similar

control of the flow of manpower could have been established long ago—and without forcing men to work for somebody's profit or face jail.

The plan available ever since the war began and still available today is simple. It does, of course, require the cooperation of the military men and it needs at least some degree of efficiency in allocating personnel in our armed services. But even at this late date and with the war against Japan likely to go on a couple of years longer, it is opportune for the Military Establishment to be required to introduce efficiency in the allocation and use of manpower. We learn now that too many men were allocated to ground forces of the Air Corps and not enough to infantry. Whose mistake was that? Stories of wasted manpower in the armed services are heard on every side.

The first step now, however, should be to revoke the arrangement whereby most men between 30 and 45 are virtually assured that they will not be inducted into military service. No new law is needed to withdraw such a regulation.

The second step is to begin to replace those able-bodied men in the supply units of our forces overseas and in the camps in this country with men from the 30 to 45 age groups. This automatically increases our supply of reserves and gives the front lines what they need—physically capable soldiers.

The system of deferments already in existence can continue to be used. If a man is not needed in an essential job or business or industry to help the war effort, he should be inducted into military service to fight or to replace some able-bodied man who can fight. The so-called Army standards, whereby boys with a broken ear drum or a spot on the lung acquired years ago are not inducted into some form of limited service in the Army, are ridiculous.

If the several million men between the ages of 20 and 45 knew tomorrow that they might be inducted into the armed forces to do limited service unless their civilian jobs were already in the essential groups, they would not need the threat of a jail sentence to find such jobs at once.

Why not accept limited service? One argument offered by the Army men in rebuttal is that too many such men would then gladly enter the armed forces, whereas the Army does not want them. But would a man who now earns $40 or $50 a week and has a family to support rush into the Army to earn $50 a month and separate himself from his home? If any considerable number did, couldn't they work a typewriter or cook meals or run a jeep or do any one of a number of countless tasks behind the lines so that able-bodied men now doing those same chores could be released for combat duty? If the Army agreed to accept only 500,000 of these men for limited service, spreading the selection process over the next 18 months, the manpower situation in the United States would be solved immediately. Already, with the threat of legislation, the movement last week into essential industries was like a panic. The mere possibility of induction at $50 a month would be equally persuasive.

To be asked to do limited service in the military forces is a proper use of manpower in a democracy. It is an understandable principle. But to be required to work in a particular war plant under penalty of going to jail is forced labor.

It is difficult to see how the Congress, if it enacts the pending manpower bill, can hesitate to remove all profit from any enterprise where there is forced labor. If forced labor is to be construed as service to one's country, let it be clearly for that purpose alone, and then, logically, management and ownership must be conscripted, too. It will be a surprise if the A. F. of L. and the C. I. O., who are opposed to the "forced labor" bill, do not insist on such legislation to cover management and ownership. There would be a widespread sympathy with such a proposal, and then America would have the very chaos which the military minds never are able to foresee but which they themselves bring on because they do not understand how to get civilian production in a democracy.

EFFICIENT OPERATION NEEDED

It is to be hoped that the Senate will not be stampeded into action, but will adopt, instead of the forced labor bill, a resolution calling on the Army and Navy to utilize more effectively the manpower already available to it between the ages of 18 and 45. If those age limits are not wide enough to secure the indirect result in channeling manpower into essential industry, and it is necessary to include men above 45, then the law can readily be amended for that particular purpose.

We have an abundance of manpower for military use and for war production. But we have not insisted on the right mechanism of control or selection which can get the maximum utilization out of that manpower. Democracy prides itself that it can accomplish much by the power of public opinion. Billions of dollars flow out of the pockets of the citizens into War bonds—not by forced savings but by voluntary purchase. The press and radio and the leaders of public opinion gladly help to do that job. The same thing can be done with manpower needs and without a forced-labor bill.

Doubtless there were many men in the House of Representatives who were for the most part too new to the Washington situation to vote wisely on the bill which, with vague cries of military necessity, was urged upon them. The Senate has the duty of saving the House of Representatives from a major blunder in war policy. To adopt a forced labor bill is to break down democracy. We can still win the war without forced labor if the Congress will, by its power of exposure, insist that the executive agencies be efficiently manned and that policies within existing law be given a fair trial by competent administrators.

The Missouri River Basin

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. BUTLER. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD a copy of a forward-looking address by Commissioner Harry W. Bashore of the Bureau of Reclamation, Department of the Interior, delivered before the Nebraska Reclamation Association at Lincoln, Nebr., on January 19, 1945. This association has been formed not only by men and women of Nebraska who are directly concerned with the conservation and use of the water resources of my State, but by many who live in the towns and cities whose future stability and prosperity are dependent on policies that look to the wise use of Nebraska's water resources for the development of the State.

Commissioner Bashore, having spent many years in the active development of the North Platte project which serves such important areas in western Nebraska and eastern Wyoming, is a recognized authority not only on water conservation but on the best means of putting water to work for the benefit of the people. An engineer of outstanding ability, his address shows that he believes that the measure of engineering results in water conservation is the extent to which constructed works can best serve the people.

I consider the outstanding achievement of Mr. Bashore's career to be the foresight and leadership he displayed in bringing about, in cooperation with Major General Reybold, Chief of Engineers, the coordination of the reclamation and Army plans for the unified development of the Missouri River system. This unified plan, which was given the approval of Congress in section 9 of the Flood Control Act of 1944, has important significance not only for the people of Nebraska who are dependent on the Platte River Basin of the Missouri system but also to the people of every river basin in the arid and semiarid areas of the West where water is the most vital consideration.

I thoroughly agree with Commissioner Bashore's observation that all water-use problems were not solved by the recognition that Congress in the Flood Control Act gave to the priority in the use of water west of the ninety-eighth meridian for irrigation and other beneficial uses. Of equal importance is the further recognition in the act which declares it the policy of Congress "to recognize the interests and rights of the States in determining the development of the watersheds within their borders" and "to facilitate the consideration of projects on the basis of comprehensive and coordinated development; and to limit the authorization and construction of navigation works to those in which a substantial benefit to navigation will be realized therefrom and which can be operated consistently with appropriate and economic use of the waters of such rivers by other users."

Eternal vigilance on the part of western water conservationists in cooperation with people of like minds throughout the country is essential to the effective translation of this policy into constructive and effective results of permanent benefit to the Nation as a whole.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When one places against the long perspective of history the short hundred years or so that this western country has been under development, one cannot help but realize that we have only just begun to build our civilization, to use our natural resources to best advantage, to say nothing of learning how to live with one another in peace and friendliness. The crude pioneering days of the West have passed, but the days of solid and intelligent growth and ripening are before us.

Within my lifetime modern science has placed in our hands miraculous tools with which we have unlocked a vast amount of new knowledge which has given us controls over our material surroundings such as man never before has held—scarcely dreamed of. There is not one of you here who does not know what I mean, who has not seen the tremendous development of air transportation at speeds and heights we hardly hoped to

attain. During the same period our knowledge of the structure of the atom has given us new skills in making metals which could withstand pressures and temperatures that have made possible new techniques in the construction of internal-combustion engines, the forging of weapons more deadly than man has ever before conceived, as well as new techniques in chemistry.

At the same time medical science has conquered diseases once regarded with abject fear, agricultural science has shown us how to increase crop production while reducing labor, and modern psychology has given an insight into the hidden resources of the human mind that eventually will teach us how to behave ourselves and lead happier lives.

In view of the short time this western country has been under development and in view of the great progress man has made in conquering his physical surroundings and making them serve his purposes, does it seem to you at all unlikely that along the banks of the Platte, the Loup, the Elkhorn, and the Niobrara beautiful modern cities will be built with all of the luxuries and conveniences that science can produce, peopled by intelligent men and women who have the leisure with which to develop the arts and sciences to a height they never before have reached?

This is the destiny that we could not escape if we would, just because we are human beings with brains and spirits that reach out for new and greater things to do. So when the means with which to bring these things about are at hand, as they are today, we cannot help but turn our hands and minds to the task. At least, we shall do so as soon as we have ceased to turn all of our energies in the direction of destruction.

In this State the resource which most requires development is water. There is enough water to bring nearly a million additional acres under intensive cultivation in Nebraska, but it rolls down the rivers and sometimes wreaks destruction along their banks. When we use the water that flows through Nebraska to full advantage, we shall avoid the destruction of floods, we shall assure additional electric power, and we shall make possible an agriculture that will increase the income of your people by hundreds of millions of dollars annually. It will enable Nebraska to combat drought such as wreaked havoc in your State in the thirties and drove thousands of families from the farms.

If we can learn to distribute these benefits so as virtually to end poverty, so as to give the greatest advantages to the individuals who contribute most to the welfare of all of us, we can certainly build for ourselves towns and cities that will be more convenient, sanitary, and beautiful than man has ever seen before.

One basis of every sound civilization lies in a healthy agriculture. The projects in the Bureau of Reclamation's plan for the comprehensive development of the Missouri River and its tributaries approved in the Flood Control Act of 1944 would irrigate 989,000 acres of rich Nebraska land, which lies in the valleys of the Platte, the Republican, and the Niobrara. And this land, which will assure ample moisture whether the rest of the area be suffering from drought or not, will be the basis for a greatly stabilized stock-raising industry, for on irrigated farms can be grown feed and winter forage for far larger herds than could be sustained if natural range lands were their chief source of feed. For that matter, the variety of products that could be grown upon newly irrigated land would add to the agricultural wealth of Nebraska through considerable diversification.

You may not be aware that today the Bureau of Reclamation systems in Nebraska are serving with a full water supply 2,436 farms, including about 170,000 irrigated acres, and that Reclamation developments under Warren Act contracts and other contracts are supplementing the water supply for about 100,000 acres. Moreover, the bureau is now building the Mirage Flats project in northwestern Nebraska, which is part of the war foods program, and has been making as much progress as possible considering the limitations on materials and manpower. Also, as part of the war food program, the Bureau recommended construction of the Cambridge project on the Republican River in southern Nebraska, but the urgent need of materials and manpower for other uses prevented approval. It is included in the initial stage of the Missouri Valley plan authorized by Congress in the Flood Control Act of 1944.

But I shall not go into details regarding the program which the Bureau of Reclamation is proposing for Nebraska. Mr. E. B. Debler, director for the Bureau in region 7, of which this area is part, will tell you about these plans much more in detail tomorrow.

What we propose for Nebraska is a part of the plan for the development and coordination of the natural resources of the entire Missouri River Basin, a development which would include the construction of some 90 dams and cover territory equal to about one-sixth of the land area of continental United States. The cost in 1940 values would be something like one and one-third billion dollars.

This, in turn, is but part of a plan for the development of all 17 States that lie chiefly west of the ninety-seventh meridian—a plan which embraces more than 200 separate projects, and in 1940 dollars would cost about $3,000,000,000. Our economists have calculated that this great engineering proposal would result in doubling the population of the West and in increasing the national income by several billions of dollars annually. With increased prosperity in one section of the country every other section gains through the stimulation of trade, industry, and travel.

In the post-war days, when our productive machine will be put to full use for constructive purposes, it appears to me very probable that people will have to work fewer hours to produce the things they want. This may mean fewer hours per day or it may mean longer vacations—but it certainly will mean more leisure to enjoy the finer things of life—including fishing. And with this leisure is certain to come much greater expenditure upon the cultivation of the lively arts, which embrace many recreational activities. From the commercial angle this is becoming big business.

A factor in the post-war development of the Missouri River Basin will be a link between Nebraska's present power grid and the great hydroelectric developments authorized on the eastern slope of the Rocky Mountains in Colorado. A transmission line from Fort Morgan, Colo., to North Platte, Nebr., will make available energy that can be produced at considerably less expense than in Nebraska, where rivers do not fall anything like the distances they drop down the slopes of the Colorado mountains. The existing Nebraska systems would be linked with the hydroelectric plants to be constructed on the main stem of the Missouri in South Dakota.

But the Missouri River Basin power projects themselves have a direct interest for Nebraska, especially. Most of the power plants proposed in the plan will generate electrical energy for use in pumping water for irrigation, and for domestic, commercial, and industrial uses. A few will be used almost exclusively for irrigation, however. In most cases, the operations of the power plants will be governed by the storing and releasing of water for purposes other than power generation, such as irrigation, flood control, and navigation, so that capacities and arrangements of the plants have been planned accordingly.

Considering all of the proposed power plants in the Missouri Basin plan of the Bureau of Reclamation as parts of one power generative unit, that unit would be able to turn out about 3,809,000,000 kilowatt-hours of energy each year at a uniform rate of 434,500 kilowatts. That means that these power plants could serve consumers with a uniform demand at the rate of 434,500 kilowatts.

Now all of this generative capacity is not going to be built in a day. If it were, we should not know how to use it. It is anticipated, however, that while we are planning and building dams we shall look ahead to see what the needs of this region are going to be, and make wise provision for them. Statistical data show that in 1940 Nebraska used 78,000,000 kilowatt-hours of energy, and estimates place the probable volume by 1950—which is only 5 years away—at 1,410,000,000 kilowatt-hours. By 1980, it is estimated, this State alone will require 3,900,000,000 kilowatt-hours of electricity—as much as power plants planned by the Bureau of Reclamation for the entire Missouri River Basin would produce. It does not appear as though we were planning too lavishly.

The Flood Control Act of 1944 to which I have referred is a great step forward. In this act the integrated plan of the Bureau of Reclamation and Army engineers for the development of the Missouri River Basin was authorized, calling for the expenditure of $200,000,000 by the Bureau and an equal sum by the Army Corps of Engineers toward the partial accomplishment of the initial stage of the program. An appropriation with which to complete surveys and field studies and prepare designs for structures will be sought to clear the way for actual work on long-awaited projects on the Republican River in Nebraska and Kansas. Passage of such an appropriation will be the signal to make ready all plans, so that as soon as the wars with Hitler and Hirohito end we shall be ready to ask for bids on contracts and commence to shovel dirt.

Within the next few months the Bureau of Reclamation will have completed comprehensive plans for similar development of 14 other great river basins in the West. Among them will be plans for the Columbia River Basin in the Northwest, the Central Valley of California, and the basin of the great Colorado River.

These plans will be presented to the President and Congress. We hope that they will be studied by the people in the areas they cover with as great interest as you of the Missouri River Basin have studied the possibilities of the plan we prepared for your river basins.

Our first purpose which will be served by the construction of post-war projects of the Bureau of Reclamation will be to make jobs for demobilized servicemen and industrial workers after the fighting stops. Everyone knows that there will be a difficult period of transition. We estimate that within 2 years after the end of the wars our post-war program will mean employment for some 200,000 workers on the construction sites, and as many more in industrial centers making electrical equipment, machinery, semifabricated materials, and other things used in building dams, power plants, tunnels, and canals.

But the principal task will be to settle servicemen and war workers on new farms created for them by these projects. If all of the projects suggested in the Bureau of Reclamation plan are constructed, there should be some 135,000 new farms created. These will be family-type farms in conformity with the established land policy of the Bureau of Reclamation. Under the original Reclamation Act of 1902 the policy was first laid down that the Government would stimulate the development of family-type farms—a farm small enough for the members of one average farm family to handle.

The law provides that we can furnish irrigation water to not more than 160 acres

under one ownership. If water is to be supplied to more than this acreage, the excess land must be sold. While there may be areas in the West in which this rule has been modified for one reason or another, it is the policy of the Bureau to encourage family-type farming. Already the established pattern of irrigation in Nebraska is in farms of less than 160 acres. Data from the 1940 census and from Bureau of Reclamation records of more recent date indicate that the average size of an irrigation farm in Nebraska is close to 120 acres, of which 67 acres is actually irrigated. This compares, for instance, with an average size irrigated farm of 197 acres in Wyoming, of which 129 acres gets irrigation water. Compare also the average size of all farms in Nebraska of 391 acres—irrigated and dry farms taken together—with the average of 1,866 for Wyoming and 822 acres for Montana. It seems clear that the transition from dry farming to irrigation farming under the 160-acre limitation of the reclamation laws can be far more easily accomplished in this State than in most others.

One of the reasons that the family-type farm has prevailed in Nebraska is that it ranks high in percentage of farms operated by their owners. It follows that if Nebraska holds to this form of farming its communities will continue to be prosperous in comparison with the areas where tenant farming predominates.

We are now entering another phase of conservation in the West. The Flood Control Act, approved by President Roosevelt on December 22, 1944, marks what many westerners believe to be the most significant step for the conservation of the waters of the West since the passage of the Reclamation Act of 1902. Read carefully section 1 (b) which provides that:

"The use for navigation, in connection with the operation and maintenance of such works (authorized by the act) for construction, of waters arising in States lying wholly or in part west of the ninety-eighth meridian shall be only such use as does not conflict with any beneficial use, present or future, in States lying wholly or partly west of the ninety-eighth meridian, of such waters for domestic, municipal, stock water, irrigation, mining, or industrial purposes."

If the courts hold that paragraph means what I think it does, this paragraph is of especial significance when read in connection with the opening paragraph of the act, which declares it the policy of Congress "to recognize the interests and rights of the States in determining the development of the watersheds within their borders" and "to facilitate the consideration of projects on the basis of comprehensive and coordinated development; and to limit the authorization and construction of navigation works to those in which a substantial benefit to navigation will be realized therefrom and which can be operated consistently with appropriate and economic use of the waters of such rivers by other users."

Effective implementation of this policy is given in section 9 of the Flood Control Act of 1944 by approving as integrated and comprehensive plans the proposals of the Bureau of Reclamation and Army Corps of Engineers for the development of the waters of the Missouri River Basin. The Nebraska Senators and Representatives vigorously supported this policy together with all reclamation programs.

It would be assuming too much, however, to suppose that all water-use problems were solved by this bill. For example, it will require a good deal of thoughtful planning to avert the type of litigation which hampered development in the North Platte area for years.

I think a good many of you know of my connection as an active construction engineer on the North Platte project. It is a great satisfaction to see the effects of one's work bear good fruit—and I am not punning. Not only has agriculture along the North Platte been stabilized, but cities and towns which are dependent upon the irrigated farms of the North Platte have grown and flourished. In Scotts Bluff County, which includes the city of Scottsbluff, the population grew from 2,552 persons in 1900 to 33,875 in 1940, a thirteenfold increase. In the decade from 1930 to 1940 the Scotts Bluff County population gained 18 percent and the city of Scottsbluff gained 42 percent, although the population of Nebraska as a whole declined almost 5 percent. I feel grateful to have had something to do with the growth of this section because of the irrigating works which I helped to build.

I feel grateful also for the opportunity to take a part in even greater developments after the war. Today the Bureau of Reclamation, as an arm of the Department of the Interior, is preparing to build not only irrigation systems, great dams, power plants, and canals, but is preparing to make Federal investment in these works contribute to man's well-being to a greater extent than ever before.

We in the Bureau of Reclamation believe that we have a greater responsibility than ever before not only because we desire to help the water users repay their pro rata share of the Federal investment but because the Government is in a position to help the settler avail himself of many techniques and uses of modern science in farming and in living in a way that he is not able to avail himself of them as an individual. In this way the Bureau of Reclamation, with the cooperation of all of you, can make its greatest contribution to the development of western communities and States. You will hear much more of this in days to come.

I thank all of you for this opportunity to tell something about the plans of the agency of Government for which I am responsible. I know that you will feel a friendly, intimate connection with the Bureau of Reclamation through Mr. Debler, who is the director of our newly constituted region No. 7. Mr. Debler and I will work with you closely to increase the prosperity of your State and bring about the fullest possible development of its resources.

Family-Sized Farms

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "All the People Have a Stake in Family-Sized Farms," published in the San Antonio (Tex.) Evening News of January 27, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL THE PEOPLE HAVE A STAKE IN THE FAMILY-SIZED FARMS

If agriculture is to prosper and expand as it must to feed the Nation, and if rural citizens are to exert an influence for decent politics and sound economics, the family-type farm—owned by the people who live on it and operate it—must be preserved.

Farmers of that type are almost invariably found to be "sturdy, independent citizens who cherish their liberties so much they will fight, as well as talk, to preserve them."

That assertion is by Senator ARTHUR CAPPER (Kansas), writing in Capper's Farmer. Preserving that traditional standard of farm life would be in everybody's interest—not the farmers' alone. As the Senator points out, industry has a stake in the family-size farm. Neither management nor worker can prosper except as the farmers prosper.

The buying power of rural America is the motive force that keeps factory wheels turning. Take that away, and many an industrial center would become a ghost town.

Bearing those principles in mind, everyone can concur in Senator CAPPER'S sensible, practical, middle-of-the-road program for keeping farmers out of "the red" after the war. He would (1) assure farmers parity prices; (2) provide equal educational opportunities for farm children, with emphasis on vocational agriculture; (3) encourage a higher living-standard for the farm family; (4) provide machinery and equipment adapted to the family size farm; (5) encourage farm-ownership through liberal credits; (6) promote the orderly marketing of farm products; (7) strengthen extension programs which will foster soil-conservation, sound crop planning, and livestock husbandry, and good management, so as to make the farm pay.

In that connection the consuming public—all patriotic citizens—may be reminded that the record-breaking food crops year by year since Pearl Harbor, supplying the sinews of war, have come mainly from family-size farms. Moreover, for the most part, those farms have been almost exclusively family tilled. Farm people have produced more foodstuff, more seed oil, and other war crops than ever before, though short-handed and needing plow tools and other implements.

Beyond that, youth from the farms have demonstrated the fighting qualities of which the Kansas Senator spoke, on many a battlefield. Surely the farmers have earned the "better break" which Senator CAPPER bespeaks for them.

Northeast Passage

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem from the Milwaukee Journal of February 1, 1945:

NORTHEAST PASSAGE

(The St. Lawrence waterway)

I stood on the Bayfield hills
And looked out over the bay;
And far beyond the Apostles saw
The Sault, the Straits of Mackinaw,
The Michigan mitten's leather paw,
And Erie's skies of gray.

I saw Ontario's blue
Pouring its overflow
Into the river that leaps and smiles
Down through the emerald Thousand Isles,
For hundreds of old historic miles
Into the gulf below.

And I dreamed of a new bright time
When all this great domain,
Landlocked and languishing, would be
Opened to all the world, and free
To load the highways of the sea
With its iron, coal, and grain.

From the bluffs above Duluth
To Anticosti Isle,
From Milwaukee to Quebec,
Scorning Niagara's dam and check,
I saw a great sea highway deck
Itself in richest style;

With great new cities shining
Like jewels on its shore;
With all its thousand old ones grown
To magnitudes before unknown;
With all its fringing acres sown
And each year yielding more.

I saw some hundred thousands
At work constructing it;
Rivers at harness; channels hewed;
Huge dams reared; a multitude
Of new lives born; old lives renewed,
For new employments fit.

I saw the Northeast Passage
Carved out to meet the ocean,
And ships of every nation stand
In harbors of a once closed land.
And new winds blow on every hand
New life and fresh emotion.

I saw the minds once lulled
In isolationist sleep.
Through contact with the world awake
To wide horizons; and the brake
Of narrow judgment snap and shake
Under the salt wind's sweep.

I saw the inland cities
Opened to all the earth;
Chicago and London proudly stood
Arm in arm in the brotherhood
Of great world ports, and found it good,
And learned each other's worth.

The farmlands of Wisconsin;
The olive groves of Spain;
Detroit's great shops; Odessa's quays;
The mills of Cleveland; Norway's trees;
Ontario's surging industries;
All formed one single chain.

I saw great poets rising
To sing with majesty
The endless wonders of these places.
I saw great artists of all races
And nations come to paint their graces
For all mankind to see.

There on the Bayfield hills
That vision came to me.
But millions more have seen it, too.
What will you now, you millions, do?
Open the high road, grand and new,
From Ashland to the sea!

—*Fred B. Blair.*

Drafting of Farm Boys

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, on another occasion I addressed the Congress on this very important question of the drafting of farm boys.

On that occasion I presented the distressing factual conditions that prevail in my State of North Dakota, and I portrayed further the tragedy which would develop should the draft of farm boys continue.

Under unanimous consent to extend my remarks in the RECORD, I include a letter written by Thomas J. Heily, of Mohall, N. Dak., which is a fair symbol of literally hundreds that are coming to my desk:

MOHALL, N. DAK., *January 29, 1945.*

Hon. CHAS. R. ROBERTSON,
Washington, D. C.

DEAR SIR: I am writing you to see if you know whether the draft is going to take my last boy and leave me high and dry. My boy has received his induction papers and is to leave for Fort Snelling on February 6 for his physical examination. There is nothing in that order that leaves any doubt but what he is to be drafted. It states he will have 21 days if he passes and he will pass.

I talked to one of the draft board members and he told me they did not want to draft key men like him and that maybe he would not be taken right away. But if they got so their quota could not be filled any other way their orders were to take them. Being that there are not many left here now but boys in this class, the prospects don't look too bright.

I told him what you said about the law to defer key farmers was still in effect and he said them fellows are just trying to pass the buck to us. Our orders are to fill our quota. Now the time is right at hand when I should lay out about $2,500 in preparation for spring and I am up in the air and don't know whether to get ready or get ready to call a sale and wind up my operations.

This boy cannot be replaced. Here are the facts: He is farming in company with me. We operate seven quarter sections or 1,120 acres and figure to crop 750 acres. We have 4 milch cows, 20 stock cows, 21 head of young stock, 53 head of sheep, 1 brood sow, 100 chickens, 4 turkeys, and 2 horses. I am 62 years old and no longer able to do heavy work but can do a lot of work if he is here to take the heavy end. We are batching as my wife died in 1928. I have one boy an ensign in the Navy and one boy in the Army and this is my last boy.

If you can find out any information as to why these boards are not instructed to pay attention to the laws of Congress I would be glad to hear from you, as I do not like to lay out money for supplies that I will later have to sell.

Very truly yours,

THOS. J. HEILY.

Some Truths About Poland

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. WASIELEWSKI. Mr. Speaker, any day now the world may receive news of the decision of the Big Three with reference to some of the more difficult and troublesome problems that must be settled to assure an early victory and a lasting peace.

One of the most difficult ones will be involving the Russian claims to Poland. The prudent and just settlement of the Russo-Polish dispute is important, not because of Poland being the first to resist the totalitarian forces but because her problem came up first and the settlement made in her case undoubtedly will serve as a pattern in the settlement of the problems involving the Baltic states of Esthonia, Lithuania, and Latvia; the difficulties involved in the Russian domination of such countries as Czechoslovakia, Yugoslavia, Rumania, Bulgaria, Italy, Belgium, France, and other liberated areas.

Thus the proper solution of the Polish-Russian dispute justly and equitably is important to the future of not only Poland but to the peace of the world.

In this connection, Mr. Speaker, I am including herewith an article which appeared in the February 1945 issue of the American Mercury, by William Henry Chamberlin, entitled "Some Truths About Poland." Mr. Chamberlin is one of the foremost students of Russian history and politics and the author of several books on the subject. His discussion is not only interesting but likewise revealing and thought-provoking.

The article follows:

SOME TRUTHS ABOUT POLAND

(By William Henry Chamberlin)

It is unfortunate that American public opinion, never too well informed about the smaller European countries, has to some extent been forced to choose between two propagandist versions of Poland. One is the idealized legend of ardent Polish sympathizers, the other an excessively dark picture drawn by groups hostile to the Poles.

There are ugly spots in the Polish record. Liberal friends of the country are the first to acknowledge this. During most of its life as an independent state Poland was governed by semidictatorial methods. The Poles, long oppressed themselves, were often intolerant in their treatment of racial minorities. Polish administrative methods in eastern Galicia, where the Ukrainians are a majority of the population, were harsh and oppressive. Even now the Polish Government would strengthen its case if it included two or three Ukrainians in the cabinet and proclaimed some federative principle for the future, with local self-government for regions with non-Polish majorities.

There was anti-Semitism in Poland, as in Rumania and other east European countries. It grew out of the same unhealthy soil of poverty, economic depression, and urban overcrowding, and led to regrettable social and economic discrimination. Also, the seizure of Wilno and the taking of Teschen from Czechoslovakia after the Munich settlement were high-handed acts in the international field.

However, one need not accept an unreal picture of Poland as a Sir Galahad among nations in order to recognize the right of the Polish people, who have fought heroically and suffered unimaginable horrors to determine their own political fate.

Poland's past cannot be reasonably appraised in the abstract. Two considerations of time and place, in particular, should be noted:

First. Poland during the thirties was wedged in between two powerful and ruthless totalitarian states, Nazi Germany and Soviet Russia, which certainly did not contribute to the flourishing of democracy. Second, the Polish record, bad as it was in many respects, was strikingly better than that of the Soviet Union, if one takes such reasonable standards of comparison as the existence of opposition parties, executions for political reasons, and forced-labor camps. The attempt to justify absorption of Poles by Russia on democratic grounds is therefore illogical and absurd.

The arguments that are sometimes put forward for differential treatment of countries that willingly or otherwise joined the Axis certainly cannot apply to Poland, for Poland was the first nation that took up arms against Nazi Germany. And Poland's fight did not cease when the physical resistance of the country was beaten down by the Germans, abetted by a sudden Soviet blow in the rear

of the Polish armies. Poland's fight has gone on, through guerrilla warfare inside and through effective Polish units serving with the United Nations abroad. History will underline that Poland was the only conquered nation where Hitler was unable to find local Quislings.

But that is not all. Soviet Russia actually owes a debt of gratitude to Poland for its steadfast rejection of Nazi blandishments. According to the testimony of French diplomatic observers, contained in the French Yellow Book, Hitler made three proposals to the Polish Government looking toward combined action against Russia in 1938 and 1939. The basis of the German proposals was that formerly German regions be returned to the Reich and that Poland be compensated by additional territory from the U. S. S. R.—a proposal remarkably like Stalin's, except in reverse.

Poland refused these offers. How different the course of history might have been if Poland, like Hungary, Rumania, and Bulgaria, had swung into the Nazi orbit and cooperated in an attack on the Soviet Union. In that case, Britain and France might never have been involved in the war and Russia would have been obliged to bear the whole weight of the German onslaught 2 years earlier. Certainly the Russians have reason to be thankful for Poland's refusal to accept a German orientation in its foreign policy.

Even after the ominous announcement of the German-Soviet Pact, in August 1939, Poland preferred an unequal war to surrender. Its reward was the revival of the old Russo-German technique of partition, with Stalin and Hitler repeating the roles of Catherine II and Frederick the Great. The Soviet Commissar for Foreign Affairs, V. M. Molotov, pronounced a death sentence on Poland when he said, in a speech before the Soviet Parliament on October 31, 1939:

"One swift blow to Poland, first by the German Army and then by the Red Army, and nothing was left of this ugly offspring of the Versailles Treaty, which had existed by oppressing non-Polish nationalities."

For almost 2 years, it should not be forgotten, Poland lived under a regime of joint German-Soviet occupation as cruel as any recorded by modern history. Both powers made every effort to decimate Polish leadership and stamp out Polish national consciousness. According to a diplomatic note of the Polish Government, 1,500,000 inhabitants of Eastern Poland were deported, most of them to Soviet forced-labor camps. The exact number of victims may be disputed, but the huge scale and brutality of the Soviet purge are beyond doubt.

II

When Hitler attacked Russia, the Poles did not seek revenge for the Russian horrors visited on their people. Though often accused of stiff-necked impossibilism, the Polish leaders showed both wisdom and magnanimity in joining the Soviet Union unreservedly as an ally. There was a disposition to "forgive and forget" in the interests of United Nations unity.

The Soviet Government signed an agreement with the Polish Government in exile, headed by Gen. Wladyslaw Sikorski, on July 30, 1941. In this agreement Moscow recognized "the Soviet-German treaties of 1939 as to territorial changes in Poland as having lost their validity." The two nations agreed to support each other in the struggle against Germany, and it was stipulated that a Polish Army, under Polish command, should be formed on Russian soil. The British Government, already pledged to uphold Poland's independence by the Anglo-Polish Treaty of August 25, 1939, declared that it did not recognize as valid any territorial changes in Poland. The United States, of course, had never recognized as legal the German and Soviet annexations of Polish soil.

The Polish Government, with headquarters in London, did everything in its power to aid the common cause. Some 140,000 Poles are fighting with the United Nations on land, on sea, and in the air. They look to the London regime as their legitimate Government. Indeed, it occurred to no one to doubt that legitimacy until the Soviet Government broke off diplomatic relations.

Systematic efforts have been made by Communists and near-Communist sources to discredit the representative character of the Polish Government. Even some ill-informed nonpartisan papers sometimes convey the impression that the Poles are deeply divided in allegiance, as between the Government in London and the so-called Polish National Council of Liberation, set up by Russia. This is a fantastic misapprehension of the Polish situation. It is as if one should describe the Norwegians as split 50-50 between their legitimate Government in London and the followers of Quisling.

The fact is that the Polish Government in London is the legal heir of the pre-war Polish Government. But it is far more representative of Polish public opinion than that regime could have claimed to be. The Polish Cabinet until recently has been composed of representatives of the four strongest parties in pre-war Poland. From the start it has worked in the most intimate cooperation with the active and heroic Polish underground movement The leadership of that movement has been in the hands of a deputy prime minister, and major policy decisions have been made, whenever physically possible, only after consulting the underground.

Thus the Polish fighting forces inside and outside the country alike acknowledge the authority of their Government in London. The recent change in the Polish Cabinet, with a three-party combination under the veteran Socialist, Tomasz Arciszewski, replacing the previous four-party combination, headed by the Peasant Party leader, Stanislaw Mikolajczyk, reflects a difference in tactics, not in fundamental principles. It reflects the tragic dilemma in which the Government finds itself as a result of British (and to a lesser extent American) pressure for a settlement with Stalin at almost any price. It is in no sense a cleavage between progressives and reactionaries.

With absolutely no illusions as to the dark prospect of achieving a free democratic Poland under present conditions, Mikolajczyk was apparently willing to compromise on the frontier question in order to save the Polish people from the misgovernment of the puppet Liberation Committee. Arciszewski, on the other hand, takes the position that, if Poland is to be despoiled, the responsibility must rest with the despoilers, and that the Polish Government should stand on the moral ground represented by the principles of the Atlantic Charter.

By contrast with the exiled Government, the Council of National Liberation is a synthetic, made-in-Moscow puppet regime. It was never heard of until Soviet troops had entered what was, by Soviet admission, Polish territory. Formed on July 23, 1944, it was recognized as a provisional Polish administration by the Soviets, and only by the Soviets, on July 25. This was pretty quick work, even when it is a question of recognizing a régime of one's own making.

Most of the members of the Moscow-made council are completely unknown in Polish life. And those who are known hardly inspire confidence. They are broken, discredited adventurers, just the kind of men who might be expected to turn out as Quislings. Take, for example, the minister of war, Michal Rola-Zymierski. Under the Pilsudski regime he was convicted of taking bribes from French manufacturers in connection with the supply of gas masks and was sentenced to 5 years in prison and the loss of his military rank and honors. Jan Grubecki, minister of communications, is a former member of the ENDEK, a nationalist youth organization, and was identified with many anti-Semitic outrages. The now deposed minister of agriculture, Andrsej Witos, tried to blackmail the government into giving him a profitable export concession in 1923 by threatening to withdraw the parliamentary support of his political c ganization, the People's Party. Emil Sommerstein, a well-known Jewish lawyer, had been held for years in Soviet prisons and may well have joined the government to avoid indefinite detention. The chairman of the council, Boleslaw Berut, is a Communist who was unknown in pre-war Poland. The committee includes two men who were more or less well known as fellow travelers, Eduard Osubka-Morawski and Boleslaw Drobner, both expelled from the Polish Socialist Party for this reason.

The sole function of the phantom government which includes at least one criminal is to carry out orders from Moscow. It has obediently echoed Stalin's demand that Poland cede some 40 percent of its pre-war territory to the Soviet Union. It has laid claim to overwhelmingly German regions, such as East Prussia and lower Silesia, annexation of which would weaken rather than strengthen the future Poland.

A Soviet policy based on respect for Poland's independence and territorial integrity would have insured the Soviet Union a loyal and grateful ally in the event of any resumption of German aggression. Unfortunately the actual Soviet policy has been very different. Under pleasant-sounding phrases designed to soothe public opinion in England and the United States, Moscow became increasingly hostile to Poland as the tide of war turned in Russia's favor.

Long before the break in relations, Russia made life difficult for the Polish Embassy. Obstacles were placed in the way of relief to the masses of destitute Polish deportees in Russia. Thousands of Poles were arbitrarily declared Soviet citizens against their will. The organization and equipping of the new Polish Army, headed by Gen. Wladyslaw Anders, became so difficult that it had to be evacuated to Iran.

Meanwhile much uncertainty prevailed as to the fate of some 12,000 Polish officers who had been in Soviet captivity since 1939 but who, mysteriously, had not been released in accordance with the terms of the 1941 agreement. General Sikorski repeatedly pleaded with Stalin for information about these men. Such a mass of important prisoners cannot get lost or mislaid. Had they fallen into German hands, Stalin could have said so. There was no reason why he should accept responsibility for the fate of men captured by the enemy. It was only in the interests of unity, to avoid open controversy, that the Polish Government did not make public its demands for information about the missing officers.

In retrospect, that would seem to have been a serious tactical error. When the Germans in the spring of 1943 announced the discovery of thousands of corpses of Polish officers in the Katyn Forest, near Smolensk, the world at large, unaware of the long Polish efforts to find those men, dismissed it as another Nazi invention.

Acting perhaps unwisely, but under strong emotional pressure of Polish public opinion, the Polish Government asked the International Red Cross for an impartial investigation of this affair. The Red Cross declined. But this incident was used as a pretext for the Soviet Government to break relations with the Polish Government, thus opening the way for the subsequent creation of a puppet regime.

When the Smolensk region was again in Russian hands, the Soviet authorities held an investigation and naturally reached the conclusion that the Germans had killed those officers. But Moscow has never explained why, if the prisoners had actually been aban-

doned to the Germans, this fact was not revealed in due time.

Stalin tried to soften the effect of his unilateral breach of relations by declaring that he favored a "strong independent Poland." But at no time was there any sincere attempt to resume relations with the only Polish group that could plausibly be regarded as representative of the Polish people.

III

One of the darkest chapters of the troubled story of Soviet-Polish relations—and a chapter shrouded in secrecy—has been the Soviet attitude toward the Polish Underground. Russia has made use of underground fighters where it needed them but has consistently dissolved their units, arresting and sometimes killing their leaders. For this tragedy the western powers, especially Great Britian, cannot escape moral responsibility.

When the Russian forces moved into Poland on a large scale in the summer of 1944, the insistent British advice to the Polish underground was to cooperate fully with the Red Army, revealing the number and location of its units, its hide-outs in swamps and forests, etc. The Poles loyally followed this advice. Their cooperation contributed appreciably to the rapid sweep of Soviet forces across eastern Poland in July.

How this cooperation was repaid—or rather, betrayed—by the Russians is one of the ugliest episodes of this war. There is a mass of material on this subject in Polish underground reports, some of which were broadcast from Warsaw when a part of the city was in the hands of underground insurgents. When the story is fully told it will shock the conscience of the United Nations' world. A few typical reports are herewith cited:

"July 13: In the Nowogrodek district the Russians 'pacified' seven villages where Polish units were quartered. Entire families were murdered, the men were deported, property destroyed.

"July 30: It appears, from events up to this moment, that all leaders of the Underground Army, together with their organizations, are being arrested by the Soviet forces after revealing themselves. It should be expected that a similar fate awaits all agencies, civilian as well as military. We must do all we can to protect these men and prevent their liquidation by the N. K. V. D. [Soviet Political Police] directly or through the intermediary of some Polish agents acting as Soviet tools.

"August 1: By radio from the Lvov District: On July 31 the officers of the Underground Army were called to a meeting. All who reported were arrested.

"August 17: In Tarnopol (Eastern Galicia) all men between the ages of 18 and 50 have been deported by the Soviet authorities.

"August 21: In Biala Podlaska (to the west of the so-called Curzon line) the Soviet authorities have arrested and deported the Commander of the thirty-fourth infantry regiment of the Underground Army * * * The Mayor of the town, Mr. Kowaleski, and the district commander of the Underground Army have also been arrested. All the orders of the 'Polish Committee of National Liberation' are executed by the N. K. V. D."

Shootings and hangings of officers and soldiers of the Underground Army were reported from Rozyszcze, in Volhynia; from Luck, in eastern Poland; from many other places. Mass deportations of Poles from Lvov and Tarnopol took place. The results of the attempt of the Polish Underground to cooperate with the Red Army could be summarized as follows: At the front there were friendly conversations, words of praise, promises of help with arms and ammunition. But behind the front lines the regular procedure included disarmament of the Polish patriot forces, arrests, deportations, shootings. The notorious Nazi death house at Majdanek, near Lublin, has been preserved as a concentration camp for Polish Underground workers.

Such a wide variety of reports, covering a fairly long period of time, indicates a settled policy, not individual misunderstandings. In a parliamentary debate that was not very fully reported in America, the Independent Labor member of Parliament, McGovern, on September 27, bluntly asked Foreign Secretary Eden:

"Is anything to be gained by covering up the fact that an ally of ours is both deporting and shooting Nationalists and Socialists in Poland?

He got no satisfactory answer. Acts of repression can be committed by a government without arousing international scandal if it is able to throw a thick blanket of silence over occupied territory. That is precisely what Russia has done in eastern Poland. Freedom of movement of correspondents has been nonexistent, except for a few conducted tours of German horror camps. Diplomats and military observers have been kept out.

IV

The climactic phase in the Polish national tragedy, however, occurred under sufficiently dramatic circumstances to attract worldwide attention. This was the 63-day uprising of Polish underground forces in Warsaw, led by Gen. Tadeusz Komorowski, also known as General Bor.

For months and even years the self-styled Union of Polish Patriots—a small group of emigrant Polish Communists in Moscow—and the Polish press had been criticizing the Polish Nationalists for not resorting to armed uprising. "Have no faith in those who urge you to be inactive and wait," declared Wanda Wassilevska, leading figure in that organization, on May 20, 1943. As Soviet troops penetrated into Poland this note was struck with ever-increasing urgency in broadcasts from Moscow which, it goes without saying, could not have been made without Soviet approval.

The appeals to start an uprising in Warsaw became more specific as the Soviet armies pressed forward to the line of the Vistula River and temporarily occupied Praga, the Warsaw suburb on the eastern bank of that river. One need only cite a single excerpt from Moscow appeals in broadcasts of July 29 and 30:

"People of Warsaw, take up your arms. Rally around the Home National Council, around the Warsaw underground army, and attack the Germans."

It was against this background of frantic appeals from Moscow, accompanied by assurances of speedy aid, that Warsaw's heroic and tragic uprising began on August 1. In its first stage it was amazingly successful and furnished a remarkable testimonial to the strength and discipline of the underground army. The old city area and many public buildings were taken. For about a week the initiative remained with the insurgents.

But the promised Soviet aid did not come. The Soviet front before Warsaw became passive. For a long time the Russians even forbade British and Polish airplanes, bringing aid to the insurgents, to use Soviet bases. Soviet propaganda suddenly began to accuse General Komorowski of having started a premature uprising. Even if this were true, it did not justify the crime of abandoning the underground heroes to extermination. The horrifying episode looks so much like a cynical design to enable the Germans to destroy underground forces which might oppose a puppet regime that the burden of proof is on the shoulders of the Kremlin and those who seek to alibi the Kremlin in this shocking affair.

V

Why should Americans concern themselves about the fate of Poland? This is an extremely curious question in the midst of a war that began in Poland and grew out of a big country's attempts to seize the territory of its smaller neighbors. Yet, it is a question one hears often in discussing this matter.

One answer is provided by a brilliant and far-sighted British publicist, F. A. Voigt, in the Nineteenth Century and After. Though he offered it in January 1944, it is even truer and more timely today. He wrote:

"The questions are not: Shall Poland's eastern border be shifted westward? Shall she lose her eastern territories or, losing them, acquire in their place western territories at the expense of Germany? The question is: Shall Poland exist?

"Beyond this there is another question: Shall Europe exist—the Europe we have known and hope to know again, the Europe for which the war is being fought, the Europe which alone gives the war any meaning, the Europe that is neither anarchy nor servitude, the Europe that is a balanced and integrated whole, the Europe of systems and states, balanced and yet related, the Europe of many sovereign states, big and small, the Europe that is so much more than a geographical expression, Europe, the stronghold of the Greco-Roman and Christian heritage? That is the question."

Whatever arguments of necessity are advanced, whatever the pressures to appease Stalin, public opinion in the United Nations cannot remain unaffected by the martyrdom of Poland. It is to be hoped that the peoples of America and Great Britain will consider seriously the moral and political implications of the policy of throwing Poland to the wolves. No step could be more isolationist in its effects, or more likely to chill the new readiness of the American people to assume international responsibilities.

Peril to Education

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

PERIL TO EDUCATION

Many colleges and universities are faced by an extremely critical situation as a result of the war. Anyone who reads the carefully documented report of the advisory committee appointed by the House Committee on Education will be impressed by the bleakness of the financial outlook for institutions that have lost a large part of the income ordinarily derived from student fees. Even leaner times lie ahead, as the hoped-for early return of college-age veterans recedes into the dim distance. A heavy mortality has already occurred among junior colleges and other small colleges, while several score institutions are currently in dire straits. During the academic year 1945–46 the number of cases of acute financial distress is expected to mount rapidly, embracing large as well as small institutions.

The problems confronting our colleges and universities cannot be solved satisfactorily by merely cutting down operating costs and balancing budgets, although some retrenchment is imperative. Beyond a certain point economies can be achieved only at the sacrifice of present educational effectiveness and of institutional ability to render service to the community after the war, when the

country will have great need for university training.

Hence the advisory committee is agreed that the present crisis calls for some form of Federal aid to prevent the undermining of the "whole structure of higher education." It recommends the creation of a nonpartisan commission on emergency Federal aid to pass on applications for standby and other service contracts sought by institutions in a critical financial situation. A very ingenious method has been devised for extending aid under conditions that would not necessitate Federal control over utilization of funds. Briefly the assisted institutions would enter into a contract with the commission to maintain certain standby educational services, following the general principle embodied in legislation providing funds for land-grant colleges in 1862. To qualify for such assistance, the full-time resident enrollment of the applicant institution must have fallen 60 percent below the level of prewar years for three consecutive quarters or two consecutive semesters. Payments would be regulated in accordance with a formula outlined in the report. All contractual relations of this kind would cease to exist 6 months after the termination of the war, by which time a good many soldiers presumably would be back from the European war zone and in classrooms. By making assistance terminable at an early postwar date, fears that Federal emergency aid might become an entering wedge for establishment of Federal control over private institutions of learning would be allayed.

Among other important recommendations is one calling for creation of a Federal research agency empowered to contract for the use of the facilities of colleges and universities in carrying out specific approved programs. The resultant spreading of research work among larger numbers of institutions would discourage the present practice of concentrating research work for the Government in a limited number of large institutions. Other recommendations deal with such matters as early reestablishment of deferment of students majoring in essential fields, preferential discharge of former students preparing for work essential to the national welfare, priority in release of faculty members from military duty and Government positions.

The value of higher education has been brought home to the American people as never before by the crying need for trained minds to guide our great war undertaking. It would be criminally shortsighted to permit an educational structure that provides leadership for peace as well as war to be undermined by failing to take protective measures at this critical juncture. A very small sum judged by comparison with the huge outlays made for other purposes would suffice to keep our colleges and universities on a going basis and enable them to provide the kind of training after the war that insures a better, more civilized post-war society.

He Don't Like Nobody

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. WEISS. Mr. Speaker, great men lose their effectiveness because of their prejudiced, biased, and partisan attitude. This is true of men in all professions whether it be Members of Congress or newspaper columnists. I admired Westbrook Pegler as a sports writer for many years, but since his abdication of the field of sports, I believe he has lost much of his sportsmanship. He has engendered such hatred for the New Deal that he dislikes everybody, and this is typified in a splendid editorial which appeared in the Pittsburgh Post-Gazette today entitled "He Don't Like Nobody," which I include in my remarks.

HE DON'T LIKE NOBODY

"We have in our craft," wrote Westbrook Pegler in a recent column, "a number of yearning essayists who are forever seeking another Lincoln, and in their quest overlook Lincoln's many faults, including his frequent contempt for law and his unmanly submission to the rule of a vixen in his home even to the extent of keeping his own son safe from war while he was rounding up by force the sons of other mothers to die horribly in battle."

Sometimes we have wondered how even a chronic grouch could find enough men to hate to supply a daily column, and we always had hopes that eventually Mr. Pegler would run out of his pet peeves and eventually be forced to write a good word about something or somebody. But no. When he starts turning back the pages of history to remind sentimental dupes in his own profession that even if they did dig up another Lincoln he wouldn't satisfy a Pegler, there is no hope for us mortals here below until he enters the pearly gates and starts exposing corruption on high.

Why, Mr. Lincoln surely wasn't a New Dealer, and he didn't even belong to a labor union.

Agricultural Deferments

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of the Michigan Farm Bureau:

FEBRUARY 2, 1945.

Gen. LEROY R. PEARSON,
State Selective Service Director,
Capitol Savings & Loan Building,
Lansing, Mich.

DEAR GENERAL PEARSON: At this critical time the board of directors of the Michigan Farm Bureau, in session January 29, 1945, recognizes the great necessity for every man, woman, and child to serve in the capacity in which each individual can render the greatest service to our country, whether in the armed forces or on the home front.

Food and fiber to sustain our men and women on the fighting front and those engaged in supplementary activities on the home front are just as essential to the support of our heroic men and women on the fighting front as arms and munitions. This is indicated by the fact that W. F. A. Administrator Marvin Jones is calling for 363,635,000 acres to be planted in crops, an increase of about 3 percent over last year, and for more meat, dairy, and poultry products.

In view of this unprecedented demand upon the farmers of the Nation, we urge the most careful and judicious interpretation of the intent and spirit of the Tydings amendment by the State selective-service office and the selective-service boards of the State.

Any further depletion of the essential farm workers at this time is bound to be attended by a reduction in farm production greatly exceeding the proportion of the men taken. This is particularly true of those in the age group of 18 to 26. In these young men is combined the vitality and the skilled experience to perform the heavier and more exacting tasks of farm production that are beyond the physical powers of older men and women or children. The trained judgment and experience possessed by these young men born and brought up on farms cannot be replaced by inexperienced urban labor, no matter how well-intentioned.

The demands of war industries and the selective service have already drained the supply of essential farm workers below the minimum required for wartime food production. Therefore, the board of directors of the Michigan Farm Bureau urges the most careful consideration of every individual agricultural registrant by the selective-service boards and your office. Any further draining of these men without due regard to the merit of their agricultural status is bound to be injurious to the war effort.

Members of local draft boards and county war boards over the State have expressed their concern over interpretations of the January directive ordering preinduction examination and reclassification of all deferred registrants, 18 through 25. Local officials indicate that these interpretations have had the effect of strong pressure upon them to induct into the Army every agricultural registrant who passes the physical examination. Other extreme ideas that have become current are that the registrant no longer has the right of appeal and that the local boards do not continue to have the authority previously exercised. Our contacts made directly with representatives of your office do not indicate such extreme treatment, but this seems to be at variance with reports on the effects of the direct contacts between your office and the local boards.

The extent to which agricultural workers have already joined the armed services either through volunteer or selective service channels is second to no other group in the Nation. It is not our purpose to make any plea for the deferment of any individual merely because he happens to be located on a farm.

We recognize that every agricultural deferment must be justified by facts sufficient to warrant the man's remaining on the farm. We view with the utmost concern, however, the general impression that seems to have become current among draft boards and selective-service officials that most or all of these young men who have passed their physical examination must be immediately inducted into the service regardless of their irreplaceability.

Therefore we urge that the utmost care be exercised to ascertain the facts through county war boards and other channels pertaining to agricultural deferment in accordance with the intent and spirit of the Tydings amendment.

Yours very truly,

MICHIGAN FARM BUREAU
BOARD OF DIRECTORS,
C. L. BRODY, *Executive Secretary.*

C. I. O.-New Deal Pact Sealed

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article entitled "C. I. O.-New Deal Pact Sealed," written by George Van Slyke and published in the New York Sun of January 23, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

C. I. O.-NEW DEAL PACT SEALED—WALLACE APPOINTMENT SHOWS THAT NEW PARTY HAS BECOME A REALITY

(By George Van Slyke)

The alliance of the left-wing New Deal and the Sidney Hillman C. I. O. has been sealed and delivered with President Roosevelt's appointment of Henry Wallace as Secretary of Commerce and forms the basis for the new political power which is to dominate the fourth-term administration.

The deal that was struck off last July in Chicago has been consummated in one of the swiftest and most startling political maneuvers of the entire Roosevelt regime in the White House. A new political party, which has been in the making for more than 4 years has now become a reality, as the politicians size up this latest development, with the old-line conservative Democratic wing crowded further out of the picture.

Mr. Hillman is being hailed here today by his political entourage as having accomplished his greatest triumph, and a political miracle. His place as a potential national leader, which has been in doubt, is now fixed in the belief of his supporters, who see him as a political power equal to any individual in the Democratic organization, excepting the President himself.

GAMBLED ON HILLMAN

Mr. Roosevelt and the New Dealers who manipulated the deal in the Chicago convention took a long gamble on Hillman and the C. I. O.-P. A. C., then coming to life in national politics, as a force which would throw the balance of power in the election.

The Hillman forces demonstrated in the election far greater voting strength than had been anticipated, even by the New Dealers. The P. A. C. came of age in the shortest period of time credited to any similar mushroom organization in political history. Having grabbed the veto power in one single campaign, the Hillman-C. I. O. group was so firmly entrenched that the President did not dare repudiate the Chicago bargain and was compelled, obviously against his wishes and better judgment, to throw out Jesse Jones and pay off the debt to Sidney Hillman. He did it in a big way and in so doing has cemented the Hillman-C. I. O. into the basic structure of the party alinement in the Nation.

The sensation which came out of the Chicago convention was the Hillman story. Enthroned in his penthouse apartment, Mr. Hillman held court for the New Dealers and big city bosses, who formed the combination seeking to put over the fourth-term nomination.

Mr. Hillman demanded the renomination of Mr. Wallace. The New Dealers feared it; the Southern Democratic leaders revolted against it and the city bosses insisted it would be too heavy a burden for the fourth-term candidacy. The series of events gave rise to the slogan "Clear everything through Sidney," which was Mr. Roosevelt's instructions to the bosses.

PROVED HIS POWER

Failing to put over Mr. Wallace, Mr. Hillman proved his power by blocking the nomination for Vice President of James F. Byrnes, director of the economic stabilization, and Senator Alben Barkley, majority leader of the Senate. They were, and are, two top leaders in the New Deal set-up. Both were bitterly disappointed and left the convention in disgust.

Then Mr. Hillman had the final word which led to the nomination of Senator Harry Truman for Vice President. And then it was that the report spread that Mr. Hillman had obtained an unconditional promise from the White House that if the C. I. O. went through for the fourth term, Mr. Wallace was to have a high ranking post in the new administration.

That story was circulated among the newspapermen and politicians during the closing hours of the convention and later through the campaign. We all heard it and many wrote it. The report never had official confirmation, but it bobbed up after Mr. Roosevelt's reelection in the frequent discussion of what Mr. Wallace was to get.

BARGAIN WAS INDICATED

Mr. Wallace's conduct throughout the campaign lent substantial credence to the convention reports of the bargain. The Vice President never wavered in his allegiance to Mr. Roosevelt and the New Deal doctrines. There was never the slightest hint that he resented having been turned down by Mr. Roosevelt in person or that he had any misgivings about his political future. Evidently he had complete faith that the bargain with Mr. Hillman was binding, and the events of the last few days fully justify his confidence.

This complete surrender of the President to the Hillman-Wallace-C. I. O. defines the status of the old-line parties more clearly than ever. The conservative Democrats are now clearly the minority faction in the administration, unless they assert their position in the tests now pending.

Robert E. Hannegan indicated today in his announcement from Washington that he will carry on as Democratic National Chairman, that he will deal with the C. I. O.-P. A. C. as a controlling factor in the elections during the next 2 years as forerunners. He will make the chairmanship a full-time job with a $20,000 salary. He said:

"As we go into the congressional elections of 1946 I should think candidates would be happy to get P. A. C. support. The effectiveness of their help was evident in the November election."

Plan for World Cooperation and World Peace

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a constructive and well-thought-out plan for world cooperation and world peace, the product of the mind and pen of John Pearson, of Hanover, N. H., distinguished alumnus of Dartmouth College.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

WORLD FEDERATION TO ENABLE MANKIND TO LIVE IN PEACE AND BE FREE

Some people conclude that while the establishment of international order through laws legislated by and administered by a world government authority may be a fine dream, it is not a practical solution because we can never achieve the goal. Let's run through history, however, and consider some hard facts.

1. THE DEVELOPMENT OF LAW AND ORDER

Man, in each stage of civilization, has finally found a way to put down anarchy through the development of new political methods and the better organization of mutual interests. Conflicts between feudal cities finally resulted in the organization of states. Then man suffered warfare between states until a system of national law and order was conceived, and broader principles of community interests were established.

The modern, scientific age, typified by sudden rocket bomb devastation of life and property of peaceful people, urgently calls for still another dimension of our political development; i. e., world government. Just as robber bands, pillaging the commerce between feudal cities, were eliminated by the organization of mutual interests on a state level, so international peace can only be had by the establishment of government authority on a global level. Airborne artillery has made the peoples of all lands and of diverse origins and interests members of one community in matters of international crime. Re: New political concepts for implementing the advance of civilization, skeptics have always said "the new idea won't work" or "it's not practical." Men had to die in battle and people become exhausted before the light was seen.

2. ELEMENTS OF LAW AND ORDER

History has revealed but one principle whereby crime (neighborhood, local, regional or national) has been eliminated. That principle is law.

Without law, there is no order in any jurisdiction, in any community. Law and order go together. You have either law or disorder and anarchy.

The weakness of treaties, pacts, and leagues

Treaties, or other substitutes for law, lack enforceability. Since there is no court on earth that can enforce a treaty, the only recourse left to an injured nation is the battlefield. The validity of treaties (contracts between nations), like the validity of contracts in private life, depends upon their enforceability in courts.

If international law and order can be built on treaties, what became of the 4,000 treaties in force among nations when World War No. 2 broke into Poland and Pearl Harbor?

If pacts are a basis of protecting us against international gangsters, what happened to the Kellogg Pact, signed by 48 nations in agreement no longer to resort to war as a settlement of international dispute? If leagues, or alliances, promise peaceful dealings among nations, what was wrong when Japan invaded Manchuria and Italy pounced upon Abyssinia?

What we call international law today is only a conventional term for referring to international understandings. No nation is compelled to submit its disagreement with a rival nation to the Hague Court.

Order, whether on a local or global scale, rests upon enforceable law. We cannot have world order without world law. We cannot have world law unless it is created and enforced by some form of world government.

What is the great American contribution to political science? As a people we inherited the system of legislative assembly. Through struggles of earlier generations we fell heir to trial by jury, habeas corpus and due process of law. But in establishing this Nation, a political principle was born that ranks with the earlier steps to endow the individual with certain fundamental rights. The organic life of the human race was raised to a greater capacity for political responsibility through the American discovery that an individual could be a citizen of more than one governmental unit.

In the 1780's, when the Confederation of States, made up of the Thirteen Colonies rebelling against England, was attempted as the means of organizing a new nation, the

basic weakness of nonenforceability of principles on which mutual interests existed, produced the same pattern of chaos and anarchy witnessed in world affairs in 1940. States debased their local currencies in seeking an economic advantage over a sister State. The Shay's Rebellion shed blood over another issue, and so on.

Despair faced our forefathers just as we today are confronted with seemingly hopeless prospects for world order. America was blessed in those days, however, with great minds and an intense interest in solving extraordinary political issues. At this time, the American version of federation of states, the formation of a new sovereign state, which we think of today as the National Government, was born in the minds of Washington and some of his associates.

The new concept was that the individual could be a citizen of State government and be a citizen of a Federal Government, at one and the same time. As is true of new ideas generally, many leaders said this was impossible. It had never been done before. Man can only be a citizen of one government, cried Mason. How can one person belong to more than one government?

Those who saw the light persisted courageously and finally through a vote of the members the only soverignty existing, i. e., State government, the Constitution of the United States was voted. Few of us realize by what narrow margin this favorable action was gained, a margin of 5 votes in one State and so on. As we look back, it seems as though the hand of God truly guided this Nation into this tremendous advance in political science.

The citizen voted for representatives of his State government and for representatives in the Federal Government on the same ballot. State courts administered the laws maintaining order in State jurisdictions (local burglary, murder, etc.) and State officials administered the laws financing the cost of local government, and operated the departments of the State. At the same time, neighbors had been voted into Federal Government responsibilities, Federal courts sat in the same town in which State courts functioned, and administered the laws created for the observance of national interests and the protection of the citizen of State against invasion by an enemy of the American colonies. Counterfeiters were tried in Federal courts because citizens of State government delegated to Federal Government the sole right to issue currency. Robbers of the mail were similarly punished for their crime through enforcement of Federal law conducted through action by a Federal jury. This jury was made up of citizens who a few months previous had sat on a State jury, dealing with a divorce case or a case of local embezzlement.

There is nothing, except attitudes of people, to prevent a world government based on the Federation principle, to which is delegated only the responsibility for maintaining international peace, from similarly dealing with an international gangster who starts to make 10-ton rocket bombs in his factory. Citizens elect their representatives in world government just as they do Representatives in Congress and their representatives in the State legislature and their representatives in city councils, and in school boards. World government courts sit in Cologne or Tokio or Chicago. Judges are chosen by the representatives we have elected. Judges, failing in their responsibility, are impeached just as Federal judges are. World government juries are drawn from the local regions just as Federal juries are drawn. The enforcing officer of the world government apprehends the criminal or criminals (in the light of law against international crime) just as the enforcing officer arrests the bootlegger breaking Federal liquor laws. The facts are heard, judgment given, and the criminal punished.

Capacity to organize for war, action leading toward an international crime, nipped in its incipient stage, not after airplanes have been built in secrecy and rocket bombs installed for a sudden destruction of peace-loving people living 500 miles away.

A. The foundation of peace: Man, the source of all political authority, is a manifold political being. He is a citizen of several communities—the city, the state, the nation, and the world.

Communities may exist for a time without being incorporated but, under the stress of adversity, they disintegrate unless legally organized. Government can only be established through the deliberate efforts of men.

The scientific and industrial developments have indissolubly unified the organic life of the human race wherever resident. Governments limited in their jurisdiction to limited geographical areas can no longer satisfy the needs of the human race.

History has revealed but one principle by which free peoples, inhabiting extensive territories, can unite under one government without impairing their local self-government. That principle is federation.

B. International order and world peace depend on the orderly process of laws backed up by judicial and enforcement procedures. Laws and their enforcement cannot exist unless created by a sovereign government. A world federation must be created to which peace-seeking nations shall delegate responsibility for maintaining world peace.

President Roosevelt told the American Society of International Law on April 30, 1944, "nations of the globe must unite in a definite body of law in order to preserve civilization and prevent a repetition of the present world disorder. Such a body of law must be capable of expansion to meet the needs of a rapidly changing world. The world cannot permit a recurrence of the present reign of lawlessness."

Common action on world federation: One method for expressing the will of the people is a State legislative memorial to Congress and the President.

Already eight States (Connecticut, Rhode Island, New Jersey, Maryland, North Carolina, Virginia, Alabama, and Louisiana) have passed a resolution memorializing Congress on world federation as set forth in a declaration.

Identical resolutions, debated and passed, after public hearings by the legislatures of these eight States, declare:

1. That all peoples of the earth should now be united in a commonwealth of nations to be known as the Federation of the World;

2. Specify that the Members in Congress from the State support and vote for this resolution;

3. Requests the President of the United States to initiate procedure necessary to formulate a constitution for the Federation of the World;

4. Requests that the President submit such a constitution to each nation for its ratification.

Members of Congress have stated that this is a logical, a democratic, and orderly method for registering the will of the people in this matter.

Thus, already people of eight States have declared (a) here are principles on which peace may be built, (b) we want our representatives in Congress to work for these principles, and (c) we want the President to initiate action leading to the goal of world federation. No complete blueprint is drawn up; only the principle of federation is enunciated, but action on that is requested.

Such action is sought because the people of these States believe that whether the Dumbarton Oaks or other proposals come to light, any successful solution will have to be built on the above concepts.

Establishment of an Enduring World

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the President of the United States from the newly elected Democratic Members of the House of Representatives:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 25, 1945.

The PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: At a special meeting in Washington, D. C., on January 25, 1945, it was resolved unanimously that the following letter be addressed to you.

You are engaging in conferences with the leaders of certain of the United Nations on final plans to win the war as quickly as possible and to prepare the way for peace-loving nations to live in peace and security.

As newly elected Members of the House of Representatives from congressional districts all over the Nation, we want to report to you the universal desire for the establishment of the most effective means of safeguarding this Nation's and the world's future, the prevention of war.

The United States should take the lead among the United Nations in urging full cooperation toward a common plan for enduring world peace. This principle is the foremost resolve of the American people and we, as recently chosen Representatives, do hereby extend to you our assurances that we will cooperate to the fullest to see that it is effectuated.

Respectfully,

DANIEL J. FLOOD, Pennsylvania: CLEVELAND M. BAILEY, West Virginia; E. H. HEDRICK, West Virginia; JOHN B. SULLIVAN, Missouri; FRANK T. STARKEY, Minnesota; WILLIAM T. GRANAHAN, Pennsylvania; JAMES E. ROE, New York; HERMAN P. KOPPLEMANN, Connecticut; WILLIAM J. GREEN, JR., Pennsylvania; HERBERT J. MCGLINCHEY, Pennsylvania; WILLIAM A. BARRETT, Pennsylvania; WILLIAM W. LINK, Illinois; ALEXANDER J. RESA, Illinois; JOHN J. RILEY, South Carolina; MELVIN PRICE, Illinois: CHASE GOING WOODHOUSE, Connecticut; HAROLD H. EARTHMAN, Tennessee; JAMES P. GEELAN, Connecticut; EDWARD J. GARDNER, Ohio; EMILY TAFT DOUGLAS, Illinois; EDWARD A. KELLY, Illinois; ANDREW J. BIEMILLER, Wisconsin; WILLIAM R. THOM, Ohio; A. S. J. CARNAHAN, Missouri; JOHN S. WOOD, Georgia; EARLE C. CLEMENTS, Kentucky; LEO F. RAYFIEL, New York; PHILIP A. TRAYNOR, Delaware; PETER A. QUINN, New York; HUGH DE LACY, Washington; CHARLES R. SAVAGE, Washington; CLYDE DOYLE, California; HELEN GAHAGAN DOUGLAS, California; ELLIS E. PATTERSON, California; DWIGHT L. ROGERS, Florida; NED R. HEALY, California; DUDLEY G. ROE, Maryland; JOSEPH F. RYTER, Connecticut; ADAM C. POWELL, JR., New York; GEORGE H. FALLON, Maryland; BERKELEY L.

BUNKER, Nevada; E. L. BARTLETT, Alaska; JOSEPH W. ERVIN, North Carolina; WILLIAM J. GALLAGHER, Minnesota; TOM PICKETT, Texas; J. M. COMBS, Texas; JOHN E. LYLE, Texas; FRANK R. HAVENNER, California; GEORGE P. MILLER, California; ALBERT RAINS, Alabama; JAMES J. DELANEY, New York; THOMAS E. MORGAN, Pennsylvania; WALTER B. HUBER, Ohio; JAMES W. TRIMBLE, Arkansas; MATTHEW M. NEELY, West Virginia; BENJAMIN RABIN, New York; GEORGE F. ROGERS, New York.

The text of the letter to the President is the unanimous expression of the newly elected Democratic Members of the House of Representatives. The committee which acted upon this matter was composed of the following Members: DANIEL J. FLOOD, Pennsylvania, chairman; J. M. COMBS, Texas; HUGH DE LACY, Washington; EMILY TAFT DOUGLAS, Illinois; ANDREW J. BIEMILLER, Wisconsin.

The committee earnestly and sincerely invites our newly elected Republican colleagues to join in this symbol of unity and reaffirm America's nonpartisan spirit in dealing with the tremendous problem of this Nation's future.

Opposes War Time

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. STEFAN. Mr. Speaker, a bill has been introduced into Nebraska Unicameral Legislature to repeal war time and go back to standard time.

Radio station WJAG, at Norfolk, Nebr., only station in northeast Nebraska, a rural section, asked their listeners to vote on the proposal.

In the first 48 hours they received 142 replies of which 137 wanted to go back to standard time and 5 wanted to stay on war time, at least until all States change back to standard time. The ratio was 27 to 1 against war time.

Some of the letters had as many as 66 signatures, but each letter or card was counted as 1 vote.

Here are sample arguments against war time:

A farm woman says old time gives them an extra hour to shop because they do their chores by sun time and sunset which now comes at 6:38 would come at 5:38 old time.

Another farm woman says she has to do her morning chores in the dark.

Another woman wants old time so children do not have to start for school in dark.

One family of four says:

War time makes forenoons too short and afternoons too long on both horses and men.

A minister wrote:

Our members simply cannot get farm work done in time to attend services that begin at 9:30 a. m., this early time being caused by most pastors having two and three churches to serve during this shortage of ministers.

A town couple wrote:

We have seen people go to work long before daylight on slippery streets, and are more likely to have accidents and I think they use more electricity than if they had been on old time.

Many farm organizations have voted unanimously or almost so in favor of the old time. Some call it God's time.

A farm woman says:

In summer we can't get started in fields until middle of forenoon on account of dew or rain. Hired men, if we can get them work grudgingly after 6 p. m. It is hard to get children to bed before dark. It is no fun to grope around in the dark during morning chores and working with animals you can't see.

One man says:

We are out of step with nature.

One man says:

If Nebraska goes ahead it might wake up the Nation to a good move.

Here are some samples of views of those who do not want to change:

I think as long as the majority of the United States uses war time so should Nebraska, but I never was in favor of war time.

Henry Deserves Any Service

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following editorial appearing in February 15, 1945, issue of Aero Digest:

HENRY DESERVES ANY SERVICE

Send for Browder! Page Hillman! Call all followers of the Communist line! The crackpots dance with glee! Wallace is to be Secretary of Commerce; the country's industrial economy is to be a planned economy, and the Nation laid helpless under totalitarian feet!

It's a tragedy! Tragedies, to be sure, can be endured. But it is also a disgrace. We bow our heads in contrition. Shame and apprehension overwhelm us. For the first time in history a Chief Executive of the Republic stoops to smear the oath he had taken but an hour before—to pay a shameful political debt by throwing the Nation's business to its bitter and avowed enemies.

Left-wingers and nitwit ideologists lick their chops. The apostle of scarcity, the man who killed off the little pigs and plowed under the cotton and corn is in the place of power; the whole economic structure trembles. The man who was double-crossed at the Chicago convention has now been given what he wants.

What a travesty on "government by the people" was enacted in the letter that was so "difficult to write"—the letter in which our Chief Executive attempted to justify his wretched act by telling Jesse Jones: "It's not for lack of appreciation for all that you have done" • • • but "Henry Wallace deserves almost any service which he thinks he can satisfactorily perform."

Why not—on that same cheap basis of barter of the people's rights—why not reorganize the Cabinet? Let Boss Kelly be Secretary of the Treasury and Boss Hague Secretary of State? How about Dan Tobin of the teamsters' union for Secretary of Agriculture? Surely he knows his oats! These gentlemen, too, worked hard to make the fourth term possible; they'd probably do as good a Cabinet job as Henry.

But while these hard-boiled guys were campaigning, Jesse Jones made the error of working hard at something also. He was trying to keep the home-fires burning, supplying money to build war plants, looking after the Nation's interests, running the biggest banking business in the world—a fourth department of the Government, Senator BYRD has called it. And he was doing these things with the temperament, political experience and business ability needed to swing the job.

How do you members of the aeronautical industry like the idea of having your whole destiny placed in the hands of a Secretary of Commerce who will stop at nothing to do what one of his fellow-travellers calls "Making America Over"? Did you, too, display the utmost devotion to our cause in the late campaign? Or are you what Wallace calls an "American Fascist"—too busy with war work and with your troubles with the C. I. O. to give politics much thought?

Your answer is important, for our troubles are deep-seated. The President of the United States has created a Frankenstein by his truckling to the irresponsible left-wingers from whose clutches he nevermore can escape.

For years we stamped our coins with the motto: "In God We Trust." Now we have a new slogan: "Henry Deserves Almost Any Service." As for the Nation, the deep, ugly scars which mark what the irritable, fast-failing, hand-tied Old Man of the White House has done to its integrity can never be removed.

An Excellent Poem by 1918 Doughboy

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. JOHNSON of California. Mr. Speaker, in the debate on the May bill, which passed the House last week, I recited, as part of my argument for the approval of the bill, a poem entitled "Just Thinkin'." The author of this excellent poem was Hudson Hawley. I had never known or seen Mr. Hawley. He is now a member of the editorial staff of the Hartford Courant of Hartford, Conn. The poem, in my humble judgment, is the best one written about the First World War. It depicts the thoughts going through a doughboy's mind as he stands poised and ready to give the Hun battle. Little did Mr. Hawley think that his poem would be used to urge Congress pass needed legislation for increased production for boys in a later war. I respectfully request unanimous consent to publish an article in the Hartford Courant, which includes the poem.

This is the article:

WORLD WAR NO. 1 POEM READ IN CONGRESS—HUDSON HAWLEY'S VERSE ON SOLDIER RECITED IN PLEA FOR SERVICE ACT

A World War No. 1 poem by Hudson Hawley, now on the Courant staff but a private on the staff of the Stars and Stripes of World War No. 1 at the time he wrote it, was recited into the CONGRESSIONAL RECORD this week by Representative J. LEROY JOHNSON, Republican, of Stockton, Calif., as part of his plea for passage of the Limited Service Act voted by the House Thursday.

The poem, Just Thinkin', describes the doughboy of World War No. 1, standing on the trench firing-step "wond'rin' if the Hun's comin' over tonight" and reminiscing in his loneliness.

Representative JOHNSON, urging passage of the Limited Service Act, told fellow Representatives that Mr. Hawley's poem "represents the psychology of the doughboy of 1918, whose son is his counterpart today."

"We want to do something, no matter how feeble it may seem," said Representative JOHNSON, "to let the man at the front know that he is our main concern. We want to let him know that, to the capacity of our power, we are determined that he should get all he needs and more, so he can win and win at the least cost. We want him to know that we are his friends. He is thinking just like we are. He is wondering what we are doing and are we remembering and thinking of him. In the A. E. F. were some fine poets in 1918. They wrote some interesting poems. My favorite one is entitled 'Just Thinkin'.' It illustrates the psychology of the doughboy of 1918, whose son is his counterpart today. With your permission I want to recite it."

Representative JOHNSON then went on to recite Mr. Hawley's poem which is printed herewith:

JUST THINKIN'

Standin' up here on the fire-step,
Lookin' ahead in the mist,
With a tin hat over your ivory
And a rifle clutched in your fist;
Waitin' and watchin' and wonderin
If the Huns comin' over tonight—
Say, aren't the things you think of
Enough to give you a fright?

Things you ain't even thought of
For a couple o' months or more;
Things that'll set you laughin',
Things that will make you sore;
Things that you saw in the movies,
Things that you saw on the street,
Things you're not really proud of,
Things that are—not so sweet.

Debts that are past collectin',
Stories you hear and forget,
Ball games and birthday parties,
Hours of drill in the wet;
Headlines, recruitin' posters,
Sunsets 'way out to sea,
Evenings of pay day—Golly—
It's a queer thing, this memory!

Faces of pals in Homeburg,
Voices of womenfolk,
Verses you learned in schooldays
Pop up in the mist and the smoke
As you stand there grippin' that rifle,
A-starin' and chilled to the bone,
Wonderin' and wonderin' and wonderin'
Just thinkin' there—all alone!

When will the war be over?
When will the gang break through?
What will the U. S. look like?
What will there be to do?
Where will the Boches be then?
Who will have married Nell?
When's that relief a-comin' up?
Gosh; But this thinkin's hell!

Mr. Hawley was inspired to write Just Thinkin' after talking with buddies in the Twenty-sixth Yankee Division, who had just come off the firing line. Mr. Hawley himself had been a member of the One Hundred and First Machine Gun Battalion, but was transferred by order to The Stars and Stripes. He was the first enlisted man to be assigned to the soldier paper and last to leave it.

Radio Discussion With Bob Evans

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, last Friday evening, I engaged in a discussion with Bob Evans, C. B. S. commentator, on the future of the G. I. bill of rights. This was broadcast over WFBL, Syracuse. Under unanimous consent, I include this colloquy in my remarks in the RECORD:

Each Friday night at this time, WFBL's special events department presents "Your Congressman Speaks." Each week, Bob Evans, WFBL's Washington correspondent will have as his guest, one of central New York's Congressmen. Here tonight in the Washington studios of CBS, is Congressman EDWIN ARTHUR HALL of the Thirty-seventh Congressional District. Here is Bob Evans.

Mr. EVANS. Who will, in turn, introduce Mr. HALL. Perhaps it should be the other way around. In any event, Mr. HALL is well known to his Thirty-seventh District—his Binghamton, Norwich, and Madison County constituents. He has been in Washington since 1939. Has served successively in the 76th, 77th, and 78th Congresses, and now is well started on the 79th. Incidentally, it's beginning to look as if the 79th is going to be remembered even more than the 78th. Certainly it has started out with a bang, particularly with the hot fight which has been going on all week in the House, over the work-or-take-the-consequences bill.

Mr. EDWIN ARTHUR HALL. Yes, the fight that reached a climax around 7 o'clock last night, when the House passed the May bill—the limited national-service legislation by a vote of 246 to 145. That legislation kept us going for 4 days. Now the Senate Military Affairs Committee has the bill, and they may report it out tomorrow. If they do, it may reach the Senate floor Monday. However, I understand that the Senate has its own version of this work-or-else legislation, and it looks as if there's going to be a battle there too, trying to compromise both bills.

Mr. EVANS. Yes; work-or-else legislation hasn't become a law as yet. However, tonight, your Congressman EDWIN ARTHUR HALL is going to talk to you about the G. I. bill of rights, and the resolution he introduced in the House a few days ago to implement that bill.

Mr. EDWIN ARTHUR HALL. I want to talk about veteran's benefits, Bob, but first, suppose you tell something of what has been going on in Washington in general this week.

Mr. EVANS. Yes, there were other exciting events in Washington this week aside from the passage of the "work or else" bill in the House. The sixty-third birthday celebration of President Roosevelt was observed, with literally millions of dimes being donated to the fight on infantile paralysis. New mileage records were turned in on the mile-of-dimes campaigns. Washington also is observing the national coal-saving "brownout" and, like many another American community, this capital looks peculiar with the bright lights all out, and the not-so-bright lights dimmed. Your first impression on seeing a darkened theater front is that no show is going on, and you wonder why. Then you realize that the show is going on as usual inside—it's the brownout. Washington also is intrigued by the fact that so many of our well-known people are missing from the Capitol scene. Secretary of State Stettinius and Harry Hopkins are overseas—last reported in Italy. War Mobilization Director James F. Byrnes, and the President daughter, Mrs. Anna Boettiger, also are among the missing, but nobody knows where they may be for publication. However, former Vice President Henry Wallace is very much among those present. After much parliamentary maneuvering throughout the week, the Senate carried itself into a position yesterday in which it voted for the George bill first, and thus postponed a vote on Henry Wallace for Secretary of Commerce until about March 1. Throughout the week, opponents of Henry Wallace for the commerce post, had jockeyed for legislation which would cause the Senate to vote on his appointment first. They know that if they could force such a vote, the Wallace nomination would be turned down. But friends of Mr. Wallace, including Democratic leader Senator BARKLEY fought to get the George bill under consideration first. They won. The George bill was accepted. It is understood the President will give it his O. K.

And so, if Mr. Wallace is approved by the Senate for the Commerce Cabinet post, and there seems to be but little doubt he will, he takes over, in effect, the bare bones of the job. The George bill has separated the lending agencies from Commerce. That is, it will, if okayed by the House and the President signs. And, as evidence of how hotly contested all this legislation was, I can tell you that Senator BARKLEY left the hospital where he had been taking treatment for an infected eye, and showed up on the Senate floor yesterday, wearing a black patch. Said Mr. BARKLEY, admitting that the patch made him look more like Deadeye Dick than a United States Senator: "The doctor told me to wear this patch on my eye to protect it from the wind, so I thought I ought to wear it in the Senate." Well, that's something of what has been going on in Washington this week.

And now, Mr. HALL, let us talk about the G. I. bill of rights, and the resolution you have proposed in the House—that resolution which proposes that Congress be vigilant in seeing to it that the provisions of the bill be carried out to the letter.

Mr. EDWIN ARTHUR HALL. Yes. Everybody thought that when Congress passed the G. I. bill of rights last year we could forget about veterans' benefits and veterans' legislation. Everyone thought that we had uncovered all the solutions to the greatest problem that this country ever will face, that of taking care of the returning soldier.

Mr. EVANS. Is it your suggestion then, that those who have been called upon to administer the bill are not going about it properly?

Mr. EDWIN ARTHUR HALL. Not at all. My point, my resolution is, that a good start be watched over to see that it is carried out to a better finish. With the facilities set up, and with the favorable legislation already approved by Congress, the veteran of World War No. 2 has much more assurance of a bright future, at this stage of the game, than did his compatriot of 25 years ago. In other words, a start has been made in the right direction. But, unfortunately, it is only a start. For, although a broad general basis for fair play for the soldier has been outlined, the whole picture still is rather hazy as to how this Magna Carta will be put into effect.

Mr. EVANS. Do we understand that the particulars of the G. I. bill of rights are not sufficiently specific?

Mr. EDWIN ARTHUR HALL. In a number of respects they are not. To me it seems there are too many glittering generalities in the bill as it stands. The proposals are attractive, yet uncertain. There is much that Congress needs to do. There is much that the Veteran's Administration needs to do. So broad a field has to be covered. I think that when the bill was passed there was not complete comprehension concerning the vast number of men it would cover. Even now, as we enter our fourth year of the war, the number of veterans discharged so far, represents only a tiny part of the millions who will be mustered out after the war is over.

Mr. EVANS. You think then the G. I. bill of rights should be changed, or amended to make it more far-reaching?

Mr. EDWIN ARTHUR HALL. I think it is imperative, in order to get a comprehensive view of veterans' affairs, that we change our whole method of thinking about veterans and veterans' rights. In the first place, the United States has been transformed by this war from a Nation of peace to a great military power. Whether we can help it or not, we have stepped forward upon the road which leads to militarism. Already, there is a hue and cry throughout the country, for permanent military conscription of this country's youth. Since this is the case, we must bring ourselves to accept policies in dealing with military personnel which would have seemed extraordinary before we acquired such an Army. For example, there is the question of rehabilitation of our wounded veterans. There are going to be unprecedented demands for veterans' hospitals in every corner of the land. We must be prepared to accept these demands, to face them. This Nation must be ready to start a program of building hospitals and veterans' facilities to take care of the staggering numbers of wounded men—of all casualities.

Mr. EVANS. But there are such provisions in the bill.

Mr. EDWIN ARTHUR HALL. Yes; but again I say they are not far-reaching enough. For example, the crippled soldier, the wounded man, will want to return home. It is inhuman to think that he would be expected to spend his lifetime, if he were disabled enough to need constant hospital care, in hospitals far from home, hundreds of miles away. So, special consideration must be given to the idea of bringing medical facilities, the hospitals, just as close to the individual soldier's home community as possible.

Mr. EVANS. In other words, you suggest that hospital facilities be provided, let us say, near Binghamton, or Norwich, or Oneida for wounded men whose homes are there or near there, and that the same be provided for those from, oh, Columbus, Ohio, or Phoenix, Ariz.; is that it?

Mr. EDWIN ARTHUR HALL. Yes. It isn't a pretty subject to discuss, but it is one that must be faced, and I believe that the wounded soldier and his family be kept in as close proximity to one another as possible. It is only human. It is only just.

Mr. EVANS. This, of course, is going to call for a great number of hospitals and medical facilities, a greater number than ever before.

Mr. EDWIN ARTHUR HALL. Yes; and the number of disabled men right now is greater than ever before and will be greater. Certainly it will call for more doctors, more specialists, more nurses. But this will have its compensations, too. With more wounded men, there must be more competent doctors. With more serious cases, there must be greater concentration upon the effective practice of medicine for their sake. All this is bound to give rise to new research, and the certain advancement of surgery, physical rehabilitation, and the medical profession in general.

Mr. EVANS. Yes; surgery, medicine, rehabilitation have made great forward strides in this war.

Mr. EDWIN ARTHUR HALL. They have, and they will continue to go forward. But, now, I have a fear that this forward movement may be arrested. I am thinking of what may happen when the first call goes out for an appropriation by Congress—an appropriation of the tremendous funds that will be necessary to provide all these facilities. Reactionary forces, inside and outside Congress, will begin to raise their voices to defeat the possibility of proper rehabilitation and hospitalization for the veteran. That is, they will do this unless vigilant friends of the veterans in Congress remain awake to the dangers of reaction.

Mr. EVANS. I see—and it is for this reason that you introduced your resolution.

Mr. EDWIN ARTHUR HALL. Yes. I have been concerned over the possibility of a tide of reaction setting in. In addition, the concern is not alone mine. I have had letters from people back home—letters which show that, in some instances, there has been a lack of interest in carrying out the provisions of the G. I. bill of rights. To ward off this lack of interest, a few days ago I introduced into the House of Representatives a resolution directing the Committee on World War Veterans' Legislation to conduct a continuous investigation—a continuous study—into the manner in which the Servicemen's Readjustment Act of 1944 is being administered. This resolution is to determine whether the G. I. bill is being carried out in accordance with the intention of Congress. It authorizes that reports be made to the House from time to time.

Mr. EVANS. In other words, the House by constantly keeping on top of what is going on in the administration of the bill, can advise, suggest, and even propose amendments, if developments suggest changes would be advisable.

Mr. EDWIN ARTHUR HALL. Yes. And so far I have mentioned only rehabilitation of the veteran. I haven't touched on the broad field of education. Education which should present great opportunities later to every man now in uniform. Everybody agrees that the soldier should have a chance to recover the years he will have lost so far as his general education is concerned. This, of course, is outlined in the G. I. bill, but before us still lies the task of putting it into effect. We must see that the America of the future provides college education, vocational training for those of her sons who have borne the battle. We must see that the machinery is oiled and working to equip that veteran for the life's work he chooses to follow—whether it be mechanic, engineer, specialized farmer, lawyer, doctor. The sky must be the limit and it is the duty of Congress and the people to see that these opportunities are forthcoming.

Mr. EVANS. And so say we all of us.

Mr. EDWIN ARTHUR HALL. Yes, and finally the soldier must be assured that, upon his return, he will be able to find a good job that will provide a good living under the only way of life worth living—the American way of life. Yes, to see that the G. I. bill is carried out will take vigilance—a constant watching over the veterans' rights. So Congress and the people must be constantly on the job. The Veterans' Administration and the educational authorities of this country should be preparing great plans for the glorious future we like to anticipate for ourselves and our returning sons and brothers. So far the American Legion, other veterans' organizations—with their experiences from the last war and its aftermath—have done much to see that present-day veterans get a square deal. But they will do more. So will Congress. So will the people of this land.

Mr. EVANS. Thank you, EDWIN ARTHUR HALL.

The Challenge of the Second Hundred Years

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses delivered by Senator GEORGE D. AIKEN and myself:

ADDRESS OF SENATOR GEORGE D. AIKEN OF VERMONT

The second century for cooperatives begins in a world torn by war and revolution, war involving nearly every nation on the globe and revolution involving the economic, scientific, social, and political future of our lives.

It is entirely possible that the period through which we are now passing and which began some 15 years ago may last for a long time to come. It is now obvious that it will not end with the signing of an armistice with Germany or even Japan.

The stories which come to us daily from Italy, from Greece, and Yugoslavia, and Poland, and India are indicative that certain phases of this changing process will continue for many years more.

Even as millions of years ago when this earth of ours was in process of reformation, with terrible earthquakes, followed by lesser disturbances, until at last a solid and enduring foundation was developed, so are we today experiencing earthquakes in our social and economic and political structure from which must eventually come the solid foundation on which the lives and future welfare of humanity will be built.

Whether we ask for it or not, we might as well face the fact that a new way of living is being established. We could not stop it even if we wanted to. The change can be for the better—it may be for the worse, but change itself is inevitable.

We can have some degree of opportunity and responsibility in determining what our future will be. We face this responsibility every day. The manner in which we meet it during the coming years will largely determine the degree to which happiness and security will accrue to generations far into the future.

The challenge, then, of the second hundred years is to assume our responsibility in determining what our future way of life will be.

As the late Justice Brandeis said, "Responsibility is the great developer." It is more than that, however. It is the yardstick of character. Men rise or fall as they assume responsibility. Not only do they rise or fall, but by the manner in which they meet responsibility they lift the status of others or drag it down to a lower level.

Vision alone is not a sufficient attribute to insure success. Vision without courage will not only fail to improve our social structure, but will bring unhappiness to its possessor.

This world of ours has largely become—in fact, has overwhelmingly become, a world dominated by economic issues. The governments of this world are largely economic governments. The wars we fight are largely economic wars.

The struggle is constantly one for power and more power; wealth and more wealth. There is inherent in the breast of everyone the urge for monopoly. To a few this urge

is translated into opportunity and realization, but to the multitudes nothing more than the urge itself is ever realized.

The world today has become the arena for this titanic struggle for monopoly and possession. Small groups of men obsessed with desire for wealth and power have organized monopolies and cartels, organizations which continually imperil the peace of the world and the safety of nations, even our own Nation.

These men respond only to this urge for possession and control. By their methods, they deprive teeming millions of the world's people of ownership, even the ownership of homes. When they deprive one of ownership or the hope of ownership, they destroy in him the final vestige of a sense of responsibility. Responsibility is intimately associated with ownership and in that very test, the test of ownership, we can find the cause for the social and economic and political failures of the past.

Even here in America, the world's great land of opportunity, we are to a great degree a Nation of tenants and mortgages. Over half the farms in some of our largest and richest Midwest agricultural States are owned by absentee landlords and are occupied by tenants. In some of the Southern States, the dgree of tenancy is much greater.

All through our great West, farms comprising thousands upon thousands of acres are owned by eastern capital but on which the labor is performed by men and women who have no hope of ownership in the land itself. The tendency toward corporation farming holds little hope of ownership for the actual tiller of the soil.

The ownership of homes in the cities has become a mirage to the millions employed in our industrial plants. Workers in many industries no longer own any part of the tools of production and have no voice in the management. Thousands of small industrial plants throughout the country have been absorbed by gigantic corporations and holding companies until their owners find that even they no longer have a voice in the management of the industry which they themselves or their forebears developed.

A system of absentee and impersonal ownership has come to rule in the United States with a resultant tendency toward loss of character on the part of industry and of groups employed by industries and even those in Government. The badge of irresponsibility is all too common today.

How often we see carelessness on the part of an employee because he does not own the tools. How often we see industry strive to get the highest figure on a contract, whether that figure is warranted or not. How often we see wastefulness on the part of Government employees because it is not their money that is being spent. How often we see whole communities and even States shifting the burden of their own responsibility to the Federal Government even while they cry out against usurpation of their authority. This condition is not irreparable; the tide can be turned back; but it can only be done through the assumption of responsibility by the individual.

The challenge of the second century to the cooperatives is to boldly assert that they are not only stemming this tide but are changing the system into which we have been drifting.

The cooperative method is the one organized economic force which has demonstrated that it has within itself the facilities for stemming the tide of our economic system from one of tenancy and dependency to one of ownership and responsibility.

Through cooperative effort, a thousand small farmers can pool their interests and thereby perform the services that might otherwise be done by a single corporation, while at the same time they preserve their sense of ownership and full responsibility upon which sound and stable government itself depends.

Through cooperative effort a thousand families in the city may enjoy a higher standard of living, which will result in improved health, better education, hope for home ownership, and a realization that these things have come to pass through the efforts that they themselves have made. They will stand a little straighter and they will hold their heads higher.

We have mastered the problems of production both on farm and in factory, but we have not mastered the problem of distribution.

Ten years ago we saw millions of tons of food destroyed on the farm because there was no market and millions of people in the cities went hungry for want of this very food. The specter of such a situation now haunts the minds of both farmers and consumers.

Both groups seek legislation to insure them against dependency. The long time solution does not lie in legislation. It will not be found in the halls of Congress. Congress may pass relief measures, may provide for subsidies, may furnish temporary expedients, but the problem of distribution cannot in the long run be met by legislation. It can be met by the people themselves working through their own organizations, working to wrest the control of processing and transportation and distribution from the hands of small monopolistic groups, working to provide homes and home ownership for more people who will realize full responsibility when ownership is realized.

When we have mastered the art of distribution, then, and only then, can we look forward to an era of peace with full employment. So long as overpopulated and underprivileged nations exist in a world where an excess of necessities of life constitute an embarrassment of riches to other nations, so long will we live under the shadow of the threat of war.

So long as millions in our own country are in want while others are unable to dispose of the fruits of their labor, so long will we have unemployment, racial and class discrimination, and all their attendant evils.

Cooperatives can show the way to a proper system of distribution. It is part of the challenge of the second century to do so.

Too long have cooperatives been apologetic about their purpose and even their existence. The second century challenges cooperatives and members of cooperatives to fly their flag high without apology and without any action which can be construed as defeatism.

Cooperatives are today the greatest single force for effectively regulating private industry. Their methods of operation, their insistence upon quality and price, their performance of service has a more far-reaching and beneficial effect on private industry than have all the laws and regulations that can be enacted or promulgated.

The cooperative system stands between the people of our country and Government ownership and control. The cooperative method offers the best solution for insuring costs of production to the producer who lives on the farm and a decent standard of living to the consumer who lives in the city. Through cooperatives we can bring both farmers and consumers to a sympathetic realization of the problems which affect the other.

Although cooperatives today have enjoyed an enviable expansion of the business which they do, they have not so far realized a corresponding increase in influence in legislative halls, particularly the Halls of Congress.

The cooperative business, including that done for producer and consumer, may be considered in terms of billions of dollars today, but the cooperative influence in Congress is almost negligible in comparison. It must find the way to express its opinions to Government.

Only last week we witnessed the defeat of the St. Lawrence seaway and and power project in the Senate because the powerful opposition to it was organized and asserted every influence at the command of its organization. The support for the development of greatest natural resource in the world and one which would contribute materially to the welfare of every person in the United States was desultory in nature and largely unorganized.

While the voice of the special interests opposing this measure was strong and influential, the voice of the cooperatives was scarcely heard. When such projects as the development of the St. Lawrence and the utilization of the tremendous resources of the Missouri River system, the expansion of transportation systems, which will result in a more adequate distribution and a higher scale of living for millions are proposed, the voice of the cooperatives should wield a powerful influence.

The second century challenges us to make that voice heard in the legislative halls of the States and the Nation. Cooperatives cannot afford not to be interested in the development of our great natural resources. They cannot afford to be unconcerned with any of the acts of State legislatures and the Congress. They must be zealously interested and zealously committed to a program of constructive action.

Not only should the conservation and utilization of water resources concern them, but conservation of forests, conservation of oil resources, conservation of minerals, and the use of these resources in the public benefit rather than in the interest of any financial group which desires to exploit them solely for itself is a matter which directly concerns every member of every cooperative.

When God placed man on earth, he imbued him with desire—desire for complete security and happiness and a perfect life. He also gave to man the means of achieving this desire, the only stipulation being that man himself, using the means which God placed at his command, should bring his desires to realization through his own efforts.

Through the ages, man has struggled upward toward the ultimate goal. He has evolved education as a foundation upon which other achievements rest; he has developed the art of medicine and healing so that life may reach its allotted span on earth; he has made the desert to bloom and he has curbed the floods and controlled the lightning; he has learned to fly through the air almost with the speed of sound itself, but he has not yet learned how to live at peace with his fellow man nor to dispel the feat of want in a world of plenty.

One hundred years ago the cooperative movement was born. Its progress has been difficult and slow. Adversity has dogged its way. Its enemies are powerful and ruthless. But because it was never stopped, because it came back after each adversity, millions of families in our own country and millions of others throughout the world are living better, happier lives today.

The first century built the foundation for a better way of life. The second century challenges us to build securely on that foundation.

ADDRESS OF CONGRESSMAN JERRY VOORHIS OF CALIFORNIA

Mr. Chairman and friend in the cooperative movement, I understand that you have suggested that I speak to you on the subject "The First Hundred Years Were the Hardest." I am going to try to speak more or less on that subject in spite of the fact that I doubt very much whether the first 100 years will turn out to have been the hardest ones for the cooperative movement. It is true that there have been years of struggle and

heroic effort against tremendous odds. It is true that the pages of the history of the rise of the cooperative movement since it first beginnings 100 years ago this month are filled with a record of hardship and sacrifice for ideals and principles in which earnest men and women have believed. The 28 Pioneers of Rochdale did indeed light a light which has shined more and more brightly around the world as the years have passed. With the 28 pounds which these poor people managed to save through months of hardship they started on its way a form of business activity based more solidly upon truly sound economic, social, and spiritual principles than any other type of economic activity that the world has ever known. For they rediscovered the one basic principle upon which all human society must depend, namely, group loyalty. On that principle they built their cooperative and out of that principle has grown the most solid hope of human betterment that this distressed world knows today.

I think, if we were to select one factor which made the task of the Rochdale pioneers more difficult than any other one, that factor would be ridicule. When they opened their little store we are told that their fellow citizens laughed at them and the children threatened to stone their little place of business. I doubt that there is a single worth-while effort that human beings have ever made that did not start out in an atmosphere of ridicule. Ridicule is the cruelest weapon which those who benefit from an established order an use against those who seek its modification for the benefit of the masses of men.

Every great movement the world has ever known has passed through three stages. The first of these has been that of ridicule and indifference. Every great religious movement has passed through such a period. The Founder of the Christian religion Himself was no exception. The movement for free public education, the labor movement, the anti-child-labor crusade, above all perhaps the movement for world peace—all of these have been in their early stages regarded with indifference if not with ridicule by the majority of human beings. There are those, however, who prefer ridicule and indifference to the even greater difficulties which encounter a great movement when it passes into the second stage of its development. For that second stage is that of opposition and bitter attempts to destroy it. Christianity passed through this period during the persecution by Roman emperors and others and all the other movements for human betterment which I have mentioned have had to pass through the fire of this second period of their development. The cooperative movement will be no exception. And as we meet here tonight on this one hundredth anniversary of the founding of the first Rochdale cooperative, the one thought above all others which should be uppermost in our minds is this: Either this movement to which we are all so devoted must gird itself for the rigors of the second period of its development or it must give up the hope of making the worth-while contribution to the solution of the human problems of which it is undoubtedy capable.

The third stage in the development of any great movement is that of its successful establishment as an accepted part of the life of society. It may well be that in Scandanavia, in England, in Nova Scotia, and perhaps in one or two other places in the world the cooperatives have already passed into this third stage. In our own country I think we must frankly face the fact that this movement is just coming of age and is only just entering that second period of opposition and well-laid attempt at its destruction of which I have spoken. The great question before this meeting here tonight is whether or not you and I have the courage and the faith to seek with all our hearts to lift this movement out of a position where it is regarded with indifference by the bulk of the population of our country and to carry it forward with courage through the fire of misunderstanding and attack which, in all probability, will await it once its real potential strength is understood.

Only one example will be necessary to illustrate what I mean. Recently the president of a western railroad received a letter from the National Tax Equality Association informing him that in their opinion his proper contribution to the work of that misnamed organization was $25,000. It happens that this particular railroad official did not reply to that letter but instead turned it over to one of his best customers, a farm-marketing cocperative. I tell this little story only to show that the National Tax Equality Association is thinking in no small terms. There can be no shadow of doubt that this organization is out to destroy every cooperative in the United States. Its literature talks about tax exemption, an exemption accorded by an act of Congress to farm cooperatives only as a measure of attempting to bring about a greater equality of opportunity as between agriculture on the one hand and industry on the other in the United States. The exemption applies only to corporation income taxes and amounts, as a matter of fact, to considerably less than a small hill of beans from the standpoint of Federal revenue.

It is doubtful indeed if due to this tax exemption more than $10,000,000 of revenue is lost to the Federal Treasury per year. But under the cloak of trying to destroy this very minor tax exemption what the National Tax Equality Asscciation with its well-filled treasury actually seeks to do is to induce Congress to attempt a violation of the American Constitution by passing a bill which would make taxable money held in trust by cooperatives which cooperatives are obligated to pay out to members. The National Tax Equality Association says that if a cooperative-marketing association receives money from the sale of farmers' crops and immediately passes that money onto the farmer who grew the crops, nonetheless all that money should be taxable as income to the cooperative. The National Tax Equality Association also says that money which remains for a short period of time in the hands of a consumer cooperative association and which that cooperative must pay out at the end of the fiscal year to its members in patronage dividends shall likewise be taxed as income to the cooperative. It is perfectly clear that this is no attempt to bring about tax equality, but rather a deliberate and well-calculated attempt to play upon the prejudices of the American people and thus to bring about the complete destruction of every cooperative within the borders of the United States. This is a challenge which I am confident we can successfully meet. I do not believe that any competent court in the United States would hold that funds held in trust by a cooperative for its members constitute income within the meaning of the sixteenth amendment. Neither do I believe when the facts are known that the American people will stand for any such attempt to destroy the one method for the solution of economic problems by the peoples' own effort and without intereference or help of the Government which has yet appeared upon an otherwise dark horizon. But this attack by the National Tax Equality Association is significant in the extreme for it indicates that the cooperative movement in the United States is coming of age, that in certain fields at least it is becoming a factor of sufficient importance to cause big business to be afraid and to make monopoly decide to attempt to do something which will bring about the destruction of this truly democratic form of economic organization of the people.

The attempt is being made to enlist the small businessman in opposition to cooperatives, an attempt that would be laughable if it were not so tragic. For I come now to a brief discussion of some of the accomplishments of the cooperatives which certainly should be mentioned at least on this memorable occasion. The first of those accomplishments is the fact that in instance after instance cooperatives have succeeded in meeting monopoly on its own ground and defeating it. They have succeeded where no other device, governmental or otherwise, has been able to succeed. Cooperatives have demonstrated that it is possible for people to own their own insurance companies and to purchase insurance at its true cost. Cooperatives have demonstrated that out of the margin between the real cost of producing petroleum products and the market price including all of the profit mark-ups of the major oil companies, the entire capital cost of refineries and other huge installments can be liquidated in a few months' time. Cooperatives have removed from the minds of millions of farmers the fear they used to have of markets controlled by monopolistic speculators. Cooperatives have successfully manufactured fertilizer, produced feed, made farm equipment, and done a host of other things in the very teeth of monopoly control of the production of the commodity in question. In these instances cooperatives have broken the monopoly strangle hold. I could go on and on with instance after instance but the point is that cooperatives since they belong to the people and since they make it possible for the people to once again know what ownership really means, have over and over again broken the hold of monopoly power and have made it possible for small business to have hope of success which it could not possibly have in a market controlled by monopolistic power. Cooperatives therefore will one day be recognized as the best friends the small businessman has. For they are a force making for true economic freedom.

Consumer cooperative stores, wholesale and production units owned by consumer cooperators—enterprises conducting production and distribution for the purpose of promoting human welfare rather than for profit—have shown that the people as owners of their own economic enterprises can be outstandingly successful provided only they are careful to provide themselves with an adequate educational background for their undertaking, to secure the best and most competent management that it is possible for them to secure, and to understand from the beginning that without a solid and devoted loyalty they cannot hope for success.

By means of cooperation the farm homes of the United States have for the first time been lighted up. A few years ago only 10 percent of our farm homes had electricity. Today this figure is approaching 50 percent. Had we listened to the private power companies, we must have believed this accomplishment impossible. But cooperatives have done the job, and in doing it have taken the longest single step which has yet been taken by any agency in making the family farm home a more attractive, a somewhat easier, and a happier place to live. In so doing they have bolstered the position of the family-sized farm, the very backbone of American democracy.

By the application of the principle of cooperation over 4,000,000 American citizens have found out that they need not depend upon loan sharks or big financial institutions to secure the credit necessary to meet their everyday needs. These millions of people have found out that reservoirs of credit can be formed just as well by pooling the small savings of large numbers of fellow citizens as can be done by the organization of great profit-seeking financial institutions. People

have found out, in short, that they can borrow from themselves, pay interest to themselves, and thus take perhaps the longest single step toward their own economic emancipation. And in this connection I am hoping that the next great accomplishment of the cooperative movement can be the establishment of the principle of "co-op money for co-op needs." What that phrase means to me is the coming of the time when all the savings of every cooperative enterprise in the country will be deposited in banks belonging to cooperators, so that cooperative enterprises that find it necessary may secure funds from cooperative sources, pay interest to cooperative financing institutions, and thus render the cooperative movement independent of the necessity of any outside financing whatsoever.

Yes, these things and many more have been great accomplishments of the last 100 years. Nor have I even mentioned the things that have been done in other countries for I am talking tonight to the American cooperative movement as its leaders are so largely assembled here. But there are certain things which we have not yet done. The story of the wonderful work of American cooperatives has not been got across to the great bulk of the American people. Have we somewhat hesitated to emerge from the first stage in development of the cooperative movement, namely the stage of public indifference, into the second period of greater difficulty as well as greater challenge? It would be entirely understandable if this were the case but each of us should search our hearts to see if this is true and should make up our minds that if it is true we will have no more of such a point of view.

For the world is sick today and suffering terribly. It is in need as never before of the gospel of cooperation, a gospel as truly religious in the best sense of that word as any economic gospel which has ever been preached. And so in the concluding paragraphs of my speech here tonight I want to urge that at the very forefront of the future efforts of the cooperative movement in America should be put the task of effectively reaching the great rank and file of the American public with the true story of cooperation. Once they have heard it they will know that cooperatives are no threat to any single worthwhile institution in our whole country but that on the contrary they can give us the best guarantee for the continuance of constitutional government, economic liberty and genuine American hope for the common men that can be found from any source. Can we not take a lesson from the experience of those consumer cooperative stores which have failed? Has not the reason for such failure over and over again been the fact that the members of those cooperatives failed to see the outstanding necessity of securing the very best and most competent management that they could find? Some excellent publicity work has been done on behalf of our cooperative movement but it is my opinion that the time has come when we must reach out for at least a reasonable share of the very vest talent that exists in the field of public education in order that we may enlist that talent in a great drive to acquaint the American people with the truth about cooperatives and the hope they carry with them. The centennial year just passed has marked a great advance in this field and great progress has been made. But even that progress is no where near sufficient.

I have said repeatedly that one reason I believe in cooperatives is because I believe them to be the expression in the economic life of mankind of the basic principles of the Christian religion. I was most heartened a few weeks ago to be able to take part in a conference on cooperatives which took place at the great Catholic university at Notre Dame. But cooperators cannot and must not fail in these difficult years to preach not only with earnestness and devotion but with real effectiveness their message of economic hope and spiritual regeneration through economic activity devoted to the development of human personality which is the very heart of this movement. After all is said and done the greatest asset which we possess lies here. For the cooperative movement is the one answer which I know of to the problem of giving humanity both security and liberty at one and the same time and in the same nation. Cooperation is the one way by which economic problems can be solved by the efforts of men and women acting on their own behalf through their own initiative and guided by their own wisdom and loyalty without the aid of the state. This is the answer which men and women around the world are looking for. Let us not fail to see that they know about it.

A New Louisiana Purchase

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mrs. DOUGLAS of California. Mr. Speaker, now and then the human imagination steps out boldly to encompass the future in a manner that stimulates enthusiasm and commands respect. A big plan is presented which thoughtful men recognize as practical because its roots go deeply into their own experience. People will say to themselves, "Now that is a big idea, but it is a good idea—one which I can go along with and work for." That is the way I felt when I read a speech made January 24, 1945, by William E. Warne, Assistant Commissioner of the Bureau of Reclamation, before the Associated Equipment Distributors at their meeting in Chicago. Mr. Warne has outlined a picture of development for western United States based upon the 43 years of experience of the Bureau of Reclamation which, although tremendous, is highly practical. I request permission to have it printed in the CONGRESSIONAL RECORD, because I believe it is a document you will wish to read with care.

STATEMENT BY WILLIAM E. WARNE, ASSISTANT COMMISSIONER, BUREAU OF RECLAMATION, DEPARTMENT OF THE INTERIOR, BEFORE THE ASSOCIATED EQUIPMENT DISTRIBUTORS AT CHICAGO, ILL., ON JANUARY 24, 1945

Members of the Associated Equipment Distributors, the Bureau of Reclamation proposes nothing less than the full development of the water and related natural resources of the West.

Unless you have done some pretty hard thinking about such a program, have a lively imagination and a good deal of faith in American ingenuity and initiative, it is difficult to realize fully what this means.

The most obvious first step is to more than double the irrigated area of the 17 Western States where rainfall is inadequate to sustain stable agriculture from 21,000,000 acres to 43,000,000. When you have irrigated 43,000,000, you will have found consumptive uses for nearly every available drop of moisture that falls in the United States west of the ninety-seventh meridian, except a portion of the run-off on a narrow strip along Pacific coast.

In doubling the irrigated area, you will have built dams from which electric power output for the West will have been vastly expanded. This will be the lowest cost hydro power produced in the United States and will bring to life tens of thousands of small industrial establishments and a good number of large ones.

In expanding the agricultural and industrial production, towns and villages will spring up—the population of the West will have been doubled—at least doubled. National income will have been increased by several billions of dollars a year. And in providing new employment on a very large scale, time will have been given to business and Government to discover adjustments to the most profoundly disturbing fact—the fact that we are learning to produce more and more goods with fewer and fewer people faster than at any time since the industrial revolution and science brought into being what we call the modern world. The pioneering period of the West will have been definitely extended almost as though the Nation had been able to effect another Louisiana Purchase.

Of course, the Bureau of Reclamation does not propose that all of this ground be covered in a single leap, although we have laid before Congress a very substantial post-war program which will cost well over $3,000,000,000 to complete.

But our proposals do call for irrigation of about 10,000,000 new acres of what is now dry soil, although fertile, on more than 300 separate projects, and would give supplemental water to some 10,000,000 additional acres now inadequately irrigated.

Coupled directly with irrigation expansion is the development of hydro power which assists in financing the construction of multiple-purpose projects and helps to balance industrial advancement with agricultural progress. Our post-war plans contemplate adding more than 4,000,000 kilowatts of firm power capacity through such projects. This will more than double the installed firm power capacity of the West.

To complete so vast a program calls for a new concept in the development of the West. In the early pioneering days, the winning of the West depended mainly upon individual courage and initiative. Quite true, fellow settlers cooperated in digging the ditches and building primitive dams that diverted water from streams onto land won from the desert, but this was done almost entirely as a private matter and on a relatively small scale.

Toward the turn of the century it became clear that there was an important job for the Federal Government in helping to construct dams and canals to supplement the efforts of private groups and individuals; and since the Reclamation Act of 1902, the Bureau of Reclamation has brought adequate water to some 4,000,000 acres of the 21,000,000 now served by irrigation in 15 Western States. Development has gone very nearly as far as it can under the methods of the past.

Now a bold new concept has broadened the outlook. We realize that, by thinking of the great river basins of this country as a whole, by planning the coordinated development of their water and other resources as one great unit, by building large, multiple-purpose projects, vastly greater benefits may be derived by every individual living within a river basin. In this way, the maximum use of water for irrigation can be obtained, along with a low-cost hydro-power development. Flood control can be achieved, navigation improved, and many related conservation ends served. At the same time, coordinated planning brings into the picture undeveloped mineral resources from which will grow new industries. This is the new concept which points to a greater future for the West than had previously seemed possible.

In approaching the tremendous problems involved in this development, the Bureau of Reclamation has made a series of 15 studies, each of which examines the natural and

human resources of a great river basin in the West. Most of these river basins include all or part of several States.

The first of these studies was that based on the Missouri River Basin, the results of which were printed as Senate Document No. 191, Seventy-eighth Congress, second session, and which covers proposals for coordinating the use of resources in territory comprising one-sixth of the land area of the United States. Already Congress has authorized expenditure of $400,000,000 on this enterprise—$200,000,000 for initial work to be performed by the Bureau of Reclamation and a like sum for work by the Corps of Engineers. Altogether, the cost of work proposed by both Corps of Engineers and Bureau of Reclamation in the Missouri River Basin comes to about one and one-quarter billion dollars.

Within a short time, we expect to present another report based on a study of the Colorado River areas—both upper and lower basins.

Thirteen other river-basin reports will follow within the year, each calling for the construction of dams, canals, and hydroelectric power systems.

Now let us analyze briefly what this plan may mean to the Nation in post-war construction work, in related production of machinery, electrical equipment, and building materials, and the long-time effects which will flow from the continued expansion of the West.

First of all, accomplishment of a $3,000,000,000 program requires an approach which builds up volume of work as it proceeds. We could not put a full force to work at once. During the first year, our engineers figure that, if appropriations have been made by Congress, and we have a shelf of projects engineered to the point where bids can be let and dirt can fly, we would spend some $164,000,000. In the second year, this could be increased to something like $360,000,000; in the third year to $450,000,000; and in succeeding years we might spend some $500,000,000 each year until we tapered off near the conclusion of the program. This estimate is based upon 1940 prices.

We figure also that about 40 percent of this $3,000,000,000 program, or $1,200,000,000, would be spent for materials and equipment. The principal items of equipment would include $205,000,000 for electrical equipment and supplies; $145,000,000 for foundry and machine-shop products; and $74,000,000 for hydraulic and mechanical equipment. Construction machinery on a few individual projects may run as high as 30 percent of the cost, judging from past experience; but this is seldom the case. The remainder would be spent for iron and steel products, cement, lumber and timber products, gravel, and other materials.

A little arithmetic indicates that the labor cost probably will run in excess of $1,500,000,000. Our estimates figure that the work would provide jobs at peak production for more than 250,000 men working at the project sites and as many more in industrial establishments, chiefly in the East, producing machinery, equipment, and materials. This would provide work for a considerable number of demobilized servicemen and industrial war workers during the period of adjustment from war to peace, when jobs may be comparatively scarce.

Now it may surprise some of you to learn that the Bureau of Reclamation is far more than just a construction agency. It is operating a Federal investment of about $900,000,000 consisting of irrigation projects, power plants, dams which assist in flood control, and some recreational areas. It is an operating arm of the Government serving millions of acres of some of the most fertile land in the United States. It is also the largest single power-producing agency in the world, having under its jurisdiction hydroelectric plants with nearly two and one-half million kilowatt capacity. To administer these large investments and to carry on the tremendous construction program that it proposes, the bureau is divided into seven regions, each under a regional director, who is the personal administrative representative of the Commissioner of Reclamation in the unified territory under his jurisdiction.

Thus, the regional directors have a responsibility for the welfare of settlers who operate farms on the irrigation projects served by the Bureau of Reclamation, in order that, as water users, they may repay their pro rata share of the construction cost of the multiple-purpose projects built for them. It is clear that the increased purchasing power created by the construction and operation of these projects by the Bureau will be very great. Such purchasing power will provide wholesale and retail markets for manufacturers of all kinds, including construction equipment manufacturers.

Our studies show that on the completion of the irrigation developments contemplated by the program, the increased purchasing power of the West would amount to one and one-quarter billion dollars annually. Here are some of the items that make up this tremendous annual home market for the products of American industry outside of the West: Automotive supplies, $225,000,000 annually; autos and trucks $160,000,000; farm machinery, $70,000,000; tractors $40,000,000. The remainder would go for food supplies which are not produced on irrigated land, building materials, clothing, beverages, refrigerators, washing machines, and hundreds of other items which are produced in the factories of the Nation.

The initial capital investment of an irrigated farm has been estimated at $8,000. Of this, approximately 40 percent generally is invested in farm machinery, autos, trucks, and tractors. Since the irrigated land to be brought in under this program would provide for more than 200,000 newly irrigated farms, the total initial capital investment of the settlers would be more than one and one-half billion dollars.

Similarly, the concern of the Bureau of Reclamation extends beyond the basic job of constructing and operating irrigation projects, as well as related facilities such as hydroelectric power plants. In the 43 years since the Bureau of Reclamation was established its activities have created or sustained through supplemental water supplies nearly 100,000 successful irrigated farms in the West. These farms, with the cities and towns that are dependent on them, support directly a population of more than a million persons.

Through its power developments Reclamation now serves areas of a population of more than 3,500,000.

Under the post-war program which has been outlined, the activities of the Bureau of Reclamation through irrigation, power, municipal water supplies, and related activities would be extended to areas with a population of more than 12,000,000 people, not counting the increase which would result.

Right here I would like to point out that the Bureau of Reclamation is interested in your plans just as you, the Associated Equipment Distributors, are interested in what we propose. The design and production of efficient construction machinery and its sale at reasonable prices will have a considerable influence on the public works programs after the war. If we can keep our construction costs relatively low the reclamation program can be expected to absorb a considerable part of the expected employment slack by putting veterans and demobilized industrial workers on useful jobs of permanent value.

The Bureau of Reclamation operates under a law requiring that the cost of our projects allocated to irrigation, power, and municipal water supplies shall be reimbursable to the Government over a period of years chiefly through payments by farmers for irrigation water and through payments for electric current that we sell at wholesale from our dams and transmission lines. It is obvious that costs of operation in such a program are important in justifying that program before the Congress and the people. You are one of the most important factors affecting our costs. The greater ingenuity the equipment designers display, the more efficient the construction machinery becomes, the more work we can do at lower unit cost. So you see you have an actual part in determining the size of this program, the aim of which is to develop our western resources.

Now let us review in its entirety the proposal which the Bureau of Reclamation puts before you. We offer you a program for the future—a program which envisages a new approach to the problem of developing the West because it pictures coordinated use of the natural and human resources of great river basins, each basin taken as a whole.

This would be the third step in a great progression. The first step was the diversion of streams to irrigate pastures and dry benches bordering our western streams. The second was the control of great rivers through the magnificent multiple-purpose structures, such as Boulder, Grand Coulee, and Shasta Dams. The third is the application of the multiple-purpose principle to a whole watershed after first investigating and reviewing the unused or wasted resources and planning a unified program for their employment in the stabilization and development of the basin.

Through this concept, unit costs are reduced and greater engineering works than ever before are made possible. It is possible so to place and time the construction of the dams and water-control works so as to reach the most and the best of the arid lands with irrigation ditches; so as to get the maximum of hydroelectric power from the streams; so as to provide the optimum of flood protection; and so as to make all of the works serve the many useful and essential purposes for which God gave man water.

With the exception of the erection of the great $22,000,000,000 war-production plant built by this Nation to defeat the Axis, the Bureau of Reclamation's program is the greatest construction enterprise ever presented. It involves not only the construction of dams, canals, and power plants, but the construction which would result from building thousands of industrial enterprises, towns, villages, and farms that would arise in the West as an indirect result.

This program calls for the democratic cooperation of all of the people. With such cooperation, it points the way toward vigorous economic and social progress in the United States.

United States Foots Bill for Private Red-Hunt Files

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John T. Montoux from PM for February 4, 1945:

UNITED STATES FOOTS THE BILLS FOR PRIVATE RED-HUNT FILES—DIES AND MATTHEWS REPORTED PLANNING BUSINESS

(By John T. Moutoux)

WASHINGTON, February 3.—Just as the Seventy-eighth Congress was expiring, and

with it the Dies committee. Martin Dies and his staff gave themselves going-away presents in the form of seven thick volumes, six of them stuffed with hundreds of documents on alleged Communist organizations, the seventh containing over 20,000 names of alleged fellow-travelers, all carefully indexed.

The volumes were printed for use of the committee only, and the United States Government Printing Office will not sell them to others. Yet, when they were ordered, the majority of the committee, including Dies himself, were not in Washington, and the last one was ordered after Congress had adjourned and the committee no longer was in existence, except technically.

Dies himself, J. B. (Doc) Matthews, the ex-Communist who served as his research director, and several other members of the staff are reported planning to enter private industry, selling information and material on the victims of their witch hunts to reactionary employers.

VALUABLE MATERIAL

If and when they do, the seven volumes should prove invaluable. For not only are they rich in witch-hunt data; equally important, only 1,000 copies of each were ordered, just enough to supply Dies and the staff and their friends on the committee in the Red-hunt racket.

The volumes were printed at Government expense at the United States Government Printing Office. According to Frank Brodie, who supervises congressional printing, they were "confidential jobs, intended just for the committee."

The last volume, it was learned today from Russell Herrell, second in command of the Printing Office, was ordered 11 days after the Seventy-eighth Congress adjourned, December 19. It was delivered to Matthews on January 2, less than 24 hours before the Seventy-ninth Congress convened.

REPUDIATED

The voters, of course, had written the Dies committee's obituary as far back as May 12, when Dies, facing certain defeat, announced that he would not run for reelection.

The first volume was ordered October 23, the last, December 30. During this period, as PM reported on November 26, stenographers were busily at work in the committee offices, under Matthews' supervision, making copies of documents in the files, in preparation for Dies' and Matthews' projected business ventures. The files included Army and Navy intelligence reports and F. B. I. findings.

Whether the documents copied are those contained in the first six of the seven hush-hush volumes, or whether they are supplementary could not be learned authoritatively today.

The seven volumes are entitled "Appendix IX, Committee Print, Communist Front Organizations, With Special Reference to National Citizens Political Action Committee."

Actually, however, the N. C. P. A. C. is treated only incidentally. The material ranges from documents concerning the Workers Ex-Servicemen's League, which folded 10 years ago, to data concerning groups which have attacked the Dies committee. It contains the names of everyone who signed the Communist Party's election petitions in Wayne County, Mich., in 1940, and evidence of the Ohio Townsend movement's alleged Communist tie-ups in 1935.

ALL COMPLEXIONS

The more than 20,000 names of fellow-travelers in the index run from Rev. J. E. Aaeschabacher, of Hyannis, Nebr., to one John Zywoil, of Detroit. Aaeschabacher signed the call for the American People's meeting in New York, April 6, 1941; Zywoil, the Communist Party's county petition.

Some of the people cited are known Communists. The majority, however, are simply liberals, who at one time or another were connected with organizations which the witch-hunters dislike. Thus, Robert Morss Lovett, Virgin Islands Administrator; Mrs. Eleanor Roosevelt; Sidney Hillman; Bruce Bliven, New Republic editor; Freda Kirchwey and Maxwell Stewart, editor and associate editor, respectively, of the Nation; and George S. Counts, vice chairman of the bitterly anti-communistic Liberal Party, all make the grade.

In addition, the index lists more than 1,500 so-called Communist-front organizations, ranging from the A. F. L. Rank and File Committee to Viveny, a slovak organization. Viveny was represented at the American Slav Congress in Detroit on December 7, 1941.

Several of the members of the late Dies committee's staff have been marking time, it was learned today, on their plans to enter private witch-hunt practice. They hoped to get jobs with the new Hart committee, established at the instigation of Representative JOHN E. RANKIN (Democrat, Mississippi), who intends to pick up where Dies left off. These hopes were dashed, however, when the Dies staff learned that Representative EDWARD HART (Democrat, New Jersey) will not rehire any of them.

So they are reported looking for clients, with the seven thick volumes of documents and names as their stock in trade.

This, of course, is exactly what Representative HERMAN EBERHARTER (Democrat, Pennsylvania) sought to avoid when he wrote Martin Dies last October:

"I sincerely trust that extreme care will be exercised so that no individual member of the Dies committee, or an employee of it, will find it possible to get possession of any of the material for his individual use at any time in the future. You know, and I know, to what use and abuse it could be put."

Representative EBERHARTER can stop trusting.

War Mothers' Part in a Permanent Peace

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein an address delivered by Hon. Ed Rowe entitled "War Mothers' Part in a Permanent Peace":

The President of the United States recently said, "We must not let our differences divide us and blind us to our more important common and continuing interests in winning the war and building the peace." No thought more completely occupies the minds of our people, and I believe most of the peoples of the earth, than that expressed by our President.

It is important that each of us make our decision to cooperate in the fullest unstinted manner toward that objective. I believe that we can see the pale light beyond the termination of armed hostilities at this time. This will not come to pass, however, without further sacrifice of life and property. The measure of that loss will be determined solely on how well each and all of us meets this challenge of our President, to avoid all differences and give our utmost in cooperation.

Building the peace calls for an equal responsibility in cooperation and a marked degree of sacrifice. In our effort toward building the peace, the leading citizens and statesmen of our land are attempting to meet this problem by designing the nature of sacrifice we will make in exchange for the security of the peace. Public opinion is going to be a strong factor to lend courage and fortitude to our President and the Senate of the United States in building the peace.

What is the war mothers' part in a permanent peace? When I speak of war mothers, I intend that as a literal term. It should mean every mother of sons in this war, of past wars, and in wars that may again blight humanity in the years to come. I further intend it to mean the mothers of men over the entire face of this burning, uprooted earth.

The time has arrived for her, wherever she may be, to add her rich influence to the efforts of men so that human understanding shall overcome every cause for future costly wars.

It is within the elementary principles of motherhood where the earthly fundamentals of pure justice are born. She comes nearer to celestial wisdom in this phase of her life than all mortals. Here is where equality rises above the richness of life's deepest love. Self-denial in the interest of understanding and unity is native to her. In the highest moments of her sacrificial life, the one virtue she will not abandon is her true sense of justice or what she understands to be the right way. If there is to be a permanent peace, it can only come through the practice of such principles.

Senator VANDENBERG recently said in a speech in the Senate: "There are critical moments in the life of every nation which calls for the straightest, the plainest, the most courageous thinking of which we are capable. We confront such a moment now. It is desperately important to America. It is important to future generations if they shall live in peace."

On the 10th of May 1944, I said in Congress: "I am receiving an enormous amount of mail petitioning me to lend my efforts and influence to a movement that will bring about an everlasting peace."

I said further at that time: "We are not doing all that we can if we merely profess our desire for peace. I can almost hear and feel the vibrant fervor of earnest prayers from millions of mothers who are truly in the depths of suffering. Could there be a more sincere profession in the cause of peace than the plaintive petition of these mothers when the idols of their maternal beings are beyond any help that may come from their willingness to sacrifice. Their sons are in the lap of the God of War. It will take more than mere avowal to bring peace. We must learn that fear of war is not a true longing for peace. Peace can only grow, thrive, and live in the rich soil of justice."

An outstanding authority reports the efforts of the human family in its attempts for permanent peace has resulted in more than 8,000 peace treaties since 1500 B. C. All of these treaties were written with the avowed purpose of permanency. The facts show, however, the average life of these treaties to be only 2 years.

Shall we conclude from this poignant fact that permanent peace is impossible? I would rather believe that the failure of these past efforts can be placed directly on the ulterior motives of selfish men than accept the oft-repeated theory "there will always be wars." An examination of the agreements will disclose the avarice of the conquerors and the hostile submission of the vanquished. The absence of pure justice in such agreements was the spark for new wars at a later time.

The first task confronting the War Mothers in the peace arrangements to come is to use their concerted effort in insisting on pure justice instead of power politics. That raises the question, What is meant by pure justice? Pure justice has certain prime requisites. First, it must recognize the right of men in their quest to be governed by their own consent. This principle is enunciated in article 3 of the Atlantic Charter. This is, in my opinion, a most important element because

if an international organization accepts this principle, it places bounds upon the participating members or nations in its relations with other nations, yet this same nation is unbounded in its authority within the sphere of its own sovereign state.

Injustice can never suffer the light of truth. War mothers must further insist that a free press shall be recognized in all nations who wish to be participating members in an international organization for prevention of wars. The law must preserve liberty to the press throughout the world so that the press can preserve liberty to the people throughout the world. Let every son's mother insist on the truth and its telling then the dark breeding places of war will be filled with light.

Mothers must come to realize that while we are citizens of the United States, and selfishly so on matters that only concern us, that we are also members of the human family. It seems this family has done its best to destroy itself from time to time in these terrible wars, or at least go bounding back over the mounds of civilization to the most savage practices of all history.

These events come into being simply because the human family has not as yet established institutions for its government such as has been done by the different nations that make up the family. In the past and of the present the nation-state is the basic unit of the world community. It has not always been so, and it is probable that it may at sometime in the future, not be again. We are moving swiftly in these days. Our ancestors spent their whole life within a day's travel of the place where they were born. Communication was limited to the gossip of the little town store. Today we listen to the voice of our boys at the front and sometimes hear the crack of their rifles. In hours we move from one continent to another and overnight we visit another hemisphere. The speed of our means of travel is amazing.

The next responsibility of you war mothers is to unite in your effort to bring about a government for the human family to function under lawful procedure on matters concerning the whole family. Every nation should be bound by laws and should be entitled to its day in court to seek justice among the nations of the world when it is aggrieved. We must realize that law and order does two things for us. It forces us to recognize our responsibility and restrictions as moral agents in a world society and it affords us rights and privileges that otherwise could not be guaranteed.

I said in the Congress last May: "I believe that the time has come for the United States of America to take her place as a leader in world affairs." We cannot longer delay the organization of the human family to establish justice among the nations of the world. Another world war with its possibilities and civilization will be thrown backward to all the primitive evils of recorded and unknown history.

Need I call your attention to the technological progress of warfare? Contemplate if you will what a sneak or surprise attack could do to the largest of our world's cities. If technological progress of warfare continues for another quarter of a century, we of this generation can not comprehend the sudden death and devastation it may bring to humanity. There are strong possibilities that it will. President Compton of the great technical college, Massachusetts Institute of Technology, now tells that war operations are running three times the rate of the institute's normal peacetime budget and is continuing to increase. That training courses have increased over 50 percent in the past year because of special war training courses. The National Roster of Scientific and Specialized Personnel, under Dr. Leonard Carmichael, of Tufts College, had by January of 1942, card cataloged 200,000 scientists of whom 31,000 were Ph. D.'s. There are present weapons not in use, only because of their unthinkable power to maim and destroy life and destroy property. Our largest cities in future wars could be wiped out overnight and no nation is immune from this destruction. The full truth of the Biblical prophecy, "He that lives by the sword, will die by the sword," is most emphasized in modern warfare. War mothers must take their part in seeing that law and order under an international organization, shall prevent future wars.

To abstractly fix our purpose on the prevention of wars alone is not enough. War is a product. It is the outgrowth of other elements that must be reckoned with if war is to be controlled.

In an article by the late Raymond Pearl, professor of biology of John Hopkins Institute, in the American Journal of Sociology, January 1941, he had the following to say:

"The major result of man's evolution since he first became established as a distinct species has been the unremitting, and in the last few centuries tremendously accelerating, control of natural forces and resources to his own purposes. The result is that today a species of mammals that is morally and spiritually at a low and primitive stage of evolution, finds itself in possession of colossal material powers and resources—such powers and resources as no other species ever had, either absolutely or relatively, nor for the most part did man himself possess until within the lifetime of persons now living. Furthermore the sociality of this mammalian species is so primitive, so ill-kept, so badly organized, and so lowly evolved generally that these enormous material powers can, and regularly do, fall completely under the control of single individuals, or small groups of individuals, who are selfish, greedy, vicious, dishonest, and hypocritical; whose souls know neither human decency, sympathetic and loving kindness for their fellowmen, nor social morality. Any sort of world-wide harmonious and sympathetic cooperation by which men may live decently together simply does not exist. The complexity of the world of today in respect of its sheerly aspects imperatively demands such cooperation if it is to continue to be a possible abode for human beings. Yet every single one of the protagonists of new social patterns, from Washington to Moscow and including assorted colleagues along the way, struggles to make his ideas prevail by the application of techniques of chicanery, demagogery, purges, and military force. * * * The standard pattern of national behavior, to which there are no exceptions, is to combat evil with evil. * * * But real and enduring peace will never be achieved by such techniques. * * * There must first evolve among men more decency and dignity, more tolerance and sympathy, more kindness and forbearance, and more capacity of cooperation for the common good in the conduct of human life."

As I have said, the small community a century ago was self-sufficient unto itself; today there is simultaneous cognizance of progressive social desires the world over and distance has been abolished. It is my profound conviction that there was never a greater demand for clearer vision and mental effort to adjust the human family's attitude to the new social forces and conditions of peaceful living.

My suggestions to war mothers can be encompassed by certain musts, if we are to find a way to build the peace.

First. The charter for an international organization must incorporate the fundamental principle of self-government for the nations of the world.

Second. There must be an international organization to prevent aggression, enforce the abstinence of the use of military force by any nation on earth, member or nonmember.

Third. Set up a tribunal to settle disputes between nations on the basis of justice.

Fourth. Cooperate fully with other nations on economic, social, and war prevention measures.

Fifth. Make membership to world organization available to all nations who will conform to the charter of purposes.

Sixth. Institute probation before granting voice in organization to any nation whose record for war making and aggression are unquestioned.

Seventh. Set up within the organization, such bodies as are necessary to study means for the improvement, suggest programs, extend credits and help all nations to bring about advancement in their social and economic life.

All of these things and more were considered at the Dumbarton Oaks meeting. Ninety percent of the program was agreed to. The sun of hope is high in the heavens. Public opinion will bring this hope into full fruition. In this you war mothers can be of help. Less than all you can do may mean its failure. All that you can do can mean its success. This is the war mothers part in a permanent peace. God grant that we may find the way.

Editorials From the Advertiser Review of Los Angeles, Calif.

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials by J. L. Liggett, publisher and manager of the Advertiser Review of Los Angeles, Calif.:

BENJAMIN FRANKLIN SAID IT

On January 17 this Nation celebrated the birthday of the famed Benjamin Franklin. We use his own words, which were always so forceful, in reminding our readers of what he had to say about winning this war.

"When the Government finds it necessary for the common benefit, advantage, and safety of the Nation, for the security of our liberties, property, religion, and everything that is dear to us, that certain sums shall be yearly raised by taxes, duties, etc. (today the etc. are War bonds) * * * and paid into the Public Treasury, thence to be dispensed by government for those purposes; ought not every honest man freely and willingly to pay his just proportion of this necessary expense? Can he possibly preserve a right to that character, if, by any fraud, strategem, or contrivance, he avoids that payment in whole or in part?"

ALL OFFICIAL CIRCLES SWEPT BY MANIA TO GIVE AWAY INDIVIDUAL WEALTH AND MANPOWER

Throughout the whole ranks of all governmental agencies there appears to be a mania for giving away John Q. Citizen's money, time, and manpower.

Starting with the Dumbarton Oaks International Conference and down through our Federal State Department, State government, and city government we find this urge for generous dispensation of our public resources and individual time, energy, and money is being advocated by our elected or appointed officials.

We know Uncle Sam is the unanimous choice of all other nations to fill the post of "grand exalted fall guy" in the post-war economic reorganization and within reasonable limits we are resigned to acceptance of that position of doubtful honor, high expense, and certain ingratitude.

FEDERAL STATE DEPARTMENT WANTS TO GIVE AWAY COLORADO RIVER WATER

Our State Department is insisting that we shall give to Mexico an extra 750,000 acre-feet of water from the Colorado River just to show that we are a good neighbor. Among individuals no such custom has ever prevailed, nor can we find where the principle is taught in any historical document or scriptural command, unless it is implied as a part of the nebulous Atlantic Charter's "freedom from fear" assured to other peoples. But what about freedom from fear for future United States of America citizens who would like to make homes on desert lands that could be fertilized by that 750,000 acre-feet of water—and eventually provide markets for our future west coast industry employers of manpower?

CITY SALES TAX

Mayor Bowron climbs on the band wagon with the (more or less) clarion call for a city sales tax, for which all merchants and merchandise dispensers would naturally be called on to provide free collection service and reports, as we do with most all other taxes.

NATION IS SCRAPING MANPOWER BARREL

Right now our Nation is scraping the bottom of its barrel of manpower in the effort to successfully maintain the wide-sweeping naval and military campaigns now under way or immediately planned. Our Army and Navy are doing a magnificent job, but the chances are that they will have to enlarge their forces to win early success. Under such conditions it doesn't make sense to propose an increase of the number of men on the pay rolls of governmental civilian agencies; it would be more logical to look to them as a scurce for enlistment of additional servicemen.

Right now we've got a war to win—social reform and further social gains had better wait until that war is won.

Arms for Russia

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest Lindley from today's Washington Post:

ARMS FOR RUSSIA—TAKING OUR SHARE OF THE CREDIT

(By Ernest Lindley)

The official reports and statements on lend-lease have been prepared with scrupulous regard for the sensibilities of our allies. Almost invariably they have stressed that our aid, great as it may seem in total figures, was small in comparison with the total war production of Britain or the Soviet Union. The lend-lease authorities in Washington took the lead in publicizing the reverse lend-lease provided by the British, the Australians, and the New Zealanders.

This air of modesty about our own contribution through lend-lease, coupled with generous appreciation of the efforts and accomplishments of our allies has been very fine. It has helped to break down the notion that we are a nation of boasters, and it has helped to keep the American people reminded of the truly prodigious efforts which the Russians and the British and some of our other allies have made. Doubtless it has encouraged the spokesmen for some of our allies to speak generously to their own people about the extent of the American contribution. One recalls, for example, passages in several of Churchill's speeches.

But at times it has seemed as if our own spokesmen were leaning backward too far, especially when some of our allies have seemed reluctant to acknowledge, or to advertise to their own people, the true scope and importance of American lend-lease aid.

The statement on lend-lease aid to the Soviet Union released last Saturday therefore is of particular interest. Like its predecessors, it has a modest air, and gives full credit to an ally. The second sentence in the first paragraph reads: "Soviet officials have expressed to us their appreciation of the part these are playing in the success of the campaign." (It does not point out that the Soviet Government has not given its own people an intensive education in this matter.) The first sentence in the next paragraph says: "Our share in the equipping of the Soviet troops is small compared with their total needs."

But having registered prominently these acknowledgments, F. E. A. Administrator Crowley put down in black and white some pertinent and highly impressive facts. Up to December 1, 1944, we had supplied to the Russians under lend-lease a total of 331,000 motor vehicles. More than half of the Soviet armies' supplies on some fronts move on American trucks. In addition we have supplied 29,000 motorcycles.

The United States through lend-lease also has given large, and indispensable, aid to the maintenance and reconstruction of the Russian railroads: hundreds of thousands of tons of rails, wheels, and axles, more than 1,000 locomotives, and more than 8,000 cars. We have supplied large quantities of tools and raw materials for Soviet war plants. We helped to overcome the electric power shortage by portable power plants—60 power trains with generating capacities of from 1,000 to 5,000 kilowatts each, which can be moved from city to city and industry to industry.

We have sent to the Russians 12,000 planes, 6,000 tanks, 1,800 self-propelled guns, 3,300 armored scout cars and numerous other completely manufactured items of military equipment.

The Red Army not only travels in large part on American wheels. Part of it travels on American-made army boots. We have sent 11 million pairs of Army boots, and more than 200 million yards of cloth of various kind.

All of these supplies and equipment not only had to be obtained and manufactured. They had to be delivered to the Soviet Union. This meant building and manning cargo ships, building and manning the Navy and Air Forces to protect them, the construction of the great supply route up through Persia, and the development of the air transport route and of the supporting Alcan Highway across northwest Canada and Alaska. It meant a great effort and it cost many lives. A true account of our lend-lease aid to the Soviet Union would include all of these contributions.

But even this partial, inadequate account setting forth the total deliveries of a few of the more important types of equipment and supplies is enough to show that the great forward thrusts of the Red Armies are in no small part an American achievement also. This is something which the Russian people should realize and the Soviet Government should realize, that the American people know and do not undervalue.

American Shipping in the Post-war Era

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Frank J. Taylor, president of the American Merchant Marine Institute, Inc., on the subject American Shipping in the Post-war World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN SHIPPING IN THE POST-WAR WORLD

(By Frank J. Taylor, president, American Merchant Marine Institute, Inc.)

When America entered this war our merchant marine fleet totaled only 10,500,000 deadweight tons. By the end of 1944 we may have as much as 50,000,000 tons. Those two simple figures reveal the scope of the greatest shipbuilding and ship management and operation story in the history of the world.

If a rough transition is made, the United States may have five ships on the high seas where once we had only one. We will have a merchant fleet equal to or greater than the combined fleets of all other maritime nations.

No one would care to deny that this Nation has assumed a tremendous obligation to American taxpayers and to the world. Those vessels are tremendously vital, not only for the sake of our own economy; they are vital to all nations. They will help set aright the things so torn asunder by the misfortunes of war. They will serve as vehicles to carry the materials to be required desperately in all corners of the globe.

The immediate problem of foresighted and thinking men is, What will this country do with such a tremendous fleet? How will it be employed in the wisest manner?

One cannot offer an unimpeachable plan. I feel that it obliges everyone, directly or indirectly in shipping, to give mature thought to the subject. And in that category, I include Members of Congress, farmers, industrial management, labor, and, of course, steamship owners and management.

AMERICA IS A MARITIME NATION

It cannot be impressed too strongly that this is a maritime nation, and always has been. This is a country with 7,000 miles of coastline. It has at least 60 good-sized cities along those coasts. Its very economy has long been based upon trade—not trade just in the sense of exchanging goods—but in the broader sense that so many of our world relationships have long depended upon ships—American ships.

Thus, I say with some pride that this Nation's shipping is perhaps its most vital industry. It affects everyone in the United States, either directly or indirectly. It is in effect the morning coffee that you have on your table. It is most of the sugar that you consume. It is the wheat and the beef that we ship to other countries. It is the export of refrigerators, automobiles, cotton, and steel.

In addition to transporting these materials, the American merchant marine in its very operation is a great consumer of materials

and services produced in this country. Our vessels use fuel, food, and equipment of all sorts in tremendous quantities and require many different types of services for that continued operation and upkeep.

Those are some of the reasons why so many of us are deeply concerned about the employment of our vast fleet once the war has ended. They are the reasons why we are examining every post-war plan projected by other groups and other industries and from them we have learned much. We trust they will continue to help us with their studies.

In the meantime, the American Merchant Marine Institute has projected post-war recommendations of its own. It is not pretended that they are absolute in their conclusions. We only hope that they are sound in their overall structure while at the same time recognizing that many unpredictable factors must be considered.

It is evident that we don't know how long the war will last, nor do we know the terms of peace.

We have no idea how many merchant vessels of any nation will survive the conflict. We assume victory and that this Nation will have a merchant fleet which will surpass in tonnage all others in the world.

In reconstructing a war-torn world it is evident to everyone that it virtually means rebuilding a continental Europe, Russia, China and probably Japan. Those jobs will take ships—every available ship. The resumption of normal trade will occupy a good portion of our ships. No one knows how many ships will be needed for new trades that will develop as a result of the war.

OUR ALLIES AND FOREIGN TRADE

We do not propose to overwhelm any other maritime nation in course of such duties and such trade. We believe that there should be collaboration with our allies. The Institute clearly recognized in its program the claims of other maritime nations to which we are allied. We have no desire to dominate world trade but will insist that American ships carry a substantially increased share of American trade and be permitted a reasonable and justifiable entry into world shipping.

All the nations of the world are inescapably interdependent. The domestic economy and prosperity of the United States require substantial foreign trade, both for raw materials and as an outlet for our agricultural and industrial products. Foreign trade is a balance wheel against recurring periods of domestic depression. We must have a merchant fleet sufficient to serve our international requirements.

HOW AXIS USED THEIR MERCHANT FLEETS

We believe that there should be some checks made upon those vicious powers which provoked this war. We believe that the Axis Powers should not again be allowed to use their merchant fleets as spearheads of penetration into nations so that they could accumulate the means to provoke and carry on wars.

Of the Axis Powers—I should like to tell you how they accumulated much of the wealth and power sufficient to wage wars. They insisted on carrying the bulk of their foreign commerce. Japanese ships carried almost 70 percent of Japan's commerce, Germany, 58 percent; and Italy, 46 percent. The Axis Nations moreover made it virtually impossible for any other country to participate in the transportation of this trade.

Under totalitarian systems, German, Japanese, and Italian steamship lines were merged so that they could exercise the greatest competitive pressure on other maritime nations. They built vessels solely designed to seize a share of our water-borne commerce. How well they succeeded can be seen in the figures for 1938 when the Axis merchant marine had close to a 12-percent grip on United States foreign commerce while American ships, flying the flag of the country that produced this volume of business, carried only 25 percent.

I note that Germany carried 4,333,000 tons, or 4.9 percent, of America's foreign commerce in that single year. Japan did just about as well with 4,245,000 tons, or 4.8 percent. And Italy, which hasn't been considered a maritime power for many generations, took 1.9 percent, or 1,600,000 tons, of cargo which might have been carried by American-flag vessels. At the same time American-flag ships were carrying only 22,436,000 tons of our own water-borne foreign commerce. The total water-borne foreign commerce of the United States was 83,430,000 tons. The figures may not seem impressive, but they are virtually the difference between the survival and the eclipse of an American merchant marine.

Or I might say they are more than that. They are the difference between the survival of militaristic nations and the survival of a peaceful people.

CONTROL OF AXIS SHIPPING

We do not plan to quarantine those powers, for it is pure reason that they must survive as people. They must be permitted the eternal and civilized right of livelihood. They must be allowed to engage in trade, but at the same time they must remain within their own spheres and they should not be permitted to expand merely for the sake of imperialism, aggression, or whatever you may choose to call it.

The over-all plan is that their merchant fleets should be disarmed along with their armed forces. No longer should there be the spectacle of 18-knot ships loaded with scrap iron for shells. It is obvious that the Japanese merchant ships were designed with war motives well in mind and were placed in trades that did not warrant vessels of high speeds and expensive construction. Their merchant fleets should be placed under international guardianship to determine that they engage only in normal trade—a trade without purposes alien to our conception of peace or in violation of it.

OPPORTUNITY FOR AMERICAN SHIPPING

At this moment I should like to take into consideration the position that our merchant fleet must play in the post-war world. The problem which faces us is tremendous and no one realizes it better than those immediately engaged in ship management and operation.

In the year 1938, which we already have taken as a standard (because at that time no nation except China and Spain was directly affected by war), we were then carrying only 25 percent of our foreign commerce in a merchant fleet which totaled 12,000,000 deadweight tons. We were dealing with countries considered economically stable, no matter their political philosophies. We were enjoying the greatest freedom of the seas in the history of this world.

Now, we have reached a point when this country has the greatest opportunity for maritime development in its history. I sincerely hope that we do not lose that glorious opportunity to serve not only this country, but all countries, as we have done on many other occasions.

I mention this particularly because we have a profound duty to perform. We must not only distribute those goods of the peacetime world, but also those that are needed because of the emergency which has arisen. We must get the goods to the countries that need them most and to the points of consumption—with the greatest speed and effectiveness.

SHIPS AND WORLD REHABILITATION

The rehabilitation of the war-torn world should occupy our present merchant fleet, not only during the immediate emergency following the peace, but for many years thereafter.

We will send materials to almost every country, feed their people, clothe them, and reestablish them as nationals within their own countries. We will have to ship them steel, cotton, beef, machinery, and seeds to replant their fields.

The requests that these countries will make on the United States for food and other agricultural products will be staggering, and the problems of relief will exceed that of even the last war when 30,000,000 tons of goods were sent abroad. In this country, as elsewhere, industry will need to be furnished with raw materials to get peace time employment started again. The war will exhaust the stock piles of goods and materials that each country had in peacetime.

EXPANSION OF UNITED STATES INDUSTRY AND NATIONAL ECONOMY

To meet all these requirements there must of necessity be an expansion of our agricultural, manufacturing, and mining industries in the post-war period. Supported by these enlarged activities of our basic industries, our national economy in the post-war period will surpass anything we ever knew in peacetime. It will be, as it must be, at a level to meet our war indebtedness and other obligations. More important, it will furnish employment to men and women who have been engaged in activities related solely to war.

There will be a tremendous demand for automobiles, refrigerators, radios, agricultural machinery, vacuum cleaners, washing machines, and other products which have been cut off by war.

It should be evident that the production and distribution of these goods and others will require the services of our merchant marine. There must be ships to export these commodities to other countries—which will need them as much as ourselves.

MERCHANT MARINE TO SERVE COMMERCE AND DEFENSE

It is certain that our increased national economy which follows the war will benefit not only our transoceanic shipping, but also our coastwise and intercoastal trade because there will be many types of commodities to be moved along our coast lines.

The American agriculture, American manufacturing, and American industry in general, have been very helpful to the merchant marine of this country through the generations. We think this is an opportunity to reciprocate. We will have the ships for everything that the American farmer, manufacturer, and producer wants delivered. Behind the ships and at the service of America's industries will be skilled and experienced management—American-flag steamship companies which are demonstrating in this war their ability to handle a large merchant fleet under the most difficult operating conditions.

Just as vital to the country and to the whole world is our merchant marine as a factor in our national defense. This war has proven that the effectiveness of our Army and Navy is directly controlled by the size and efficiency of our merchant marine. No one connected with shipping has to be told that this is a global war, a war of distances, or a war of logistics. This war should certainly teach this country for all time that we must have a merchant marine commensurate with the size of our Army and Navy. America's foreign policy for the post-war period as expressed recently by the House of Representatives indicates that this country is going to take no small part in the continuous maintenance of peace. Our Navy has been trebled and will require auxiliaries in order to be efficient.

THE INSTITUTE'S RECOMMENDATIONS FOR POST-WAR

The recommendations of the American Merchant Marine Institute assert that it is the inescapable necessity for the United States to assume a major role in post-war

affairs in order to promote peace and stabilize international conditions. They pointed out that:

We need an adequate American merchant marine for our national defense and economic security.

When war broke upon this country, we had very few auxiliaries and were forced to engage upon an emergency shipbuilding program—and our own commerce suffered severely because we lacked the ships to keep it alive.

The members of the institute recommend that post-war shipping plans should involve a strong American merchant marine under private ownership and that vessels now held by the Government for title or for use should be returned to private ownership as quickly as possible after the war. They believe that such a plan would tend to encourage the ownership, management, and operation of American-flag vessels.

There is also the general opinion within the steamship industry that the provisions of the Merchant Marine Act of 1936 have been of invaluable assistance in continuing this country as a maritime nation. Hailed as the "Magna Carta" of American shipping, the act deems it necessary for the national defense and commerce of this country that we have a merchant marine privately owned and operated to carry a substantial portion of our foreign trade. It is believed that the war might have jeopardized the gains made under the act through the interruption of many trade routes and that one of the first steps in the shipping post-war program should be a progressive restoration of these routes as soon as possible.

It has been observed that less than one-third of pre-war commerce was carried by American lines engaged in foreign trade. There have been many people who set up a portion of the amount that our own vast fleet should carry. We definitely expect to carry an equitable proportion.

NEW ROUTES AND NEW SERVICES

The developments of war have obliged American steamship management, working under the direction of the War Shipping Administration, to udertake new routes and new services. It is a general opinion that such routes and such services that are of value to United States commerce should be continued in peacetime.

Although we are assured of a tremendous fleet for use in our domestic-trade routes when the war has ended, the post-war planning committee of the institute points out that the vessels in these trades not only must be replaced by modern ships, but that they should also be augmented with additional tonnage.

There is a decided opinion that American shipping should engage in indirect routes which for many generations has not been a strong point in our shipping program. It means in effect, that we have customarily sent our vessels only between domestic and foreign ports. For a long time we have taken no part in shipping between foreign ports without the necessity for returning to our home ports. In the same line of thinking, the committee has also encouraged the use of tramp shipping.

Perhaps one of the most striking of the proposals made in reference to our post-war merchant marine is the establishment of a reserve defense pool of at least 5,000,000 tons of shipping. Such a policy would alleviate the heavy and expensive shipbuilding program upon which we were forced to engage immediately upon entering the war to provide auxiliaries to our fleet.

Our merchant marine is not just a matter of ships—it is a human organization of men now engaged in the winning of the war. For many it may be a new occupation but they will want to stay at sea. The labor situation naturally is going to be serious if we at any time contemplate reduction of our merchant-marine fleet. We have spent a lot of time and money training a competent and able body of men to be officers and personnel for our ships. We do not plan to lose their experience and we think we have a great opportunity to employ those men in the post-war years for the benefit of our commerce.

FALSE NOTIONS ABOUT AMERICAN MERCHANT MARINE

We must be well on guard to disabuse any people who would spread the false notion that America is not a maritime country and that it is foolish to support and maintain an American merchant marine. We note that every time an effort is made to expand our merchant marine, this type of propaganda is projected. There are those who think that it is best for this Nation to let other countries attend to the carriage of our foreign trade.

These sophists would have us believe that a large American merchant marine would harm our foreign trade. They have long exaggerated the claim that the revenue derived from shipping enables foreign countries to buy American goods. Actually, freight revenue is but a small percentage of the value of the cargo involved and contributes relatively little toward purchases in this country. In normal times such great maritime countries as Norway and Sweden sold more goods to the United States than they bought here, thus clearly indicating that shipping revenue was not solely necessary to buy American goods.

Those who hail our liberal trade policy, our reciprocal trade agreements, and other steps toward a freer flow of trade, seem unwilling that such equality should apply to our merchant marine. That is, except in time of war when they think it is perfectly all right for us to have a merchant marine, built quickly and consequently at great expense to the American taxpayer. But in peacetime these people feel there is little place for the American flag on the seven seas.

THE PRICE OF SHORTSIGHTEDNESS

Such shortsightedness means that in event of an emergency that affects world shipping, our trade, dependent upon the transportation services of other nations suffers heavily; in the event we go to war, it means that we must again engage in a building program to make up for lost time.

This country was fortunate enough at the outbreak of both World War No. 1 and World War No. 2 to have the time to build up merchant fleets to serve as auxiliaries to our armed forces and to keep other countries allied with us supplied with food, clothing, and materials of war. We cannot presume at any time that such favorable circumstances will attain again. We cannot trust to luck and rest on any assurance that we will always be able to fight off lightning blows and sneak attacks. The means and modes of modern warfare may develop to the point where an enemy could achieve victory so speedily—that the miracle of our wartime shipyards cannot be repeated. Preparedness remains our only assurance of peace.

SHIPS AND WAR SUPPLIES

Tanks, bombers, jeeps, trucks, cannons, and the other implements of war can be scrapped, stored, or otherwise disposed of. But our merchant ships, while being weapons of war, are also instruments of peace. In the ultimate disposition of our merchant fleet, we must make use of it to the best advantage of our country. Our merchant marine belongs to the Nation and we therefore must have the sanction and support of the American people to keep it maintained. We are confident that Americans, aware of the merchant marine's contribution in this war, will give it every encouragement in the days of peace to take our rightful place as a greater maritime nation.

The Turbulent Missouri

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. CANNON of Missouri. Mr. Speaker, one of the great rivers of the world is running amuck. With increasing frequency and with accelerated power and appalling devastation, the Missouri River has for the last 5 or 6 years poured raging floods from its watersheds to its confluence with the Mississippi, sweeping farms, villages, crops, livestock, highways, railroads, power lines, and human lives into vast and torrential seas of debris and destruction.

So vast and uncontrollable have these recurring avalanches down the great valley of the Missouri become that it is now apparent that it is a national problem and only the Federal Government has the authority and resources to cope with it. Numerous surveys have been made with a view to determining the method best adapted to the control and utilization of the waters of this unruly river and acres of newspaper space have been consumed in their exposition and discussion. None of them is entitled to more careful study than the considered statement just issued by the Missouri Farmers' Association, the membership of which includes thousands of farmers in the counties adjoining the Missouri River whose losses from flood damage over the last few years aggregate millions of dollars.

Following an extended and exhaustive investigation of the situation by its engineers, economists, and legislative committees, the Missouri Farmers' Association has just released the appended statement:

A STATEMENT ON FLOOD CONTROL BY F. V. HEINKEL, PRESIDENT, MISSOURI FARMERS' ASSOCIATION

The State legislative committee of the Missouri Farmers' Association has recommended that its 86,000 members in Missouri support a Missouri Valley Authority. This decision was made by the committee after several months' study of the flood-control problem.

In arriving at its conclusion that the interests of Missouri farmers would best be served by an M. V. A., the committee took into account these two points: One, that the present flood control law, signed recently by the President, does not meet the needs of the Missouri Valley; and, two, that a Missouri Valley Authority, patterned after the tried and proven Tennessee Valley Authority, would give the people in the valley a comprehensive, over-all plan which will not only control floods but conserve our natural resources and properly utilize the surplus waters at the same time, which will benefit all of the people in the region.

The newly enacted flood-control law is inadequate because it favors chiefly only two groups of people, those interested in irrigation upstream and those interested in low cost river transportation downstream. It is a patchwork compromise between the Reclamation Bureau which is to deal with irrigation upstream and the Army engineers who will construct the numerous high dams and

huge levees lower downstream. What little soil conservation that will be done under the law—and soil erosion over the years costs four times more than floods and is caused by the same thing, namely: Uncontrolled run-off—is a seeming afterthought and will be done by the Department of Agriculture, which means the Soil Conservation Service.

Under the new law just enacted three different governmental agencies will be attacking the big problem in a piecemeal fashion, with one scarcely knowing, or caring, what the other is doing. How can good results be expected from such a hodgepodge of authorities?

I strongly suspect that the new law pleases the big power interests, since only 1 of the 26 big dams that would be constructed in Missouri, and which will ruin numerous towns as well as a half-dozen counties, provides for electric power, although this is hard to understand since power profits have soared in the Tennessee Valley since T. V. A. reduced the wholesale rates. The one exception is at Osceola, in St. Clair County, where a local power plant site will be inundated and is to be replaced with a new one. The irrigation people upstream were made happy, and so were those interested in low-cost river transportation.

In order that too much water is not used upstream for irrigation and the Missouri River thereby reduced to a trickle below Kansas City during dry seasons so that barges could not operate, the new law provides that numerous high dams in Missouri and Kansas will impound the surplus water after they have run off our hills and slopes carrying with them heavy loads of life-giving top soil, to be released gradually during the dry seasons so as to maintain a 9-foot channel for barges from Sioux City to St. Louis. Enormous levees, set back a half mile from the river banks, are to keep the river between two walls.

These big dams will, within a few years, prove to be a waste of taxpayers' money because of silting. Without extensive soil conservation measures in the watershed the artificial lakes will fill up with silt rapidly. Army engineers admitted at a hearing before the congressional Rivers and Harbors Committee in Washington not long ago that the artificial lakes created by the dams would be completely silted up within 50 years after their construction, and after that "it is somebody else's worry." If they will be fully silted up in 50 years and be made useless, they will be half gone in 25 years, which means they will be half as effective. After that will other Army engineers build more dams elsewhere on our rivers with taxpayers' money?

And this is leaving out of account the 900,000 acres of Missouri's most fertile farm land that it is estimated will be permanently flooded by the dams, and its 20,000 citizens who will be uprooted from their homes, and the towns and counties, business enterprises and property that will be ruined. The lakes made by the dams will be of enormous size when full of water and a sea of mud after the waters are released during the dry seasons. The largest one of the dams, located at Osceola, will impound water covering 260,000 acres during the winter and spring seasons, and after the water is released, say, in July and August when the dry season occurs, the lake will be about 60,000 acres in size. This same thing will be true in corresponding degrees of all the 26 lakes planned for the State of Missouri.

I have no doubt that for several years after these dams and the huge levees are completed floods will be controlled downstream, but only for a few years and at a tremendous cost. Farmers living in the river bottoms will lose all of their land between the levees and the river banks, a distance of a half mile on each side of the river from Sioux City to its confluence with the Mississippi. And then in a few years, when their children take over the operation of their farms they'll find the floods recurring, because the big lakes will be filled up with the topsoil from our upland farms. The river itself will finally silt up until it will eventually be flowing between two walls like the Yellow River in China.

The legislative committee of the Missouri Farmers' Association, after careful study, has arrived at these conclusions about floods:

First. That the Missouri River, like other natural things, knows no boundary lines, and that flood control is, therefore, a responsibility of the Federal Government.

Second. That floods are caused by the uncontrolled run-off of water. That the place to start dealing with floods is on the uplands where the run-off occurs—to deal with floods by mechanical means alone after the water has swept down into the valleys is to deal with effects rather than the cause of floods.

Third. That we should not merely seek to prevent floods, but to make all possible use of our water resource from the time it falls on our uplands to the time it merges with the Mississippi. We should seek to deal with the problem in a comprehensive, regional way, as an investment which will yield rich returns, rather than merely as a necessary expense.

I believe that a Missouri Valley Authority, patterned after T. V. A. with proper adjustments made to conform to the needs of the Missouri Valley, can make available to the people all of the possible benefits. We can have flood control, which is our foremost objective. There can be water for irrigation in the dry States. We can have extensive conservation of our soil, of wildlife, and other natural resources. Any high dams that may be necessary can and should generate cheap electric power. And there should be ample water left for river navigation.

Under proper management—and do we not always have to take chances on good management whether in private or public undertakings?—an M. V. A. can produce an environment here in the Missouri River Valley where cheap electricity and low-cost transportation will promote the development of a great industrial empire. Our farm lands will be conserved and improved through adequate soil-conservation measures, which spells a more prosperous State and Nation. Water for irrigation in the dry sections will take the gamble out of farming for thousands of good people. As new industries are developed in the region, more jobs will mean better markets for the products of midwest agriculture.

Such a plan as M. V. A. is an ambitious one, but the situation calls for it. And yet it is not a visionary plan, because it has been tried and proven in the Tennessee Valley.

America's Merchant Marine in the Post-war Era

EXTENSION OF REMARKS
OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. COFFEE. Mr. Speaker, in extending my remarks in the CONGRESSIONAL RECORD, I include herein an address given by me before the People's Lobby Conference, Washington, D. C., recently. The speech is as follows:

The title of my talk emphasizes the attitude of thinking Americans toward every aspect of this global war—that victory over the military machines of Germany and Japan, is vital—but that psychological and political aspects of the war are of equal importance with military, in winning that victory, and victory is never really won till lasting peace is insured.

Victory in an economic vacuum, with an orgy of ruthless competition, would be only a prelude to World War No. 3 and probably a short prelude.

All nations are watching America's economic policies and plans, enemy, neutral, and United Nations.

The British Labor Party is committed both to major social ownership at home and an association of nations, "the collective authority of which must transcend in the economic sphere, the rights of separate nations," to use its statement.

It is obvious that avoidance of dangerous commercial rivalries, and at least the possibility of war, requires measures in this direction.

The titles of two books by H. N. Brailsford, the British publicist, "The War of Steel and Gold," published in 1912, and "Property or Peace?" in 1934, and "We Fight For Oil" by an American publicist, Ludwell Denny, in 1928, are significant.

A merchant marine is a vital factor for war or for peace.

We must determine which ours is to be before fighting ends.

Hon. Emory S. Land, Chairman, the United States Maritime Commission, in the Commission's latest report to Congress, states the Commission in 1943, appointed a representative post-war planning commission, consisting of key officials in the Commission and the War Shipping Administration, to make a comprehensive study of the problems which would face the merchant marine industry when the war ends and full commercial operations are resumed.

The stake is enormous, even at our present rate of spending.

The Commission's report states:

"The over-all picture at the end of the fiscal year (June 30, 1944) was 6,765 vessels, constructed, under construction, or on contract, with a total estimated completed cost of $13,824,302,818, of which $8,947,946,299 had been disbursed as of June 30, 1944.

"The completed deadweight tonnage was 36,305,427 with 17,633,400 under construction, or a total of 53,938,827 deadweight tons."

Despite past and prospective losses, the Commission reports that the Government will own a fleet of ships aggregating more than 50,000,000 deadweight tons when the war ends.

This is about equal to the merchant fleets of the world, when the war started in 1939.

The Government's investment in shipping, which does not include battleships of all sorts, of about $14,000,000,000, is almost one-half more than its investment of about $9,000,000,000, through the Defense Plant Corporation, for construction of plants for war production.

The Commission holds no war-built cargo ships or tankers that are or can be put in first-class condition at reasonable costs should be scrapped, but placed in a sanctuary as a national defense reserve, so we won't have to spend so much time or money if and when another war is forced upon us, or to insure against another war.

In view of these facts, the following information was asked of the Commission:

"Tonnage and number of Government ships at end of war adapted for—

"(a) Transoceanic commerce.

"(b) Coast-wide and inland waterways.

"Anticipated demand for ships for world commerce and proportion America has and

other nations, particularly Britain, Norway, Sweden, France, and Russia, have.

"What plan, if any, has the Maritime Commission to allocate the world's ocean-borne commerce to the several maritime nations, and to regulate both freight and passenger rates, and to protect wage and working conditions of seamen?

"What plan, if any, has the Maritime Commission to correlate our local and ocean-borne shipping with railroads, canals, etc.?"

A reply, this month, from the Commission, states:

"The questions raised are impossible to answer at this time.

"They involve problems of post-war developments which no one can predict at this time. They are intimately involved in the prospective peace treaties and other international agreements, and I do not think anyone has anything like a definite idea as to what the future will bring in this connection."

Admittedly answers are not easy to give, and any program of an executive agency must be approved by the Congress, as long as democratic processes continue, while both the Senate and House of Representatives of the Congress have committees on post-war planning.

Our experience after World War No. 1, however, convinces me, that as a famous jurist, Charles Evans Hughes, remarked about the law—"It is what the courts say it is," so the future of post-war international relations, of which the American merchant marine is a symbol, will be what the peoples of the world decide to have it.

This is very unwelcome doctrine in some quarters.

In sending me current data on the status of the merchant marine, the Commission writes:

"On the basis of this information, one should be able to speculate reasonably as to what would be desirable in the merchant fleet of the future, keeping in mind, of course, the basic policy set forth in the Merchant Marine Act of 1936."

The Merchant Marine Act of 1936 specifically states:

"It is necessary for the national defense and for the proper growth of its foreign and domestic commerce, that the United States shall have a merchant marine of the best equipped and most suitable type of vessels sufficient to carry the greater portion of its commerce, and serve as a naval or military auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the United States."

There is a clear contradiction in saying "the United States shall have a merchant marine" and in the same sentence it is "to be owned and operated privately by citizens of the United States," but the desire of some citizens to conduct their operations "privately" is quite understandable.

Similar issues have arisen in connection with certain appointments in the State Department.

The recent record is instructive.

In March last year, Hon. S. O. BLAND, Chairman of the House Committee on the Merchant Marine and Fisheries, introduced a bill (H. R. 4486) authorizing the sale or charter of any vessel constructed by the Maritime Commission, or under contracts executed for it, from January 1, 1941, up to a year after the war ends, and any vessel transferred to or acquired by the Commission during this period if constructed in the continental United States—under conditions set forth.

The bill explicitly states—"notwithstanding any other provision of law."

In committee hearings over several weeks, Chairman Land, of the Maritime Commission, suggested amendments to protect the Treasury, that is the American people, incorporated in a redrafted bill introduced in this session, of which an important one prohibits the Commission from selling or leasing "a vessel which any other agency of the United States Government has the right to control, custody, or possession," as long as such agency needs it.

Another one vests in the Maritime Commission authority to determine prices and lease rates for our ships.

At this hearing, Mr. Almon E. Roth, president of the National Federation of American Shipping, Inc., said:

"One of the greatest considerations of this industry (maritime) is the early restoration of our trade.

"If we do not get into it at an early date we will see our British cousins, and the Scandinavians going in."

This Federation is composed of five principal American shipowner associations, which include about 95 percent of the shipowners engaged in oceangoing traffic, when the war started.

On the other hand, Arthur Phillips, executive secretary of the Congress of Industrial Organizations Maritime Committee, told the House committee:

"Shipping is an international industry. Continued and enhanced United Nations collaboration is a prerequisite for profitable post-war maritime operations.

"The United States must take the lead in calling for an immediate open-table United Nations conference on shipping at which preliminary agreement on a fair distribution of the world's tonnage can be reached. The central theme of the conference must be organization of world shipping to fill the needs of an ever-expanding world economy.

"Agreement must be reached on a limiting of the spheres of economic conflict and a widening of the horizons of economic opportunity. Cooperation must be effected to prevent ruinous competition, rate wars, and restrictive and discriminatory practices.

"It cannot be said that such discussions are premature. Indeed, some surety of cooperation in the shipping field is a necessary win-the-war step. It will put an end to the uncertainty which had led to demands for the resumption of private operations at a time when every vessel is needed to bring victory closer.

"Subsidization to make up the operating differentials should be limited to true cost differences. Any use of subsidies for economic warfare will be disastrous.

"International agreement limiting subsidies and based on audits of actual records should be sought."

The executive secretary of the People's Lobby, Inc., urging international controls and allocation of ocean-borne shipping, told the committee:

"International controls of shipping are as vital as international controls of currency and of natural resources."

The Honorable SAM RAYBURN, Speaker of the House of Representatives, in an address to the Foreign Policy Association in New York, last June, very cogently stated:

"The lesson we must learn and remember and never forget, is that it is futile to wish for peace without providing the methods for keeping the peace."

The American Federation of Labor calls for "an international organization armed with power to deal promptly with aggression."

All the major general farm organizations are definitely on record for international organization.

Their action at last fall's annual meetings is significant.

The National Grange, oldest of the farm organizations, calls for:

"An effectively implemented organization of sovereign states * * * development of foreign trade on an equitable basis * * * rehabilitation of productive industry in devastated lands."

The American Farm Bureau Federation is equally explicit:

"International trade is basic to the well-being of this Nation and of the world.

"We must not repeat the mistakes made after World War No. 1, when the nations of the world resorted to extreme nationalism and isolationism to promote self-sufficiency and to secure selfish advantages through raising tariffs and trade barriers, through competitive manipulation of currencies and international exchange, through international cartels, and other restrictive trade practices. The present war will have been fought in vain if the nations of the world return to such nationalistic policies when this war ends."

The National Farmers Union with clarity visions the economic basis for an enduring peace in its promise:

"We pledge ourselves to work with men of good will everywhere for an international organization which, through political and economic cooperation, can bring about an era of enduring peace and universal brotherhood. This time we must not fail."

The committee on international policy of the National Planning Association, last fall, published a pamphlet America's New Opportunities in World Trade, which asserts:

"The policies affecting the overseas part of the Nation's economy have now become too important in their implications for national prosperity and world peace to permit tolerance of piecemeal and narrow-interest policymaking.

"From now on the foreign trade and investment decisions of the United States must be expressed and coordinated in terms of national long-term interest."

This study, assuming continuation of our general pre-war policies in trade, during the post-war years, estimates that by 1950 our international merchandise trade will amount to $7,000,000,000 of exports and $5,000,000,000 of imports—an annual total of $12,000,000,000.

This means a large ocean-borne commerce originating in or directed to the United States, and nearly all other major nations will seek to expand their foreign trade.

Britain feels she must increase hers, over pre-war, by about one-half.

Trade rivalries have in the past led to conferences and pools to fix and maintain passenger and freight rates.

Most maritime nations have subsidized their shipping in foreign trade.

American ship subsidies have often made an oceangoing pork barrel out of our merchant marine.

Congress must soon determine whether we shall repeat the inexcusable mistakes of the past, and facilitate the all too easy steps to another global conflict.

Over 40 years ago, Hon. David Lubin, of California, founder of the International Institute of Agriculture located in Rome, and till his death, our representative in that institute, foresaw the danger of rivalry in ocean-borne commerce.

He urged and worked incessantly for international control and allocation of freight shipping—but without success.

We can learn from the two World Wars in a quarter of a century—which we know were preventable—because all world statesmen tell us a third world war can be prevented.

America has a big head start in ships constructed, which summons us to leadership in a plan to use our merchant marine for peace.

During the war, the world's shipping has been pooled for the purposes of the United Nations—proving this can be done.

Experience shows any other course is a challenge, if not a threat, to peace.

During the war high profits have been made from war's emergencies in shipping.

Such profits cannot easily be carried as the world shifts back to peace pursuits.

Can we achieve this pooling under private ownership?

Certainly not under unrestrained competitive ownership.

The slogan "Don't give up the ship," applies in peace if surrender means "unconditional" and commercial rivalries and rate wars.

Possession is sometimes nine points of the economic law as it is in the legal textbooks.

Unless shipping interests of the world give better proof than ever in the past that they will cooperate continuously, to reduce charges, improve service, and protect labor's standards—America must not give up our merchant marine; it must not sell or lease ships to our own or to other nationals, without full guaranty it is to be used as an agency of peace to achieve this threefold peace objective of world commerce.

Work or What?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. SCHWABE of Oklahoma. Last week the House of Representatives in Congress had under consideration what is commonly known as the May bill. Some have erroneously referred to it as the work-or-fight bill. Others have referred to it as "work, fight, or go to jail or pay a fine." Still another name appearing in the press, in referring to this measure, was "work or else" bill.

These various names of and references to this measure show the confusion in the thinking of Members of Congress, Government officials, newspaper reporters, and commentators. This suggests the consideration of the history of this measure and the varying predictions as to its future form and passage or nonpassage.

Originally, this proposal was introduced as House bill 1119 and hearings were had and evidence was taken before the House Committee on Military Affairs, January 10 to 18, inclusive. Apparently, the substance and basic principles of H. R. 1119 were approved by the top military and naval authorities of the country. In the printed copy of the hearings before the House Military Affairs Committee on page 3 thereof, Robert P. Patterson, Under Secretary of War, is quoted as having said:

The War Department endorses bill H. R. 1119 as an immediate measure.

He further stated at the hearing:

I want to make it clear that the War Department urges the prompt passage of national war service legislation of the broadest character affecting our entire adult population, capable of assisting in the prosecution of the war, as promptly as possible.

The bill for discussion today, H. R. 1119, as I understand it, affects men from 18 to 45 years of age, and provides that as to those men, those who leave war activities that they are now engaged in, and those who decline, when requested by the local selective-service boards, to engage in war production, or in activities supporting the war effort, shall be subject to induction into the armed forces (p. 4).

At this hearing, Chairman MAY is quoted as having asked Secretary Patterson, "As I understand the meaning of H. R. 1119, it is that for a man who is even now engaged in war work, in an industry, or a man who is offered employment, or asked to take employment in war work, and refuses to do so, the penalty is immediate induction into the armed forces, as this bill provides?" Mr. Patterson answered, "I understand that." Then Chairman MAY asked the Secretary the following question: "So it is in the nature of what is known as a provision for 'work or fight' as it is commonly referred to?" Mr. Patterson answered, "Yes"—page 5.

The Secretary stated that the present manpower crisis "has been caused by maldistribution rather than by an actual shortage. There is no shortage in this country of anything to carry on a war"—page 11.

After stating that the war urgency is such that young able-bodied boys on the farms should be taken at this time, the Secretary said, "There is certainly no shortage of food in this country"—page 19. He further stated that the primary objective he advocated through this legislation was to get production—page 20—and that the purpose of the bill "is to put pressure on them"—referring to persons classified as IV–F or some other class that comes within the scope of this act, and so forth—"to obey the direction of the local selective-service board to go into war industry. That is the purpose, I take it"—page 23.

When the bill was printed and placed before the Members of the House of Representatives for consideration and debate, it appeared as House bill 1752. We were not shown and did not have before us H. R. 1119 considered by the committee and on which hearings were held, but the committee chairman introduced and presented for consideration H. R. 1752.

H. R. 1752, apparently, is a much different bill from H. R. 1119, according to the statements of many members of the House Committee on Military Affairs. Chairman MAY, in opening the discussion on H. R. 1752, stated:

I want to get over to the membership of this committee the admission that I, myself, am not entirely satisfied with the bill. I wanted a work-or-fight bill. I wanted it so that when a man was reclassified, he would be made immediately available for induction in the armed forces if he refused to go to work. What this bill actually is, in my judgment, is a bill to provide a system by which a man must either work, fight, or go to jail or pay a fine. (CONGRESSIONAL RECORD of January 29, 1945, p. 567.)

Apparently, the administration of the bill as originally planned was to be under the supervision of the Office of War Mobilization, but, for some reason not disclosed, H. R. 1752 provides that the immediate administration of the provisions of the measure shall be placed in the hands of the Director of Selective Service. Many amendments were offered, but administration forces plead with the Members not to allow the bill to be amended in any respect whatever, regardless of how imperfect it was.

One amendment, the so-called Harness-Barrett substitute, was rejected by the small margin of 187 to 177. The Harness substitute would have thrown the administration of the provisions of the bill, with certain other important changes, into the hands of the War Manpower Commission. The Harness substitute contained several provisions similar to the provisions in the original H. R. 1119, which are omitted from H. R. 1752.

H. R. 1752, without amendment, passed the House by a vote of 246 to 165. Many Members voted for the passage of this act for the alleged reason that they wanted to support the measure because they understood it was recommended by the Commander in Chief and the heads of the military and naval departments. But, as above pointed out, it was not the measure upon which the hearings were held. It assumed a different form, omitted many salient provisions that were in H. R. 1119, and placed the administration of the act in different hands. Many Members expressed themselves as fearful of the criticism their vote might draw from the men in uniform and now on the battle fronts if they should vote against the measure. Several frankly confessed that they thought, regardless of the imperfections of the bill, the psychological effect would justify their voting in favor of the passage of the bill.

On the other hand, there were many of us who voted against the bill for the reason we did not consider it sound legislation.

First of all, many opposed to the bill considered it unconstitutional and in direct violation of the provisions of the Constitution of the United States.

The opponents did not believe the conditions justified the passage of the act and did not want to see what many considered slave labor, or forced labor, authorized by congressional enactment. On all hands it was agreed that labor and management have done a marvelous piece of work thus far and have not fallen down. The United States Chamber of Commerce, the various organizations of management, organized labor—both the A. F. of L. and the C. I. O., and the major farm organizations protested the passage of this act for the reason that they considered it a death blow to the system of American free labor. William Green, president of the American Federation of Labor, said H. R. 1752 "is highly objectionable to working men and women represented by the American Federation of Labor, all of whom cherish as a common heritage the principles of freedom, liberty, and democracy. H. R. 1752 embodies within it the principles of totalitarianism, the substitution of governmental compulsion for voluntary action on the part of those who serve in the army of production." He further stated, "There is no shortage of manpower." These statements were made over Mr. Green's signature under date of January 26, 1945.

Furthermore, statistical information and specific instances were cited showing that there has been a great hoarding of manpower in certain industries; that immediately prior to the election last November it was stated by those in authority that the war was about over, and many workers in war industries left their

jobs and went home, thinking that their services were no longer needed in the war effort. We were told in this country the supplies of materials, ammunition, munitions, and men were ample. Two months later, we were told this was a mistake and that the war was not as near to conclusion as had been prophesied.

The Harness substitute would have given the local draft boards the authority to go into the war industries and plants that are now being operated so extravagantly on a cost-plus-fee basis, where surplus labor is employed and production is lagging, with authority to take unnecessary men out of such plants and put them either in the armed forces or in places where their services are really needed. This would have corrected a lot of the bungling, mismanagement, and faulty allocation that is now so pronounced and so much in evidence. But, the provisions of H. R. 1752 will not correct the present ills along this line.

Management and labor alike agreed upon the all-convincing argument that if H. R. 1752 becomes a law, production will be slowed down instead of stepped up, for slave labor, or forced or involuntary labor, has never been as productive as voluntary or free labor. Commentators and those calculated to be the best judges of such matters predict freely that this act will never be passed by the Senate in its present form and that if any like measure is passed, after a conference, it will contain entirely different provisions from those in the bill passed by the House. Some even suggest that if our armed forces continue with those of our allies, as they are now so successfully advancing, the war with Germany may be concluded before this extreme and un-American measure is enacted into law—if ever it is enacted in its present or modified form.

If our American men in uniform could only be given a true picture of what H. R. 1752 provides and be told of the amendments that were offered to improve the same but rejected, no one would need fear their reactions.

Many Members voting against H. R. 1752 are fathers of sons in the armed forces of this country who have acquitted themselves nobly and gallantly in both of the major theaters of war. These opponents would not take the chance of depriving their own sons and those of their neighbors and friends of anything that the boys need to win the war as expeditiously as possible. It takes more fortitude and courage to stand forthright and patriotically for principles and love of country and its time-honored principles than to support measures which are calculated to appease or win temporary approval.

Members on each side, for the most part, are willing to vote their conscientious sentiments and allow patriotism to dictate their actions. This was not a partisan contest. Party lines were not attempted to be drawn. However, strong administration leaders championed the bill from beginning to end, admitting that it contained many imperfections.

Punishing War Criminals

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 31, 1945, issue of the New York Times. The editorial is as follows:

PUNISHING WAR CRIMINALS

Axis war criminals ought to be punished. We are not aware of any important dissent from this statement in any Allied country. Some of us like to play with words. We may say that punishment is an old-fashioned idea and that what we propose is a sort of sanitary measure. We mean to abate the kind of crime Hitler and his colleagues and subordinates have committed by eliminating the cause. We mean to eliminate the cause in such a way that no new sources of contagion will be established. Whether we put the matter in this way or in some other way the conclusion is the same. Axis leaders must be removed from circulation, which means that they must be removed from this earth. They must be removed precisely because they are leaders and have led. They need not be convicted, unless we deliberately choose to make a drama of it, of the murder of any one specific person. Below a certain level of authority we come on a new category of crime—the designated offense against a designated victim or victims. In such cases we may find it desirable to hold court and bring in witnesses.

The question has been brought into the open by the resignation of Herbert Claiborne Pell as American representative on the War Crimes Commission in London. It has not been brought fully into the open, for all that the Acting Secretary of State, Joseph C. Grew, has to say is that "it is the policy of this Government that the Axis leaders and their henchmen who are guilty of war crimes shall be brought to the bar of justice." What crimes? Is the making of unprovoked and undeclared war a crime? Must we prove that Adolf Hitler had foreknowledge of what was done at Lidice and that he personally ordered the creation of the many Nazi murder camps? Shall we attempt to bring the Nazis to trial for all of the crimes they have committed in the Reich itself, as well as in the countries they once conquered? Or shall we settle account with them for their crimes against the United Nations and leave the punishment of crimes committed on German soil to the reckoning of the German people?

Dr. Sheldon Glueck has ably discussed the whole subject in a recently published book, War Criminals: Their Prosecution and Punishment. As he summarized his conclusions in a letter to this newspaper he holds that such criminals "must be tried by the military and civil courts, and under the laws, of each of the injured states with certain exceptional and large-scale cases to be prosecuted in an international criminal court to be set up by the United Nations and to apply the common (unwritten) as well as the conventional (written) law of nations." As an "injured state" Russia has already held trials and inflicted punishments—perhaps in more instances than she has yet made public. Whether anything would be gained by a full-dress trial of such creatures as Hitler, Goebbels, Goering, and Himmler may be questioned. Each one of these men has already made a full confession which would doom him in any court—and the fact that the confessions were otherwise labeled by those who made them is of no consequence. Moreover, these felons may die at the hands of their own countrymen before we can get at them.

When we come down to simple terms there seem to be but three necessities. One is to get rid of men whose continued life and freedom endanger our civilization. The second is to do this in such a way that present and future generations, including such Germans as have remained sane and such Germans as will, like members of other races, be born sane, will recognize that justice has been done. The third is to make it clear to the Germans that punishment will not be indiscriminate, and that those who have not shown themselves criminals will gain rather than lose by surrender.

The Allied heads of state have many important subjects to take up at their pending meeting. They would do well to make a clear statement on this one. It is not enough to say that a policy exists. A decent respect to the opinion of mankind requires that the policy and the reasons for it be stated.

War Crimes Problem

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following article entitled "War Crimes Problem" which appeared in the February 1, 1945, issue of the Washington Evening Star:

WAR CRIMES PROBLEM

The circumstances surrounding the end of Herbert C. Pell's service as American representative on the United Nations War Crimes Commission are disturbing, even though Acting Secretary of State Grew has just spoken reassuring words on the subject. Mr. Pell is convincing when he says that it is nonsense to ascribe his failure to return to London to the fact that Congress did not appropriate money to cover his work there; the real reason, he declares, is that certain American officials—presumably in the State Department—do not want to punish Nazi criminals as thoroughly as he advocates.

Mr. Pell's thesis is that the United Nations should try Germans not merely for the crimes they have committed against the nationals of other countries but also for crimes committed against the nationals of Germany itself, chiefly the Jewish minority. It is on the latter point apparently that there has been disagreement, some officials believing what a nation does to its own citizens is its own business. That a similar disagreement exists in Britain is indicated by the fact that Sir Cecil Hurst recently resigned from the commission when the British Foreign Office failed to go along with the ideas shared by himself and Mr. Pell.

If Mr. Pell and Sir Cecil had not been playing leading roles on the Commission, their departure from it would not now seem so significant. But in view of their importance,

and whether they are right or not, it is difficult to escape the conclusion that something fundamentally serious has upset the whole United Nations program to translate into action past inter-Allied declarations—notably the Roosevelt-Churchill-Stalin statement of November 1943—to bring Axis criminals to justice in the very countries where they have worked their crimes. Mr. Grew says that United States policy is "definite, forthright, and comprehensive," but Mr. Pell, who has been close to the subject, apparently does not think so, and if American authorities differ among themselves and if British authorities differ among themselves also, there is more than a little reason to wonder how America, Britain, Russia, and the other allies will be able to work out any joint approach to the problem.

The task of the War Crimes Commission, under the best of conditions, cannot be anything less than extremely difficult and complex, involving the grading of evidence and the working out of legal procedures against an army of individuals charged with abominable deeds on a vast scale. But as matters stand today, in face of the disagreements revealed by Mr. Pell and Sir Cecil, the task is probably more difficult and complex than ever, so much so that it is a question whether the Commission itself will be able to survive its inner divisions.

There thus seems to be a real danger that unless the situation receives prompt attention in the highest Allied councils, war criminals will escape again this time just as they did after 1918.

Pell Affair

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 21 issue of the Washington Post. The editorial is as follows:

PELL AFFAIR

Acting Secretary Grew was somewhat disingenuous when, in his first comment on the Pell affair, he said that Mr. Herbert C. Pell would not be returned to the United Nations War Crimes Commission in London as the American member because Congress had refused to appropriate funds for his salary and expenses. Technically, that happened to be true, though it left out the fact that the Department did not try very hard to get Congress to appropriate the small $30,000 involved. One very likely reason why it did not try very hard was disagreement between Mr. Pell and certain of the Department's international-law experts regarding punishment of war criminals. Actually, moreover, the request for the necessary appropriations was supported before the House Appropriations Committee by a junior officer of the Department's Legal Division.

The real point at issue between Mr. Pell and the legal lights in the Department is whether the persecution and wholesale murder by the Nazis of German Jews and other racial minorities in Germany are crimes which the United Nations have a right to punish. Mr. Pell took the position that they have such a right, and he persuaded the other members of the Commission to approve his stand. And his position is by no means unique. On March 24, 1944, President Roosevelt declared: "All who knowingly take part in the deportation of Jews to their death in Poland or Norwegians and French to their death in Germany are equally guilty with the executioner. All who share the guilt shall share the punishment." Again, in his message to Congress, June 12, 1944, the President said: "This Nation is appalled by the systematic persecution of helpless minority groups by the Nazis. * * * We have made clear our determination to punish all participants in these acts of savagery." But, apparently, the President did not make the point clear enough to certain well-entrenched functionaries in the State Department. Thumbing their books on international law, they found no precedent for the procedure which the War Crimes Commission advocates. They hold that crimes against humanity perpetrated on German soil are within Germany's domestic jurisdiction, that crimes perpetrated on United Nations territory are to be punished by the individual United Nations governments. But, lacking precedents, these experts favor delay, apparently, until more volumes can be thumbed.

It was the same legalism that was responsible for the fiasco that attended the execution of the clause in the Versailles Treaty regarding the perpetrators of atrocities in the last war. Surely we cannot permit that fiasco to happen again. In a second statement on the Pell affair Mr. Grew has declared that the Government has a definite program on war criminals which is "comprehensive and forthright." Those are mouth-filling words. They are not enough. The time has come for the Department to take the American people into its confidence on this matter.

Revolution—American Way—Wake Up

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my own remarks, I include the following article from the pen of one of America's most distinguished small town editors, the Honorable Seymour S. Tibbals, which appeared in the Franklin Chronicle of Franklin, Ohio. These comments on public affairs by Mr. Tibbals, who has been a newspaperman for more than 50 years, are well worth the attention of every Member of Congress and every American:

REVOLUTION—AMERICAN WAY—WAKE UP

The fact is that we, and that means all of us in every part of the world, are going through a revolution. Some people call it a war, but it is a revolution, too. The trend is definitely to the left, to government control of all people. Make no mistake about it. President Roosevelt's promise of 60,000,000 post-war jobs, his nomination of Henry Wallace as Secretary of Commerce, the introduction last week by a relatively inconspicuous Senator of a job-budget program, various hints and comments in the recent Roosevelt annual address and Budget messages, all fit into a single pattern. Get set for the jolt that is coming. The New Deal roller coaster is again climbing the incline for another dash down the economic shoot-the-chutes. All at once, all over the world, simple, common, every day people have discovered the terrific production power of machines, if they can only be put continuously to work. Now the post-war problem comes down to this: We have had full employment in the war; can't we do the same thing in peace? It is as simple as that. Many of us believe that private enterprise could give full employment to the people if encouraged and given the chance. But those in control of Government, led by President Roosevelt, are outlining a dozen major fields of prospective Federal job-making—T. V. A.'s, highways, parkways, plus Federal-encouraged enterprises, like "a million homes a year for at least 10 years," all indicating that Government would play a big part in it. We all agree that we can't let the boys come home to apple-peddling on street corners. The New Dealers say we must have a break with the old established American way of life; the way that cleared the forests and made America the greatest country in all the world. We must adopt bold new policies, an approach equal to the magnitude of the subject. The so-called conservatives want employment all right, but for one reason or another they don't trust the New Deal to administer it, or don't agree with the proposed methods of getting it. The row over the appointment of Mr. Wallace is the first skirmish in this big fight. The court ruling against the President's seizure of the Montgomery Ward stores is another effort to stay the sweep of this revolution.

What was the good, old-fashioned American way when you were a boy? We'll tell you. You were flat broke when you finished high school. You started to work in a store or the local print shop for $3 a week. But you weren't discouraged. You had youth and health and a grim determination to get ahead. You worked hard for your employer, but you kept looking around for a chance at a better job. You saved a part of your earnings. You didn't make the high wages paid today, but what you received on Saturday night was all yours. There were no union dues and assessments taken out; there was no part deducted as withholding income tax and other levies for Government securities that supported an ever-increasing army of Federal appointees. When you had laid aside enough, you selected the girl of your choice and started a home and family. After a few years together, you were happy and contented, instead of paying a court fee and attorney for a divorce and being sued for alimony. In the American way a man who started as a peddler with a pack on his back could own a store of his own in time. A man who split rails could become President. Opportunity knocked at your door, and you were free to answer the summons. You could buy a little farm and look over your acres with pride in the thought they were yours and you could raise what you pleased. True, there were cases of injustice and unfair treatment. There were misers and overbearing landlords who extorted exorbitant rates of interest and took advantage of the ignorant, but there are hordes of indolent, unscrupulous politicians today who, like vampires, suck the blood from suffering humanity. There are dictators, rulers, and men in power who send millions of boys into the hell of war, killing them ruthlessly, maiming them frightfully, taking the best years of their lives, and sending them home, when they are through with them, shocked, nervous wrecks. It is all beyond us. But there is one thing we did and could comprehend and that was the American way under which we lived a happy boyhood and grew up.

Under the competitive, independent system we made great progress. We steadily improved the comforts of living. We developed the means of transportation, we built better

homes and better schools, we discovered electricity, the telephone, the radio, and the motion picture, but we also had time to walk in love under the moonlight. We had independence, the right to keep the rewards of our effort. Do you realize that men 33 years of age have known no President but Roosevelt since they became of voting age? Do you realize that the American way of life, of freedom of efforts, has never really been known in the last decade? Have we actually made progress during the period of encroaching socialism? We are, indeed, in the throes of a revolution and it is up to the great middle class to stand firm against the ideologists, the New Dealers, and those who lazily drift and say, "The Government will take care of me." It was rugged individualism that led the children of Israel out of the wilderness; it was individual effort and courage that blazed the trails through the American forests.

Our hope of staying this revolution lies in the American Congress. More and more in the Roosevelt administration has the executive branch of the Government taken to itself powers that rightfully belonged to the legislative. Congress, itself, when it was little more than a rubber-stamp body in the early days of the New Deal, carelessly allowed its powers to be plundered from it. But there are signs today that Congress has been revitalized. The hold-up of the Wallace nomination as Secretary of Commerce and Federal Judge Sullivan's decision that the President was without authority to seize the Montgomery Ward properties are hopeful signs that the American way is again on the march.

THE ROUNDER.

Justice for the Living

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial which appeared in the January 30, 1945, issue of the New York Post. The editorial is as follows:

JUSTICE FOR THE LIVING

The failure of Clairborne Pell to get the $30,000 (less than one-thousandth of the total State Department appropriation) that is needed to maintain an American delegation to the United Nations War Crimes Commission is well worth a congressional investigation.

Mr. Pell believes that the Nazis who murdered their own nationals—Jews and anti-Nazi—are guilty of war crimes and should be tried. What's more, he joined the British delegate, Sir Cecil Hurst, in saying so.

A few weeks ago, Sir Cecil resigned under pressure. Then last week, veteran diplomat Pell was told that the House Appropriation Committee had somehow decided that we didn't need any war crimes delegate.

The United Nations War Crimes Commission can now return to the somnolence and profitless contemplation of legalisms that had, up to the time Hurst and Pell spoke up, characterized its existence.

The indignity this incident visits upon millions of dead and unavenged Hebrews is slight, compared to what these dead have already suffered. It is to ourselves, the living, that the greatest harm is being done.

For international justice is indivisible. If today, the Nazi can murder, say, a million and a half Jews, natives of Axis countries, and go unpunished, then some future Hitler will feel safe in building a Maidanek in London and cremating a million and a half conquered Britons.

If we overlook planned murder when it happens to Jews in Germany, Hungary, Rumania, then some day we will find planned murder on our own doorstep. X marks the next spot, and it turns out to be us.

L'Affaire Pell concerns justice for the murder of millions of Jews. It also concerns justice for all of us.

For it might have been us. It could be us in the future.

Drafting of Farm Labor

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. BUNKER. Mr. Speaker, food is a weapon of war. Without food we could not survive. Today we stand on the threshold of victory; a nation well fed and from the abundance of our harvest we not only have been able to feed ourselves, our allies, but also those people who so recently were liberated from the yoke of the oppressor. This has been made possible by our tremendous production of food. The farmers of America deserve the thanks and gratitude of a hungry world. Their industry, their patriotism, their devotion to democracy, their willingness to work long hours have combined to make our Nation the food basket of the current world-wide conflict. To disrupt this program of production at this critical time by promiscuous drafting of essential farm labor would truly be unfortunate. This letter and resolution from the Nevada State Legislature, now in session in Carson City, forcibly states the case of our Nation's farmers and ranchers:

ASSEMBLY CHAMBER,
CARSON CITY, NEV., *January 29, 1945.*

Re Deferment of registrants engaged in agriculture.

Hon. BERKELEY L. BUNKER,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN BUNKER: We enclose herewith a copy of a joint resolution adopted by the forty-second Nevada legislative session, memorializing Congress and the National Selective Service Board to defer from induction those registrants engaged in agriculture and stock raising.

Until recently this had been the practice of the local selective service boards with the approval and approbation of the national board. These deferments were based on recommendations of the Department of Agriculture County War Boards, thus insuring a most careful scrutiny into the case of every registrant who claimed deferment on the basis of being engaged in the agricultural, dairying, or livestock industries.

As you are fully aware from your intimate knowledge of conditions in Nevada, these industries had even then been seriously crippled by reason of shortage of manpower with the requisite "know how" that takes years of experience to develop.

By reason of this condition, drastic cuts were made in sheep, cattle, and dairy herds. Most of the few remaining herds are being now entirely cared for and managed by the sons of ranchers who have been heretofore, and we feel properly so, deferred from military service.

An indiscriminate reclassification and induction of the young men heretofore deferred, by reason of being engaged in the agricultural and livestock industries, will create havoc in Nevada. For the past 2 years the level of livestock, dairy, and crop production has been maintained in most instances by the prodigious efforts of a father and son combination. If this combination is destroyed it will mean the end of many cattle and dairy herds and a greatly curtailed crop production.

We, in all sincerity, urge upon you the importance and gravity of the present situation.

We do not count the financial loss to the State, which will be great, as any part of the reasons which actuated the members of the legislature in adopting the enclosed resolution. It is the considered opinion of the legislature that if the national welfare, national economy, and the national war effort are to be maintained, those who produce the food of the Nation, the armies and the navies, must be permitted to have their sons stand shoulder to shoulder with them in facing the colossal task ahead.

As to the individual courage and patriotism of these lads whose continued deferments are requested, we point out that in most instances with these young men it takes more downright courage to stay on the farm and ranch than it does to enter actual military service.

Copies of the resolution will reach you in due course through the usual channels. In the meantime, we feel that this letter, signed by all the members of the joint committees on agriculture and livestock of the assembly and the committee on agriculture of the senate, will impress upon you, even more strongly than the resolution itself, the seriousness of the conditions now faced by the livestock, dairy, and agricultural industries in the State of Nevada.

Respectfully submitted.

Assembly Joint Committees on Agriculture and Livestock: Fred Sirosnider, chairman; George J. Miller; Geo. Hussman; Alma Woods; James Ryan; Louis Scott; Paul W. Waner; Peter Henrichs; R. W. Ogden; Ellis J. Folsom; Senate Committee on Agriculture: Walter Cox, chairman; Charles H. Russell; A. V. Tallman; Press W. Duffin, Jr.; Nye W. Tagnoni.

Assembly Joint Resolution 3

Joint resolution memorializing Congress and the National Selective Service Board to delay the induction into the military forces of the United States of registrants actually engaged in the agricultural and livestock industries, and to declare these to be critical industries

Whereas it has heretofore been the policy of the National Selective Service Board to permit local selective service boards, upon the recommendation of the local United States Department of Agriculture County War Boards, to defer the induction of registrants actually engaged in agriculture and livestock raising; and

Whereas in answer to the need of the military forces and essential and critical industry for additional manpower the local selective service boards have been directed by the National Selective Service Board to reexamine and reclassify all deferred registrants to the end that all physically fit persons under 26 years of age be inducted into the military forces, and that all persons both

under and over the age of 26 years not physically fit for military service be forced into essential and critical industry; and

Whereas an indiscriminate reclassification of registrants will remove many thousands of men now engaged in agriculture and the raising of livestock from these industries; and

Whereas the growing and production of food is even more essential to military success than the production of armament, agriculture and livestock raising are not only essential industries but are critical industries, the impairment of which will be immediately reflected in the national war effort: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of Nevada, That the Congress of the United States, through proper legislation, and the National Selective Service Board of the United States, through proper rules, regulations, and directives, immediately take such steps as may be necessary to classify agriculture and livestock raising as critical industries ,and to reinstate and continue the policy, heretofore in force, of deferring the induction of registrants engaged therein, into the military forces and/or compelling them to enter into other so-called essential and critical industries; and be it further

Resolved, That a copy of this resolution be sent to the representatives of the State of Nevada in Congress, namely, Senator P. A. McCARRAN, Senator JAMES G. SCRUGHAM, and Representative BERKELEY L. BUNKER.

Work or Fight Bill

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. PHILBIN. Mr. Speaker, after listening very carefully to all the evidence presented before the House Military Affairs Committee, I am not convinced that a case has been made out for this bill. To the contrary, most of the factual evidence indicated that there was no present need for such drastic legislation. That was the testimony of representatives of labor and representatives of industry as well as some governmental officials and impartial, disinterested organizations.

Indeed, appraising the evidence fairly and impartially one would have to be possessed of a blind faith in the judgment and infallibility of our present military leaders as affecting the complex and highly organized and specialized field of American industry in all its intricate ramifications before one could reasonably conclude from a survey of our present industrial situation that this legislation was justified. Even from the proponents of the measure there was widely varying testimony as to the actual labor shortages that presently exist but the inference was inescapable from their expressed views that Congress was expected to act upon the assumption that the enactment of this legislation would have an anticipated psychological effect upon the morale of our own armed forces and the attitude and feelings of our enemies. The suggestion was apparent that entirely apart from any actual need that this legislation was sought, not so much because it was necessary but more to implement and strengthen ipso facto, in unstated and immeasurable ways the morale of our fighting forces and the spirit and diplomatic potentialities of our allies and enemies.

There is undoubtedly some dislocation of our productive forces in certain specialized lines due to various causes.

First. Technological changes, retooling, and the shift to new weapons and new types of instruments of war.

Second. Cut-backs of war production during the last 6 months or more of 1944 occasioned by the optimistic view in some governmental and business circles that the European phase of the war was rapidly approaching its end, which gave credence in the minds of many war workers to the belief that they could and should return to regular peacetime employment.

While it is an undoubted fact that absenteeism, turn-over, inadequate housing, faulty transportation, unsatisfactory living conditions, and the hoarding of labor were, and possibly are, factors in the lag of war production in certain limited specialized lines, there was no proof whatever that either strikes or letdowns of any kind attributable to labor had materially contributed to this situation. On the other hand, it is abundantly clear from all the testimony that American labor and American management, working together cooperatively, have achieved the greatest production miracle in history, which has literally flooded the country and the world with goods, materials, and weapons necessary to the war effort, and which have supplied not only our own armed forces but in prodigious quantities and amounts the armed forces of our allies.

Much stress was placed upon current shortages of ammunition, but no satisfactory reason was given why our boys should not be adequately supplied. It was suggested that difficulties of transportation existed. Why there should be any shortage whatever of anything necessary to carry on this war, transportation or anything else, is not comprehensible to me, nor has it been demonstrated that the shortages that existed—and I am willing to concede that they have existed and perhaps do exist—have in any way been attributable to the noncooperation of honest, industrious, and patriotic American labor or the leaders of industry. If people are seeking scapegoats to blame and stigmatize for the deplorable fact that in some cases our armed forces have been lacking in ammunition and other essential weapons of war, in my opinion, they cannot look in the direction of labor or management, and the Congress should not seek, even by innuendo or indirection, to convey to the country that the sporadic dislocations and shortages we are now suffering from are due to the failure of production forces on the home front. Our workingmen of all categories have shown a commendable willingness to go into essential war industry whenever they were requested or assigned. They have done so without force, coercion, or duress; they have done so because they are anxious to make their contribution to our cause, and they have done so voluntarily, willingly, and wholeheartedly in most cases, without compulsion of any kind.

On the other hand, if compulsion should be needed to induce the uncooperative or the unresponsive or the irresponsible to take their places in critical industry, existing Government agencies possess the broadest powers to require adequate performance within the provisions of existing controls. The local selective-service boards have full authorization to grant or revoke deferments and in that way require under threat of immediate induction any person subject to their jurisdiction to remain or continue in essential wartime work. The War Manpower Commission and the United States Employment Service have equally effective powers in that they may grant or withhold referral certificates for employment so that if an individual refuses to work in essential industry where he is assigned, he can be denied work altogether.

For these reasons, I do not believe that such drastic coercive legislation as this which would regiment American citizens and subject them to jail penalties for refusing to comply with directives of local selective-service boards and which would uproot them and their families from their home communities, and possibly send them into remote places to work. I do not believe that the local selective-service boards efficiently can or should be converted into employment agencies but the duty imposed upon them by this act would require them to exercise the functions of employment agencies. I do not believe that Congress ever contemplated that such heavy burdens and responsibilities should be placed upon these boards which exist to channel essential manpower into the Army and Navy and other military units because that is a special function so vital to the war effort that it ought not to be confused with any other.

Because of the high esteem and affection I have for the honorable chairman of the Military Affairs Committee who has demonstrated so much patience, great skill, and ability and laborious painstaking energy in connection with this measure, it is a source of considerable regret to me personally that I cannot support this bill. However, the dictates of conscience and my own conceptions of what I believe to be the best interests of my country and my district, together with my views of the wishes and desires of my constituents, compel an opposite course and I must follow it.

Perhaps a different question would be presented if broader national-service legislation requiring the drafting of labor, capital, and profits and everything else that might be needed to prosecute the war had been proposed to the Congress at the beginning of the war. At the present time, it is too late, in my opinion, after we have established and effectuated the voluntary principle with such sweeping character and effect, for

such legislation to be applied to our complex economic organization without utmost confusion and chaos. The experience of one of our allies which strove for almost 1½ years to acquire effective functioning of national-service legislation is some suggestion of the difficulties involved in such a radical departure from ordinary voluntary techniques that have been used by democratic governments since time immemorial.

I sincerely hope that somewhere along the line as this measure wends its legislative way throughout the Congress, that there will be still further deliberation, calm judgment, less sentimental and emotional feeling and sounder principles invoked which may result in the abridgment of the undemocratic methods prescribed by this bill.

It certainly is not sufficient that we should enact this measure simply because our military leaders have asked for it. They have their own specialized fields in which they have pursued a lifetime training and they are presently confronted with very serious problems of strategy, tactics, and diplomacy that surely require all their attention and ability. They are not, in my opinion, best qualified as experts or specialists to pass upon the very complicated problems of revising and adjusting our industrial techniques of manpower utilization and production during wartime. The persons who are best qualified, fitted, and capable to perform these vital tasks most efficiently and most skillfully are the persons who have lived and worked in industry during their entire lives and who have acquired proficiency, special knowledge, experience, and facility of industrial and labor techniques which suit and fit them best now to resolve and correct any madadjustments, inadequacies, insufficiencies, and dislocations of our American industrial and economic machinery, and thus promote maximum speediest production of critical weapons and supplies.

Summarizing my position on this matter, therefore, I would like to set forth the following objections to this measure.

First. That, on the whole, the evidence before the House Military Affairs Committee and available to Congress from all other sources does not indicate the existence of labor shortages or stoppages widespread or serious enough to warrant the imposition of the drastic revolutionary controls provided by this bill; in fact, to the contrary, labor surpluses due to cut-backs and lay-offs are observable in some localities and resultant manpower would be available for allegedly critical activities.

Second. Existing powers vested in local draft boards, the War Manpower Commission, the United States Employment Service, the War Food Administration, and other governmental agencies are adequate to channel employment from unessential to essential or critical war industry.

Third. To enact this bill now, instead of resolving whatever transient labor shortages exist by appropriate speedily applied voluntary methods, thus expediting needed war production, would result in delay, dislocation, confusion, and impairment of the whole manpower allocation and production process. That it would take at least several months to put this bill into effective working operation, no one has contradicted.

Fourth. The principle upon which this bill is based is entirely foreign to American institutions and is totalitarian, oppressive, and dictatorial and contrary to the spirit of the American Constitution and our accepted democratic way of life. It has been termed a work-or-fight bill. It would be more appropriate to call it a work-or-jail bill. It constitutes a dangerous, unwarranted, and most undesirable regimentation of the nineteen millions more or less of patriotic, hard-working American citizens which it would affect. The bill is a grotesque admixture of totalitarian techniques which certainly have no source or foundation in American life as we have known it, but which are more indigenous to the alien philosophies and arbitrary ideological conceptions of foreign lands.

Fifth. The bill is discriminatory in that it singles out so-called IV-F's and others within certain age brackets for compulsory enlistment in industry and at the same time leaves other equally useful groups outside those brackets free to choose their own employment, in the regular American tradition. It is further discriminatory in that it extends to these proposed industrial draftees, who are presumably being punished under the terms of the bill for noncooperation with the war effort, and who certainly constitute a very small, infinitesimal percentage of our working population, certain special privileges, rights, and benefits heretofore reserved for our veterans, which by the provisions of the bill would be denied to the remaining millions constituting, by and large, the overwhelming mass of faithful American workers whom no reasonable person would dare charge with dereliction of duty or disloyalty to the war effort.

Sixth. In operation the bill would produce division, discord, disagreement, and contention among vital and important groups of our people at a time when the greatest need of the hour is for absolute national unity both at home and abroad.

Seventh. The bill would effect a fundamental change of a revolutionary compulsory character in our American industry and economic patterns at a time when millions of our boys are away from home fighting for freedom, who therefore have absolutely no opportunity to express their views, and would result in reshaping and reconverting along totalitarian lines the very institutions of democracy and freedom which they are fighting and dying in many parts of the world to maintain and protect. These gallant sons expect us to maintain and protect these institutions while they are away.

If this bill is enacted it lays the precedent for legislation similar in principle but more sweeping in character which will change our entire American social order from a basis of freedom to a basis of compulsion, coercion, and force.

Before I can conscientiously vote for legislation such as this, which will unnecessarily and arbitrarily uproot honest, industrious, hard-working American men and their families from their own native soil where they were born and brought up and where they have undeniably worked with fervor, patriotism, and enthusiasm in our war effort and transport them as migrants and totalitarian puppets to distant and remote places, I will have to be shown that in no other way or by no other means of voluntary action and cooperative endeavor can the safety and security of our American Nation be preserved. For the foregoing reasons, I will vote against this bill.

Post-war Military Training

EXTENSION OF REMARKS

OF

HON. ROGER C. SLAUGHTER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of February 4, 1945:

WHICH PUBLIC OPINION?

The cloud over Congress as it approaches the question of post-war military training is, of course, the uncertainty of American public opinion. In many ways the American public's mass judgment has been surprisingly good, but its record on national defense is shocking. And yet the enduring opinion of the American people must be the basis for our national security and influence in the years ahead.

Within the last week 12 university presidents, including the presidents of the University of Missouri and the University of Kansas, have advanced the most potent argument against wartime action on a post-war military training plan. Instead of coming out in flat opposition to a citizen army, they say "Wait."

They point out that our own defense measures will be only a part of a complete post-war program for world peace as well as defense. We can't plan for part without knowing the whole. They stress the difficulties of planning a sound post-war program under the tensions of the war psychology and, they might have added, at a time the best military minds are occupied with the war. Why is it necessary to attempt to read the needs of the future, they ask, when you consider that this is strictly a peacetime bill with no bearing whatever on the pressing business of winning the war?

These reasons for waiting are too logical to be brushed aside, but many persons, both in and out of Congress, believe a long delay is tantamount to killing any plan for universal military training, no matter how much our national interest may require it.

The Army has another good reason for asking action now. Like civilian organizations, the Army should have information on its peacetime job at the same time it is conducting the war. Even plans that must spend some time on the shelf should be made in advance. The general staff should know whether it is headed toward a permanent civilian army, a large standing army, or virtual demobilization with the fate of the Nation trusted to brotherly love.

But, no doubt, it is also true that our responsible military leaders are afraid of the swinging pendulum of public opinion. At the price of terrible waste of lives and na-

tional resources they have been required to build one of the world's most powerful fighting machines is less than 5 years. They have stood at the brink of disaster, they have looked over the brink and seen what was below—at the very time the American public was blithely assuming our national good luck would see us through. These men would be negligent in their duty if they did not use any influence at their command to make sure that it doesn't happen again. In their minds no world order for a conceivable number of years can justify the United States in neglecting its own military strength.

Right now the majority of the American public, by the evidence of all public-opinion polls, is overwhelmingly in favor of universal military training. It would be quite natural for these men to want to strike while the iron is hot—get a good program established—then hope it will provide a peg for future public thinking, a peg to stop the pendulum before it swings too far back.

Considering that in peacetime civilians have always been suspicious of military leaders, General Marshall has taken a very constructive step. His plan for a trained civilian Army is geared more to the civilian type of mind than what usually passes for Army thinking. By proposing a substitute for a large standing Army he goes back to the methods advocated by George Washington and reverses all other military leaders since that day. Without exception they have been big standing Army men.

We all realize that in a democracy public opinion must rule. But on an issue of such wide fluctuations as this you might ask, "Which public opinion? The opinion generated by war or the equally unusual opinion likely to come with the reaction after the war?" As a practical matter, of course, both must be taken into account in drafting any permanent military training plan in times ruled by the war psychology. Neither the grim, sacrificial attitude of wartime nor the complete revulsion against guns after a war is entirely representative of the American people. In the past the military standards have been set at the time of the revulsion—with tragic results.

If the public could be counted on to see more clearly after the war than it does today, nearly everyone would agree with the 12 college presidents and many others who hold to the same view. No matter how a lack of permanent policy might handicap the military leaders in their long range plans, the arguments for delay would still stand.

Will the American people come out of this war clear-eyed and realistic? Most profoundly we hope so. Whether a military training bill passes or fails in this Congress, a steadfast public must be the foundation of our national strength. In the past we have indulged in the luxury of believing our hatred of war required us to throw away the means of war. We indulged in it behind the fancied security of ocean barriers that were blasted on Pearl Harbor day. Perhaps after 160 years we have learned our lesson.

Armed Forces Have a Priority on Beer

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. COCHRAN. Mr. Speaker, we read during the past few days an article about the soldiers in the Thirty-seventh Division celebrating their entry into Manila by sampling the products of a large brewery. I can readily understand why a glass of beer is welcome in that climate.

Some well-meaning people feel that our armed forces should be deprived of beer during the period of the war. Regardless of our views on this subject, nothing could be more harmful than if an order were issued to deprive them of a bottle of beer. Even if they did not want it they would resent, and very properly so, any action that might be taken along this line.

St. Louis is one of the great beer-producing cities of the Nation. Fifteen percent of the beer brewed goes to the armed forces. Under the permission granted me, I include an article published in the St. Louis Star-Times:

ST. LOUIS BEER GOES TO WAR; 800,000 CASES EACH MONTH

Approximately 800,000 cases of St. Louis-made beer go to American servicemen overseas each month, figures from the Missouri Brewers' Association reveal.

Each of four major beer companies here ships 15 percent of its product to the overseas troops, and a fifth company is preparing an extensive shipment to be sent in March.

Figures also reveal that an additional 382,700 cases each month are purchased by the military for consumption by troops in this country, making a total of 1,182,700 cases a month earmarked for servicemen.

That means that, in the course of 1 year, 14,192,400 cases are sent to men either overseas or in military camps in this country. With each case containing 24 bottles, additional mathematics reveals that 340,617,600 bottles of beer a year are sent from St. Louis breweries to servicemen.

The following figures show how much St. Louis beer is going to the armed forces:

	Percent domestic	Percent overseas	Cases, domestic, monthly	Cases, oversens, monthly
Anheuser-Busch, Inc.	5	15	140,000	625,000
Griesedieck Bros. Brewery Co.	0	15	----------	75,000
Hyde Park Breweries Association, Inc.	1	15	1,700	55,000
Falstaff Brewing Corportation	17	0	237,000	(1)
Columbia Brewing Co.	2	15	4,000	45,000
Average	5	12	----------	----------
Total	----------	----------	382,700	800,000

[1] Falstaff now preparing extensive overseas shipment for March.

The George Bill

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. PLUMLEY. Mr. Speaker, many people have asked my position concerning the George bill, which, of course, involves the confirmation of Mr. Wallace as Secretary of Commerce. What the Senate may have done or may do in regard to Wallace is none of my business, legislatively. In the House of Representatives, however, I propose to support any and all measures such as I believe will effectually and absolutely divorce Mr. Wallace from the direct or indirect control of the expenditure of vast sums of the taxpayers' money. He has already wasted too many millions trying to make substance out of his pipe dreams to be entrusted with even a penny in order to advance his socialistic and radical plans to remake this Government fundamentally.

Anybody who reads what Mr. Wallace says must know he is opposed to the fundamental policy of thrift and to the present so-called capitalistic system of government under which we operate. The truth is, he is for about everything the ordinary man in this country is against. He is against those who have. He is for all those who have not, and he does not recognize the fact that in many instances the reason they have not is because they have not the intestinal fortitude to get in a country where what a man has is measured solely on the basis of what he is willing to pay in blood and sweat and tears to get. Wallace is a little of every "ism" and "ist" and their composite. We must see to it that he is not permitted to hold office where he can do us any further harm.

I am opposed to the confirmation of Wallace as Secretary of Commerce, with limited or unlimited powers. While he says he is for the small businessman, his actions over the years belie his words, for, as the slaughterer of little pigs and the plower-under of crops to create a scarcity of food for the common man, the small businessman and his family, he demonstrated his comprehension of the future and present and his incompetence as an administrator and, above all, his lack of interest in the very common people about whom he talks so much, impractically.

In the second place, I am against his confirmation because I am opposed ab initio to this astrologer, starry-eyed dreamer, socialistic, and radical, poor businessman, and to the theories he envisages and openly supports for a paternalistic state. The good old U. S. A. is good enough for me, on the old basis of live and let live, governed by the law of supply and demand.

In the third place, he should not be allowed to use the taxpayers' money in order to advance his selfish plan to make himself President. He has the misguided support of some of those who agree with his policies and visions, and that of others who hope to make his impractical dreams come true to serve their selfish ends. They must be their own juries and judges.

This man Wallace also is the sine qua non and the idol of those who hope to profit at his hands and at the taxpayers' expense, such as the Sidney Hillman C. I. O.-P. A. C. group which demands his confirmation, ill-advisedly.

However, there are those of us who feel that the common people—and that means the practical dirt and dairy farmers, the daily workers, management, labor, industry, and capital, and you and me—would survive Wallace's separation

from any administrative function of the Government. Why pay for a guinea pig and be one at the same time?

Henry Wallace is first, last, and all the time a dreamer of dreams which are impractical of fulfillment. He is the apostle de luxe of the New Deal. He can point to no real, practical, continuous benefit ever derived by the common man from any of his theories which have cost more to make work than they pay.

Very few Vermonters would agree with the policies of Henry Wallace if they were given an opportunity to know what those policies are or if they had been obliged to listen to him expound them as I have had to do over the years when he has appeared before the Subcommittee on Appropriations for Agriculture.

Personally, I do not consider him a real friend of the farmer, dirt, dairy, or other, and therefore and because I feel he is a threat to the continuation of the Government as I have known and love it I shall not vote to give him control over a dollar of any Vermont taxpayer's money.

Transportation Crisis in Grain Belt

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. HOPE. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including a letter recently received from Mr. E. A. Kepley, chairman of the county agricultural adjustment agency committee for Grant County, Kans. In this letter Mr. Kepley points out the extremely serious car shortage now prevailing in western Kansas and adjacent areas. It is indicated that unless cars can be furnished immediately there will be serious losses of grain which is now piled on the ground subject to all the hazards of snow and winter weather.

I think the conditions mentioned in this letter are largely representative of those prevailing in the entire area and unless something can be done promptly, valuable and much needed livestock feed will be lost or seriously damaged.

I want to commend the Office of Defense Transportation for the efforts which it is making to meet this situation, efforts which have not as yet, however, resulted in much success due to the unprecedented weather situation in the Northeast which has resulted in immobilizing so many freight cars in Northeastern yards. The letter in question follows:

ULYSSES, GRANT COUNTY, KANS.,
January 29, 1945.

Hon. CLIFFORD R. HOPE,
House of Representatives,
Washington, D. C.

DEAR SIR: The grain car situation is critical in Grant County so the county A. C. P. committee called owners or operators of elevators in Grant County and prepared the most accurate and conservative information we could.

We find that it will take 153 cars to move the 305,000 bushels of milo that is still on the ground and exposed to snow and weather. In addition the elevators and farm bins have 2,010,000 bushels and will require 1,286 cars to move this. During the past 4 months the four shipping points in Grant County received only 434 cars; in order to move the milo the next 4 months we will need three times as many cars as we got the past 4 months.

In addition we find that the elevators and the C. C. C. has 238,000 bushels of wheat and various farmers have 101,000 bushels of wheat to ship. This will require 188 grain cars.

To get the milo and wheat cleaned up for what promises to be a better than average wheat crop we will need 1,474 grain cars the next 4 months, this is 368 per month or an average of 41 cars per elevator per month.

We understand that a larger than usual percent of grain cars are going to the stations along the main line and the stations in Stanton and Grant County are being neglected and that these two counties have the largest grain sorghum crop ever produced in the county.

We hope this information will be helpful to you in your efforts to get grain cars for western Kansas.

Yours truly,

E. A. KEPLEY,
Chairman, County Committee.

The Greek Problem

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include the following newspaper article which recently appeared in the Evening Star, of Washington, D. C., which article follows:

MR. NICHOLSON DISCUSSES GREECE WITH HIS TONGUE IN HIS CHEEK

To the EDITOR OF THE STAR:

If I were to write the agenda of the proposed conference of Messrs. Churchill, Roosevelt, and Stalin, I would arrange the subjects to be discussed not in the order of their gravity but levity, placing the easiest at the top, the hardest at the bottom. According to this scheme, the problem of Germany would be the first, that of Greece the last to be handled, since the battle of Athens is the prelude of World War No. 3.

I would recommend the listing of the subjects in this manner for expediency as well as for psychological reasons. The conference would start in absolute agreement, which is of the essence. A bright morning is a good omen, heralding a lovely day ahead.

The Greek question is the biggest, hardest, most intricate, and thorny problem before Churchill, Roosevelt, and Stalin, because Greece is the crossroads of the Mediterranean where Russia and England decided to confront each other as potential enemies. The battle of Athens and the simmering civil war in Greece are neither accidents nor phenomena of local significance. They represent the ancient dreadful disease of humanity, which is now spreading all over Europe, but especially in Greece, exhibiting there its most sinister symptoms.

To simplify matters, the civil war in Greece today is a miniature of the "red" revolution in Russia in 1918. The Communist leaders of EAM (Greek front of liberation) are decided to wage war against Regent Damaskinos and Premier Plastiras to overthrow them and erect their own government.

OUTLINE OF OBJECTIVES

They seem to have the following objectives:

First, to Russianize Greece; second, to create a new state cut of the three Macedonias—the Greek, the Serbian, and the Bulgarian; third, to organize a Balkan federation on the pattern of the U. S. S. R.; fourth, to establish an alliance of the Balkan federation with Russia for mutual assistance against any and all aggressors, and, fifth, to try in every possible way to induce Turkey to join the federation, using peaceful means. If these prove futile, to invade Turkey and deprive her of the Dardanelles and Bosporus.

The leaders of EAM, being Communists, take their orders from Moscow. Therefore, the revolution in Greece is sponsored by Russia against England, in spite of the agreement of Teheran in 1943.

When Churchill sits at the green table with Stalin, they will both know that they are enemies. Churchill will smile and ask Stalin his reactions to the fatal drama now being played in Greece. Stalin will say:

"I am not responsible in the least. The blood of the innocent men, women, and children who have been slaughtered in Athens and who will be slaughtered in Peloponnesus, Thessaly, Epirus, Macedonia, and Thrace is on the hands of Siantos, Miantos, and Company. I have nothing to do with their nefarious schemes and crimes."

If the conference were being held in Jerusalem (as I believe it should be), Churchill will remember Pontius Pilate and remark:

"I know you are innocent, but innocence alone in this case does not seem to prevent a murder. Greece is being delivered into the hands of the partisans of Siantos and Miantos. Won't you be a trifle more than neutral in a Roman sense, which I admit is legal, and be a little more concerned in a Greek sense, which is moral and humanitarian? After all, Greece delayed Hitler in the spring of 1941."

THE DIALOGUE CONTINUES

Stalin will interrupt him and say in earnest:

"Please, I am open to suggestions. What is the use of forcing an open door? What would you like me to do?"

Churchill: "I would ask you to order those gangsters to stop shooting, disarm, go home, and shave * * *."

Stalin: "My good man, I have done this very same thing long ago. In fact, I did it in December. I sent a Christmas card to Siantos and Miantos, wishing them in Greek: Epi ghis erene, en anthropis evdokia (Peace on earth, good will among men). What else could I do?"

Churchill: "I am overpowered with gratitude for your tenderness, Comrade Stalin, for that inspiration of genius. And what, pray, was the answer to your most gracious message?"

Stalin: "Niet, rien, nofling. I was hoping for an answer until the end of December. Now, to tell you the truth, I am beginning to despair. I wash my hands from Siantos and Miantos." (He washes his hands.) "Here, I am innocent!"

Then President Roosevelt will hold his cigarette holder as a drummer holds his stick, iron his voice and say:

"My friends, allow me to remind you that the solutions of all the problems of the universe which we put down on paper are yet in nebulous condition, that they will take time, a long time, in fact, eternity, as far as we are concerned, to evolve into worlds innumerable, since we all must strive for perfectionism, no matter if we shall ever attain it or not. Oh, yes, I was speaking of eternity, wasn't I? * * * if you can follow the astronomical way of my thinking * * * Well, why, then, not be realists in practice, as we

are in theory? Why not be optimists, rather than pessimists? And why not leave a few questions unsolved, or at least one question? That one question will be an excuse adequate encugh for us to meet in Jericho in the next crisis. After Germany's surrender, Japan will be with us—pardon me, I mean against us. So, let us promise solemnly to each other that we shall meet again, and again, and again, in order to plan together, work together, and fight together. I move we adjourn."

SOTERIOS NICHOLSON.

Farm Credit Administration Outshylocks Shylock

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. HOPE. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am including two letters from Mrs. Mary Roberts, of Jetmore, Kans. These letters speak for themselves. It is almost unbelievable that a Federal agency should resort to the loan-shark collection methods which these letters reveal the Farm Credit Administration to be following.

A few weeks ago Congress passed legislation authorizing the Farm Credit Administration and other Government agencies to compromise and settle indebtedness owing the Government. It was the intent of Congress in passing this legislation to provide a way whereby people like Mr. and Mrs. Roberts could adjust their indebtedness and get it on a basis where they could pay it. It certainly was not the intent of Congress that any Government agency should go out and browbeat and harass elderly and sick people. It has been a long time since I have heard of anything so brutal and indecent. I may say that this is only one of numerous complaints which I have lately received regarding the collection policies of the Farm Credit Administration and I am today making a request of the chairman of the House Committee on Agriculture to immediately investigate the administration of the recent act and the collection policies now being pursued by the Farm Credit Administration.

The letters follow:

JETMORE, KANS., *January 23, 1945.*

Hon. CLIFFORD HOPE,

Washington, D. C.

DEAR SIR: I am writing you in regard to the resettlement and seed loans. During the dust storms we borrowed money to save the life of our cattle and to live on. For 10 years we never raised a crop; finally had to sell all our cattle and machinery and moved to town and found work to live for 3½ years. Federal land bank foreclosed on our home, our lifetime saving. Four years ago we moved to a farm and asked the F. S. A. to loan us money to get a new start, which they refused to do. We had nothing to live on but what our son in the Army would send us. He never asked for dependency benefits, but preferred to send home what he could. Some months more than $40. That's pretty good for a corporal overseas. He arranged to get a little farm, 160 acres, $2,000, paying $150 a year. Had arrangements made for it to go to me. But now since we have this little start the F. S. A. is trying to get what little we have saved. All the cattle we have probably a dozen with a $500 note against. It makes us pretty discouraged. We are both nearing 60 years and my husband ill with cancer, so most of the work falls on me. I would feel bad to see them get it with my only son fighting the past 2 years in France and never been home for 3 years. It's his money that has kept us alive and paid for what we have. I know you are very busy and I hate to bother you, but thought there might be some legislation you could put through to save what little the farmers have who have gone through this period. Many thousands of the older folk, like us, are in the same shape. But I would like to have a little left when the boy comes home. There are only 33 acres broke on this place. We rent 100 acres but give one-third rent and paid $5 an acre to have it cut and $128 to hire the grain hauled to market. How much have we to live on? We owe quite a hospital bill, as my husband was in the hospital most of the summer and fall. You've no idea what it's like to live in such a fear. I am afraid to get the mail for fear of the sheriff. I always thought growing old was to be pleasant, but not so in our case. Pardon me if I have taken up too much of your time, but what shall we do?

Sincerely,

Mrs. MARY ROBERTS.

JETMORE, KANS., *January 31, 1945.*

Mr. CLIFFORD R. HOPE,

Washington, D. C.

DEAR MR. HOPE: Your kind letter came today, and we really did appreciate getting it. The Feed and Seed Loan got so anxious for their money we couldn't wait for your letter, so we wrote them a check for $50, causing us a $12 overdraft at the bank. We have had two letters from them this week wanting more money by next Tuesday. Mr. Caldwell found out some way we owned four Government War bonds, the $25 type at maturity. He insists we cash them immediately and give them the money. We took them to the post office today. They wouldn't cash them, so we left them at the bank this afternoon to see if they would cash them. It was quite an effort getting enough money to get them. After Pearl Harbor I saved all my dimes to buy them, thinking I was patriotic. We owe the Crop and Feed Loan about $1,100, counting interest, and the Resettlement or Farm Security Administration $680. We have never borrowed anything from them for 8 or 9 years, but when they first started loaning money during the dust storms Mr. Kenneth Hall came out and told us in order to keep the farmers on their farms they would pay them a certain amount, I think, $12 a week. Anyway, this money must be used to build up the farm, thereby furnishing them work and their living. We were then living in a two-room shack. So they gave us 2 months' checks, and we bought the cement, doing our own work. When we got the foundation run for three rooms, Mr. Hall came out and told us they had quit giving the money and we would have to borrow to finish the building. So the $680 is what we borrowed to finish the building. We never would have started if we had known they were not going to keep their word. Of course, the dust kept blowing until we lost all our cattle. Many a day my husband and I spent all day digging out the soapweed, then taking and chopping them up fine with a corn knife until our hands were blistered and bleeding. The Federal land bank then foreclosed on our home. I wish I could find those papers and send you telling us to build, but we have had to move five times since then, and so much gets misplaced and destroyed when you move so much. I think we can borrow about $500 on this farm; but if we did, I want a guarantee that it will clear both Feed and Seed Loan and Resettlement or Farm Security Administration. This is all we have, and everything we have is what our son has sent us. He has earned his money the hard way, fighting and living in mud in France. I had hoped to have something for him when he gets home. We have not written him any of this worry, thinking it might not be best for him. We owe $75 hospital bill at Gleason Hospital at Larned, and I really do not know what the doctor's bill will be in Dodge City; probably $150. Have been afraid to ask, knowing we had nothing to pay with. My husband needs to go to the hospital now, as cancers are breaking out several places, but cannot do it until we have money to pay them. My son never asked dependency for us, thinking he'd rather pay us himself. If he had in the 3 years he's been gone, there would have been nearly enough to pay the seed and feed loan. I will send you our entire income for the month of January: Cream, $25.96; eggs, $15.87. Please tell us what would be the fair way to settle. But, really, we can't endure having them write us two or three times a week, calling us over the telephone (country line), and visiting us. I want some kind of a settlement so we can be at peace once more. Please give us your advice. How much do you think we should pay? Will take your advice. Thanking you again, I am,

Sincerely,

Mrs. MARY ROBERTS.

The American Way Is Winning the War. Why Exchange It Now for Totalitarian Way?

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, I wish to amplify the statements made in my speech on Thursday, February 1, 1945, when the May bill, H. R. 1752, and the Harness-Barrett and the Voorhis substitutes were before the House for consideration.

In that speech I expressed opposition to the May bill and, in turn, supported the Harness-Barrett and the Voorhis substitutes. I voted to recommit the May bill and, on final passage, voted against it. The President has urged that we support the May bill, as General Marshall, Chief of Staff of the Army, and Admiral King, Chief of Naval Operations, have stated that they will need by June 30, 1945, an additional 900,000 men and that they need additional war equipment. The President and the other proponents of this May bill, H. R. 1752, state that 700,000 additional men will be needed in industry and agriculture by June 30, 1945, to provide additional equipment.

I am a great admirer of General Marshall and Admiral King. They have been trained from early boyhood in the art and science of war. They and those associated with them and our millions of American boys have wrought heroically and gloriously on the seven seas,

the five continents, and the islands of the world. There is no brighter chapter in American history. General Marshall and Admiral King say they must have 900,000 additional men by June 30, 1945, and that they must have additional equipment. I accept these statements at their full face value. We should see to it that they have the 900,000 and as many more as needed and that our Army and Navy be supplied with all the munitions of war, food, and clothing, that our commanders say they need—and then some. There must not be any shortage of men, munitions, materials, supplies, and food at any time or anywhere in order to insure complete victory at the earliest moment possible.

As I pointed out in my speech the other day, the President and the Director of the Selective Service can place each and every one of the 18,000,000 men and boys between the ages of 18 and 45 covered by this bill into the armed forces, if they desire and after they are there, require them to perform any service they may be able to perform, either for full active duty or for limited service. They can draw from this pool of 18,000,000 men between the ages of 18 and 45 except the joker in the Selective Service Act, which gives a privileged status to more than 300,000 able-bodied young men most of them single and who have been passed on as in good health and able to perform active duty. Most of these are clerks, performing nonessential jobs in the Government and they could be spared much more easily than to further strip the farms and industry of young men engaged in war production. It would be an easy matter if the administration were willing to have this provision stricken from the law and put these 300,000 young men on an equal footing with other able-bodied young men in the Nation.

Investigation has disclosed that by the end of 1943 there were 3,007,000 Federal jobholders. This was increased in 1944 by 302,000. Therefore, there are now 3,309,000 Federal officeholders and workers. It is generally agreed that the services of a million or more of these could be very well dispensed with and this would add to the efficiency of the service and save the taxpayers billions of dollars. But instead of cutting down this vicious waste of manpower, this conscription bill will add no one knows how many, but perhaps 100,000 or more Federal officeholders; and other bills are being pushed by the administration that will add many thousands more.

If young men under the age of 18 volunteer for the Navy as they have been and are doing, at least 150,000 will be inducted before June 30, 1945. More than 420,000 able-bodied young men will reach the age of 18 and be subject to the draft before June 30, 1945.

But there still remains this large pool of 18,000,000 men between the ages of 18 and 45 within the draft age and subject to the draft who have not been inducted into any branch of the armed services.

There has been a wide discrimination against the colored men for the armed services, and there are thousands of young women who are willing and who could be inducted into the armed services to perform work that is being done by young men capable of combat duty. We can easily get an additional 1,000,000 men for service by June 30, 1945.

This conscription bill includes farmers. The farms have been hit harder than any other group. It is urged that with the farms stripped as they are of manpower, that 200,000 additional be taken from the farms. This would be a serious blow against our production of food, feed, and fiber that are so essential to winning the war. The facts disclose that there can be no doubt but that General Marshall and Admiral King will have all the men they say they need for our armed services.

IS IT NECESSARY TO CONSCRIPT AMERICAN LABOR?

In order to produce the equipment that General Marshall and Admiral King say is needed, the President and other proponents of this bill say that we must have 700,000 additional men and women for war production by June 30, 1945. The Federal Manpower Commission says that we need less than 160,000. They have been organizing our manpower resources during the war. They should know more about this question than any other person or agency of the Government. The President appointed them and if they are inefficient he should name a new manpower commission. They have been established and have a set-up in every community in the United States.

Whether it is one hundred and sixty thousand or seven hundred thousand, what are the prospects of securing this number of men and women over the period from now until June 30, 1945? We are told that a million and a half workers in industry left their jobs in the summer and fall of 1944. That may be true; but who is to blame for this condition?

ADMINISTRATION POLICY RESPONSIBLE FOR WORKERS LEAVING DEFENSE PLANTS

It was not due to any lack of patriotism on the part of the overwhelming majority of these workers. They heard President Roosevelt, Prime Minister Churchill, and many leaders of this country and the Allied Nations say, and they read many magazine articles and editorials claiming, that the war in Europe would be over in 1944 and that many war plants would be eliminated and millions of workers would be released and would have to go back to peacetime production in industry and on the farms. They knew of hundreds of war plants being closed down and they knew of tens of thousands of men and women who were being released from work.

At the urgent request of the President and his administration for many weeks last fall Congress devoted a great deal of its time to working out a reconversion bill to provide for the reconversion from war industries to peacetime industries, and it was alleged there were $100,000,000,000 surplus war supplies and property to be disposed of. These overoptimistic statements and the closing of plants and people being let out from work led the great majority of these million and a half to feel that they had better get back to their homes and secure peacetime jobs.

We might say in passing that before the election the President told of the miraculous job that industry, management, agriculture, and labor had done in the field of production. When the American workers learned that the war would not be over in 1944, every day since early in November thousands have been flocking back to the war plants. The numbers who have returned run into the hundreds of thousands and the numbers are increasing every day. If nothing more was done I am sure that whether we need 160,000 as stated by the Manpower Commission, or 700,000 as claimed by the President and the backers of this bill, many more than that number will be back in the war plants long before June 30, 1945.

IS IT WISE TO CONSCRIPT AMERICAN LABOR?

Apparently many persons do not recognize the difference between being drafted to work for the Government and being drafted to work in civil life for private individuals and companies who are engaged in business for profit.

Great Britain and some of our other allies, as well as our enemies—Germany, Japan, and Italy—have been operating under a policy of controlled enterprise and conscripted labor.

Great Britain in 1943 and 1944 had an absenteeism of workers of 10 percent. In the United States our absenteeism for 1943 and 1944 was between 6 percent and 7 percent.

In Great Britain in 1944 loss of time by strikes was 16 percent greater than strike losses in the United States—in man-days lost. This statement is taken from reports of the British Ministry of Labour.

British employers report that labor is unwilling because it is drafted, and that only a minority of the conscripts are satisfactory laborers.

Donald Nelson, who made such a wonderful record as head of our War Production Board, declared, "We call our secret weapon the initiative, intelligence, and know-how of free American workers."

Hon. Joseph Keenan, vice president of the War Production Board, states that "labor's morale, her sense of participation * * * have been so heightened, that they have broken all records."

Notwithstanding that industry and management, agriculture and labor have been greatly handicapped by the mistakes and blunders of the administration, their record of production in every branch of industry, transportation, agriculture, and labor has been one of the miracles of recorded history. Labor and industry have also made some mistakes. Some men in industry have not cooperated. Some labor groups, against the advice and appeal of their national leaders, have engaged in work stoppages. Yet none of our allies and none of our enemies with conscript has approached American production in man for man, machine for machine, and unit for unit. There must be no halting or stoppage of industry or labor until victory is won.

A MARVELOUS RECORD OF ACHIEVEMENT

Industry and management, including chambers of commerce, the National Manufacturers Association, railroads, truck and bus lines, a great majority of the farmers, and labor—American Federation of Labor, the railroad brotherhoods, the United Mine Workers, Congress of Industrial Organizations, and other labor groups—in fact, all labor groups that we know anything about, except a small group of those with communistic front, have expressed strong opposition to the May bill, H. R. 1752.

We look to our generals and admirals to know our needs of men and materials. They are trained and experienced in their particular fields. On the other hand, we must look to industry, management, agriculture, and labor to advise us as to the best course to follow to provide the materials, equipment, and munitions for our war effort. These groups of producers are experienced and trained in their particular field. It seems to me that it would be unwise to follow any other course.

We started from scratch in 1940 and have built the greatest navy and merchant marine that the world has ever seen. It is generally said that we now have a greater tonnage of fighting and auxiliary vessels and cargo vessels than all of our allies and our enemies combined. We have supplied ourselves and billions and billions of dollars of war supplies for the Allied Nations. We have furnished Great Britain more than twenty-five billion of lend-lease. We have been thrilled over the wonderful progress made and being made by the Russian armies. I saw an article recently by Miss Christine Sadler in which she stated that the present Russian drive might be labeled, "Made in the United States of America." Our own Government F. E. A. lists the following that we have furnished the Russians: 11,000,000 pairs of Army boots, 97,000,000 yards of cotton cloth, 50,000,000 yards of woolen cloth, 58,000,000 yards of webbing, 294,000,000 tons of explosives, 331,000 motor vehicles, 1,045 railroad locomotives, 7,164 freight cars, 1,000 dump cars, 100 tank cars, 2,120,000 tons of steel, 478,000 tons of railroad rails, 110,000 tons of wheels and axles, 233,000 tons of aluminum, 314,000 tons of brass, 65,000 tons of copper products, 16,600 tons ferro-alloys to be used in the manufacture of steel in the Soviet mills, 733,000 tons of nonferrous metals, 12,200 airplanes, 1,300,000 tons of petroleum products, 638 tons of chemicals, and so forth. This does not include the billions of pounds of food, feed, clothing, powder, shells, and other war equipment.

This tremendous aid to Russia was made possible through production in our industries, plants, shops, mills, and mines, and on our farms and transported by American railroads, truck, bus, air lines, and ships, and this represents only a part of what we have delivered to our allies—Great Britain, France, Italy, China, India, Australia, New Zealand, Canada, the South African Republic, Ethiopia, north Africa, Mexico, Cuba, and other Central and South American countries. These are the results of the genius and skill of patriotic Americans engaged in industry, management, agriculture and labor. Eighty-five or ninety percent of the 12,000,000 American boys in our armed forces come from the homes of those engaged in industry, management, agriculture, transportation, and labor.

Can it be truthfully said that they are not sincerely and deeply interested in winning this war and having their boys and my son to come back to their homes and loved ones?

Would it be the part of wisdom to ignore the advice of these persons engaged in production and enter upon an entirely new and untried policy at this stage of the war, that those engaged in production, say, will bring about confusion, lower the morale of our workers, and decrease production? The American people fought a war and adopted the thirteenth amendment to do away with involuntary servitude. We have fought all of our wars without conscription. We have won the battle of production and are winning this war without conscription. This has been the policy of our Government from its beginning. We are now called upon to abandon this well-tried American democratic policy and embark upon the policy of the totalitarian governments and the policy used by our ally, Great Britain, without success. Is it the purpose of this administration to secure greater production? If it is, let us appeal to those who have made this wonderful record of production, with their experience and achievements behind them, to go forward, as they can, to greater achievement, or is it the policy of this administration to further regiment and tighten their control on the American people, leading in the end to the regimentation and control of industry, management, agriculture, and labor. Why should our boys fight for liberty, freedom, and democracy in other lands and for other lands and other peoples, and come home to find that these great fundamentals have been destroyed here at home? The only group that has claimed to favor labor that is supporting this bill is Earl Browder, the leader of the Communists in the United States and the Daily Worker of New York, the newspaper and mouthpiece for the Communists in the United States. They favor this bill. It is very much in line with the totalitarian policies of communistic Russia. Do they indulge the hope that this will disrupt our country and bring about disunion and discord for which Communists throughout the world have striven for a quarter of a century? I have no objection to Russia having any form of government her people may desire but I do not want the Russian form of government imposed upon industry, management, agriculture, or labor or any part of the American life.

If the objection to the May conscript bill was confined solely to labor, the American people might hesitate to follow it but the objection to this bill represents every agency of production in this country, capital and labor, industry and management and workers, farmers and those engaged in transportation, chambers of commerce, manufacturers associations, and Federal Manpower Commission. They all warn the Congress and the country that this bill will hurt and not help production and threaten the liberties of the American people.

WHEN DEMOCRACY BREAKS DOWN

David Lawrence, the editor and publisher of the United States News, who cannot be charged as a spokesman for labor or any other group, but one of the very ablest commentators on public questions, sensed the danger in this measure and in an able editorial warns the Congress and the Nation against its adoption:

The American people have been taught to believe that totalitarianism is bad and that democracy can wage war without adopting the Fascist formula of forced labor.

The American people have been taught to believe that involuntary servitude is bad. The Constitution explicitly forbids it.

Military service is not involuntary servitude because service for one's country is not service for anybody's individual profit.

But enforced service in a civilian plant, operated by civilians and in which civilians have a stock ownership and seek to make profits, is involuntary servitude.

The cry that in the midst of war the Constitution must be abrogated is the same cry of expediency that the totalitarians use when they abrogate human rights.

The House of Representatives has passed a manpower bill which calls for forced labor. It is a grave mistake in policy and marks a tragic chapter in the history of American democracy.

* * * * *

It is difficult to see how the Congress, if it enacts the pending manpower bill, can hesitate to remove all profit from any enterprise where there is forced labor. If forced labor is to be construed as service to one's country, let it be clearly for that purpose alone, and then, logically, management and ownership must be conscripted, too. It will be a surprise if the A. F. of L. and the C. I. O., who are opposed to the forced-labor bill, do not insist on such legislation to cover management and ownership.

Without pressure the House would have adopted H. R. 1803, the Harness-Barrett substitute to the May bill. With all the pressure the administration could bring to bear and with the appeal of the Speaker that we should adopt the May bill without any amendment, the Harness-Barrett substitute lost by only 10 votes. This substitute bill was backed by all of the groups that are opposed to the May bill. H. R. 1803 would have corrected the waste of manpower in the Government and in the Government shipyards and the cost-plus war plants. There are thousands of unnecessary men and women in these Government shipyards and these cost-plus war plants. That has been clearly demonstrated by the investigating committees of the House and Senate and by reports that all Members of the House and Senate have received from reliable persons working in these plants. There is nothing in the May bill to reach this hoarding and waste of manpower in the Government or in these Government-owned and controlled plants and the cost-plus plants. This waste of manpower has been denounced by industry, both management and labor. H. R. 1803 will carry out the policies of our Government and will

strengthen those policies by giving further aid to the War Manpower Commission. The Federal Manpower Commission was appointed by the President and can only recommend. The Harness-Barrett substitute gives the Manpower Commission the power to act and to cooperate with industry, management, agriculture, and labor in cutting out this waste and hoarding of manpower by the Government or anybody else and to distribute the manpower through this cooperation instead of by conscription. I know that we can accomplish more by cooperation of industry, management, agriculture, labor, and the Manpower Commission, acting with patriotic zeal, to increase our production and win the war as quickly as possible, than we can by conscripting 18,000,000 men when they say we only need 700,000, and set up a new far-reaching bureaucracy by placing this matter into the hands of the local draft boards of the Nation. Whatever shortage there is, it is more or less local. It does not exist throughout the country. They have an excess of manpower in most of the communities.

We have in this country nearly 53,000,000 workers employed in some capacity or other. Nearly one-half of this additional manpower asked for could be secured from the excess manpower in the Federal offices and all of it could be secured in the excess of manpower in the Government plants and the cost-plus plants.

The Government has been wrong in establishing and increasing many of the plants of production in populous and crowded centers of the Nation necessitating the expenditures of hundreds of millions of dollars to provide homes, and so forth, for the workers. If these plants had been distributed throughout the country; for instance, in many parts of Kentucky where they have ample supplies of timber, coal, gas, water, highways, railroads, and over supply of men and women capable of doing war work there could have been no shortage of manpower, and the manpower would be distributed throughout the Nation. Under the May bill, men and women can be taken from their homes, farms, and small plants and sent to any part of the world and required to remain there until the war closes. That may be 1 or that may be 5 years. No one knows. They could be forced to leave their families and farms and go where a draft board may say and work for some other farmer if the draft board decides his farm is more productive, and a good machinist and mechanic might have a little business and produce war materials, but he might be forced to go to some larger plant and use machines and give up his own plant and his family, and the small number who have refused and still refuse to do useful war work when drafted would have all the benefits of the Soldiers' and Sailors' Civil Relief Act. This would put them on a much more favorable basis than tens of millions of patriotic men and women who have been and are doing their full share in helping to win the war. In other words, the faithful and patriotic are penalized and the indifferent and shiftless will be rewarded. That alone will create discord. They say this will reach folks in the pool rooms and other places, the idlers and shiftless. The British authorities say that only a small part of the conscripted workers perform satisfactory service. Why not take these persons who refuse to work or do their part in this war into the armed services? They can do that and compel them to do limited service, if not actually to fight.

Believing that this legislation will cut down production and not increase it; that it will be hurtful and not helpful, I have and shall continue to oppose legislation in the form of H. R. 1752, the May conscription bill.

Why the New Deal Wins

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1945

Mr. GAMBLE. Mr. Speaker, under leave granted me by the House on Friday, February 2, 1945, I insert an editorial titled "Why the New Deal Wins," which was published in the Herald-Statesman, of Yonkers, N. Y., on January 15, 1945:

WHY THE NEW DEAL WINS

The Dunn Survey of Greenwich which came closer in its preelection predictions last fall than did any other of the numerous poll takers and political prophets, has now furnished leaders of the Republican Party throughout the East with its analysis of the reasons why the New Deal continues to win.

Although the election is long past, the return of Congress, and the State Legislature at Albany has revived political interest and there may be timeliness in consideration of the review of past events.

"You must face squarely the fact that the Republican fight is to regain, not to preserve, free representative national elections," is the warning Rogers Dunn gives the G. O. P. chieftains.

"You did not 'almost' win the 1944 election," he writes. "Neither does the close vote justify optimism for 1948 any more than the close vote of 1940 justified optimism for 1944. Once again, New Deal methods worked with precision and returned the majorities planned more than a year before election day—majorities which experience showed could be maintained regardless of campaign issues and qualities of the Republican candidates."

What are these successful "New Deal methods"?

The Dunn Survey purports to show that they are based upon a "bought" vote, by which is meant the strategic placing of Federal employees in doubtful or pivotal States with large votes in the Electoral College. In July 1943 Mr. Dunn sent a questionnaire to Republican Governors, Congressmen, National and State committeemen, asking: "What is the average number of Democratic votes you would expect each Federal employee could influence?"

The answers ranged from 3 to 10 votes for each such employee.

Taking a low average of four to be conservative, the survey then shows that 2,800,000 Federal employees influence 11,200,000 votes and from this draws this conclusion:

"Forty-eight million votes were cast in 1944. If Roosevelt had only 40 percent of the normal or free vote, the Federal employee vote of 11,200,000 would give him 54 percent of the total vote. He won 53½ percent.

"You must recognize that you have never been fighting Franklin Roosevelt and his uncanny political touch," Mr. Dunn tells the G. O. P. leaders. "You have been fighting the new instrument of public power, a part of which, the bought vote, has been perfected as a high precision machine, unbeatable until directly engaged. You have had 8 years and five national elections in which to learn this, but you have failed."

Well, what can the Republican Party do about it?

Mr. Dunn suggests two courses, if the New Deal is to be defeated in 1948. One plan is to have the G. O. P. openly state the facts, admit incapability of defeating the bought vote, and thus afford at least 22,000,000 opponents of the New Deal an opportunity to know the truth and perhaps cooperate in the solution.

The second plan is for the G. O. P. to organize a small group of capable and independent thinking men and women who perceive the peril and who will seek and consider every conceivable solution before 1948. "Whenever men have created new offensive weapons," counsels Mr. Dunn, "others have always found successful counter measures."

Well, we don't know. But we hope somebody does something about it.

Only God and a Few Humans Know

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from Industrial and Engineering Chemistry magazine:

ONLY GOD AND A FEW HUMANS KNOW

The head of one of the most highly rated departments of chemistry in this country tells us:

"Instead of a normal senior class of chemists and chemical engineers of about 100, I met my senior class on Monday consisting of 1 girl, 2 IV-F men, and 2 men in I-A who will almost certainly be called before they can graduate in February. This is the class which ordinarily would graduate in June. In other words, it is our normal class. At the present time, instead of having about 80 graduate students in chemistry and chemical engineering, we have 4 girls and 4 IV-F men. Of the girls, 1 is married to a staff member, and the other is an alien."

In all honesty, Mr. Roosevelt, Mr. Stimson, Mr. Patterson, Mr. McNutt, and General Hershey, what can the post-war future of America be when conditions such as these are permitted to continue? You are the men who can change the present senseless interpretations of the selective-service law.

Pre-war Germany, we suspect, had more chemists in proportion to its total population than the United States and, for all we know to the contrary, still has them. Certain it is that such secret weapons as V-1's, V-2's, and probably V-3's are not the brain children of economists and statisticians. Our allies and our enemies alike are preparing the greatest number of chemists in their history for service, once the present conflict is over, but we—we are sending our future chemists into the armed forces to perform every sort of task except making America technologically strong in peace or in war.

The present conflict is no 2-week National Guard encampment. We have finished the third year, and the end is not yet in sight. Unless we do something constructive in the matter of returning the mental cream of the Nation's youth as bona fide students to its classrooms, we will see an entire generation of scientists lost to this country.

Today we have at least 15,000 trained chemists and chemical engineers in the armed forces. Are they serving as chemists and chemical engineers? No; not more than a mere corporal's guard.

Why? Simply because their services as chemists and chemical engineers are not required in the Army.

They are sorely needed in America's production army—the army that is producing explosives to make our guns vocal, the army that provides aviation gasoline for our boys to fly the planes, the army that makes sulfa drugs, penicillin, blood plasma, and DDT so that our boys may live instead of dying on the frozen fields of Germany or in the oozing mud of Leyte. Yes; it is also the army that can make worth-while jobs for our boys to come back to instead of raking leaves and selling apples.

Why is this challenge to America's technological strength and supremacy in the post-war era permitted to continue? Only God, Mr. Roosevelt, Mr. Stimson, Mr. Patterson, Mr. McNutt, and General Hershey know, and it is hardly practical to ask God why.

Letter to Former Governor Gardner, of North Carolina

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. KOPPLEMANN. Mr. Speaker, I was so impressed with the letter written by Mr. Drew Pearson to former Governor Gardner, of North Carolina, which was reproduced in the Washington Post under date of February 6, 1945, that I felt the Members of this body would be enlightened by reading the facts brought forth by Mr. Pearson.

At this time when there is so much misapprehension regarding the true facts, when so much propaganda is going the rounds in a campaign to crucify one of our greatest Americans, Hon. Henry A. Wallace, I want to commend Mr. Pearson for the convincing manner in which he has presented the real facts in connection with this Wallace appointment.

I am one who thinks Henry Wallace is a great American. I know that Wallace's pulse beats for the common people. I know that Wallace has not lost the common touch. The service rendered by Secretary Wallace as directing head of the Department of Agriculture, when he supervised and passed on loans totaling more than $6,000,000,000 to save the farmers of America, is too recent to be forgotten by me.

Mr. Wallace's record as an administrator has placed him among the forefront of those who did the most to bring us out of economic chaos in which we found ourselves during the early months of 1933. The enemies of Henry Wallace know he is honest and fair. It is to such men that our country must look in the future if we are to remain free.

Within 2 hours after the Senate passed the George bill friends of Henry Wallace in my home city of Hartford formed the first Wallace for President in 1948 Club in America. There will be other such clubs all over America—yes, hundreds of them.

We need a man who has the wisdom of Henry Wallace for our post-war economy.

I am grateful to Mr. Pearson for writing such a splendid letter in behalf of such an outstanding American.

Under leave given me, I wish to extend my remarks by inserting in the RECORD the letter of Drew Pearson above-mentioned:

WASHINGTON, *February 3, 1945.*

Gov. O. MAX GARDNER,

Shelby, N. C.

DEAR GOVERNOR: We were talking last week about Henry Wallace. And since you as an old friend have been so patient and generous in defending me in the past, I thought I owed you a further explanation of my ideas on Henry Wallace.

We were remarking that Wallace was politically inept. He has been presiding over the Senate for 4 long years. Usually when a Senator or anyone close to the Senate comes up for confirmation for an administrative appointment, he is confirmed by acclamation, regardless of his political views, regardless of committee hearings, and regardless of research into his past.

The Senate would have confirmed Jack Garner for the dual job of Loan Administrator and Secretary of Commerce without any hesitation whatsoever. Also Charlie Curtis—though neither was banker nor businessman. They were skilled, however, at poker and smoked-filled-room politics, and they would have been confirmed.

Henry Wallace, on the other hand, has hardly made more than half a dozen close friends in 4 years of presiding over the Senate. He has no private refrigerator. He does not even smoke. When Senators dropped in to see him he was timid and shy and talked about foreign affairs and preclusive buying or seed corn. He just lacked the aptitude for winning close friends and influencing Senators.

WOODROW WILSON AND WALLACE

But sometimes I wonder whether in the broader sense Wallace hasn't been a very smart politician. For while lacking friends in the Senate he has won millions throughout the Nation. As you remarked, his devotion to principle, his austerity, his inability to compromise is so much like another great man the Senate rebuffed—Woodrow Wilson.

As the world looks on Woodrow Wilson's fight over the League of Nations, it is generally recognized that that battle was the turning point toward a new war. And what I am afraid of is that the current Senate fight over Henry Wallace (in which he has already lost more than 50 percent of the battle) may be the turning point toward another different kind of war.

You know far better than I the danger of economic war which can follow military victory. As Governor of North Carolina, you told me how even your efficient State had difficulty meeting its financial obligations in the depression days of 1932. We all remember the threats to lynch judges in Iowa, and how the drawbridges across the Potomac were raised for the first time in history to prevent 20,000 angry, hungry war veterans from storming the Nation's Capitol.

And what I don't believe the Byrds or the Baileys, the Tafts or the McKellars have any conception of is how easily this may happen again.

MUST NOT HAPPEN AGAIN

In the European war theater today there are 8,000 American soldiers absent without leave. While many of these are technical A. W. O. L.'s, on the other hand we already know how the black market has prospered in France, and we know that some American troops, especially in Italy, have left the Army permanently, have married local women, and live by the black market or by raiding the vast stores of American supplies in France and Italy.

While these are in the vast minority, we cannot escape the fact that almost every American soldier will come back, trained to fight, but only too anxious to get back to work—if he can get work.

We also cannot escape the fact that one result of this war has been the tremendous enhancement of the prestige of Soviet Russia. Prestige always accrues to a nation winning great military victories. In addition, I remember an observation by Congresswoman CLARE LUCE last year that Russia had now usurped the place occupied by this country when for about 100 years after 1776 we were looked up to in Europe as the young, vigorous, revolutionary country which set the political pace for the rest of the world.

Mrs. LUCE is probably right that today in France, Italy, Greece, increasing numbers of people are looking toward Russia as the young revolutionary country now setting the political pace for the world.

UNITED STATES LABOR AND RUSSIA

How much American soldiers coming home from Europe will be influenced by the inspiration of Soviet Russia, I don't know. If they have jobs, the influence should be negligible. But the risk is there. The risk also exists here at home.

Labor, which carried the main load in reelecting Franklin Roosevelt, was not happy over the appointment of the new millionaire antilabor team in the State Department. However, labor figured that the Cabinet would be balanced by appointment of its own friend and chief champion, Henry Wallace.

Now, however, they see Wallace bearing the brunt of the bitterest political attack since the days of William Jennings Bryan. They see him getting, at the most, merely control over the Census, the Patent Office, the Weather Bureau, the Bureau of Standards, the Coast and Geodetic Survey, and other routine functions of the Commerce Department, with absolutely no power to help provide jobs or influence the economic future of the Nation.

All of which is liable to leave a sour taste in the mouths of several million people.

Even assuming that Henry Wallace knew as little about administrative government as some of his refrigerator-frequenting predecessors in the Vice Presidency; even assuming he had never run the largest agency of the Government, the Department of Agriculture, for 8 years with an A–1 record; even forgetting that as Secretary of Agriculture he loaned more money than Jesse Jones to more people and with a higher percentage of collections; even so, the bitter fight against Wallace is likely to leave a sour taste in the mouths of many people.

CHAMPION OF COMMON MAN

For Henry Wallace to millions of people has become a symbol. He has become a symbol representing the things which Roosevelt once fought for when his administration was young and vigorous. He has become a symbol of 60,000,000 jobs, a champion of the common man.

And it doesn't make for good public reaction when he is opposed and sabotaged by the millionaire apple-grower of Virginia, the millionaire publisher from Ohio, and the representatives of the Duke power interests in North Carolina. I should think that if the Byrds and the Baileys, the Tafts and the

McKellars were smart they would take the initiative in letting a man like Henry Wallace bear the brunt of the terrific post-war headaches. Then the political repercussions in case of failure would not be so violent.

But if the men who have learned to shoot straight come back to a land where history repeats, and the same thing happens as after the last war, and if they see the same little group of obstructionists responsible, then I, for one, fear the consequences.

That is why I think the Senate fight over Henry Wallace and his plans for the common man may take its place in history alongside the historic fight over Woodrow Wilson and his plans for permanent peace.

I only wish that some of your friends in the Senate had your broad understanding of these problems, or at least your sympathetic desire to inquire into them.

Your friend,

DREW PEARSON.

Kansas Produces

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. SCRIVNER. Mr. Speaker, from my home city, Kansas City, Kans., comes news which is cause for just pride. In 23 January working days 315 Mitchell B–25's were delivered, and in addition to this output an equivalent of 20 more B–25's was produced, in spare parts, by the North American Aviation Co. of Kansas. Thus, January 1945 was the greatest production month in this company's history.

Not only that, but in our sister city of Wichita Boeing Airplane announces that January was its month of largest production of B–29's—a month in which accelerated schedules were exceeded.

All this was in spite of the most severe winter weather the State has experienced in many years.

Kansas workers and plants deserve our gratitude. Mr. Speaker, it is apparent that Kansas sets the pace for others to follow.

The Army's New Correction Division

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MARTIN of Iowa. Mr. Speaker, on Wednesday evening, January 10, 1945, I had the pleasure of hearing a most interesting address on the subject of the Army's new Correction Division by Col. Marion Rushton, A. G. O., before a joint meeting of the Committee on Military and Naval Law sponsored by the American Bar Association at the Army and Navy Club.

I have been very much interested in the kind of treatment which our soldiers receive when they infringe the military laws and I was truly amazed at the degree to which the Army is going in an effort to maintain the highest possible standards of military justice, particularly as it pertains to the rehabilitation of our own military prisoners.

Colonel Rushton in the course of his remarks outlined in clear and forthright terms the mission of the Correction Division which has been set up in the Adjutant General's Office of the Army Service Forces for the purpose of administering this vital program within the Army.

The remarks of Colonel Rushton are of such a nature as to be of profound to every Member of Congress and for that reason I am asking unanimous consent to have printed in the RECORD this most illuminating talk by the officer who heads up this all-important Correction Division.

The address follows:

The Army is now operating an extensive, complex, and far-flung correctional and penal system embracing institutions from simple stockades enclosed by a few strands of barbed wire to walled-in disciplinary barracks like Fort Leavenworth, Kans., and Green Haven, N. Y. In number, the Army's general prisoners alone exceed the inmates of Federal prisons or those of the State of New York. In addition there is an undetermined number of garrison prisoners confined in stockades and guardhouses in practically every part of the world. With the increase in the size of the Army its prisoner population is growing and experience in World War No. 1 indicates that the peak will not be reached until after the termination of hostilities.

The military prison has a difficult role to fulfill since it serves two masters—the Army and the public. It must be operated in such a way as to maintain discipline, morale, and efficiency and to exercise a deterrent effect on potential offenders and conserve manpower. On the other hand, its affairs must be so conducted that the public has confidence that military offenders are not being treated inhumanely or with undue severity and yet that men who have failed in their military duty and are safe in confinement, instead of at the battle front, are not pampered.

Many departments and practically every troop unit in the Army are concerned with the handling of military offenders. The Provost Marshal apprehends and arrests them, the Judge Advocate General tries and sentences them, the Surgeon General, through his neuropsychiatric service, helps to classify them, the Adjutant General exercises over-all staff supervision and recommends clemency for the most serious cases, while the service commands are responsible for the care, custody, training of all general prisoners within their boundaries, and the restoration to duty of those thought to be more readily salvageable. Every command unit from companies, batteries, or troops up has its stockade and garrison prisoners. Besides their own misdemeanants such institutions are frequently called upon to take custody of persons awaiting trial, or sentence, or transshipment to the place of ultimate confinement. This heterogeneous group is constantly changing and presents a focal point for trouble unless carefully watched.

The Correction Division has been organized to study and to meet these problems. It is charged with the development of standards, policies, and procedures to be applied by those having jurisdiction over military prisoners without interference with the proper functions of command. The Correction Division's mission is to devise plans and specifications for standard guardhouses and stockades of various types, for rehabilitation centers and branch disciplinary barracks; to indicate what minimum facilities are necessary to insure proper segregation of vicious inmates and meet the ordinary requirements of custody, housing, and sanitation. It recommends standard tables of organization for institutions of various types and personnel standards with respect to mentality, physique, personality, and aptitude, and assists in putting into effect programs and procedures that have been found to have constructive value for both short-term and long-term prisoners and to increase the likelihood that they will make good on restoration to duty or on release.

Army prisoners considered capable of restoration to duty are committed to rehabilitation centers; others for convenience of custody or training are kept in post guardhouses, disciplinary barracks, or Federal penitentiaries. On the 1st day of January 1945, there were a total of 24,348 general prisoners under Army custody or supervision throughout the world. That compares with approximately 18,000 Federal prisoners and 12,500 prisoners in the State of New York. As of the first of the year a total of 7,710 general prisoners were in rehabilitation centers of which there are 6 in this country located in the Second, Fourth, Fifth, Seventh, Eighth, and Ninth Service Commands; 8,562 were in disciplinary barracks, of which there are also 6 located in the same service commands; 1,843 were in Federal penitentiaries, the younger ones in reformatories like Chillicothe and El Reno, the old offenders in penitentiaries like Atlanta and McNeil Island; 4,702 were in overseas installations; and 1,531 were in guardhouses awaiting transfer. No garrison prisoners are included in these figures—it is probable that they number an additional 20,000 around the globe.

Our gross intake of general prisoners has averaged 2,045 per month during the last 6 months and although we have restored an average of 747 per month to duty and released an average of 407, there has been a net gain over the last 6-month period of 891 prisoners per month. On the first day of last year, 1944, the total number in confinement was 11,701. In other words, we have grown more than 100 percent within the last year and we are still growing.

At the end of 3 years of this war, we have about the same proportion of general prisoners to over-all strength as prevailed at the end of 2 years in the last war, that is, thirty one-hundredths of 1 percent or 1 prisoner for every 330 soldiers. How long the war is going to last and how high the proportion is going to mount as we begin scraping the bottom of the personnel barrel is anybody's guess. At the end of the war, whenever it comes, it is foreseeable that there will be a widespread feeling that all prisoners who are charged solely with military offenses and of many who are charged with minor civil offenses should be released. Just what the effect of this feeling is going to be is difficult to foresee, but certainly the rate of decline from the peak at the end of the war will be very rapid in the rehabilitation centers and they in all probability will be quickly closed up. But in the disciplinary barracks the decline will be less rapid. It is contemplated under Article of War 42 that all prisoners of the nonrestorable criminal type be confined in Federal penitentiaries and it is to be hoped that by the end of the war all such prisoners will be confined in civil institutions rather than those operated by the Army. But for one reason or another there will be some prisoners left in the disciplinary barracks to constitute a permanent problem until their sentences run out.

Although exact figures cannot be known so long as the war lasts, it does seem clear that

the rapid expansion now indicated will not long continue, and this, of course, has an effect upon the type of buildings and equipment which the Army should install. The maximum-security prison at Fort Leavenworth, Kans., with a capacity of 2,000 must apparently be supplemented for quite a period after the war by two other maximum-security institutions, by choice one on the east and one on the west coast. The Eastern Branch Disciplinary Barracks, Green Haven, N. Y., which is a maximum-security institution having a capacity of 2,016, is under lease from the State of New York, but if the anticipated crime wave develops at the end of the war, New York may require it for its own needs. The Army is therefore in the market for another maximum-security institution on a permanent basis.

No change in plant or equipment is anticipated for rehabilitation centers in this country now that more than half of the strength of the Army is overseas. The prime purpose of imprisonment is discipline, and discipline is best served if the soldier can be straightened out in his thinking and conduct and restored to duty. Restoration when permanently accomplished more nearly answers the Army's prison problem than any other result. Consequently, the greatest emphasis has been placed upon it.

From the date of activation in December 1942 through December 31, 1944, the rehabilitation centers have received 25,841 general prisoners. Of this number 7,710 are still in the process of rehabilitation, most of them having been received at the rehabilitation centers within less than 6 months; 8,524 have been found unsalvageable and transferred to disciplinary barracks or otherwise disposed of; and 9,607, or 37 percent, have been restored to duty. How well this 37 percent has since behaved will not be definitely known until the end of the war. So far, 835 are known to have gotten into trouble again, and again were convicted by general courts martial and are back on our hands. No matter how well or how poorly these rehabilitees eventually turn out it is felt that the attempt at rehabilitation, the attempt to give the second chance must be continued so as always to provide the possibility of flow in the prisoner's status.

Absence without leave and desertion are by far the most frequent offenses, military or civil. The Army has devoted considerable thought to that annoying problem, and court martial is not always the disciplinary remedy used. Processing centers have been established at Fort Devens on the east coast and Camp McQuade on the west coast to deal with the special problems of men who have jumped ship on their first or subsequent scheduled trips abroad. Here their records are examined and if the excuse is pretty good, and the record justifies the conclusion that probably the soldier will make good after all, he is put on the next ship to rejoin his unit with or without charges preferred. Such procedure is often recommended when soldiers miss their return boat after sick, rotational, or battle-fatigue leave in this country.

It seems clear to me that there will never be any single optimum solution to the desertion problem and it is not difficult to foresee real trouble with it when the fighting ceases in Germany and troops in large numbers are ordered across the world to fight in Japan.

Murder and rape cases are pretty well disposed of by commitment to the Federal prisons (the exceptions are probably analyzed as manslaughter or attempts), but other felonies are largely sent to the military prisons. There is a general feeling among military men that there is less disgrace in being sentenced to a disciplinary barracks or rehabilitation center than to a Federal penitentiary. And certainly there will be less embarrassment for the soldier after the war is over to refer in conversation to the former than to the latter. But I submit that when a genuine criminal is identified he should be sent where he belongs; namely, to the penitentiary. There are many men now in the Army who in the natural course of things would have wound up in penitentiaries had there been no war. We have drafted many potential criminals along with sound men. It behooves us to identify the real criminal and tuck him away where he will cause the minimum of worry both to the Army and to society. In practice, however, there are frequently real obstacles to the classification of offenders in the early stages of investigation and trial. If such a man has a criminal record it is to his advantage to conceal it and it is rarely the case overseas, or even in this country, that police, F. B. I., or case work records are available to courts-martial or even to reviewing authorities. Usually there is a psychiatrist attached to each division, but he is not always a criminologist nor are his services always available. Maj. Gen. Myron T. Cramer, the Judge Advocate General is, of course, aware of all this. I have heard him and his staff preach on the subject to the Judge Advocate General's school at Ann Arbor, Mich., and to conferences in the field. But it is a matter as to which the Army must always be on the alert, for once a felon is sentenced to a military prison he may not thereafter, under the provisions of Article of War 42, be transferred to a penitentiary, no matter how criminal his real nature may prove to be.

The chief difficulty which arises in the handling of prisons is to find and train adequate guard and administrative personnel with sufficient age and experience to give expert handling under all circumstances. A fool armed with a little temporal authority and a club can do himself, his commanding officer, and the Army more harm in a guardhouse than he would ever get a chance to bring about anywhere else. The blind cannot be expected to lead the blind. Many inmates have become general prisoners in part, at least, because of lack of leadership or imagination on the part of their commanders. A little patient exercise of tact, a little defter handling might well have avoided court martial in several cases which come to mind. Such men are entitled to good leadership and a chance to prove what they can do under it. In prison work personnel—all personnel from commandant to cell-block keeper—is more important than plant or equipment or theory or philosophy of punishment. Guards are teachers, not only in courses of instruction, but by example. No matter how admirable the overall policy of the Army with reference to military prisoners may be, and no matter how well planned and integrated its proposed system may be, it is of no practical value unless the guards who come in daily contact with the prisoners are willing and able to enforce it.

Even if all the persons with prison experience now in the Army were made available there would be a shortage of guard and prison personnel. It has become necessary, therefore, to institute courses of instruction to properly indoctrinate, train, and inform them. A practical school for such instruction has been set up at Fort Leavenworth, and, as each new branch disciplinary barracks has been activated, its new personnel have attended that school. This however is only the beginning. Further instruction will be available within a few weeks in cell-block management, ju-jitsu, personal protection, etc., at Atlanta, and as the students finish these courses they will return to their respective stations and there teach what they have learned.

To insure expert professional guidance for the War Department the Under Secretary of War has appointed a board of civilian consultants which include some of the most brilliant names in the penological field. Members of the board are Warden Stanley P. Ashe, Western State Penitentiary, Pittsburgh, Pa.; Sanford Bates, Commissioner, New York State Board of Parole; James V. Bennett, Director, Federal Bureau of Prisons; E. R. Cass, General Secretary, American Prison Association; Reed Cozart, Associate Warden, United States Penitentiary, Leavenworth, Kans.; William J. Ellis, Commissioner, New Jersey Department of Institutions and Agencies; Dr. Garrett Heyns, Director, Michigan State Department of Corrections; Warden Walter A. Hunter, United States Penitentiary, Leavenworth, Kans.; Richard A. McGee, Director, California State Department of Corrections; Warden Joseph W. Sanford, United States Penitentiary, Atlanta, Ga.; and Walter M. Wallack, Wallkill State Prison, Wallkill, N. Y. Austin H. MacCormick, Consultant to the Under Secretary of War and Executive Director of the Osborne Association, New York, is chairman of the board. This board attended a conference which was held at Fort Leavenworth, November 14–16, and at which all commandants of rehabilitation centers and disciplinary barracks, representatives of the staffs of the nine service commands, Army Air Forces, Army Ground Forces, Army Service Forces, the General Staff, the Adjutant General, the Judge Advocate General, and the Surgeon General were present. Practical down-to-earth problems of custody, clemency, and restoration were discussed in detail, as well as the practical effectiveness of the whole general program. It is felt that in the future the various services and commands which are concerned with this intricate and thorny problem will not work separately, but with a thorough understanding of appropriate functions, and the common result to be attained.

Vandenberg Peace Program

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. JUDD. Mr. Speaker, it is with extreme pleasure that I include herewith under consent of the House, the speech made in Detroit, February 5, by the distinguished senior Senator from Michigan, ARTHUR H. VANDENBERG. It is impossible to overestimate the importance of his forthright proposals. They constitute the most constructive and potent contribution to American thinking on foreign policy and to American statesmanship since World War No. 1. They give almost the first ray of real hope that we may prevent World War No. 3.

VANDENBERG PEACE PROGRAM

Mr. Chairman and gentlemen, with deepest gratitude I thank you for your generosity to me upon this fine occasion. Under pressure of the times in Washington, I rarely have an opportunity to get back to home, sweet home, during these days and nights which try the souls of men and test the fate of nations. You may understand, therefore, why I so deeply appreciate your hospitality. I shall respond by gratefully taking advantage of the occasion to tell you what is in my heart regarding the dedications which must be closest to yours.

One. America must win this war as swiftly and conclusively as possible, and no interruptions to the supply lines which sustain

our intrepid soldier sons can be tolerated for a single, bloody instant.

Two. America must seek a peace which justifies this sacrifice and martyrdom, which searches for justice as a substitute for force, and which plans a free world for free men.

In the time at my disposal I concentrate upon this latter aim. We have relative unity in this fraternity of battle. We sometimes drift dangerously away from a kindred but equally indispensable fraternity for peace. It is our responsibility to see to it that if this unity for peace disintegrates, it is not our America which shall be held at fault when the books of history are balanced. In my view, we cannot serve this solemn function by further silence in respect to our attitudes. That silence confuses our allies. It often provides them with the reason which they plead to justify unilateral decisions which collide with our ideals. It may dangerously invite the conclusion that our silence gives our own consent by default. It even confuses our own people who frequently cry out in anguish for the definition of our aims. It is time for us to say what we will do. It is time for us to say what we will not do. And it is time for us to start the doing.

That is my theme tonight.

A FEW FUNDAMENTALS

As a basis for our thinking, let me lay down a few fundamentals. The first is the recognition of a physical fact. Since Pearl Harbor the ghastly countenance of war has become more sinister than ever before in the nightmares of the human race. The awful science of mass murder has made more progress—what a word—in 3 cruel years than in all the centuries since time began. And this new science is only in its lethal infancy. Contemplate the robot bomb in its maturity. Contemplate the refinements of jet propulsion when it still further reduces this foreshortened world to an intimate neighborhood. Contemplate a war of push buttons, in which human flesh and blood are at the mercy of mechanized disaster. I need not labor the point.

This war, God knows, is bad enough. But world war No. 3 will open new laboratories of death too horrible to contemplate. I propose to do everything within my power to keep those laboratories closed for keeps. I make this pledge in the name of humane common sense. But, more than that, I make it in the name of American self-interest. Times have changed. The oceans are no longer moats around our ramparts. Once upon a time Detroit could wait for the enemy to get to Windsor. In the next world war an enemy half way around the globe will be just as close. No nation hereafter can immunize itself by its own exclusive action. Only collective security can stop the next great war before it starts. Therefore, collective security is to our advantage—and we serve America if we can help to make it work.

But this brings me immediately to my second fundamental. We cannot make it work alone. Unshared idealism is not an asset; it is a liability. It takes something more than a paper league to keep the peace. An unjust peace will break out of any strait jacket the wit of man can devise. It ought to. Collective security will be no stronger than the merits of the cause it implements. Therefore it is to our own American self-interest also to keep this objective forever at our masthead—peace with justice. Not because we want to meddle in the problems of other continents but because there can be no peace without justice. Let me be specific. I am talking about the basic aspirations of the Atlantic Charter. It is not just a nautical collection of fragmentary notes. It is bone and sinew of our flaming forward march. I quote:

"No aggrandizement, territorial or otherwise."

"No territorial changes which do not accord with the freely expressed wishes of the people concerned."

"The right of all peoples to choose the form of government under which they will live."

"Sovereign rights and self-government restored to those who have been forcibly deprived of them."

THERE WILL BE DIFFERENCES

There will be differences of opinion in the grand alliance about the meaning of these precious things. I do not pretend to say that we, by dictation, can have it all our own way. But I do presume to say that, by the same token, no other member of the grand alliance, by dictation, can have it all his own way either. I do not speak belligerently. I speak with deepest respect for the utterly mangnificent contribution which each of our major allies is making to the coming victory. But I speak with equal respect for our own fabulous American contribution. I speak with a profound prayer that the friendly, helpful unity among us shall never fall apart. But I speak also in the belief that candor now will do more for this priceless unity than will disillusionment tomorrow.

This brings me to my third fundamental. The President has correctly said: "The nearer we come to vanquishing our enemies the more we become inevitably conscious of differences among the victors." How do these dangerous differences disclose themselves? Usually by unilateral decisions in which one or another among the United Nations makes its own announcement—pronounces its own ultimatum—regarding its own present or post-war plans and purposes. It puts its own interpretation upon its own rights regardless of the fact that these rights, for all of us, all flow from our common effort. I assert that all vital decisions should also flow from the same sort of a common effort.

Let me illustrate what I mean. The army that gets to Berlin first does not win for its nation the right to settle Germany's future just because it got to Berlin first. No nation's army would have reached Berlin at all except for the herioc, common combat of all the other nations' armies. This is just another way of saying that unity—unity for an ultimate lasting peace—is a constant, day-to-day necessity which must be nourished by all of us through constant, coordinated consultation—in war and then in peace—and through a reasonable regard for mutual sensibilities.

Now let's put these three fundamentals together and—in the name of honest, helpful candor—see whether they do not plainly point an immediate plan of action. You will remember the fundamentals. First, the inexpressively vital need to prevent World War No. 3 through collective security; second, the paramount importance of a just peace if it is to be a permanent peace; third, the hazard to these objectives if each of the United Nations starts going its own way even before we have clinched our total victory. Let's frankly face our American responsibilities in this connection.

It seems to me that the logic of the situation is fairly straight and simple.

Why do our allies take these disunifying steps? What's the reason given for partitioning Poland? For planning satellite conquests? For the Anglo-Soviet agreement of 1942, the Soviet-Czechoslovak agreement of 1943, the Franco-Soviet treaty of 1944, and similar actions yet to come? What's the reason given for much of the resurgent movements toward alliances, and toward the old power politics which has been the world's prime curse? What's the reason?

IT'S PERFECTLY UNDERSTANDABLE

It's a perfectly understandable reason. It is a perfectly human reason. It is the frankly expressed fear of reborn Axis aggression in the years to come. Twice within one generation our continental allies have seen the German monster rise and overwhelm them. Twice within one generation they have been driven to the valley of the shadow by military aggression. They do not propose to be exposed again. Unless and until they know that they can depend upon America to join effectively in keeping Germany and Japan demilitarized, they will continue to go their own way. The truth of the matter is that it was the failure to keep Germany demilitarized after World War No. 1, which made possible World War No. 2.

In the face of these circumstances, my fellow citizens, I ask you whether our immediate duty—our tremendously great, immediate opportunity—is not clear? America has the same self-interest in keeping Germany and Japan permanently and effectively demilitarized as have her closer victims. America has the keenest sort of self-interest in preventing the threat of reborn Axis aggression from driving the rest of the world into another era of separate alliances because that, too, is the road to another war. In other words, here is one common danger—one common objective—in which we have a complete and basic common interest.

Why not face it now? Why not act now? Regardless of any other peace plans, and regardless of whether we agree or disagree among ourselves regarding them, here is one thing that must be done regardless of whether we do anything else at all. Here is one thing that must be done—namely, the permanent demilitarization of Germany and Japan—unless we are blinder than bats in respect to history, following World War No. 1, and unless we are to be guilty of the colossal sin of dissipating victory after World War No. 2.

It is in response to this irresistible logic of events that I have proposed and continue to propose that America shall sign up now with all her major allies, to join in a hard-and-fast treaty, solemnly ratified by the Senate of the United States, which pledges our constant armed cooperation, instantly and peremptorily available through the President of the United States without further reference to the Congress, to keep Germany and Japan out of piracy for keeps. I propose that we say—beyond misunderstanding—that this fiendish thing shall not rise again. I propose that we shall practice what we preach. I propose that no other nation shall have any further chance to use our silence as an alibi for ulterior designs, if such there be. I propose action instead of words. I propose action now—before it is too late. I propose it for the sake of a better world. But I say, "again and again and again," that I propose it for our own American self-interest.

Aside from the incalculable major advantage thus to be gained, there are at least two collateral advantages of scarcely secondary moment. I discuss them briefly.

SUBJECT TO REVIEW

When we have relieved our allies of any legitimate fear of reborn Axis aggression, we also have relieved them of any legitimate need, each on his own unchecked account, to make unilateral decisions, from time to time, in the name of self-defense. We shall have earned the right to demand that whatever such decisions may have been made in the process of war—and I concede that such decisions may sometimes be unavoidable—we shall have earned the right to demand that all such decisions shall be subject to review and correction in the post-war peace by whatever international organization we set up to perpetuate the solidarity of the United Nations. In other words, and in plain terms, we shall have earned the right to demand peace with justice—the only kind of peace which can survive. A spoilsman's peace will not survive. Therefore, peace itself is the

issue at this point. Furthermore, one of the greatest arguments against early action on the Dumbarton Oaks plan for a post-war league will have been substantially removed because, otherwise, it can be persuasively urged that America is asked to sign a warrant to help sustain an unknown future which may be too repugnant to us to deserve or to get any such fidelity from justice-loving America.

This brings me to the second collateral, but dreadfully important, dividend from this program. It brings me to Dumbarton Oaks. If we first deal with our enemies through unequivocal post-war restraints upon them, we have remaining only our friends to consider in charting the organization of our post-war peace league. This immensely simplifies our problem. The only real controversy inside America respecting Dumbarton Oaks is whether the President shall have the power, without reference to Congress, to join our armed forces with those of the peace league to stop renewed military aggression. After we have given him this unquestioned power in respect to our enemies, I think I can prove that the creation of such a power for use against our friends becomes almost an academic question from the standpoint of reality.

WOULD BE A FORMER ALLY

Remember, we are now arranging a peace formula with our friends. We have taken care of our enemies. Remember that we are now talking only about the future use of force against one of our present allies who subsequently becomes a military aggressor to threaten the peace of the world. Obviously it can be only one of our present major allies. It will have to be a present major ally who has broken a solemn pledge to abandon force as an instrumentality of foreign policy. It will have to be a major ally who has successfully defied all of the intervening machinery for the pacific settlement of disputes contemplated by Dumbarton Oaks. This means full investigation and report; then conciliation; then mediation, then arbitration; probably the intervention of international law through the medium of a new world court; perhaps even economic sanctions. The new crisis will not be a blitz. It will not come upon the world like a thief in the night. It will finally reach the last recourse—namely, armed force—only after the other United Nations (which is to say, the conscience of the world) has been put upon serial notice that one of our present major allies has turned brute beast and proposes to assault civilization.

Such a challenge would be of such gravity that no President in his right mind—whether he has the actual power or not—would think for an instant of committing America to such a war without knowing that he had his country and the Congress behind him. On the other hand, no Congress would hesitate for an instant to respond to such a challenge. We declared war on Japan in 13 minutes and on Germany in 5. That ought to be sufficiently expeditious. In other words, I repeat, it means nothing, in a practical sense, whether the President himself is given this final power or not, so far as the functioning of the peace league is concerned. But, in a practical sense, it may mean infinitely much in the decision of the American people as to whether they might reject the whole Dumbarton Oaks adventure, if they are asked to give the President this exclusive power against one of our present allies in the face of a plain constitutional injunction that only Congress can declare war.

Oh, but, you ask, if "only Congress can declare war," how can you give the President plenary power to use our armed forces to keep the Axis permanently demilitarized? The answer is that for 150 years the Constitution has permitted the President to use this plenary power for "the national defense"—short of war—and it repeatedly has thus been used without question. The permanent demilitarization of the Axis, when once authorized by Congress through the Senate's ratification of a treaty, would not involve a new declaration of war. It would only be the lengthened shadow of the present war. It would clearly fall within the Presidential authority under the Constitution.

GENIUS OF DUMBARTON OAKS

Now, you probably ask: "Should the peace league have no force available, except against our erstwhile foes?" My answer is that the peace league certainly should maintain constant staff work in planning the ultimate mobilization of military force; it certainly should have peremptorily available, so far as we are concerned, such military force as is traditionally granted under the Constitution to the President for national defense; but, remembering there is to be unlimited force for use against our present foes, it does not need the final war power which the Constitution of the United States commits exclusively to the Congress of the United States.

My further, and fundamental, answer is that the genius of Dumbarton Oaks, in correct perspective, is not the use of military force at all. The genius of Dumbarton Oaks, is the exact opposite. It is the substitution of justice for force. It is the substitution of international law for piracy. It is the substitution of peace for war. Its genius lies in the organization of these pacific mechanisms which shall stop future frictions short of the necessity for force. Its genius lies in the mobilization of the vigilant moral and spiritual power of enlightened civilization against the dark and evil forces of recurrent savagery. If this power has been dormant and impotent it is because it has lacked a vigorous world instrument for organized expression. In my deep conviction, Dumbarton Oaks, in proper form, can supply this tremendous instrument.

All of these benedictions become possible just as soon as we have permanently quarantined the Axis lusts. Oh yes, I have oversimplified the problem. I have no illusions that this tough old world will suddenly quit its sins because a formula is born. I promise no millenium. I am not so naive as to believe that the earth can suddenly rid itself of national rivalries. But I respectfully submit that here lies a way of hope. It or something like it, will take us out of our foreign policy vacuum. It will untie our tongues and once more make us vocal in behalf of our ideals. It will save us from the dangerous misunderstandings which our continued silence might invite. It will certainly promise a better peace, and, therefore, a safer and a longer peace. And it is practical because it plainly conserves self-interest (unless "self-interest" involves ulterior and sinister designs) for all concerned in this great fraternity of allied war.

INSURANCE AGAINST WAR

I do not object, my fellow citizens, to the vigilance of any nation in behalf of its own self interest. That is what nations are for. I am frank to say that I want our intelligent, American self-interest just as vigorously protected by our spokesmen as British self-interest is always protected by Mr. Churchill and as the self-interest of the Soviets always are protected by Mr. Stalin. But I cannot escape the conviction that an insurance policy against World War No. 3 is basic in the self-interest of every civilized nation in this distraught world, America emphatically included.

Certainly that is an expression of American self-interest. We give up nothing except the inevitable curse of another involvement in another war if it ever comes. We do not sacrifice our independence. We join no world state. We do not desert the Constitution. We leave the Stars and Stripes in all their pride and glory on the domes of Washington. We simply join ourselves, in continued united fraternity with our battle comrades, in a great cooperative adventure for a better earth. We do it for the sake of free men in a free world. We do it in the name of justice. We do not do it if justice is denied. If we can start it now, our allied unity will have new vigor. The end of all our present wars will respond more quickly to our prayers. We shall vindicate our soldier-sons. We shall keep the word of promise to our hopes. We shall save our children's children. We shall have earned the right to beseech God's blessing on our dreams.

Senator Vandenberg Points the Way

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Century of January 24, 1945:

SENATOR VANDENBERG POINTS THE WAY

To a country racked with anxiety over the fate of the Atlantic Charter and the prospects for a post-war international organization, to a public which had found little encouragement or leadership in the President's message to the new Congress, Senator VANDENBERG's speech in the Senate on January 10 brought the greatest lift of spirit in many months. For the Senator from Michigan pierced straight through the fog of mutual misunderstanding and recrimination which had begun to settle over the relations of Great Britain, Russia, and the United States. He showed what has caused the tensions which have threatened to divide them. And he pointed out an immediate practical type of action which the United States might lead in sweeping these irritations away and producing an understanding that would win the war on terms that would give some dignity to American sacrifices and open the road to a genuine post-war world cooperation. The Vandenberg speech may not have uttered the final word on peace-making. But it did offer the one thing the people of the United States have been most desperate to discover—leadership. It contained no empty generalities and no double-talk. It should be as welcome among forward-looking people in England and on the Continent as here. One strange fact about the speech, however, is that almost none of the comment, either in the press or over the air, seems to have recognized that at its vital point—Mr. VANDENBERG's proposal for an immediate treaty with our allies which would give the President a free hand to use the forces of the United States to help in completely disarming Germany and Japan and keeping them disarmed—the Senator was reaching straight back to the proposal made by Governor Dewey last August 16. At that time the Republican candidate, who was receiving as sound advice on international affairs as the Nation affards, declared that post-war control of Germany and Japan should be divorced from any permanent international organization, since handling these Axis nations in such a way as to see that they do not return to brigandage is "a specific responsibility of the victors" which "cannot immediately be delegated to a world-wide organization while such organization is yet new and untried." Section two of chapter 12 of the Dumbarton Oaks charter was so written as to permit such a separation of this immediate problem of dealing with Germany and Japan from the larger problem of building permanent peace.

WHAT SENATOR VANDENBERG WOULD DO NOW

The Vandenberg proposal is as simple as it is practicable. The United Nations, says the Michigan Senator, have reached a point at which they must make their final choice between a peace of joint or of individual action. They are drifting toward the latter, as recent events in Poland, Greece, and elsewhere show. The explanation always given is that Russia and Great Britain, which have to go on living in the same Europe with Germany, fear a German military revival and another attack, and they are not sure how far the United States would cooperate to stem such an attack. Hence they build blocs of buffer puppet states, or negotiate bilateral military alliances, all as a means of guarding against this German danger. Senator VANDENBERG might have added, though he did not, that some of the most glaring oversights and high-handed proposals in the Dumbarton Oaks document as it now stands grow out of this same urge to make the new league in reality a device for the repression of Germany. Let us, says Mr. VANDENBERG, clear away all confusion by placing the disarmament of Germany and Japan in a category by itself. Let the United States offer Russia and Great Britain reassurances by giving the President, by treaty, authority to use all necessary American forces to see that this is done and done in a way to be permanent. Then, having thus assuaged the fears of our allies and shown them how far the United States is from planning a post-war revision of isolation, let us ask our allies to place all their unilateral and bilateral agreements in a temporary category, subject to final revision by the new league, which would be given the right to pass on "protested injustices in the peace itself." Thus, at one stroke, the Axis would be rendered impotent, our allies given new confidence, the reasons for a return to power politics and balances of power wiped out, and a means provided by which eventually in the new league the principles of the Atlantic Charter might be translated into actual international practice.

WILL THE PRESIDENT RISE TO THIS OPPORTUNITY?

By his speech, as has been said, Senator VANDENBERG brought new hope to millions of Americans who had begun to ask, "What are we fighting for?" Now the question is, Will the administration seize the opportunity thus offered to change the whole outlook for the post-war future? This would not require that the Vandenberg proposal be adopted just as it stands, but it would involve endorsement of the principle of an immediate inter-Allied pledge to disarm and keep disarmed the Axis. The first indications have not been favorable. Senator CONNALLY, who acts as the administration spokesman by virtue of his position as chairman of the Senate Foreign Relations Committee, at once denied that the task of dealing with the disarmament of Germany and Japan can be separated from that of forming a permanent world organization. When this failed to gain public applause the Senator from Texas came forward with an alternative to the Vandenberg proposal. This took the form of a suggestion for immediate formation of an "interim world council" to advise the Allies in handling questions regarding liberated territories. This Connally counter-proposal will seem as empty as it is to all who remember that in October 1943 the Big Three set up, in the course of the Moscow conference, a European Advisory Commission to do precisely what Senator CONNALLY talks about. This Commission has been in existence ever since, and has accomplished precisely nothing. It is possible, politics being what it is, that the administration may dislike to get behind the Vandenberg proposal because it originated with the recent Republican nominee for the Presidency (whose campaign would have been greatly strengthened if, after making it, he had kept hammering away at it) and because it has now been brought before the public by a Republican Senator. But this war, as the President has often admonished the Nation, is no partisan affair and is not to be fought on a partisan basis. The blunt truth is that Senator VANDENBERG has shown the general direction in which the United States can move immediately to exercise its leadership to get a decent peace. If the President chooses to ignore or turn down this proposal, he will lay himself open to the charge of placing party interests before the interests of the peace of mankind.

Congressman Wigglesworth, Republican, of Massachusetts, Demanded the Truth

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, under leave granted me, I am extending my remarks in the RECORD and including therein an editorial appearing in the Louisville Courier-Journal of Louisville, Ky., January 5, 1945, in which it discussed some of the acts of the Federal Communications Commission, headed by the Honorable James L. Fly.

For some 2 or 3 years many Members of the House and especially Republicans, have been insisting upon the investigation of the doings of this Commission and its Chairman, Mr. Fly.

This Commission and Mr. Fly, through a majority of the committee, have been able to postpone from time to time a thorough investigation, and finally have submitted a report which has been characterized as a "crude whitewash," and the gentleman from Massachusetts, Congressman WIGGLESWORTH, a Republican, stated that this was achieved by "the full force of the administration." One of the matters attempted to be investigated was the complaint of Mr. Donald Flamm. Mr. Flamm charged that through administration pressure, including the Federal Communications Commission and Mr. Fly, he lost radio station WMCA in New York 4 years ago. It is charged that he did not desire to sell this station, but, through the administration and the Communications Commission and its Chairman, he was forced to sell it for $850,000, much less than its value, to one Edward J. Noble, a favorite of the administration. Mr. Flamm was offered a much higher price. He did not desire to sell but was forced to sell to Noble. Mr. Noble afterward sold the station for a profit of $405,000.

It also appears that Thomas G. Corcoran, who is regarded as one of the favorite lobbyists of the administration, figures in the transaction between Flamm and Noble.

Another station, WFTC, at Fort Lauderdale, changed hands under suspicious circumstances.

The Courier Journal, a stanch supporter of the administration, characterizes the Flamm-Noble case as a "sad story—an exceedingly painful and depressing one."

I wish to express my appreciation for its thanks to the gentleman from Massachusetts, Congressman WIGGLESWORTH, a Republican, as the only member of the committee who has consistently demanded the truth. He is an able, honorable, courageous public official.

This editorial is as follows:

A GARBAGE CAN TOO FULL FOR A LID

The House committee which has been investigating the Federal Communications Commission has tried to put a lid on a garbage can, but the garbage, as is unfortunately the case in many a literal instance in Louisville this morning, still protrudes, very visibly and odorously. We have reference in particular to the deal whereby Donald Flamm, who is unknown to us but who has about as impressive a case as we have ever seen, lost radio station WMCA New York, 4 years ago. We are not pursuing a grudge against James L. Fly, under whose administration as chairman of F. C. C. the events which victimized Mr. Flamm occurred. Mr. Fly is no longer a member of the Commission and was by no means the only person concerned. We are simply pursuing a conviction that in the WMCA transaction there is garbage that needs to be incinerated in the fire of public opinion and that the House committee, instead of facilitating this, labored deliberately and crudely to prevent it.

Mr. Flamm's story, briefly, is this: He sold WMCA for $850,000 to Edward J. Noble, a favorite of the administration, who had been Under Secretary of Commerce when Harry Hopkins was Secretary. Mr. Flamm says that he did not want to sell and that, if he had wanted to, he had previously been offered a higher price. (The fact is that Mr. Noble afterward sold the station at $405,000 profit.) But how could a man be compelled to dispose of a property he wanted to keep? A radio station happens to be a property under the strict and detailed regulation of the F. C. C. Mr. Flamm says that he received intimations that, unless he sold, there might be trouble for WMCA from the regulatory authority. A careful man, he had certain soundings made in Washington to ascertain if this was the case and discovered, so he says, that the heat was on.

Now, if there were nothing whatever in all this—and incidentally the name of Thomas G. Corcoran, then close to the White House, now Washington's super-lobbyist, flitted in and out of the story—why was the House committee unwilling to subject Mr. Flamm's highly shocking contentions to the light of day? A curious thing happened. During the autumn, the committee had investigated at open hearings a transaction in which Station WFTL at Fort Lauderdale, Fla., changed hands. Some dubious circumstances were discovered, and the committee, criticizing Mr. Fly, has denounced these in the report it has just issued—the same report in which everything is said to have been lovely about the WMCA deal, no evidence of pressure, coercion, or duress, nothing amiss about what Mr. Corcoran did, and so on. But when the committee had reached the WMCA deal in November, it had suddenly decreed secret sessions, and the grounds for its conclusions are not known to the public as are those concerning WFTL. On its face, the committee's action appears to be exactly what Representative WIGGLESWORTH of Massachusetts, a minority member, and Mr.

Flamm say it is—a crude whitewash—Mr. WIGGLESWORTH adding that this was achieved by "the full force of the administration."

This is a sad story, and to the Courier-Journal, which is counted a supporter of the administration, an exceedingly painful and depressing one. It happens, however, that the story probably has not ended. Mr. Flamm, a persistent man, has instituted suit in New York for the recovery of WMCA, and the evidence which the committee either sought to suppress or was prevented from obtaining may yet be presented for a public judgment. For the present about all there seems to do is to thank Mr. WIGGLESWORTH, a Republican, and the only member of the committee who has consistently demanded the truth.

Retention of General Marietta as Superintendent of Walter Reed Is Fine Recognition of His Excellent Service

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a deserved tribute to ability and service of Maj. Gen. Shelley U. Marietta, Superintendent of Walter Reed Hospital, published in the latest issue of the Army and Navy Journal:

ARMY RETAINS GENERAL MARIETTA

A career studded with achievements is that of Maj. Gen. Shelley U. Marietta, Medical Corps, who reached the statutory retiring age January 31. While the policy of the War Department contemplates the replacement of retired with active officers, it makes exception in the case of those especially qualified, and such an exception is General Marietta. Therefore he will remain certainly for the period of the war as Superintendent of Walter Reed Hospital. In that position his talents as a physician and as an administrator will continue to be available to the thousands of wounded and sick officers and enlisted men admitted to the institution under his command. In spite of the lack of trained nurses and ordinary help, which necessarily has added to administration difficulties, it is generally agreed by patients and visitors that there is not a better hospital in the country. This is the judgment of the vast majority of the Senate and House and especially of their military committees. The man who above all others who is pleased that General Marietta will remain at the head of Walter Reed is General of the Armies John J. Pershing, whose devotion and esteem for this medical officer are based upon appreciation of the care he has received from him over the years and the close friendship which has developed from it.

General Marietta is an extraordinary combination of medical skill and administrative ability. Officially he is an authority on internal medicine, with tuberculosis as a specialty. However, due to his incessant study and wide experience, he is thoroughly familiar with all branches of medicine. His inclination for the profession he adopted came from his father, who was a physician and practiced in Des Moines, Iowa, where the family had moved from the South via Pennsylvania. He graduated in medicine from the College of Physicians and Surgeons, Illinois, after graduating from the School of Dentistry in Des Moines. Probably because his grandfather and father had seen service in the Mexican and Civil Wars, respectively, he became interested in a suggestion to join the Army. He received a reserve appointment in 1910. Two years later he was commissioned in the Regular Army and graduated from the Army Medical School at Washington, D. C. His duties carried him to various stations throughout the United States, Hawaii, and the Philippines, and in World War No. 1 he served with troops and at hospitals in France. Back in the United States he was stationed at the larger hospitals, including Letterman, Fitzsimons, Fort Sam Houston, Walter Reed, and others, either as assistant chief of the Medical Service or its chief. His final assignment was that to Walter Reed, where he has been in charge since 1939. It was when he was stationed at San Antonio that he was selected by the Surgeon General to proceed to Tucson to treat General of the Armies John J. Pershing, who had suffered a severe heart attack while vacationing in that community. General Pershing gives credit to General Marietta for his recovery, and his regard for him has continuously increased as their association over the years continued.

Besides the 22 years of strictly professional duty which General Marietta has had, he has been engaged in administrative and construction work of wide and varied character. He established the base hospital at Atlanta, Ga., and while there trained a medical unit made up of the students at Emory University, for service with the A. E. F. in France. He organized base hospital No. 43 and took it to France for service as the base hospital at Blois. Since his present assignment at Walter Reed began, besides the execution of 45 projects, which have greatly expanded and increased the usefulness of the hospital proper, he transformed college buildings at Forest Glen, Md., into a convalescent section and buildings at Beltsville, Md., into a reconditioning center. When he came to Walter Reed, there were available only 1,200 beds; now there are 3,502. His insistence on the latest modern equipment has made Walter Reed probably the best-equipped hospital in the United States if not in the world. There passed through the hospital last year 17,800 patients, who had come for treatment for wounds, illness, and rehabilitation. During the period of his service there, it is estimated that more than 50,000 persons have undergone treatment within its walls.

Besides his manifold duties at the hospital, General Marietta has served on numerous boards for the development of remedies for diseases. He is a member of the American College of Physicians, American College of Chest Physicians, Military Surgeons, and American Medical Association, and is diplomat of the board of internal medicine. Probably the greatest tribute that could have been paid to his ability as an administrator was that paid by an enlisted man who had been wounded in France. "I am going home on leave," he said, "and while I naturally am anxious to see my family, let me say that no one could have received greater attention or greater consideration than I at Walter Reed. It is an excellently run institution because the man at the top, General Marietta, knows his business and will have none but expert doctors and nurses under him. I was in bad shape when I reached the hospital. I had lost an arm and a leg, and the future looked pretty black to me. But I was treated like a human being and not like a cripple for whom everybody was sorry, and I shall face the world now with confidence. The hospital could not be what it is did it not have such a man in charge as General Marietta."

General Marietta was married in Des Moines, and his gracious wife has been a tower of strength to him throughout the years.

Commander in Chief, Veterans of Foreign Wars of the United States, Endorses Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a statement of the commander in chief of the Veterans of Foreign Wars of the United States, the Honorable Jean A. Brunner, endorsing the Committee on Un-American Activities. The statement referred to follows:

VETERANS OF FOREIGN WARS,
OF THE UNITED STATES,
New York, N. Y., January 15, 1945.

Referring to the efforts of certain elements to scuttle the effectiveness of the House of Representatives committee investigating un-American activities, Jean A. Brunner, of Forest Hills, N. Y., commander in chief of the Veterans of Foreign Wars of the United States, said today:

"Anyone who would be guilty of interfering with the work, or who would put Trojan horses in, to interfere with the work of any congressional committee investigating un-American activities, is selling out the men in our armed forces, who are giving their lives to maintain our American way of life.

"Our fighting men are making sacrifices so that our Nation will remain free, and not that it will be controlled by any one person or group of persons. Those who interfere with the work of ridding our country of Nazis, Fascists, Communists, or any other vermin, will have to answer to our fighting men when they return.

"No loyal, patriotic American has anything to fear from such a committee, and real American Congressmen will not be intimidated.

"What are those who oppose this committee afraid of?" asked Commander in Chief Brunner. "Are they afraid that the spotlight of such investigations will reveal rodents in their houses?"

JERRY A. FREEMAN,
Public Relations Officer.

Coming Over the Blue, It May Be True

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. HOFFMAN. Mr. Speaker, Pegler seems to be just another victim of the smear. Here is one of the latest, as outlined by him on the 30th of January, last:

FAIR ENOUGH

(By Westbrook Pegler)

Continuing my running commentary on the dangerous attitude of the Blue Network, one of our big national radio chains, toward miscalled news broadcasters specializing

in excitement and falsehood, here are chapter and verse on a specific incident.

On the Sunday evening after the recent election, Drew Pearson, in his program over the Blue, said that Frank Sinatra had called at my room at the Waldorf-Astoria on election night to take a punch at me for opposing his friend, Mr. Roosevelt, and, not finding me in, contented himself by mussing up the room.

This was an absolute fake.

Sinatra undoubtedly did get tight, as later inquiry showed, and returned from Sidney Hillman's P. A. C. headquarters to his own apartment in the same hotel where he caused large disorder and was subdued by a house detective. In all large and well-conducted hotels, of which the Waldorf is one, all unusual incidents are investigated promptly and reports are made in writing to the front office. Such reports were made in this case.

Being a Roosevelt fan, Sinatra, had a right to howl and did. But he never did come near my quarters either in my absence or after my return about 1 in the morning.

A few days after Pearson's broadcast, I began to detect the technique of the New Deal Communist smear which puts an opponent in an unfavorable light without libeling him. An item had appeared in one of the New Deal gents' room columns reporting that Sinatra had refused to work in the Waldorf's Wedgewood Room unless I checked out. There was no libel in that, either, but, like the Pearson broadcast, it was a smear.

So I inquired of Lucius Boomer, the managing director, who said that, of course, there was no truth in it and that any time anyone hired to sing, dance, or do card tricks in the saloon attempted to edit the guest list he would get rid of the performer.

It occurred to me that the Blue Network had some responsibility because, in the newspaper business, a reporter who brings in fakes is fired, the paper runs a "beg pardon" and that is that.

Instead of offering any redress, however, Mark Woods, one of the Blue's vice presidents, suggested that I write a piece about it. He said they could use the publicity, but he made no offer to right a wrong.

That made me curious as to how radio treats people who have been smeared with political or personal motivation, so I called on Chester La Roche, another vice president, whom I have known for years, and Ed Noble, a New Dealer, who had served in the Department of Commerce, and then acquired the Blue and became its president.

Both La Roche and Noble said Pearson was a headache to them because they thought he was malicious and unreliable, but couldn't get rid of him because, by the use of such methods and material, he had acquired a large popular following.

Noble said an apology might be arranged, but that if he gave one, Pearson would contrive it in such a manner as to make it worse than the original fake. He took a helpless attitude. La Roche cited an item which Pearson had broadcast about the automobile trip to Washington of John Foster Dulles, Tom Dewey's adviser on foreign relations during the campaign to confer with Cordell Hull on solemn state business.

He said Pearson had made it appear that Dulles had used the gas for this travel because he had a sore toe but that he, La Roche, knew that the trouble was much more serious, in fact, a bad infection. He thought Dulles had suffered a serious injustice but that was the end of that.

During this time I was investigating the pro-Communist thief and imposter calling himself William Gailmor who had been employed by the Blue as a news commentator on their key New York local station, and had several talks with officials of the Blue, incidentally, on the Sinatra-Pearson thing.

At no time did they offer an independent retraction or correction but, in the end, they said, that if I brought in affidavits from the Waldorf house detectives and the management, they would make one.

My point has been that the victim should not have to go to such extremes to disprove a fake. He might not know how to go about it. He might not have time. He might be away, even overseas.

Still, La Roche and Noble now insist that they are anxious to give fair and complete retractions when their commentators are proved unfair and that they review all their scripts for "appropriate news authority." In this case there was no news authority and, in answer to my own specific inquiry, Mr. Boomer says, in writing, "I have checked the files of the night manager, assistant managers, and floor clerks and can find no record of any unusual incident in the room you occupied on election night."

But quite as dangerous as motivated lies broadcast for smearing purposes over national chains, are half-truths and even wholly true statements and observations uttered with the dramatic voice. Noble, La Roche, and all radio men, and many other persons of intelligence, know that a harmless text may be an incitation to riot, delivered with certain inflections.

There was one broadcaster a few years ago whose text was absolutely faultless but whose sneering pronunciation of the phrase "this Jewish gentleman" or "Mr. Henry Morgenthau" was so full of hate that decent people thought of Goebbels and shuddered. It did no good to censor his copy.

It is up to radio to manage these problems. The newspapers, generally, weed out liars and fakers when they have revealed themselves and, fortunately, our type hasn't yet been wired for sound.

What I say, by way of comparison favorable to the newspapers, is that if this fake had been put across the desk of any paper as ethical as the Blue now pretends to be, the managing editor wouldn't ask the victim to bring in affidavits but would send out his own reporters to bring them in. He would then apologize and fire the faker, however great his circulation power.

Universal Peacetime Military Service

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following program entitled "Congressional Record of the Air," on universal peacetime military service in the United States broadcast over Station WHN, New York City, February 5, 1945:

Mr. REPAID. Around the Halls of Congress tonight there is a mounting storm of controversy, centered on the proposed universal military service for the United States. Although legislation on this subject has not as yet been introduced, many men in high places have expressed themselves both for and against the proposal. So tonight on this broadcast of "Congressional Record on the Air" we ask: "Is universal military service in the United States feasible? Is it needed? Is it democratic?" To present you with answers to these questions we have invited one of the country's outstanding Members of Congress, EMANUEL CELLER, from the Fifteenth District of New York City. Mr. CELLER has been a Member of Congress since 1922, and serves on the important Judiciary Committee of the House. I am very glad, indeed, to present Congressman EMANUEL CELLER.

Mr. CELLER. I view with alarm—with justified alarm—the proposals to introduce into the United States a system of universal military service in peacetime. I admit I am shocked by the loose thinking that has accompanied the proposals to date. We are told that it will be a blessing, an enrichment in education and in health. Nonsense. A year's military training is not education; it's indoctrination. No broad cultural base in education is provided; only that knowledge is stressed that will have a direct bearing on the brutal business of fighting. Very well, let the Army speak for itself. The War Department in a recently distributed circular states: "There will be no place in a sound universal military-training program for activities that are nonessential to the task of preparing our young men for combat." Thus it will be education for war.

Moreover—and the educators of our country know this—a year's interruption in the normal progress of study must result in a marked decrease in future attendance at higher institutions of learning. Take a lad away from his school for 1 year, and mark then his reluctance to return. What will he learn that a trade, vocational, professional, or general school cannot teach him outside of the usages attendant upon war? Do we need an army to educate our youth? What's wrong with our schools?

The talk about the increased health of our youth is just as hollow. Let's remember, firstly, that only the physically fit will be selected for the training. It has been ascertained that only 630,000 out of 1,250,000 who reach the age of 18 are mentally and physically fit for service. The unfit do not get into the Army and do not receive the innoculations and cures, and so forth, that those who are accepted get. Moreover, it's a pretty sad commentary on the state of the Nation when we choose the Army as the instrument to cure our social ills. Let's admit frankly that our public-health services need mending badly—and then let's do something about it for the whole Nation, children of 5 and adults of 50. Why only lads of 17–18?

That's what disturbs me, this shying away from essentials and giving us instead this gibberish about health and education.

If we as the most powerful country in the world want to start a race among the nations of the world for bigger and better armies, for feverish expansion in the instruments of war, then by all means let's have universal military peacetime training. If we want to cultivate an atmosphere of distrust among our weaker neighbors to the south of us, and inspire them to rivalries and jealousies among themselves, then by all means let's have this peacetime militarism. And if we want to make certain that all proposals for the establishment of international organization for peace fail, let's pass the military training bill now. Let's not wait until our boys return. What have they to say about the making of a durable peace?

The structure of a durable peace can only stand firm—and this is neither naivete nor wishful thinking—when the people believe and trust, it will stand firm. Encourage this tentative approach, this "maybe and maybe not," this "well, it's a good idea but will it work?" view of international practicable harmony, and upon the slightest disagreement—poof, down it goes. You cannot build a huge machinery of war, be it in men or machines, and then not search about for some way to use it. You jolly well know the temptation to use it.

You can either cultivate the attitude that a durable peace is possible, that the organization for peace is practicable or you can cultivate the dubious attitude, the distrustful, suspicious attitude. Then the game begins again all over the world. You don't trust me; I don't trust you.

Against whom are we arming? Peacetime conscription brings with it machine guns, tanks, and bombs. Do we aim at our allies? Does it mean we will shake hands with them but not without a bodyguard? Against Germany and Japan? Just why, pray tell, are we bothering with international organizations? Why have any Dumbarton Oaks conference?

Moreover, if that's the kind of mental set we are going to embrace (that war is inevitable and we must therefore bow to the inevitable), I can't see the effectiveness of universal peacetime training. In the rapidly changing techniques of war, you aren't going to use the boys who were trained 10 or 15 years ago, even 5 years ago. Those who have been previously trained will be either too old or will have to be retrained. Immediate use can only be made of the men then in training and they will only number those in the 17–18 yea. bracket, hardly enough for a fighting army. For the rest, the identical process of our present selective service will have to be instituted again. War implements are constantly changing; tanks used at the war's beginning are now obsolete. Men must be retrained to figure out the new weapons.

You will hear talk about "sneak attacks." Of all the misnomers in military history, that one stands supreme. The technique of modern war requires years of preparation; the conversion of peacetime manufacture and the diversion of raw materials for war purposes. Both Germany and Japan gave the powers that be ample notice of their intent. Hitler did not sneak up on France, Britain, and Russia; he gave full warning of the set-up in the Reich factories when they started to make Messerschmitts and Dorniers. The whole world knew about the ersatz rubber tire plants to be used for military purposes. We knew all about the conversion of automobiles to tanks and fertilizers to explosives.

Intelligent appraisals of exports and imports of a suspect nation and of the products of its manufacture will reveal any inimical purpose. A war can be stopped in the making, before the death on battlefields if we have the international peace structure dedicated to that purpose, alert and aware that in this era war does not come overnight. War is one coming event that casts its shadow. That is the one lesson we did learn.

If we must keep our lads in everlasting training, why not our farmers, our manufacturers, our shipbuilders, etc. All of which means that forever and a day, our economy must be geared to war.

And remember this, peacetime conscription can and does lead to the surrender of much of the liberty we have fought and sacrificed for. Our democracy rests on the principle that the state serves the people and is not founded on any concept that the people serve the state. Military peacetime training is a perversion of this basic principle of our Government. It insists upon the dedication of 1 year out of our youths' lives for—as far as I can see, and as I have tried to point out—no useful purpose. It places in constant stream the malleable minds of our youth under the tutelage and discipline of professional officers who necessarily bear the military cast of mind.

I ask those of you who are listening tonight to weigh the proposals and weigh them carefully. Ask yourself: What do we gain thereby, and how much do we lose?

Mr. REPAID. Thank you very much, Congressman CELLER. I think you have covered the question quite thoroughly. There is just a point or two I'd like to bring up at this time, and these are questions that have come to us as a result of our announcement last week that you were to speak on the program tonight. For instance, here's one: Would not a year or more of service in the Army develop a finer spirit of democracy?

Mr. CELLER. No, emphatically. I find nothing democratic about an obedience to an officer which the Army demands. I find nothing democratic about the Army forcefully inculcating in our youth the need for immediate and unquestioning obedience. In war, yes; we have no choice. In peace, no; we have a choice. Our democracy is, and should be, a pronounced individualism with a submission to an intense discipline, but only in time of war. Our democracy affords the right of the common man to be heard. Strict Army discipline smothers that right to be heard. Remember, peacetime military conscription is inconsistent with any intellectual freedom. It means complete submission to constitut.d authority. It precludes any criticism on the part of the conscript, and makes for a standardized conduct that destroys initiative.

Mr. REPAID. All right, sir; how about this one? If we are going to have universal military training at all, isn't this a good time to consider it? I mean the people are war conscious today, whereas they might not be 5 years after the war.

Mr. CELLER. No. The American Federation of Labor, the Federated Council of Churches in America, the National Farmer's Union, Catholic bishops and archbishops, and many others all agree that this problem should not be settled until after the end of the war. We will then know what our international situation will be. Those now serving in the Army and Navy will then be given an opportunity to express their views. Our military requirements until the end of the war can well be met by expansion of our present Selective Service Act.

Mr. REPAID. Now what about this angle? Military conscription is nothing new. It has been used by a number of countries. I wonder, sir, if you could give us a little bit of that history.

Mr. CELLER. Machiavelli first proposed universal military service in Europe—a rather suspicious origin. It was used by French revolutionists to preserve benefits of the French Revolution, but Napoleon seized upon it to forward his imperial dreams. He said: "I can afford to expend 30,000 men a month." Such an attitude toward humans is the very antithesis to democracy. Prussia with Bismarck, the Kaiser, and now Hitler used conscription for militarism and Lebensraum. The Czars used it for despotism. Hirohito uses it. Mussolini used it. Franco uses it. Farrell and Peron use it in Argentina for despotism. England and the United States, with no conscript army, were the victors in World War No. 1, and are destined for victory in World War No. 2. The Negroes fear the democracy of compulsory military service. They know it will spread Jim Crowism.

Mr. REPAID. That is indeed interesting, Mr. CELLER. Now, I think we have time for just one more question, and that's a pretty big one. I am sure you will agree we will have to have some sort of preparedness program. Now, just what plan would you suggest instead of universal military service?

Mr. CELLER. I am opposed to compulsory military training since it is duck soup for the hereditary military caste. It makes top dogs out of the professional soldier, career colonels, who demand blind obedience—not thoughtful acquiescence. I am for volunteers first, with suitable inducements for pay and quarters and rank, together with inducements of scholarships and bonuses. If Dumbarton Oaks succeeds, we will need an international army for police purposes, to which we would make adequate contribution of men. If, to fill our quota, volunteer methods fail, then we must conscript. We would have no choice. It would then be the price of domestic and international security. But, for goodness sake, let us not glamorize any idea of military conscription. Let us not combine such processes as education for democratic discipline with military training. Just as oil will not mix with water, they will not mix.

Mr. REPAID. Now our time's about up, and we thank you again, Congressman CELLER, of New York.

Deferring Essential Agricultural Workers

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MARTIN of Iowa. Mr. Speaker, on January 16, 1945, the War Manpower Commission issued a release through the Office of War Information giving a list of essential and critical activities to be used by selective service for the induction of men in the 26 through 29 age group. This list contained 35 groups of services and covered about five and a half pages of mimeographed listings on letter-size paper. The entire listing of activities was represented as essential activities, and those activities that were considered critical were given in capital letters. To my surprise the fifth group which covered agriculture and agricultural services did not include any activity in that field as a critical activity so I wrote to Hon. Paul V. McNutt, Chairman of the War Manpower Commission, on January 20, 1945. Because of the importance of this matter I am setting out herewith my letter to Mr. McNutt together with his reply to me dated February 2, 1945.

In view of the opening statement in the release of January 16 that the list of essential and critical activities announced on that day was to be used by selective service as a guide in the induction of men, the War Manpower Commission has not helped to clarify the muddled situation that has existed in the field of agriculture. Issuing a list of essential and critical activities with their fingers crossed and without any explanation in their release such as given in Mr. McNutt's letter to me of February 2 has been confusing and misleading. A brief statement that the War Manpower Commission had made no attempt to appraise the relative importance of agriculture in their release of January 16 would have given me and all others interested in agriculture a far different impression than I gained from reading the release.

I hope the information given in Mr. McNutt's letter to me will be of some help in clarifying the situation for the Members of Congress from the agricultural areas:

JANUARY 20, 1945.

Hon. PAUL V. MCNUTT,
War Manpower Commission,
Washington, D. C.

DEAR MR. MCNUTT: War Manpower Commission release date Tuesday, January 16, 1945,

did not reach my desk until January 19 whereas you will probably recall we had War Food Administrator Marvin Jones before the Military Affairs Committee January 18. I had heard rumors of your release of January 16, however, in time to question Mr. Jones about it, but I am writing this letter to register with you directly my vigorous objection to your failure to list any agricultural activity as a critical activity.

What I fear most of all is that reduced manpower on the farms plus lack of adequate machinery supply plus a reduction of yields to even normal level this year may result in a real crisis in the food supply of our Nation at the most critical point in the war program. Unless you foresee the needs of agriculture for manpower the crisis will be upon the country when it is entirely too late to do anything about it. You know and I know that once the crop-planting season has passed, a full year must elapse before any shortages can be made up and then only with a good break in the way of weather and growing conditions.

Most fortunate for America, the past 3 crop years have been all-time record years for production and for good harvest seasons, but our experience 1 year ago with the abnormally late planting season in the commercial Corn Belt is a vivid reminder of lurking dangers and we cannot afford to take any undue chances in the matter of food production as we look ahead. While I sincerely hope that we may have the fourth year of record food production we cannot depend on good weather conditions to favor us indefinitely. For that reason, I look upon farm operations and all food production as critical when food is so essential to the success of our Nation and our allies. I hope, therefore, that your next list of essential and critical activities will take cognizance of the importance of agriculture and food production.

Sincerely yours,

THOMAS E. MARTIN.

WAR MANPOWER COMMISSION,
Washington, D. C., February 2, 1945.

Hon. THOMAS E. MARTIN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MARTIN: I have your recent letter objecting to the War Manpower Commission's failure to list any agricultural activities as critical activities.

Since the list is used primarily as a guide in dealing with nonagricultural or off-the-farm activities, we made no attempt to appraise the relative importance of agriculture.

Agricultural recruitment and placement activities have been assigned to the War Food Administration, and the selection of agricultural workers for the armed services is made by the Selective Service System. In the former case the list is not used by the War Food Administration as a guide for its recruitment and placement activities. The Selective Service System's action is governed by the Tydings amendment.

I wish to thank you for your letter, and I hope my explanation will clear the matter up for you.

Sincerely yours,

PAUL V. MCNUTT,
Chairman.

Natural Gas Situation in Detroit Area

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. LESINSKI. Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD several short articles relative to the natural gas situation in the Detroit area. I also wish to refer to my speech on the floor of the House on Monday, February 5. I stated that there had been a "bungling" of orders issued by the W. P. B. to the gas company of Detroit, and that they had "slept on the orders all night." These statements have been borne out by articles appearing in the Detroit papers on Tuesday, February 6, and Wednesday, February 7, and particularly by the article in the Detroit Free Press on Wednesday, February 7, captioned "W. P. B. Officials Explain Industry Gas Shut-Down."

The recent bungling of W. P. B. orders and the attempt of the Michigan Consolidated Gas Co. to capitalize on this emergency to put over their $70,000,000 pipe-line plan is but another reason why the House Committee on Rules should approve my resolution, House Resolution No. 18, in order that the House Committee on Interstate and Foreign Commerce will be authorized to investigate these giant utility corporations and recommend to the Congress remedial legislation in the form of amendments to the Public Utility Holding Act of 1935. It will also afford an opportunity to instruct the Federal Power Commission to investigate the exorbitant rates being paid by consumers of natural gas in the Detroit area. These rates are paid not only by consumers generally in the Detroit area, but also by over 100 war plants producing critical war materials. It is needless for me to point out that where excessive costs are burdened upon war plants for production of critical war materials, they are paid for by the taxpayers of America, which monies are derived principally from sale of War bonds to our citizens, including the members of our armed forces who have so generously subscribed to War bonds while they are fighting our country's battles on the far-flung battlefields of this global war.

The following are the articles to which I referred:

[From the Detroit Free Press of February 6, 1945]

GAS COMPANY HEAD DENIES DELAY ON CUT ORDER

A charge by Representative JOHN LESINSKI, Michigan Democrat, that the blame for Detroit's gas crisis last Friday should be placed on the Michigan Consolidated Gas Co. drew a hot blast Monday night from John W. Batten, president of the company.

LESINSKI asserted on the floor of the House that the telegram curtailing the gas supply was sent at 5 p. m. Thursday. The company "slept on the order all night," he said.

"If the gas company had made the order public," he said, "the confusion could have been averted.

"If industrial users had known about it, they could have curtailed the use of gas and materially assisted in preventing the reduction of pressure."

When told of LESINSKI's charges, Batten replied:

"LESINSKI doesn't know what he's talking about. Nobody here slept on anything."

Batten said a telegram from the Panhandle Pipeline Co. was received at 9 p. m. Thursday.

He said the decision to curtail gas was held up to check with W. P. B.

Also, he said, there was no reason to shut off the gas at night because at that time there is enough for everyone.

He said that the telegram was ambiguous because it stipulated that the order must be carried out without damage to "service or production facilities."

As soon as the matter could be cleared with W. P. B. officials in Washington, Batten said, the order was complied with.

GAS SHORTAGE IN EAST SOMEWHAT RELIEVED

Eastern fuel gas shortages were relieved slightly Monday by rising temperatures.

In Pittsburgh utilities companies reported they had resumed operations at several war plants. A critical fuel gas shortage had shut down or curtailed the use of gas in 200 plants in the area.

A 3-day ban on the use of natural gas by amusement places was lifted Monday night in seven eastern States after temperatures rose. States affected by the W. P. B. restriction were New York, Pennsylvania, Ohio, West Virginia, Kentucky, Maryland, and Virginia.

[From the Detroit News of February 6, 1945]

BLAME DENIED IN GAS MIX-UP—COMPANY PRESIDENT ANSWERS LESINSKI

A denial that the Michigan Consolidated Gas Co. was in any way responsible for the confusion which resulted in the Michigan gas crisis of February 2 was made today by John W. Batten, president of the company.

Batten answered charges made by Representative LESINSKI, Michigan Democrat, in Washington Monday. LESINSKI said that the company, by "sleeping on the order all night," was responsible. LESINSKI said the order curtailing the use of gas in war plants and night clubs came through at 5 p. m. February 1. It was not made public until next day, he said.

BATTEN VERSION DIFFERS

Batten said the order did not reach Detroit until 9 p. m. February 1. The telegram was from the Panhandle Pipeline Co., which supplies the Michigan company. The telegram was held up until the War Production Board was queried, Batten said.

Because of confusion over the application of the telegram to the local situation, Batten said, several factories shut off their gas supply and closed February 2. The order was withdrawn by the W. P. B. early February 2.

LESINSKI'S CHARGES

LESINSKI said that if gas users in the Detroit area had been told of the shortage arrangements could have been made for an adequate division of the available supply.

The Panhandle company diverted gas to Ohio, where a shortage existed. The Detroit supply was adequate, however.

LESINSKI said that the diversion of the gas supply was used by Michigan Consolidated officials to emphasize the importance of their plan to build an independent $70,000,000 pipe line to the oil fields of the Southwest.

[From the Detroit News of February 6, 1945]

UTILITIES TAX HELD INVALID—DETROIT FORBIDDEN TO COLLECT LEVY

Circuit Judge Joseph A. Moynihan today declared that the city ordinance which authorizes the collection on an excise tax on the Detroit Edison Co. and the Michigan Consolidated Gas Co. is unconstitutional.

In conformity with his opinion, Judge Moynihan issued an order restraining the city from collecting the 20-percent excise tax.

The Michigan Public Service Commission last August 4 ordered the Detroit Edison Co. to pay $10,450,000 in rate reductions.

COMPANY TAKES APPEAL

The company appealed, contending it could not pay the rate reductions and at the same time pay Detroit's gross revenue tax.

The tax was set at 20 percent of the gross revenue, but was limited to the maximum the company would have to pay in Federal

excess-profits taxes. Paul W. McQillan, company attorney, argued the city tax would amount to $10,400,000. He contended that the tax plus the rate reduction would amount to confiscation.

TAX NOT COLLECTED

The city made no effort to collect its tax pending a court ruling on its constitutionality.

James H. Lee, of the corporation counsel's office, arguing for the city, insisted that the Detroit excise tax would be only $2,932,000 if the rate reduction were effected. This $2,932,000, Lee said, could be paid through a reduction in the company's post-war reserve.

[From the Detroit Free Press of February 7, 1945]

W. P. B. OFFICIALS EXPLAIN INDUSTRY GAS SHUT-DOWN

The shutdown of industrial gas, which crippled a large portion of Detroit's war industries last Friday, was ordered for "humanitarian" reasons, according to two W. P. B. officials who flew here Tuesday from Washington to offer explanations.

Edward Falck, Director of the Office of War Utilities, W. P. B., denied categorically there had been any confusion so far as his agency was concerned in the issuance of the orders.

He said that last Thursday he had instructed the Panhandle-Eastern Co., which serves Michigan, Illinois, and Indiana, to deliver all extra gas to the Columbia and Consolidated Systems. That company supplies most of the larger cities throughout the Ohio Valley, including Pittsburgh.

He said the order was issued when it was found the lowered gas pressures in the Ohio Valley was imperiling hundreds of thousands of domestic users.

Falck said that no industrial considerations were involved.

He said the original order had gone out late Thursday to the Michigan Consolidated Gas Co. At noon Friday Michigan Gas notified this area's prime users of industrial gas of the shutdown.

He said he understood that some confusion was caused because certain companies refused to take telephone orders from the gas company and demanded a written directive from Washington.

He said the cut-offs, which have been unknown to Michigan in any drastic sense, are common in all other areas and have been invoked frequently since the outset of war.

Falck emphasized that additional shut-offs might be ordered for this area during the winter.

Alex MacComber, director of the gas division of the W. P. B., who accompanied Falck here from Detroit, denied that the Detroit area had ever been on the list of areas where gas for amusement purposes would be curtailed.

He said that press dispatches which stated otherwise had misquoted him.

Freedom and Security

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Women's National Republican Club on February 3, 1945, at the Waldorf-Astoria, New York City:

I am happy to be with you here because, as you know, I am proud to be a Republican. When one takes the long view of our country's history from the noble years of Abraham Lincoln until now, it seems to me that our party has much to be proud of. It is still as in Lincoln's day, I believe, the party that most cherishes freedom. But the greatest domestic political issue of our times no longer seems to be freedom. It is security. Now neither of our two great political parties has a monopoly of either freedom or security as issues. Yet candor compels us to admit that since the advent of the New Deal, the Democratic Party seems to be the party that most cherishes security. In a democracy it is therefore reasonable that the party which seems most to cherish the more popular issue should be the party in power.

But why is security a more compelling issue in America today than freedom? Largely because our people have tended more and more since the turn of the century to take freedom for granted. Before Pearl Harbor millions of Americans had almost come to believe that their freedom was a natural manifestation of America itself—natural in the same sense that our weather is a manifestation of nature. And a natural manifestation, no matter how constantly discussed, could not be an issue of serious political dispute. Freedom, as political subject matter, became increasingly known as just Fourth of July oratory.

When we paused to reflect on our Revolution and Civil War, we knew that the climate of freedom was not fixed by nature over this Nation; that it did not spring from our native soil twixt the golden wheat and the green corn. We have shed too much blood in fraternal strife over the issue of freedom to forget altogether that it was wholly begotten in our forefathers' valiant hearts.

Pearl Harbor once again reminded us of these spiritual origins of freedom. Once again in the terrible light of war, we clearly see that only human wills—tirelessly and passionately dedicated human wills—can keep many men free from the lustful and ambitious few who stand ever ready, in every age, in every climate, on every soil, to dominate and enslave them.

We Americans know that we shall defeat all those who would dominate us from without and by force of outrageous arms strip us of our freedom.

Are we so sure that we shall in the years ahead resist those who would dominate us from within and by force of tempting words also strip us of our freedom?

The names of many powerful and persuasive domestic tyrants to come are not known to us now. They have not stepped upon the native scene for the times have not yet ripened for them. All we can predict is this: Before they can succeed in stripping us of our freedom they must first persuade us of a great untruth: They must first persuade us that security is freedom. For the intentional confusion of security with freedom is the stock in trade of all the great political racketeers of modern times.

Wise men who have studied the aspirations of the human soul and weighed the needs of the human body understand that political freedom and economic security are not identical or interchangeable concepts, even though they are closely interwoven and interrelated.

Consider Poland. Economic security for Poland was always to be had in the past from either Germany or Russia—but at the price of her political freedom. We know which she chose time and time again and at what terrible sacrifice.

What is true for nations is true for groups and for individuals within a nation.

Take an example from our own history—our Negroes. Our history books tell us today that before the Civil War the Negroes were far better fed, clothed, sheltered, and cared for, as a group, than the vast majority of New England millworkers. They were in fact economically secure from the cradle to the grave. But they were not free. Today they are free. And yet they are less secure than any other group within the Nation. Security is not freedom. And freedom is not security. Yet both are essential to the well-being and happiness of every individual. And the attainment of the largest possible measure of both—that is the American dream.

Can any political party today promise and give the individual citizen both freedom and security? Can any party expand the area of personal security without contracting the area of individual freedom? This is the all important question which will face our Nation when victory comes.

I was asked today to give you a report on my recent trip to the European combat zones. Perhaps you expected a colorful eyewitness account of what our men and women in the armed services are doing. But maybe you will agree that it is more important that we should know what they are thinking about their post-war world.

When they come marching home the vast majority of men and women in uniform overseas are going to demand more security and more freedom than their fathers ever dreamed of. They cherish both concepts equally. But if the leaders of our Nation fail to give them both—and to give them both fairly soon—then our Republic is doomed. For if our returned veterans are forced to choose between their political freedom and their economic security as they may well be if our party cannot give them both, they will choose economic security. They will do so with no immediate awareness of making any such hard choice because the great untruth that security is freedom has already made much progress in America.

Let us remember that millions of Europeans and Asiatics have been led during the last 25 years into totalitarian slavery by their gradual acceptance of this catastrophic fallacy.

Americans can no more remain isolated from the destructive ideas that sweep out of Europe and Asia than from Europe's and Asia's destructive armies. As we must conquer these great armies with greater ones, so we must conquer these false ideas with true ones or be conquered by them.

These battles still to be fought at home when peace comes are worthy of the noblest hearts and keenest minds in both our parties. For by the spirit of the Constitution, by the brothers' blood our fathers shed in Lincoln's time, by the blood our Democratic and Republican sons are spilling now, both parties are surely pledged to the proposition that free Americans can be made secure and secure Americans can be kept free.

Do we need to wait for peace to fight this battle? No. We can begin to fight it now on the home front and by fighting it now can help to win it even before our men start coming home. How? By testifying with all our minds, with all our hearts, with all our strength to our belief in freedom as a concept separate from security and a concept nobler than security. But how do we do that? How are all our men and women overseas doing it? How did the Poles do it? By the voluntary sacrifice of every personal comfort, every scrap of security that interfered with freedom's fight. By getting a war job. By buying War bonds. By giving blood. By enlisting if you are a woman, physically able and unburdened by family charges, in the Army or Navy Nurse Corps, the WAC's or WAVES, the MARINES, the SPARS, the Red Cross. Simply, you might say, by working

and fighting for freedom now instead of talking of freedom tomorrow.

There are millions of people in America—mostly very ordinary people you never read about in the papers, who are doing everything and more that has been asked of them in freedom's name. But there are millions of others who have done little or nothing to win the war. Most of these are women.

I am sorry to say today what has been said so often and so much better before: Too many American women have failed to match up to their men overseas. Too many American girls seem to feel that their only patriotic duty is to keep their skins lily white and soft for some G. I. to touch when he comes home. I hope their G. I.'s are lucky enough to come home with hands to touch with.

Their failure and the failure of many men on the home front to make voluntary personal sacrifices worthy of the terrible sacrifices our men make on the battlefields belittles the cause of freedom and casts it low.

Can there be any connection between the failure of many Americans to respond to the great and urgent calls for their services at home and abroad, and the fact that our Nation had fallen into the habit of taking domestic freedom too much for granted? Yes; there is surely is. But there is also a connection between this failure and the progress in America of the great untruth that security is freedom. For if you need only stay secure to stay free, then you don't have to fight to stay free.

Let us face the truth: Today every American physically able and free of domestic obligations who does not voluntarily put mind or hand to some sort of war work is either an unimaginative clod who does not see that freedom is again in danger and therefore the real issue, or a spiritual fat cat who does not care. And such men and women are set-ups for the post-war demo-Fascists or demo-Communists who will one day use them to rob us all of both freedom and security. Whatever their party affiliations today potentially they are the totalitarian mass men and women of tomorrow.

The lesson of the battle front for the home front is that freedom is still world without end the greatest issue for the valiant hearts and generous minds among mankind. It is still the supreme value. It cannot be caught in the scientists' test tube. It cannot be written on any economists' balance sheet.

Freedom is what we are really talking about when we say that the voice of the people is the voice of God.

When the Boys Come Home

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. HEFFERNAN. Mr. Speaker, one of the most impressive sights encountered in my recent trip to our out posts and battle areas in the Pacific was the wonderful accomplishments of the American engineers. From all accounts they are performing equally miraculous works wherever our troops are engaged. Someday when the whole story can be told the work of the Army engineers and the Navy Seabees will be cited as among the most important contributions to the winning of the war.

As an architect, I have always been closely connected with engineers, and as a public official and highway commissioner in Brooklyn, I was associated with many of the men who are now building roads, bridges, airfields, and fighting on the roads to victory.

While I was in the Pacific I met some of these men. Their first inquiry was aimed at getting news of the conditions at home. A question frequently asked me was how the company they worked for before entering the service was getting along and what the chances were of their getting back the jobs they left to enter the service of our country. Some of the younger men I met have grown in engineering and construction experience far beyond what they possessed when they put on Uncle Sam's uniform. They are going to present a problem when they return to civil life.

In this connection I was much impressed with what Col. E. W. Garbisch said recently, along the same line, at a meeting of the New York Highway Chapter, Associated General Contractors of America, at Albany, N. Y.

Colonel Garbisch, who is now district engineer of the Corps of Engineers in command of the New York district, won fame while at West Point as the outstanding football hero of his day, and is rendering valiant service to his country in the game of war.

At the Albany meeting he was asked by the contractors: "What can we do to help our boys on their return to civilian life?"

In answer to the question Colonel Garbisch said:

Naturally, you will have to be prepared for great changes in many of them. Those who have suffered injuries in body or mind will have to be treated with the same kind of consideration and understanding that you would want if you were in their place. As to those who return in good health you must bear in mind that they have, in most cases, been subjected to many hardships and have been through hell and back to make it possible for all of us to continue to live and maintain the American way of life, liberty, and the pursuit of happiness.

You must be prepared to keep your promises and give them back the jobs they left to enter the service of our country. In some cases this is not going to be as easily done as said, unless you have work on hand for them to do. This means that you have an added incentive to obtain contracts which will make it possible for you to put them back on the pay roll.

In most cases the older and more experienced men, those who left key positions, will not offer the same problems as will the younger men. The oldsters will be able, in great measure, to take care of their own destiny and more readily fit themselves into peacetime activities.

But the younger men are going to be much more difficult to place in positions which will match up with the added experience and the responsibilities they gained during the time they were in service. Most of them will be fitted for much better jobs than they had when they put on Uncle Sam's uniforms. The 3, 4, or more years' experience, especially of those who are engaged in engineering and construction work, which has taught them how to meet and accomplish the impossible, is going to make them dissatisfied with what they will consider petty jobs.

In many cases it is going to require patience and understanding on your part, as well as theirs, to refit them into your organization. They have no doubt learned the value and necessity of team work, and the records they have made show they play a winning game, but the game they are coming back to will be entirely different. They will need considerate and patient coaching to help them put aside the rules and regulations of the game of war and play a winning game on the civilian fields. Do not for one moment imagine I favor any mollycoddling. You should not attempt that and they would resent it, but I feel you should prepare yourselves to do your best for the boys who deserve the very most we can give for the sacrifices they have made.

Of course, we must keep one thing in mind: it is all right to do a bit of thinking and talking about post-war, but right now the main job is to win the war. Wishful thinking won't do that. We have the enemies on all fronts "advancing backward" at the moment, but we should keep going with everything we have until the ball is over the goal line. Then we can pick ourselves up, scrape off the mud accumulated during the battle, and select the clean clothes that will make us presentable again to face the problems of life and the pursuit of economic security in business and at home.

Many of your own boys are having experiences and rendering services which must fill you with pride. They are doing their very best for all of us here—let us do our best until the war is over to keep them supplied with everything they need, and let us prepare ourselves to do our best to help them to help themselves when they return. Pray God it may be even sooner than we dare to hope.

Hold on to the True Christmas Spirit

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. HAGEN. Mr. Speaker, a few days ago a kind and good friend lamented that the true spirit of Christmas has, to a large degree, faded into the past and faces which a few short weeks ago were glowing with good will and friendliness are now set and resolute.

Because we are carrying on a grim and awful war, we should make a special effort to be cheerful and considerate of those around us. It will lighten their heavy burdens and make our own more easily endured.

Above all, we must reaffirm our belief in divine providence, so that we may not sink to the depths of the depravity engulfing the leaders of our enemies.

Following is my own Christmas message which was submitted by request to the Regular, the official publication of the Regular Veterans Association:

A MESSAGE FROM CONGRESSMAN HAGEN

The Christmas season of the year is traditionally celebrated by Christian peoples the world over as a time when we become conscious of our obligations to our fellowmen.

This year is no exception.

In spite of the fact that millions of our men and women are engaged in a struggle to the death with strong and resourceful enemies, we must not lose our perspective.

It becomes more important than ever that we retain and practice the Christian principles which are exemplified in the spirit of Christmas. It is this spirit which gives our fighting men the courage and stamina for victory over the enemy. Our fight is not against men—but against their evil and pagan and undemocratic philosophies.

During this Christmas season we all hope and pray for a speedy end of war and for a lasting peace based on Christian principles.

I also wish to insert a copy of a Christmas talk by the well-known commentator, Edwin C. Hill, delivered Tuesday, December 19, over the Columbia Broadcasting System network.

This talk made a lasting impression on me and my family. I feel others, who may not have heard it, should have an opportunity to read it.

It follows:

The only world we have while we draw the breath of life is in a state of such appalling confusion and violence that it requires the full strength of faith in the Savior of mankind to keep us going. It requires that we grip with all of our soul's strength the conviction that in the end good always triumphs over evil. Always. The seemingly useless slaughter and sacrifice of individuals suggests to the discouraged and doubting that God is not interested in the individual. That view is neither warranted nor intelligent—or else the life of Jesus Christ is utterly meaningless. For what else did the Christ come down upon the earth and give up His life than to help the individual?

No reading of the Gospels can lead to any such hopeless and daunting conclusion as that God and His Son are concerned solely with some vast plan of mass refinement. As we enter the season devoted to the Christ the thought occurs that there is only one dependable guide to life on earth, and that is in the sayings and doing of Jesus as the Gospel records them. After nearly 2,000 years the only sure authority on the Saviour is written in the four Gospels. And so it is immensely important, at the beginning of the Christmas season, that we attempt to picture not Jesus the God, but Jesus, the incomparable loving and tender human being. So again to the Gospels. The oldest of these was written many years after the event which is the very soul of the Christian religion. The others came even later. Before it became preserved in writing, the matter they all contain was handed down through the several centuries, from mouth to mouth, from father to son, from mother to daughter. And with much warmth of human association and reality. These do not derive from roving imagination.

How can one conclude, for example, as has been imaginatively written, that Pilate "listened with particular emotion," or was moved by any special consideration for one whom he, as a magistrate, could not possibly have cherished any reverence. No Roman pro-consul trying to steer a precarious course between two difficult and dangerous masters, Tiberius at Rome and the equally murderous Herod at Jerusalem, could have been in a more perilous case. So Pilate, on the authority of the Scriptures, took the middle course, conducted the briefest examination of Jesus—an official interrogation only—at the end of which he remarked, "I find no fault with this man." From the Roman procurator of Judea, this was great praise indeed. Fanciful interpretations of the unspoken thoughts of Jesus won't do. The farther we stray from the Gospels, the more bewildered we become.

As to his personal appearance, the French scholar, Renan, dwelling somewhat on the sweet and penetrating influence and amiable character of Jesus, remarks that these qualities appear to have been accompanied by a beautiful face. There can be no doubt at all that he possessed qualities which threw around Him a fascination from which no one of his countryside, of those simple and kindly populations, could ignore. Renan's supposition that the face of Jesus was lovely, brings to mind one of the most interesting questions of nearly 2,000 years: "What did Christ really look like?"

What evidence have we? If we may accept as authentic a letter which was written when Tiberius Caesar ruled the Roman world, more than 19 centuries ago, we have very positive evidence as to His personal appearance. In the reign of the Emperor Tiberius Caesar, there was a Roman law officer in Judea, whose official business it was to keep the Roman Senate informed of all occurrences of interest. It was his custom to send a letter every week or so, informing the Senators of what was going on in Jerusalem and in other parts of the Roman Province of Judea.

And this is what he wrote: This precise description of Christ: "A man of stature somewhat tall and most comely, with a very reverend countenance such as the beholder may both love and fear. His hair is of the color of chestnuts, full ripe, plain to the ears, whence, downward, it is more orient and curling, waving about his shoulders. In the midst of His head is a seam or partition of His hair, after the manner of the Nazarenes. His forehead very plain and delicate; His face without spot or wrinkle—beautiful, with a lovely red. His nose and mouth are formed as nothing can be represented; His beard is thickish, and in color like His hair, not very long-forked. His look innocent and moderate; His eyes clear and quick. In reproving He is terrible, in admonishing courteous and fair-spoken. It cannot be remembered that any have seen Him laugh, but many have seen Him weep. In proportion the body most excellent. His hands and arms most delicate to behold; in speaking, very temperate, modest, and wise. A man for His singular beauty surpassing the children of men."

There is the portrait in all its strength and beauty—something to contemplate with awe and with unshaken faith. On this Christmas, perhaps as never before, it is essential and paramount to believe that this man who came to save men, not only has steadily triumphed but will continue to triumph over all evil—however we fear, however we doubt, however we are shaken by the blasts of misfortune—until all things are made equal in the great day of reckoning.

Price of the Dumbarton Oaks Proposals

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. LANDIS. Mr. Speaker, we are all agreed upon one thing, we want no more war. Everyone wants to win the peace. But just how are we going to win the peace? Public opinion will decide the course we will take. The decisions we make in the next few months may determine our national welfare for years to come. May we be given the courage, the human understanding, and the strength of character to solve this problem.

In planning for the future of America we are now perfecting and will have in operation the largest globe-girdling network of airways, as well as the largest fleet of planes in the world. On the sea we will have the greatest naval and maritime fleet in the history of mankind, and the invisible radio waves already dominated by Uncle Sam's vast communications network.

America will be willing to help feed the starving nations abroad and extend the hand of Christian fellowship as far and as fast as other nations will reach out to take it in a firm resolve to work together to preserve peace and eliminate the evils and inequalities which provides the seeds of resentment and of war, but above all, our security, our solvency, our system of self-government and sovereignty must be safeguarded.

Most Americans agree with the philosophy of the Atlantic Charter, which provides that we seek no aggrandizement, territorial or other; that we desire no territorial changes that do not accord with the freely expressed wishes of the peoples concerned; that we respect the rights of all peoples to choose the form of government under which they will live; that we will endeavor to further the access by all to trade on equal terms; that we will try to bring full collaboration of all in the economic field; that we hope, after the destruction of Nazi tyranny, to see established a peace which will afford security to all within our national boundaries; that this peace should enable all to traverse the seas without hindrance; that we believe that all nations must ultimately abandon the use of force, but that pending such development the aggressor nations must be disarmed.

The minds of the American people are confused about the ways and means of implementing the Atlantic Charter. Many Americans favor the creation of machinery for international peace, yet oppose the implements necessary to carry out its objectives. Some are against compulsory military conscription and others are opposed to policing the world. Some have a friendly attitude toward the principles set forth in the Dumbarton Oaks proposals. Four things are called for in these proposals: First. A general assembly; second, a security council; third, an international court of justice; and, fourth, a secretariat.

If a group of nations are to bind themselves together under such a set of principles, giving the security council the range and power indicated, it appears to me the council will be ineffective unless it has at its command what might be termed an unlimited supply of: 1. The most modern fighting equipment in the world; 2. A trained and skilled personnel second to none; 3. Financial strength of unlimited proportions; and 4. Basic raw materials which can be converted into fighting equipment and general supplies as the needs of the day demand.

We may expect a total direct interest bearing Federal debt in this country of no less than $400,000,000,000 before the present conflict ends. In the event of the international agreements being consummated, it is reasonable to assume that the United States will take the lead in establishing international currency stabilization, and the necessary machinery for the expansion of the required credit with which to reconstruct the war-torn areas. If the United States is to do this, somebody will have to buy billions of dollars worth of new issues from the Federal Treasury in order to supply that agency with the necessary dollar exchange to extend to the other countries of the world. Such a program could easily involve an additional $100,000,000,000.

What the attitude of 12,000,000 fighting men and women will be when they return from the battlefronts to their homes, with respect to these great questions, I do not know. How far they will be willing to go on bearing the tax burdens incident to servicing the tremendous dollars debt, I do not know, to say nothing about the tax levies that will be required to pay the annual recurring expenses outside of the cost of servicing the debt.

Do you not believe the following questions should be answered before final approval is given the Dumbarton Oaks or similar proposals?

Should we do our part in policing the world?

If so, should it be compulsory or voluntary?

By maintaining an adequate air force and acquiring necessary air bases, do you believe American air power alone is sufficient to police the world?

How large a standing Army and Navy should we have in peacetime?

Do you believe in compulsory military training?

Do you believe the time has come to invest in physical education because it will prepare the youth of America to make his maximum contribution to society?

Should we dismantle our war plants and junk our ships which cost our taxpayers over $200,000,000,000?

Should we preserve our stockpiles of nonperishable materials, such as quinine, tin, and natural rubber, which were acquired at vast effort and expense?

Should we take our diplomatic service out of politics and establish diplomatic schools similar to West Point and Annapolis to train our future diplomats?

Will R. O. T. C. and Army summer school training be sufficient to prepare our youth in military tactics?

Will it be necessary to establish more R. O. T. C. units throughout our colleges and universities?

Do you believe in lowering the American standard of living to increase the living standards of other countries?

Yes, these and many more questions will have to be answered before a preponderant overwhelming public opinion will favor ways and means of implementing the Atlantic Charter. Every American will be called upon to help solve these perplexing problems.

Effort Made To Pass Proposed Twenty-second Amendment to United States Constitution in Georgia Legislature Condemned by Journal Editorial

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. PATMAN. Mr. Speaker, I have made a number of talks on the floor of the House during the past year on the activities of the Committee for Constitutional Government in its effort to place about the neck of the American people a yoke in the form of the so-called twenty-second amendment, which, if adopted, would not only figuratively break the individual's back but would break the backbone of our democratic economic structure. I refer to the proposed amendment which would limit the power of the Federal Government to levy taxes on incomes, inheritances and gifts to 25 percent.

PLAN TO LIMIT INCOME TAXES ON RICH

The first obvious reaction by too many of our people who are the victims of the group's subtle propaganda is that "here is a chance to limit my income tax to a certain figure. The rate has been increased during the past few years and here is an opportunity to put a check on any further increase."

What that gullible person does not realize is that he is, by lending his support to such a movement, making it absolutely certain that his tax rates will increase to the 25-percent figure, which is considerably above the tax bracket in which the average workingman, white-collar worker, and the small businessman are now placed in paying individual tax returns.

The beneficiaries of such an amendment will be the individuals who now find themselves in the high tax brackets by virtue of a very high income and the corporations whose tax brackets are also high by virtue of high profits.

Should not the result be perfectly obvious to anyone who even gives a moment's reflection to the proponents' line of propaganda? It is so simple that it could well be illustrated by the grade-school teacher using the old loaf-of-bread type of explanation. If it takes three measures of wheat to make a loaf of bread, one of which has been furnished by the poor man and two by the rich, what happens when the law will no longer permit the rich man to contribute his two measures? The poor man is either going to have to increase his contribution or the loaf is going to be a mighty slim one. That loaf of bread, gentlemen, must keep the old people of our Nation in sustenance, must take care of our veterans, must keep alive our Government and our Nation. I dislike to bring such a childish story out on the floor of the House, but when a group such as the Committee for Constitutional Government can change the answer to exactly the same problem and do it so quietly and effectively that 17 of the State legislatures endorse their answer, I think it is about time that we do something about it.

PLOT SUBSTANTIALLY ACCOMPLISHED BEFORE DISCOVERY

I am casting no reflection upon the intelligence of our citizens. The group's activities have met with such phenomenal success only because the great majority of the people of our Nation have not been aware of what was going on until comparatively recent months. I myself was shocked last year when I discovered this diabolical plot and found that 14 States had already adopted endorsing resolutions. There was certainly no publicity connected with each of these alleged successes.

I am proud that I have been instrumental in changing this lack of publicity. I shall continue to act as an unwelcome press agent for the Committee for Constitutional Government, and I can assure you that the spotlight of publicity will be focused upon every move to get this insidious amendment passed.

I shall have plenty of help in giving these activities publicity, too. Members of State legislatures all over our Nation are keeping me posted on developments in their respective legislatures in this respect. National organizations are advising their officers and members to keep their eyes open and to do all they can to defeat the movement. Many of our papers are finding out what is going on and welcoming a chance to expose those who advocate the adoption of the twenty-second amendment.

EDITORIAL ON SUBJECT

A very fine example of an editorial which appeared recently on this subject is that in the Atlanta Journal, Atlanta, Ga., of February 4, 1945, and I believe the Members of Congress will be interested in it. I am therefore having it incorporated in my remarks, in full, as follows:

WELL, HERE IT IS

We have been expecting it for weeks and, lo and behold, here it is. On Friday Representative John W. Greer, of Lanier County, introduced in the general assembly a resolution asking Congress to call a convention to move for an amendment to the Constitution which would limit Federal income and inheritance taxes to 25 percent. This is a local manifestation of a national movement which has been denounced on the floor of the Congress by one of its ablest and most respected Members as "the most sinister lobby ever organized" and as "the millionaires' amendment to make the rich richer and the poor poorer." The Congressman who exposed the scheme is WRIGHT PATMAN, who has represented a Texas district since 1929.

The national movement is the scheme of an organization calling itself the Committee for Constitutional Government, sometimes functioning under the alias of the Committee to Uphold the Constitution. The leaders of this committee, whose name is so pretentious, have been identified to Congress by Mr. PATMAN as Frank Gannett, a New York publisher reputed to be a millionaire; Sam B. Pettingill, a former Congressman who has conducted an active propaganda campaign in recent years against all New Deal measures; Edward A. Rumley, a convicted German agent

during World War No. 1, and the reputed brain of the movement.

Resolutions similar to that which now has been presented to the Georgia General Assembly have been slipped through the legislatures of 16 States. We say "slipped" because there is record of declaration by many members of those legislatures that they were unaware of the action that was taken. Congressman PATMAN told the House "quiet but extremely effective lobbyists kept their hands covered until the right moment for unveiling their final attack." Fourteen States had acted before the scheme reached the attention of the Congress. The States which have passed such a resolution are Alabama, Arkansas, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Michigan, Mississippi, New Jersey, Rhode Island, Wisconsin, and Wyoming. The Pennsylvania Legislature passed the resolution in June of 1943, but the Governor vetoed it.

The purpose of the scheme is obvious. Whereas a man with an income of $1,000,000 now pays income tax of about $800,000, the ceiling would be $250,000. The man with $2,000 income who now pays about $175, probably would have to pay up to the limit; that is, $500. Yet the Government would be unable to finance its operations without the levy of a national sales tax and other imposts which would bear with especial severity on those of low income.

If 32 States should pass such a resolution, a Constitutional Convention must be called to draft and submit a twenty-second amendment. One-half of the necessary number already have been gulled into action.

This move is an effort of special interests to revise the principles of taxation in such a way as to shift the burden of government from those best able to pay onto the shoulders of those less able to pay. It should never be permitted to reach the floor of the General Assembly of Georgia. If it reaches the floor, it should be defeated by overwhelming vote.

Personnel at Air Base Commended

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilmington (Del.) Morning News, of February 7, 1945:

PERSONNEL AT AIR BASE COMMENDED—GROUP IS LAUDED FOR FLYING 11,000,000 MILES DURING YEAR WITHOUT ACCIDENT

Commendation of Lieut. Col. William B. Hooton, commanding officer of the Second Ferrying Group at the New Castle Army Air Base, and all base personnel was received yesterday from Maj. Gen. Harold George, commanding general of the Air Transport Command at Washington, for the successful completion of the first year of operations of the Crescent Caravan without a fatal accident.

General George's message follows:

"The hearty congratulations of the whole command are extended to you and the personnel of your organization on the outstandingly successful completion of the first year of operations of the Crescent Caravan Ferrying Division, Air Transport Command. You have accomplished the remarkable record of flying nearly 11,000,000 miles along the 12,000-mile-long crescent route and making 1,500 ocean crossings without a fatal accident.

"All this is due not only to the extraordinary skill and attention to duty of pilots and flight crews of the Crescent Caravan, but also to the careful supervision and exceptional efficiency of maintenance and servicing personnel.

"I, therefore, desire to express to all personnel of your command concerned in this operation, my thanks and appreciation for their consistent conscientious effort, and to officially commend them for their distinguished achievement."

Psychiatry for Vets

EXTENSION OF REMARKS

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from today's Washington Daily News:

PSYCHIATRY FOR VETS

(By Thomas L. Stokes)

Congress has had its attention called—and very effectively—to one of the most serious problems of the war, the increasing number of veterans suffering from nervous and mental disorders, neuropsychiatric cases.

Representative PRIEST (Democrat, Tennessee), in a House speech, called it "one of our most pressing problems," and warned that until Congress provides facilities and trained personnel to meet it "we are leaving a tragically dangerous gap in our veterans' program unbridged."

It should be the immediate concern of Congress, he advised, "to find a way for specialized training of from 10,000 to 20,000 medical graduates in the field of neuropsychiatric treatment, and to provide reasonable assurances that an adequate number of men so trained shall go into veterans' hospitals for a definite and specified length of time."

He is preparing a bill for Government assistance in such a program.

The Tennessee Congressman, who has studied the problem, sketched its outlines to the House. Already between 130,000 and 140,000 men have been discharged from the service because of neurotic maladjustments, and the number is increasing daily. There are today less than 4,000 trained psychiatrists for the whole country and many of these are now in the service where they are needed badly.

Neither the Veterans' Administration nor any other agency of government today is able to cope with this growing problem, Mr. PRIEST said. He explained that the Veterans' Administration has its hands full with the tremendous amount of detail imposed upon it by the G. I. bill of rights, and at the present time is seriously handicapped by personnel problems. These, he added, will no doubt be cleared up in most lines of activity when the war is over.

"But," he said, "whether the Veterans' Administration shall be able to give the neuropsychiatric treatment that must be given as the number of such patients increases will depend primarily upon whether the Congress takes the necessary steps to augment facilities and to assure a sufficient number of skilled men in the medical service to do the job.

"I do not know nor does the Veterans' Administration or the Public Health Service know today how many men will be required. All who have looked into the matter at all know that many more will be required than are available today even if we were able to use all those now serving in the Army and Navy Medical Corps. I have received estimates that range from 10,000 to 18,000."

There is at the outset, too, he explained, a shortage of teachers qualified in the neuropsychiatric field, and it may be necessary first to train some teachers.

Representative PRIEST also emphasized the necessity of the community taking an active part in meeting this problem, for in the end it becomes a community problem. He pointed out that, even when enough psychiatrists are trained, there still will be need for a community program.

Statement by the American Labor Party on the Foreign Policy of the United States Government in Europe

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein the statement of the American Labor Party on the foreign policy of the United States Government in Europe:

The approaching military victory of the Allies is the result of the most extraordinary coalition of nations in history. That coalition is making victory possible. Without it the forces of fascism and nazi-ism might have enslaved the world.

The success of that coalition is a tribute to the leadership of President Franklin D. Roosevelt, Winston Churchill, and Joseph Stalin. In helping to cement that coalition, the President has fully represented and safeguarded the interests of the United States.

That coalition must be continued and extended in order to establish a just and durable peace for the people of this country and for the world. To achieve this end the Congress, and particularly the United States Senate, has a grave responsibility to provide the necessary cooperation. Otherwise the people of this country may be deprived of the fruits of our military victories and the benefits of the great coalition forged with the major United Nations.

I. UNCONDITIONAL SURRENDER

We emphatically endorse the policy of unconditional surrender.

The peoples of this war-torn world must not be cheated of their victory by a soft or negotiated peace. This war will have been fought in vain unless the Allied Governments are free to take the sternest measures to exterminate the very roots of Fascist and Nazi aggression for all time.

We urge that the strongest possible measure be taken by the major Allies not merely to see that Germany and Japan are demilitarized but that they are kept demilitarized and that the industrial and political potentials of these nations to become future aggressors are destroyed. We urge that all necessary agreements to accomplish these objectives be concluded among the major Allies as soon as possible.

II. DUMBARTON OAKS

The Dumbarton Oaks proposals represent a historic advance in the establishment of international machinery for the preservation and enforcement of peace. There must be no reservations which will nullify these proposals. There must be no reservations which will hamper the new world organization in dealing with aggression promptly and effectively.

The last election was a decisive mandate to this effect.

We accordingly urge:

A. With respect to the Dumbarton Oaks proposals

1 That the new world organization proposed at Dumbarton Oaks be set up at the earliest possible moment.

2. That in accordance with the Dumbarton Oaks proposals this country undertake to make available to the new world security council a designated amount of our armed forces for use against aggressors.

3. That this country's representative on the security council be empowered to vote for the use of force by the council to restrain aggression, without being required to return to Congress for specific approval in each instance. In the words of President Roosevelt, "If the world organization is to have any reality at all, our American representative must be endowed in advance by Congress with authority to act."

B. With respect to voting on the security council

The enemies of the new world organization have attempted to magnify differences between the powers as to proposed voting procedures on the security council. Nothing must stand in the way of a prompt settlement of these differences.

For ourselves, we regard it as basic that another world war can be prevented only by the united action of the great powers who are primarily charged with the responsibility of maintaining the peace. If the great powers cannot agree to preserve the peace, then no organization can preserve the peace. Any attempt to preserve peace, except by the unanimous agreement of the great powers, cannot succeed. Any attempt to enforce peace against one of them must inevitably provoke another world war.

The maintenance of peace, therefore, demands that the great powers who stand charged with the responsibility for the maintenance of the peace be in continuous fundamental agreement. In view of the basic considerations, the most desirable voting mechanism in the Security Council is one that will best be calculated to produce unanimous action by these powers. We accordingly urge that voting procedure on the Security Council be so established as to require unanimity of action on the part of the great powers represented thereon.

C. With respect to bilateral agreements

We strongly approve the bilateral treaties of mutual assistance entered into by Czechoslovakia, England, France, and the Soviet Union. These treaties are essential steps to realize the objectives referred to above.

These treaties look toward the policing of Germany and the continuance of cooperative action between these allies of ours. The treaties are thoroughly consistent with the Dumbarton Oaks proposals and implement specific sections of those proposals. They seek to organize Europe so as to make Europe strong enough to check German aggression in the future through the united action of those countries as the primary policeman in Europe. These treaties are, therefore, necessary steps in the achievement of a basic goal of this war, namely, to render it impossible for Germany to attempt once again to conquer Europe and from Europe to threaten the peace of the world. These treaties are, accordingly, important and constructive contributions to the national security of the United States.

III. LIBERATED COUNTRIES

1. Democratic governments in the liberated countries are cornerstones on which a durable peace must be built.

Our aim should be to encourage the unity of all exiled governments with the liberation movement of their respective countries. Where, however, that is not possible, discredited and reactionary governments, however, temporary or provisional they are alleged to be, must not be superimposed by force on any peoples. Such governments do not prevent anarchy or maintain order. On the contrary, they provoke the most violent disorder and civil war. They retard economic recovery, create the basis for new Fascist movements, and jeopardize the interests of this country in world peace and post-war world trade.

Full encouragement and assistance should be given to the popular forces of resistance in each of the liberated countries. These forces stemming from the masses of the people have earned the right with their own life's blood to work out their own destiny. Moreover, these forces are vital instruments in the war against fascism. They constitute a firm foundation of future democracy.

2. In this connection, we must recognize that recent differences between the United States and England stem mainly from unresolved questions which will become acute in the post-war period. These questions relate to matters of post-war trade. They must be settled as quickly as possible in the interests of an enduring peace.

We favor agreements promoting the equitable participation by the peace-loving nations in an expanded world trade. The Bretton Woods proposals are vital steps in this direction.

Fair and mutually satisfactory agreements which give recognition to the interests and needs of the British people, as well as the United States, are necessary in order to check repressive measures in countries such as Greece, Belgium, and Italy, and remove obstacles to our own policies in the Far East and Latin America.

A. Greece and Belgium

In line with these fundamental principles, we condemn the policy which has thus far been followed in Greece and Belgium. We urge that the peoples of those countries be permitted to reconstitute their governments so that those governments will be truly representative of the popular forces of resistance and liberation.

B. Italy

We urge the more active encouragement and assistance be given to the democratic forces in Italy and that adequate relief be furnished to the people of that ravaged country, to the end that that country may be established on a self-governing, democratic basis as quickly as possible.

We support the demand of the Italian Government to be allowed to participate with armed forces in the fight against Nazi aggression.

We fully endorse the Marcantonio resolution providing for the admission of democratic Italy into the United Nations.

C. Poland

The people in Poland have suffered greatly and fought gallantly in their homeland against the Nazis.

We urge that the United States Government develop ways and means of sympathetic cooperation with the newly established Provisional Government of Poland in Warsaw.

IV. SPAIN

Franco Spain has clearly demonstrated that it is an outpost of nazi-ism and a springboard for the establishment of fascism in America. Under the guise of neutrality, Franco has been receiving American oil and other commodities, has placed Spanish waters at the disposal of Germany for Nazi submarine bases, has made Spanish land and factories available for Nazi plane bases, has made Spanish facilities available for Nazi radio stations, and has furnished Spanish soldiers for the Nazi war machine.

The whole of Spain has become a training ground for a Latin-American gestapo and a spearhead directed against our own immediate interests in the Americas. Franco Spain has become a conduit for the transfer to Latin America of billions of dollars of Nazi and Fascist loot.

In line with the principles expressed above, we urge the following:

1. The adoption of Congressman COFFEE's resolution calling for severance of diplomatic relations with Franco Spain and the ending of all shipments of oil and other materials by our Government.

2. The extension of moral and financial assistance to the democratic Spanish elements within Spain and outside its borders, seeking to restore a republican form of government in that country.

3. The granting of freedom of movement and communication for Spanish republicans in exile, especially for political leaders and representatives of the last republican government.

V. CONCLUSION

The task of building a genuine and effective world organization is a challenge to our patience, our intelligence, our imagination, and our faith. That task is not facilitated by the irresponsible criticism of our allies by perfectionists or by the sniping of isolationists masquerading as superinternationalists.

In the words of President Roosevelt, "We are not fighting for and we shall not attain a utopia. Indeed, in our own land * * * we have yet to realize the full and equal enjoyment of our freedom."

Voices of the Present and Past

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. STIGLER. Mr. Speaker, at the beginning of this debate I had no intention of asking for time to express myself in support of this bill, as I am not a member of the Military Affairs Committee. And then, too, I am reluctant to violate the precedent set for new Members of this House, but as I have sat for the past 2 days and listened to arguments, both pro and con, trying to obtain a clear concept of this legislation, my mind unconsciously reverted back some 25 years ago during World War No. 1, when many of us here today had the privilege and honor of wearing the uniform of our country and leading men in action at Belleau Woods, or perhaps Chateau Thierry, St. Mihiel, Meuse-Argonne, and other famous names, all revered by the 4,800,000 men who served on the battle and home fronts of the last war.

During those days, Mr. Speaker, I never once thought it ever would be

my honor to express my thoughts in the Halls of Congress of the United States, and especially in support of a bill which, in my judgment, according to the way it is passed, will either shorten or prolong the war.

As I address you this afternoon I seem to hear voices from the sepulchers of the dead, voices of the past; yes, voices from the various cemeteries in France, where we see thousands of little white crosses, row on row and the red poppies grow. Voices from the Surennes Cemetery near Paris, voices from the largest cemetery at beautiful Romagne, France, where more than 30,000 of our heroic dead were buried. I seem to hear those voices, Mr. Speaker, asking the question this hour, Is Congress today considering an antilabor bill, a pro-labor bill, a bill in direct contravention to the thirteenth amendment of our Constitution, an un-American bill, a totalitarian bill, a slave-labor bill, or Fascist bill, as some have suggested, or a bill that our Commander in Chief, who should have the united support of all of us during war, our Secretary of War, our Secretary of Navy, our Chiefs of Staff of the Army and Navy have asked for? A bill which they say is necessary to win the war. As I listen to those voices, Mr. Speaker, the question suggests itself. Who am I to deny their request?

Moreover, I seem to hear the stilled voices of the past say "this is not a bill that would place a crown of thorns on the brow of labor, but one that is necessary on account of the exigencies of war—necessary if we have early victory—necessary if we want to save thousands of lives—yes, necessary if we want to save billions of dollars. Every hour you postpone action here you prolong V–day over there."

So far as I am concerned politically, I may be at the road of Armageddon. If I vote for this bill it may cause my defeat at the next election, but, Mr. Speaker, during these crucial days when the world is on flame I am not thinking of that. If that comes I shall at least have the courage of my convictions and the satisfaction of knowing I heeded the voice of my Commander in Chief, the Secretaries of War and Navy, and their respective Chiefs of Staff, and the countless voices of the past, voices inaudibile as they may be to some, but voices that have made this country what it is today—a land of freedom, a land of justice, yes, a land of democracy—a land where we have freedom from want or fear.

It is easy to say we are in favor of doing everything possible to help win the war, but, Mr. Speaker, it takes something more than lip service on the floor of Congress to win a war. Ask the dogface who ever occupied a funk or fox hole. This afternoon I am wondering whether we are going to follow the voices of the past, as well as the 40,000 World War No. 1 veterans who are still in the hospitals of our country paying, and paying with untold suffering, for the privilege of serving their country, and the some 11,000,000 men who, I am sure, if allowed to vote on this measure, an overwhelming majority would vote for it. Yes, I, too, am wondering if we are going to follow the voices of our Commander in Chief, Secretaries of the War and Navy, and their respective Chiefs of Staff.

In casting my vote for this bill, Mr. Speaker, I don't consider I am voting to slave labor, or violating my oath of office to uphold and defend the Constitution, or voting for totalitarianism, fascism, or against organized labor, as has been said on the floor during this debate, but consider I am doing just the opposite and am only keeping faith with those voices of the past, the men and women in the service today, the fathers and mothers of our 650,420 combat casualties, and last but not least, with my Commander in Chief, Secretaries of War and Navy, and their respective Chiefs of Staff.

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from the Spencer (Mass.) Leader:

DRAFT NURSES?—NEVER

Ever and anon the toll of dead and wounded in this war increases at an appalling rate. The pressing demand for 10,000 trained nurses, with the threat that women will be drafted for this work, only serves to emphasize the fact that the methods of total modern warfare are producing casualties far in excess of previous wars. If nurses are drafted, it will be one of the greatest tragedies of this war. The services of nurses in connection with warfare, ever since the days of Florence Nightingale, have always been on a voluntary basis. Nurses become such, especially in wartime, because they wish to assist in healing the awful wounds left by the war. They volunteer because they love their work and their fellow men. No mere hirelings could minister to the needs of wounded men with that patience and kindly care which now distinguishes the work of our nurses. Nursing will lose its soul on the day that the volunteer system ceases to exist. Recently I met a cadet nurse whose father was one of New York's leading dentists, whose income was such that money ceased to be a consideration in their lives, and yet his little daughter, still in her teens, volunteered as a cadet nurse in a Boston hospital. One nurse of this type is worth 10,000 hirelings. More and more we tend toward regimentation by state edict. The drift seems always in that direction. Perhaps this move to draft and regiment the nursing profession may open our eyes sufficiently to awaken us to a full realization of how far we have left the basic ideals of our founding fathers as we supinely let the builders of a new tower of Babel confound our thinking if not our language. Already some of our institutions of learning are showing the Government the right way by instituting courses of preparatory training in the nursing profession. If the Government would get back of these moves to encourage voluntary training there would be no need for such drastic moves as proposed in the new draft legislation. Right here in Worcester County the Worcester Junior College is offering such a course, and young women who wish to enter this highly desirable profession will do well to investigate the advantages of such training.

Record of the F. B. I.

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. STEFAN. Mr. Speaker, to take things for granted is a great American trait. To take things as they are has been the rule rather than the exception, until an emergency is upon us. Then with fanfare, we "view with alarm," and on the verge of hysteria we do a "Paul Revere" to save the day.

I recall, as do you, those soul-searching days following the disaster at Pearl Harbor when we expected an invasion on the east coast and on the west coast, with bombings in the Middle West. And from the lips of persons even high in the Government came the word that a wave of sabotage was soon to break out; that the enemy was getting set to strike. In fact, many accepted a wave of enemy sabotage for granted. That wave of sabotage has yet to come, and today, we generally are complacent and again we are taking it for granted that saboteurs and spies are a thing of the past.

During these perilous years we have all assumed that our home front would remain secure. There is justification for that view which will continue so long as the Federal Bureau of Investigation, under the able leadership of its Director, Mr. J. Edgar Hoover, is on the job and has the backing of the citizenry of this Nation.

The record of the F. B. I. stands for all who desire to examine it—it is a record of achievement in which I take considerable pride. As a member of the Subcommittee on Appropriations in charge of the Department of Justice appropriations, I have for many years taken a personal interest in the development and accomplishments of the Federal Bureau of Investigation. And the F. B. I. can stand on its record with justifiable pride, for it is the record of right-thinking Americans, in Congress and out. As Mr. J. Edgar Hoover said once in a speech, "The F. B. I. reflects the tempo of the times." It does. Over the years, by some means, it has been able to project itself into the uncharted paths of the future and lay a course of action which justifies our taking for granted the internal security of the land.

Let me refer to the record of this efficient agency of our Government. In 1938 and the early part of 1939, quietly and efficiently it was laying the ground work for events that now are history. Even before the Hitler military machine gave its horrifying exhibition of might in the

conquering of Poland, the F. B. I. was on a full wartime basis. It worked as we slept. Some persons, even here in Congress, thought that Director Hoover was somewhat of an alarmist and perhaps was needlessly expanding his organization. Others, subverters and heads of front organizations, were not long in publicly proclaiming that the F. B. I. was exceeding its authority. And as time went on they became more vociferous in their denunciations. But now we can understand. They knew what would happen to those who would sell America short. They knew that a program of sabotage would never materialize if the F. B. I. could get the jump on them. It is little wonder that more pressure was not exerted to restrain and hamper the F. B. I., particularly at the time when the Communists were alined with the Nazis.

Day and night, F. B. I. agents did their job of ferreting out persons potentially dangerous; investigating their backgrounds, alliances, and activities. When the Jap holocaust was visited on Pearl Harbor, the F. B. I. was ready. Even as the bombs were falling, the word was flashed to this organization's headquarters. A quiet Sunday afternoon and evening became a turmoil of activity. The G-men put their fingers on all dangerous aliens. Overnight the Axis fifth column in America became extinct. Since the outbreak of war, the F. B. I. has arrested over 16,000 alien enemies, many of whom were released upon giving a satisfactory explanation of their suspicious activities. Others were released by alien enemy hearing boards, while over 4,000 have been interned and nearly 6,000 paroled. In making these arrests the F. B. I. seized as contraband nearly 5,000 firearms; over 300,000 rounds of ammunition; 2,200 sticks of dynamite, enough if properly placed to cause untold damage to our war effort; over 4,000 cameras; 3,000 short-wave radio receivers; code books; and Jap and German uniforms, along with numerous other items.

There is always a fear that in time of war civil liberties will be infringed upon, and this was one of the favorite smoke screens that the subverters raised before the war in denouncing the F. B. I. So far as I have been able to learn, there has not been one single case of high-handed arbitrary action laid at the doorstep of the F. B. I.

Back of this miraculous job was planning and training. In 1935, for example, Director Hoover founded the F. B. I. National Academy for the purpose of training select representatives from various communities in America so that they in turn might train their brother officers in the application of scientific aids to law enforcement. Nearly a thousand men have graduated from this school. Many of the graduates are chiefs of police. Here was a nucleus around which progress could be made in each community. From my own State of Nebraska 14 officers have attended the academy. I have personal knowledge of the great value of this training to State and local law-enforcing officers.

More important, here was the backbone of the F. B. I. mobilization plan for law-enforcement officers which was placed in action in 1939. Director Hoover gives to American law enforcement its just praise and credit for their sterling performance of wartime duties. Standing shoulder to shoulder, local, county, and State authorities have worked with the F. B. I., proving once and for all time Mr. Hoover's claim over the years that this Nation needs no national police. I would venture to say that from the standpoint of efficiency and achievement our American authorities stood head and shoulder above the O. V. R. A. of Italy, the Gestapo of Germany, and the N. K. V. D. of Russia. And their work has been done in the American way. I would not insult our American authorities by making any further comparison. We want none of the Old World's corruption, oppression, brutality, and tyranny in the United States.

Seldom heard of was a vast mobilization program of war industries to safeguard against sabotage. In 1939 the F. B. I. launched a program of surveying the protective facilities of war plants, followed by recommendations as to how the protective facilities could enhance security. Some 2,300 key manufacturing establishments upon whom we had to depend for the bulk of our weapons of war were surveyed. Since the F. B. I. studiously avoided injecting itself into employer-employee relations, both management and labor enthusiastically aided in this furtherance of an antisabotage program. The result is that up to now there has not been one successful enemy-directed act of sabotage. To the shame of those enjoying the blessings of being Americans, the F. B. I. has found some 2,000 acts of technical sabotage committed by persons seeking to satisfy personal grievances, and by those who would rather engage in horseplay than to go all out to work for America. The records show 568 convictions for this type of crime.

While the enemy has not been successful, it has not been because they have not tried. The Nation was electrified by the news in the summer of 1942 of the landing of eight saboteurs from Nazi submarines and of their apprehension by the F. B. I. within 2 weeks after their arrival. Here was positive proof that the enemy was desperate. It is also their confession that the F. B. I. had done its work well, for you may rest assured that had the Germans a single vestige of an organization left in the United States they would never have gone to the expense, trouble, and risk of trying to build up a new organization in America.

The same observation may be made in the espionage field. Scores of spies have been arrested by the G-men; their plans thwarted. Here again the Germans, by sending their spies, Colepaugh and Gimpel, to the United States by submarine, admit that their spy organization in the United States was nonexistent. There is another lesson to be drawn from this most-recent landing. As the enemy finds the pressure of the Allied offensive mounting, in desperation they will become more brazen. Until the war is finally over and the shooting has stopped, both in the east and west, there can be no relaxing of our effort or curtailment of our protective forces.

In World War No. 1 the records show that there were 7 delinquents in every 1,000 men of draft age. Those of my generation remember with shame the disgraceful methods that were used in enforcing the draft laws. Slacker raids were the rule rather than the exception. There has been no such fanfare in this war. The job has been done without hysteria. Instead of 7 delinquents in 1,000, there is only 1. The emphasis has been placed on carrying out the intent of Congress in getting men in the Army rather than in jail. Thus, out of 445,000 cases there have been fewer than 12,000 convictions. The others either complied with the act or were made available to the armed services.

Prisoner of war camps are located in virtually all sections of the United States. In them are thousands of Germany's fanatical Nazis and some of Japan's vanquished but still defiant warriors. They are in our midst, but not by choice. Few have changed their minds about Hitler or Japan's destiny in the Orient. They despise America, look upon democracy with contempt, and are powerless and harmless only so long as they are kept safely in confinement.

It is inevitable that some prisoners will try to escape, and that many will succeed. Thus far there have been 1,249 escapes by prisoners of war in the United States, and all but 20 have been recaptured by the F. B. I. and local authorities. Most of the 20 still at large have been free for only a short period of time.

Military authorities have the responsibility of maintaining in confinement and controlling prisoners of war. But when a prisoner of war escapes, he becomes a threat to the internal security of the Nation and continues to be an active danger until he is placed back in confinement. Most prisoners who escape hope to make their way back home and rejoin the fight against the United Nations. En route are many opportunities to pick up valuable information, many places where carefully planned acts of sabotage would do great damage to this Nation's war effort.

The F. B. I. is charged with the responsibility of guarding the internal security of the United States, and for that reason it is the coordinating agency and the guiding force in the search for and the apprehension of escaped prisoners of war.

Prisoners have escaped by cutting wire, crawling through washouts, and going over fences. Generally they travel afoot, but some have ridden trains, traveled in crude boats on rivers, while others fled in stolen jeeps or even on bicycles.

With over 100 Federal criminal laws to enforce, aside from its wartime activities, the F. B. I. has had its hands full. Crime is on the upswing. Hijackings remind one of the old days of the roaring twenties when the beer barons were stealing each other's stock in trade. In this era of scarcity, racketeers and robbers find a ready sale in the black markets of rationed items, and the only way

to curb this menace is to make it so unprofitable that the criminals will think twice before attacking shipments in interstate commerce. Not only has the F. B. I. been able to clear up most of their hijacking cases, but they have been able to recover a high percentage of the stolen loot.

Protecting the uniforms of the United States has been another big job handled with distinction by the F. B. I. Those lecherous persons too yellow to fight have defamed our fighting men by buying uniforms, campaign ribbons, and even decorations, then being feted by those who would believe their lies and boasts, which were designed to gain the sympathies of their listeners.

There was a time when no home in America was free from fear of kidnaping. No bank was free from fear of robbery. Congress wisely enacted statutes giving the F. B. I. jurisdiction to investigate such cases, with the result that such crimes practically ceased. Before the outbreak of war, fears of kidnapings were almost forgotten; however, many responsible citizens and authorities again are fearful of a revival of crimes of this type.

The rise in juvenile arrests does not augur well for our future. They are the ones who may be our public enemies in the coming years. The disruption of home life and the failure of parents in the peacetime years is the fault. Americans have not always put first things first. And the home has suffered with the tragic result that arrests of girls under 21 have increased 130 percent since the outbreak of war. A boy 17 years old should be finishing his high school course and preparing for the future, yet the figures show that more boys aged 17 are arrested than in any other age group. What is the answer? It appears not to be a difficult one—return the American home to its rightful place, as the center of American life. Make it a place of learning as well as a place of living.

The Federal Bureau of Investigation is an example of what can be accomplished in Government, and it should be duplicated in principle in all levels of Government, State, county, and municipal. Above all, let us support and stand back of this agency of security.

Observations Concerning Current Problems

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks I include the following observations concerning current problems taken from my weekly news letters to the people of my district:

THE NEW BEVERIDGE PLAN

The Beveridge social-security plan of 2 years ago—used as a basis for the New Deal "cradle to grave" or "womb to tomb" security proposal—has now been superseded by the new Beveridge plan for full employment. Sir William Beveridge finally tumbled to the fact that his first plan provided insurance against losing a job, but it did not in itself make jobs; therefore, it was not a sound program. In order to provide the desired security, jobs to provide full employment must be created. Sir William has now brought forth his plan No. 2, a plan to guarantee full employment. Beveridge proposes to solve all economic problems—national idleness, trade slumps, depressions, overproduction, and underconsumption. In his new plan he would have the Government underwrite or guarantee consumption demand. He says the workers should be able to buy all the goods they can produce; but under our present economic system they haven't enough money, so the Government must step in and fill the deficiency of demand, which in plain English means furnish the extra money. The Government will get the money partly by borrowing and partly by a tax program designed to redistribute the wealth of the Nation. Since reading the Beveridge plan for full employment, I am wondering if this is where the President got his idea when he promised 60,000,000 jobs. Haven't we enough crackpots of our own without borrowing ideas from England's crackpots?

THE FULL-EMPLOYMENT BILL

Senator MURRAY, of Montana, has introduced S. 380, which he calls the "Full Employment Act of 1945." The purpose of the bill, as glibly stated in the preamble, is: "To establish a national policy and program for assuring continuing full employment in a free, competitive economy, through the concerted efforts of industry, agriculture, labor, State, and local governments, and the Federal Government." In substance, the bill says that all Americans able to work and seeking work have the right to useful, remunerative, regular, and full-time employment; that it is the responsibility of the Federal Government to guarantee that right; that whenever private industry fails to provide full employment—jobs for all—the Government must step in and provide the necessary jobs to assure continuing full employment. The bill is a very comprehensive one, full of high-sounding phrases, setting forth idealistic objectives; but when analyzed it simply offers the same old panacea for unemployment—Federal borrowing and spending to provide boondoggling jobs for all the unemployed. This is exactly what Wallace testified he intended to do if he were made Secretary of Commerce and had control of the Federal lending agency. It is the Hopkins' program of "spend and spend, tax and tax, elect and elect" over again. It is Sir William Beveridge's plan No. 2 put into the form of a bill. What do you think of it?

THE PATTERN SHAPES UP

Straws in the wind flying around Washington show that we are in for an era of planned economy. In the President's recent Budget message he indicated that an era of planned economy under strict Federal control is in the offing. In that message he said, "The mistakes in debt management and tax policy after the last war must not be repeated." This suggests that he has a different plan for debt management and tax policy after this war from the one used by CARTER GLASS and Andy Mellon. He proposes to control the economy of the Nation through a program of taxation, Government spending, Government borrowing, and the manipulation of our debt load. A $300,000,000,000 debt load, with an annual interest payment of between six and seven billion dollars is a force to be reckoned with in the economic life of this Nation. The forced resignation of Jesse Jones, one of the biggest businessmen in the Nation, and the appointment of Henry Wallace, the greatest exponent of planned economy in the Nation, is a clear indication of what the President has in store for us.

A QUESTION OF FITNESS

What are Wallace's qualifications, views, experience, and background for the responsible job that Jesse Jones has filled so well?

1. The Secretary of Commerce has control over the Civil Aeronautics Administration, which deals with world aviation. Wallace says world aviation should be under the control of the United Nations peace organization. Do we want that?

2. The Secretary of Commerce has control of both foreign and domestic commerce, which deals with world trade. Wallace says he favors a United Nations investment corporation that would regulate world trade largely by using our cash and our credit. Do we want that?

3. The Secretary of Commerce has control over the $750,000,000 invested in American synthetic rubber plants. Wallace says we should scrap these synthetic rubber plants and get our raw rubber from Latin America and the Far East. This means doing away with several hundred thousand jobs, and again becoming dependent upon outside sources for our rubber. Do we want that?

4. The Secretary of Commerce has control over the Federal loan agency that has been given $35,000,000,000 to loan to the Defense Plant Corporation, the Rubber Reserve Corporation, the Foreign Economic Administration, the Petroleum Reserve Corporation, and so forth. Federal subsidies of all kinds are also covered by the Federal Loan Agency. Do we want Wallace in control of these billions so he may carry on his socialistic experiments? Jones testified that the R. F. C. could lend anything, at any time, at any rate of interest, to anybody."

Congressman DIRKSEN summed up Wallace's appointment very plainly when he asked: "If Tom Girdler had been appointed Secretary of Labor, what would our labor organizations say about his fitness for the position? If Jeannette Rankin of Montana, the lady pacifist—who voted in the House against World War No. 1 and against World War No. 2—were appointed Secretary of War, what would the American people say about her fitness for the position?" The question concerning Wallace's appointment to succeed Jones is a question solely of his fitness for the position.

Administration of the Selective Service Act

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

G. A. PRESCOTT, JR., & SONS,
Tawas City, Mich., January 31, 1945.

Hon. ROY O. WOODRUFF,
House of Representatives,
Washington, D. C.

DEAR MR. WOODRUFF: We enclose clipping from your local paper, the Bay City Times, under date of January 24, with a few remarks from one who knows after 3½ years as a member of the local selective-service board.

We are of the opinion some of the so-called parlor pinks placed in local State offices through political influences, to help General Hershey run the big selective-service show,

are not gifted as old Joseph, back in Egypt, when he interpreted King Pharaoh's dream about the seven fat and lean kine. If they were, they would not be making asinine statements which we hear about and read almost every day.

Did you know, in a recent meeting January 12, in Saginaw, before a joint group of selective-service boards, appeal boards, and appeal agents, one of these very brilliant young majors, when asked about the Tydings amendment to the Selective Service Act, stated it did not mean a thing, or words to this effect; that the President, as Commander in Chief, had stated, "All men between the ages of 18, etc., should be in the armed forces."

Did you know after these meetings, when the heat went on, General Hershey told the press the Tydings amendment was still in force and would be strictly adhered to by all local boards; but the very next day, after all the news broadcasts had quoted him, the papers came out with a statement from our State headquarters that all men between the ages of 18 and 26 would be called from the farm to service as needed? We ask seriously which statement is true or false. Does General Hershey run the show or do some swivel-chair officers in the State headquarters? Who can the people of this great Nation believe, the head of the Selective Service System, who publicly calls it foolproof, or the misinformed and misguided heroes running the show from the various State headquarters offices?

Did you know in a recent meeting of the triple A, held in West Branch, a Mr. Doan, who is at the head of this organization in the State, told various members present the farm boys would be in service; there would be no chance in an appeal because the State office would request the appeal, and there would be nothing left for the appeal board to do but follow their wishes?

Did you know on March 29, 1944, Memorandum M-797 was sent from State office at Lansing to local boards, boards of appeal, and Government appeal agents; the subject: Current policy regarding classification of agricultural registrants?

Reference Tydings amendment to the Selective Training and Service Act of 1940, section 5 (K), page 15-L.

Sections 622.25, 622.25-1, 622.31-2, 622.31-3, 623.61 (C), and 627.51, Selective Service Regulations.

Local Board Memorandum No. 164, as amended February 14, 1944.

The President's memorandum of February 26, 1944, to General Hershey.

General Hershey's letter dated March 13, 1944, to local boards and boards of appeal members and Government appeal agents.

State Memorandum (M-7180), (M-737), (M-778).

This Memorandum (M-797) has 12 paragraphs and is signed by LeRoy Pearson, State director.

Section 2 provides briefly that in "class II-C shall be placed any registrant who is found necessary to and regularly engaged in an agricultural endeavor essential to the war effort." (Please note carefully no age limit is here specified.)

Section 3 provides that class II-C deferments shall be for a period of 6 months or less. At the expiration of the registrant's deferment in class II-C, his classification shall be reopened. So long as the registrant is necessary to and regularly engaged in an agricultural occupation or endeavor essential to the war effort and until a satisfactory replacement in such agricultural occupation or endeavor can be obtained, the registrant shall be continued in class II-C at the end of each successive period for which he has been deferred in such class.

Section 5 reads, and we quote: "The President, in his memorandum of February 26, 1944, states, 'It is time to strike a new balance' in manpower reserves between essential civilian activities, war production, and the armed forces; that agriculture and industry should release the younger men who are physically qualified for military service." (This seems to be the paragraph the State office majors and whoziss think overthrows the Tydings amendment, but we ask you, does it?)

Section 7 has a paragraph as follows:

"With the urgent need for manpower by the armed forces, it is not believed that new registrants (18-year-olds recently registered) can be currently deferred in class II-C unless there is an urgent need for their services on the home farm. Neither is it advisable to defer a registrant unless there is an established or preexisting need for the services of a skilled farm worker."

Section 9 says in part: "With the current need for younger age men by the armed forces, it is believed that the above provisions should be applied only to those men above the age of 25 years and more particularly to fathers 30 years of age and older." Here is where the blunder was made in the beginning—all these older skilled farmers and livestock men were put in the draft until the situation became so serious it brought about the Tydings amendment. With this older groups in service, the calls developed for the younger boys and each group of this desirable age has been drawn until the farms of this Nation are drained to their very grass roots.)

Section II says: "The practice of certain local boards classifying in I-A and ordering for induction physical examination farm registrants under 26 years of age, regardless of essentiality, is not in conformity with the Tydings amendment, selective-service regulations, or General Hershey's letter of March 13, 1944. Such action does not meet with the approval of this headquarters and coming at a time when spring planting is about to begin is causing farmers to question whether the administration actually desires their farms to be operated in 1944. If crops are to be planted, labor must be available. (Now, here we have all the arguments condensed into one. The above rule is being broken every day regardless of the Tydings amendment or any other directive and the only subterfuge has been the pulling of the farm boys to the induction centers while still classified in II-C and planning to drop them in I-A after they pass the physical examination.) Now, in all seriousness what is the score? On August 10, 1944, Col. Samuel D. Pepper, Chief Deputy State Director, wrote our board as follows:

"The Tydings amendment was never intended to and does not by its terms provide for exemption of registrants engaged in agriculture, and has not been construed by the President or by the Director of Selective Service as being an exemption law.

"This headquarters has been endeavoring to bring about a uniform compliance with the existing selective-service regulations and has felt obliged to appeal many cases in the past few months. Many of these appeals have been from agricultural deferments, especially as to registrants in the age group under 26.

"We believe your board should give greater consideration to the existing needs of the armed forces for younger men in classifying your registrants in this age group, and less concern for the food-production program which the President some months ago declared to be satisfactory enough to warrant the release of these younger-age-group men." (Just here we recall in the beginning of selective service one bright young lieutenant told a joint meeting in Bay City not to worry about the food and farm situation as the State of Iowa, Wallace's State, could grow enough to feed the United States, lend-lease, etc.)"

All over Michigan files have been combed recently by headquarters, all farm deferments in the age group 18 to 26 were ordered for physical examination, some 40 boys from our county, and those who passed will arbitrarily be inducted into the Army. State headquarters know how many there are and they will make the calls accordingly and insist on them being filled regardless of the Tydings amendment, if they can make this ruling stick.

It seems to us that at every turn all the State headquarters, and Washington too, has done is try and discredit the local boards. An order comes out in the press: "Every man in the 18 to 35 group must take a physical examination." The public heaves a sigh, tightens its belt, and says, "Let's go"; but the press release did not mean what it said. Five days later another release appears stating this does not apply to those deferred in agriculture under the terms of the Tydings amendment, and we ask you, Does this Tydings amendment mean anything under these new directives or is it an illusion to be played with by men too dumb to realize the seriousness of the farm situation? This country today has no big backlog in agriculture. In the past 100 years we have had seven major droughts. Today our country is about 25 percent short on hogs. This in itself is serious, but can be regained much quicker than in any other kind of livestock. Our stores of corn and other grains are such that one real bad drought or one real wet spring and summer to interfere with the planting and the food situation would be more than serious.

Butter stocks in the United States today are lower than anytime in the past 50 years—this is due largely to lack of help, selling whole milk, and the dairy cows wiped out by the Bang's test and sold as farms were closed. Just here we cite the dairy herds offered for sale in the Chicago milkshed area and in other areas when the selective-service law first went into affect. This and other things undoubtedly was the cause of the Tydings amendment.

The situation is so serious the county agents and triple-A men are alarmed and someone or some group down in Washington should think this thing through—not just the first part of the equation. Do you realize if all these farm-deferred boys are drawn into the Army there will be auction sales all over this country and a good dairy cow will be worth about 33⅓ percent of what she is worth today and even then who will absorb her other than for beef?

Our board will definitely battle the State office on deferments that have the war board recommendation, and we feel are justified according to production and we are supposed to have the final say, but the State office will ask for an appeal—the appeal board will be instructed what to do and by so doing will slowly strangle the food supply of a great nation.

Pardon me for drawing a personal mental picture. During the First World War my good father was food administrator of this State. He never faltered from his request for more and more food. The fall the armistice was signed we threshed 21,253 bushels of grain out on the ranch—we had 200 acres of corn for the silos, and ran over 1,000 head of cattle besides the sheep. We also cut 700 acres of hay and we paid two threshing crews more than $750 in money. We got this crop all in before the so-called third group were called to camp. The fourth group were married men with children. We drove the country for a radius of 100 miles nights and Sundays to get help. All we got were old men and school boys—the old men knew how to harvest but could not stand the gaff, and the young boys did not care to learn. Anyone with any intestinal fortitude hates to see a crop spoil and waste on the ground. We completed the harvest and we are willing to do our part again but we would not go through this experience again regardless of the cost, for we just could not take it.

Last fall was wonderful and a great crop was harvested but had the rains and floods

appeared as they sometimes do the summer efforts would have been in vain and the labor of the harvest wasted.

Today the Nation faces a shortage of farm labor. The local selective service boards who know and see these things are standing by with hands tied by tricky regulations.

According to Selective Service Statistical Digest of November 1, 1944, we have 22,098,000 registrants in the 18 to 37 age group. Of these 47.9 percent are inducted or enlisted, 19.3 percent have industrial deferments, 20.5 percent are in IV–F rejected and 6.9 percent have II–C deferments for agriculture. (These IV–F boys will not all stay on the farms.)

Here is the story, 6.9 percent of the 18 to 37 year old group are engaged in running the farms of the Nation along with a lot of old, tired men and women and yet we are told the food supply is ample, the President has spoken, agriculture must furnish this young group.

This is a serious matter—too serious for a lot of young, inexperienced Army officers to be interpreting the food supply of the Nation. We hope you and your colleagues will give this matter some very serious consideration in the near future.

With kind personal regards, I am,

Sincerely,

GEORGE A. PRESCOTT, Jr.

Compromise

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Journal-Gazette of February 4, 1945:

COMPROMISE

EDITOR OF THE JOURNAL-GAZETTE:

There is no settlement in a civilized world without compromise. No exceptions. Not one of us can ever be literally or absolutely (unlimited and unconditional) or uncompromisingly free. Each of us in this human world, is dependent upon others. There should be a "conditional surrender" to both Japan and Germany. And here is my thesis: Japan and Germany can never be totally destroyed. No large nation can be entirely stripped of its power. History shows this in too many instances for detail here. Suffice to say this is a historical fact. Now, a similar plan should be submitted to both Japan and Germany, to the Japanese and German people directly; to their respective military forces, indirectly. In the present unconditional surrender plan (the conditions of surrender) to both Japan and Germany that the present military cliques are to be eliminated and ringleaders tried before an Allied tribunal; all industrial or heavy production to be limited to peacetime production or dismantled; war indemnities for both Japan and Germany to be levied on long-term payments and reconstruction of destroyed Allied properties. For instance, Germany must restore Poland to her pre-war status as well as Pussia's destroyed cities. And prisoners of war held by enemies and ourselves to be returned to their respective countries. An international Allied police force to police both Germany and Japan for 5 years to maintain this compromised peace. All enemy former military production centers to be under international police inspection during this term. The Japanese and German people to be reeducated into the humanities of civilization by an international educational college and helped economically to regain their foothold upon life. In short, give them the psychology (feeling) of a 5-year democracy in practice rather than theory. Show that religion of human relationships means kindness, sincerity, and cooperation to your fellow man. And as Confucius so wisely said, "Reciprocity will make the whole world kin." German and Japanese people will quickly observe that they have been lied to by their military groups and know what it means to feel free and not in fear of death at the least slip.

No legislation can reform a people—even by force. It may hold them in check for a while, but not for long. History of wars on end prove this apodictic fact. The Japanese and German peoples must "reform" themselves. But we must set the example—not as revengeful and hating victors, but as God's (not man's) worshippers of peace on earth good will toward all humankind. Not force reform (impossible) but help them to reform. The unconditional surrender psychology is not only unwise, impossible, but suicidal to an ultimate plan for permanent peace, for we will but continue hate (fear of insecurity) and wars of tomorrow. And this "compromised surrender" is what we would expect of our unconditional surrender. The erroneous psychology of an uncertain, unconditional surrender is its "indefiniteness." We must be definite, positive, and dynamic in our understanding what a peaceful world must be—and state these "surrender terms" in plain and simple terms—the simpler and laws involved will bring success. And I recommend to Congress and legislator war committee council that will attend the forthcoming Big Three meeting just this sort of an end-the-war and make-the-peace plan. If we persist in the unconditional-surrender plan thousands and more thousands of our boys and the allies' boys will be slaughtered and maimed for life, our economic supplies reduced to a basis of diminishing returns, for these peoples of our enemy countries will not understand our economic plan, and we will gain a victory, yes, but the world will (allies in particular), be economically bankrupted. That is the present World War determination of our enemies on this unconditional-surrender basis. A compromised peace or a stated peace policy to end war and bring dependable peace is the only sane and logical solution. No exceptions.

NORMAN SWEET.

Application of the Golden Rule in the Problem of Peace

EXTENSION OF REMARKS

OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and accompanying statement:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 6, 1945.

MY DEAR MR. ARMSTRONG: I wish to thank you for your letter of February 1, enclosing a feasible application of the Golden Rule in the problem of peace.

I have read your memorandum carefully, and I am extending your remarks in the CONGRESSIONAL RECORD.

With all good wishes, I am,

Sincerely yours,

WILLIAM T. BYRNE.

FEBRUARY 1, 1945.

A FEASIBLE APPLICATION OF THE GOLDEN RULE IN THE PROBLEM OF PEACE

All Christian people recognize the value of the Golden Rule as an ideal in human relationships. Occasionally some country actually applies it with surprising success. The rule is simple: "Do unto others as you would be done by."

When the United States turned the Boxer indemnity into a fund for supporting the education of the Chinese they applied the rule. The benefits to the United States of this policy have been great.

Does the present crisis offer the United States a similar opportunity? Undoubtedly, the Allies will demand some reparations from Germany and Japan. Such a penalty, as partial punishment, seems only just. The penalty, however, must not backfire, as reparations did after 1918. That is where the Golden Rule can save us.

The Bretton Woods Conference has shown the need for a large loan fund to be used in restoring the countries where war's destruction has been extensive. Much of this money must be advanced by the United States, but part could very well be from reparation payments. To have the reparations paid to the world government instead of national governments would add to the world governments' prestige and would lead to certain other possibilities that are the essence of this proposal.

Presumably, part of the loans would ultimately be repaid, but as we ruefully learned in 1930–32, there are many difficulties in repaying international loans. What one country wants to sell another may not want to buy. The reparations under the scheme proposed here are not to be returned to any particular country but to the world government. The peace terms should then provide that these funds should be repaid to the economic and social council to be used in research and education to raise the standard of living in all parts of the world, but with particular attention to those areas where the standard is low in comparison to the potential of the area. Research work could actually be carried on in the countries repaying the loans or in countries willing to accept sufficient imports to permit the transfer of the funds.

The scheme would do several desirable things: First, it would apply the Golden Rule by trying to raise the standard of living for all—which is certainly what we would want for ourselves. Second, it would give positive financial power to the economic and social council that would raise it from the level of futile discussion to the level of a super-Rockefeller Foundation for the improvement of the world. When one reviews what has been done by foundations of this type, the possibilities appear tremendous. Third, it would provide a revolving investment fund for transfer to countries with excess of imports over exports and could be used as an important part of the currency stabilization fund. It would have great advantages over the usual loan fund used for stabilization in that the transferred funds could be used to eliminate the basic causes of the depreciation of the currency, whereas the loan funds are not so readily directed into the needed education and research.

The plan is simple but goes directly to the fundamentals of world troubles: The hopelessness of people who see no way to offer a better chance to their sons and daughters than the meager opportunities they have had. It proposes to use the reparations as

a great humanitarian foundation for the improvement of the life of man wherever he may be—in Asia, Africa, Europe, or the Americas; yes, even in Germany and Japan.

Television

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Washington Post under date of January 24, 1945. The Federal Communications Commission recently issued an order which will directly affect the development of television broadcasting in the future. The Post editorial explains the problem with great simplicity and clarity. The editorial follows:

TELEVISION'S FUTURE

The Federal Communications Commission has issued what amounts to a caveat emptor warning in connection with its proposed allocation of spectrum space to television broadcasting. There has been a bitter controversy in the industry between those who wish to promote the sale of television receiving sets as soon as materials become available and those who would like to postpone commercial exploitation until a superior technique for broadcasting can be perfected. In its present place in the spectrum, television can operate in bands no more than six megacycles wide, permitting a picture of only 525 lines. In the ultra high frequencies, which the F. C. C. has designated for experimental television, much wider bands would be available to make possible pictures of far greater clarity, depth, and detail.

What the Commission's findings in its allocations report boil down to is a flat warning that better television is around the corner. Prospective buyers of television receivers should take note. Yet the Commission has authorized commercial television to go ahead on 12 six-megacycle channels assigned to it in the lower frequencies. The danger inherent in this policy was made evident at once in a talk delivered before the Washington Advertising Club last week by T. F. Joyce, of the Radio Corporation of America, a manufacturer of receivers. Mr. Joyce predicted the television industry would become a billion-and-a-half-dollar business in terms of retail pricing at the end of the fifth full television year. He must be planning to sell a great many receivers. But these receivers, keyed for reception in the frequencies now allocated to television, would be altogether worthless for reception of the improved television in the ultra high frequencies when this gets under way. If the public should be gullible enough to invest millions of dollars in such receivers, then the change-over to the superior system of television, when it becomes feasible, would be extremely painful, perhaps impossible. The F. C. C. might well have been more explicit on this score.

When it was talking about frequency modulation, the Commission declared that "Public interest requires that FM be established in a permanent place in the radio spectrum before a considerable investment is made by the listening public in receiving sets and by the broadcasters in transmitting equipment." We quite agree. And the doctrine is equally applicable to television. At least the public ought to be informed that the type of television which the F. C. C. now proposes to authorize is merely temporary and makeshift in character. It would be tragic if eagerness for immediate commercial gain were permitted to block technological progress.

Small Business and the Free Enterprise System

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. LEONARD W. HALL. Mr. Speaker, under the leave granted me, I am including herein an editorial from the National Independent, published in January 1945, issued in the interests of the Independent Tire Dealers and Tire Rebuilders of America, in comment on the action taken by the House of Representatives in extending the life of the Small Business Committee:

REAL FREE ENTEPRISE SYSTEM IS NEEDED FOR REAL DEMOCRACY

The action of the House of Representatives on January 18, when unanimous approval was given by voice vote to House Resolution 64, which extends the life of the Small Business Committee, should be looked upon by all small-business interests of the United States as a big forward step by Congress indicating that small business assuredly must get the protection it deserves.

In the same vein of thought this action by the House would be a warning to all the peace-time agencies of our Government that they must adopt a more militant stand for small business, and act accordingly in protecting the many against the few who seek control of the industry of the Nation.

CANNOT AFFORD DELAYS

Nothing is more true than that small business cannot afford the time and money for delaying actions of the Government in bringing about prompt relief where the country's laws and regulations have been violated by big business.

In many instances in our industry insofar as the Robinson-Patman law is concerned, and as regards misleading advertising (in 1938 and 1939), we have witnessed the serious damage that has been done to all small-business interests, and while corrective measures have been taken, in the meantime the damage was most costly to the independents.

The amazing and unjustified price wars that beset the industry—right up to a few months before Pearl Harbor—would not have come about if we had the help and support of these Small Business Committees of Congress. If the committees had been in existence then we could have presented a truthful case which would have brought about immediate relief.

PROMPT ACTION SAVED INDEPENDENT

Without fear of contradiction it can be stated that it was the prompt and immediate actions of both the Senate and House Small Business Committees that figuratively saved the life of the independent tire dealer and the tire rebuilder, because certain Washington authorities—and even some leading rubber officials—shortly before Pearl Harbor remarked that it was too bad but the independent dealers were through for the war period.

Those making such statements did not want this to happen, but that was the actual way it looked to them at the time, due to the war emergency.

A few others thought differently, and they immediately appealed to Hon. WRIGHT PATMAN, chairman of the House Small Business Committee, and their actions, with those of all members of the committee, always will stand as a monument in the Nation's business as the turning point for the small business interests of the country.

DEALERS SHOULD NOT FORGET

The independents of our industry never should forget this. We emphasize this as it is regretful to record that small business oftentimes does forget its sincere benefactors and those who seek to protect it.

Remarks on the floor of the House when this resolution came up for consideration were of major importance when one considers that they came from both sides of the House.

Outstanding was the statement of Hon. LEONARD W. HALL, New York, who said: "So, Mr. Speaker, I do hope this House will leave open to the small businessmen of America the only forum they have where they may be heard, and that only forum is the Small Business Committee of the House."

In our opinion the statement is of major importance to everyone in our industry, and a definite warning to any and all who attempt control of monopoly in the rubber-tire industry.

SUPPORT FOR OUR STAND

Previous to the national political campaigns in 1944—in the National Independent dated May 1944—we proposed to both parties that they incorporate in their platforms a plank recommending that the small business committees be made standing committees in the Congress. We now believe our thought was not in vain—due to the action on January 18—in the light of the support that was forthcoming from both major political parties.

We believe that we can state that a similar resolution, already introduced in the Senate by Senator MURRAY (Montana), and referred to the Commit on Audit, will be reported favorably, and that the Senate will take similar action to that of the House. And it is to be hoped also that Congress appropriates sufficient funds so that the small business committee will be able to function in a satisfactory and efficient manner so that all qualified small business in the country will have its rightful place in the economic structure of the Nation.

Hon. WRIGHT PATMAN has assured us that the tire bill will be reintroduced immediately, and we believe we will get similar cooperation from Senator MURRAY on the bill in the Senate.

GET OWN HOUSE IN ORDER

As time goes on it will be found that these small business committees will be found to be among the most important and powerful in Congress. Labor, agriculture, finance, and others all have powerful representation in Congress through committees, and now that small business is officially recognized it is up to small business itself to get its own house in order and prepare itself with factual information if and when it calls upon the Small Business committees for help.

Big business in our industry should immediately take note of its past actions in the retail field and set its house in order, or these forums will have to be used by the independents as the court of last resort.

Bethlehem Hingham Shipyard

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 7, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the mayor of the city of Brockton, Mass.:

BROCKTON, MASS., *February 5, 1945.*
Hon. PHILIP J. PHILBIN,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Hundreds of Brockton men and women who are employed at the Bethlehem Hingham Shipyard have asked me to appeal to you, the Navy officials, and Secretary Forrestal in their behalf.

This tremendous shipyard has been notified that some time in the very near future it is going to be closed down for lack of contracts, all of us are sure that the necessary contracts can be secured in order to keep this splendid, patriotic group who have worked and produced for the Government, those fine Navy ships that are winning this war.

Thanking you for your many favors in the past, I remain,

Very truly yours.
JOSEPH H. DOWNEY, *Mayor.*

Program for Rebuilding of Timber Resources in South

EXTENSION OF REMARKS
OF
HON. JOHN S. GIBSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 7, 1945

Mr. GIBSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release:

PROGRAM FOR REBUILDING OF TIMBER RESOURCES IN SOUTH

(By Clair Johnson)

WASHINGTON, January 26.—A program designed to stimulate rebuilding of timber resources on 200,000,000 acres of southern forest lands was proposed today.

Twenty-five southern Congressmen pledged to work for the project, which calls for 20 experimental forests to serve as demonstration areas for each 10,000,000 acres of forest.

Representative GIBSON, Democrat, Georgia, chosen leader of the group at a meeting today, said an appropriation of $1,500,000 will be sought for next year and $1,000,000 annually thereafter.

The funds would go to the Agricultural Department, which would be charged with developing the research work.

Last year a similar congressional group, headed by GIBSON, was successful in obtaining an appropriation for development of the South's scrub oak into useful products.

The program was recommended by the Forest Farmers Association after 2 years of study. The association's secretary, Wayne G. Miller, of Valdosta, Ga., told Congressmen it was needed "to rehabilitate worn-out lands in the South and to provide cash incomes from the sale of wood pulp and other forestry products."

Miller said the Government already owns eight sites for the proposed experimental forests and cooperative arrangements with State and private landowners would make it unnecessary to buy others.

"The country will have to look increasingly to the South for a large share of its forest products in the future," GIBSON told a reporter. "The Federal Government, through a sound program of research, must lead the way in rebuilding and maintenance of our forest."

GIBSON, who was authorized to pick a committee to draft the necessary legislation and seek its passage, said the following either attended today's session or sent word they would back the effort:

Representatives HOBBS, MANASCO, GRANT, and BOYKIN, of Alabama; GATHINGS and HARRIS, of Arkansas; PRICE and SIKES, of Florida; PACE, BROWN, and COX, of Georgia; WHITTINGTON, ABERNETHY, and COLMER, of Mississippi; WEAVER and CLARK, of North Carolina; RIVERS, of South Carolina; BECKWORTH, COMBS, and LUTHER A. JOHNSON, of Texas; BLAND and SMITH, of Virginia; COOPER, of Tennessee; MALONEY, of Louisiana. All are Democrats.

Extension of the Lend-Lease Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 7, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following resolution adopted at a meeting of the United Lodge No. 889 of Lynn, Mass., Sons of Italy in America, requesting all possible aid under the lend-lease program be extended to the suffering civilian population of liberated Italy:

Whereas it is common knowledge that the civilian population of liberated Italy are suffering untold hardship and privation as the result of the ravages of war.

Whereas it is a moral obligation of the United Nations to devise ways and means to seek to ameliorate these conditions.

Whereas it is common knowledge that other liberated countries are being aided by large lend-lease shipments of food, clothing, and medical supplies.

Whereas the allocation of shipping facilities to transport a minimum amount of badly needed supplies would not affect the war effort.

Whereas the President of the United States has sufficient authority under the laws of the United States to extend lend-lease aid to the civilian population of liberated Italy: Be it hereby

Resolved, That by virtue and in pursuance of the action taken by the members of the United Lodge No. 889, of Lynn, Mass., Sons of Italy in America at a meeting duly called, it was voted to draft and forward proper resolutions to the President of the United States requesting that all possible aid under the lend-lease program be extended to the suffering civilian population of liberated Italy, and further that a copy of said resolution be forwarded to Hon. LEVERETT SALTONSTALL, of Massachusetts; Hon. DAVID I. WALSH, of Massachusetts; and Hon. THOMAS J. LANE, of Massachusetts, requesting that all possible assistance, encouragement, and aid be given the President in these premises, and further that Congress itself take cognizance of the situation by requesting immediate action in carrying out the general plan of this worthy program.

UNITED LODGE OF LYNN, MASS., No. 889,
SONS OF ITALY IN AMERICA.
THEODORE REGNANTO, *Chairman,*
JOSEPH O. SPINA, *Secretary,*
JOSEPH H. SHIFCIONE,
CONSTANTINO D. GEROLAMO,
GAETANO IORIZZO,
Resolution Committee.

Work-or-Fight Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH E. TALBOT
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 7, 1945

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter concerning the recent so-called work-or-fight bill, written by a former Member of the Congress. The letter follows:

Hon. JOSEPH E. TALBOT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN TALBOT: Action just taken by the House on the work-or-jail bill prompts me to give you some objective comment on the use that has been made of this newest "crisis" (the break-through in Belgium) to continue the trend toward a socialistic or a communistic state government.

With the administration forces, together with the Army and Navy, hammering away for immediate passage, the House fell for the propaganda, "We ought to give the armed forces whatever they ask." Meantime, during the Senate consideration, there is an opportunity for all citizens to scrutinize the proposals and consider what will be the final results if the May bill or similar legislation passes.

To sugar-coat the draft of labor with the excuse, "It is only for the duration" and "To stand by the military commanders" does not change the fact that this is nevertheless another direct step toward communal living and state control under military compulsion.

It is interesting to note that some of those who have professed great love and concern for organized labor, in their greater devotion to furthering the teachings of Trotsky and Marx, voted for this draft legislation.

We can utilize the IV-F's, include nurses in the draft, stop all strikes in war plants, enunciate by law the principle of "work or fight," and we may have peacetime compulsory military training for our youth—yes, we may have one or more or all of these. But it is important to realize that it is not necessary to adopt total civil draft or universal labor draft or even the May bill, under a supposed crisis that requires universal service, to achieve some of the components. Present laws will suffice or can be strengthened.

Of course, the Army and Navy want every man and woman included in a total civil draft. It would augment the present system that furnishes the uniformed forces by providing another simple process of drawing an official order to move civilian manpower at a certain moment to a given place.

It is fair to conclude, if the administration and shifting of civilian industrial forces was

to be done with the obvious waste of manpower and transportation that was practiced by the Army and Navy during the first 2 years of our recent training period, the war production manpower shortage would never improve. It was common practice for hordes of California recruits to be sent 3,000 miles to Florida for preliminary training, and New England men found themselves shipped to Pacific coast camps or getting their early workout on far-western terrain much like the home grounds.

Yet happily, under the voluntary system, the production forces promptly took up their posts in mine, mill, and factory with the minimum of travel and time lag. The President has called attention to what he called negligible loss of time by union strikes under our present methods. We need only remember the miracle of production performed by labor and management since our entrance into the war was done without compulsion.

To say the Army and Navy favor total civil draft only adds numbers to the proponents—not weight of argument. Their background and training for war sets them apart from the rest of us. They have no experience with nor tolerance of social and political opinion and results. They think only in terms of numbers of men and tons of matériel required for a given problem in warfare. To include full direction of all manpower from schoolroom to graveyard appears to them to be a simple broadening of the field of discipline. Unquestioned obedience to government on the home front may be a logical corollary to strict discipline required for the battle front, but it is a departure from the nonmilitary world and the democratic principles under which we Americans must compete, compromise, and compose the ideas and activities of each other if we are to live and work as free men. It is a departure from the American precept that the Government takes orders from the people and the belief that the least-governed country is the best-governed nation.

It seems imposing and unanswerable to say "unless we have total civil draft we shall prolong the war." This is a specious statement, and presumably used in the hope that if reiterated it will finally be believed. We ought to remember that, although both Germany and Italy were wholly regimented and England and France brought almost entirely to a similar state by what seemed necessity, yet neither singly nor as Allies were they able to attain success in this war. It needed the added weight of the United States with its voluntary production and citizen armies to turn the scales toward victory.

To state that total civil draft will speedily end the war is at best only a promise with a dangerous experimental short cut. Actually, can it be seriously contended that men and women ordered to dictated tasks, in which they may have no aptitude or liking, will work faster and more efficiently than those who work for the pleasure and pride of accomplishment, in jobs of their own choosing and for the pay that the individual's skill earns. Can dictated direction, planned and prefabricated homes, regimented recreation, and labor pools filled and emptied with mechanical precision be satisfactory substitutes for our right of freedom to work and to the pursuit of happiness in a state where ambition and voluntary effort often earn success?

Will a new horde of bureaucrats, the administrators to keep the records and the overseers to supervise our goings and comings, increase or decrease the number of productive hands engaged in the war plants? Will the party members or agents politically appointed wear black shirts or some less ominous color as they go about to make inspections or to collect the new taxes required to pay for the privilege of waging a speedy end to the war and of living under universal service or total civil draft?

Among the statements and arguments offered for total civil draft, the one the proponents regard as conclusive (you are supposed to slink off in a corner a slacker if you disagree) is the comparison with Selective Service. They state "if it is right for Government to induct our physically fit young men and women into military service, it must be equally right to induct every other man and woman into the production line." It may be added that the followers of Trotsky and a few in Congress advocate a further right of government—the requisition of all capital and private property for the use of the state.

Actually there is no logical comparison between the men who pursue the art of war and those engaged with the precise facts of matériel production. War strategy is practiced with elements of surprise, improvisation, quick movement, and withal with soldiers taugh "theirs not to reason why". In the fog of war with large numbers of men involved secrecy is important and only the commanders can know the reasons and hazzards of action. In such an enterprise complete regimentation is necessary and instant and implicit obedience is imperative if the manpower and matériel is to be used to the best advantage and with the least loss.

Conversely, the home front is a deliberate field, where tangible things may take on new shapes and purposes, but where men intensify rather than change their employment. True there must be unity of action and devotion to duty, but uppermost there is a sense of pride for and a loyalty to those who risk their lives in battle. All good citizens are warmed by patriotic zeal for service, but only 10 percent of the population are privileged to bear arms and become subject to military discipline. If the fires of patriotism have burned so low that men will no longer work and sacrifice at home to support those at the front, then the Nation holds no promise in the future for either soldier or civilian. Do those who demand total civil draft believe the fathers and the families of the men in the fox hole and jungle have ceased to love their country and will desert their defenders? For a century and a half this people has offered its sons, its labor, and its resources whenever the Nation was threatened. To stifle patriotic emotion and to extinguish honest pride in voluntary service for family, community, and country by complete or partial national regimented mobilization is to forsake our traditional past and to abandon the hope of a greater free democratic future.

The lately disclosed deficiencies of Army G–2 in the European theater, and the lack of comprehensive planning by those at home charged with military procurement for every contingency, makes an alibi and an opportunity of the present agitation. The technique of putting over self-defensive even though unpopular measures under the guise of war necessity has been common practice this past decade. This is the reason for the suspicions and fears of people today that new and added controls of the American economy and people will result if the May bill or civil draft is adopted. To attempt to place the blame for the honest mistakes and omissions made in high places by making a scapegoat of industry is despicable. The public will excuse bad judgment but not bold evasion. The war took a turn against us where we were not prepared, and that made shortages and new requirements. The labor and production front did not fall down, nor can it make up these shortages overnight. What failures there may be here at home are for want of information and because of ill-advised or insufficient information by the Government. It is lack of confidence in the news furnished to the Nation, news that is spoonfed by some all-wise ones, that is to blame for the letdown in the war effort. This news control is an adjunct of regimentation that is already in daily use—telling the public what is best for them and only what they can take. They (the O. W. I.) have a psychological warfare pattern for the home front and deliberately employ it. It is because of this manipulation of the bad news that the American people expected the war to end last October. Meantime, it is made to appear unpatriotic to question or criticize censorship.

With the experience of the past 2 years behind them, it hardly seems likely that the people are in a mood to accept the present arguments and harness themselves with new and broader restrictions that are basic in Universal Service and in the May bill. It cannot be that 2 years of directives has convinced the country that some Government agent or agency in Washington knows the possibilities and potentialities of Hank Hornyhand or George Grimyfist better than the farmer or the machinist himself. Both of these citizens grew up to choose his own vocation and his own boss—sometimes himself. Maybe he is ready for a change. It is doubtful if he has yet been convinced of the need for someone to compel him to work against his will, but he is still susceptible to reason and enlightened and inspired leadership.

Give him all the facts and sufficient time for consideration. Let him decide between compulsion and volition. He will not fail the Nation in this crisis—either with his hands or with his mind. Whatever Hank and George decide will be best for the future welfare of the country.

Very sincerely yours,

RANULF COMPTON,
MADISON, CONN.

Deferment of Agricultural Workers

REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. MICHENER. Mr. Speaker, in the beginning, may I call the attention of the House to the very informative and factual remarks made yesterday by the chairman of the Committee on Agriculture, the gentleman from Virginia [Mr. FLANNAGAN]. These remarks appear on page 932 of the daily RECORD of February 7, and are well worth reading.

Since January 2 I have addressed the House on several occasions concerning the attitude of Director Hershey, the State directors, and the local draft boards, toward the Tydings amendment to the Selective Service Act. Particular attention is called to my remarks appearing in the Appendix of the RECORD, page A411.

The gentleman from Virginia [Mr. FLANNAGAN] makes it clear that the attitude of the Selective Service Director toward the Tydings amendment has caused much confusion and misunderstanding, not only on the part of State directors and local draft boards, but also on the part of Members of Congress. It would seem, however, that Director Hershey's last pronouncement clarifies the

situation so far as he is concerned. After quoting the testimony given by General Hershey before the Committee on Agriculture day before yesterday, the chairman succinctly says:

Let me draw the issue.

Simply stated, the issue is this: The Congress is of the opinion that the Tydings amendment is clear and unambiguous, and places upon the local draft boards only one determination, and that determination in the language of the amendment is to find out if the registrant is "necessary to or regularly engaged in an agricultural occupation or endeavor essential to the war effort." Selective Service has, in construing the Tydings amendment read into the amendment a new element, namely, comparative essentiality, and thus placed upon the local boards the duty to determine whether the registrant is more essential to the armed forces than he is to the farm, or whether the registrant is more essential to the farm than he is to the armed forces. This, in my opinion, is an unwarranted construction and a construction that the Congress never contemplated would be placed upon the amendment.

Mr. Speaker, I have heretofore pointed out the difficulties local draft boards in Michigan have been having in their desire to comply with the draft law. In this connection I include herein a front-page news story from the Adrian (Mich.) Daily Telegram of February 5, 1945, which is as follows:

DRAFT BOARD MEMBER SUBMITS RESIGNATION IN II–C RULING PROTEST

H. D. Moran, a member of the Lenawee County draft board since April 29, 1943, has submitted his resignation to the local draft board and Gov. Harry F. Kelly. He first submitted his resignation to Governor Kelly January 31, but the Governor refused to accept it and urged Mr. Moran to continue with his duties on the local board. Mr. Moran submitted his resignation again Saturday.

In writing the Governor, Mr. Moran declared that he has "conscientiously carried out the responsibilities of the office to the best of my ability.

"However, as of today I respectfully ask that you accept my resignation, as it will be impossible for me to continue to fulfill my oath of office and to carry out the new instructions that have been given to me by the State selective service headquarters. I refer to new orders given our local board affecting all registrants new deferred in II–C, ages 18 through 25 years.

"We have been told that all II–C registrants must be ordered for induction regardless of their importance to agriculture.

"That if our local board places a registrant under 26 years of age in II–C that our State director will exercise his right of appeal to the appeal board.

"That if the appeal board upholds the local board's II–C decision, the State director will then exercise his right of appeal to the Presidential board, and we are further advised in that case this board will most certainly place the registrant in I–A.

"That if a local board insists upon placing registrants of this age group in II–C, that without doubt the State director would remove that board from office."

Mr. Moran pointed out to the Governor that memoranda from General Hershey and the State selective service headquarters do not jibe, particularly in relation to the Tydings amendment. He declared that in his opinion the Tydings amendment has not been modified.

"It therefore looks to me," wrote Mr. Moran, "that our memorandum in which the President has advised us of the critical need for young manpower is being used by Michigan as a State to increase her calls on younger men, disregarding the Tydings amendment and the seriousness of what it does to an agricultural county like Lenawee.

"Our board has always been willing to cooperate with every order, with any task, that has been required of it. We are proceeding in the selective service way of reopening all our farm cases. We were to furnish this young manpower by selection, we were also to consider the Tydings amendment, and that production of food was also important. I cannot follow the new instructions and therefore I must resign.

"When the people of Michigan realize the harm done to agriculture in our State and remember neighboring States have not interpreted State advice 288 as an order by our President to induct every farm boy 18 through 25 years then there are going to be some questions to be answered, and what, Governor Kelly, will those answers be?"

Mr. Speaker, I am personally acquainted with Mr. H. D. Moran and have no hesitancy in presenting this article as a correct statement of the facts.

After days of investigation on the part of over 200 Members of Congress representing agricultural districts, and by the Committee on Agriculture of the House, and personal interviews with General Hershey and Colonel Coatsworth, his chief assistant, I have reached the following conclusions:

First. The directive issued by General Hershey on January 3 might be susceptible of different interpretations.

Second. The so-called clarifying directive issued by General Hershey on January 22 is clear, concise, and understandable. I do not believe that anyone can read this "clarifying" directive and not understand that it was the purpose of the Director to require local draft boards to comply strictly with the Tydings amendment. How can any other interpretation be given to this directive which says in part:

The directive of January 3, 1945, State directors advice No. 288 did not change or modify in any manner the Tydings amendment.

The House Committee on Agriculture assisted General Hershey in the drafting of this directive, and everybody present, unless it was General Hershey, thought that the purpose of this language was to require the local boards to comply with the Tydings amendment, and understood that State directors and local boards were to be given this information by General Hershey.

Third. The last statement made by General Hershey, on February 6, before the Committee on Agriculture is inconsistent with his two previous directives and raises a new issue which nullifies the force and effect of his so-called clarifying directive. His last pronouncement, which Chairman FLANNAGAN has summarized, absolutely destroys the Tydings amendment.

Mr. Speaker, no one wants to exclude from the draft all farm workers from 18 through 25. We do, however, want the law passed by Congress to prevail over a bureaucratic, evasive directive.

The Congress passes the laws which the President signs. The executive branch then executes the laws. In these circumstances the interpretation of any law by an administrative officer is vital. In short, if the administrative officers will not enforce the plain terms of a statute, it would seem that little good can come from additional legislation which might receive the same treatment. The several directives and statements of Director Hershey remind me of the old story, "Off again, on again, gone again, Finnegan."

Mr. Speaker, this whole matter is most unfortunate and regrettable from every standpoint. If Director Hershey had made his last pronouncement as his first directive, the State directors, the local draft boards, and the Congress would have at least understood what he meant. Together with many other Members of Congress, I cannot accept his final interpretation. However, he is in the saddle and the most that Congress can do is to attempt further to write a mandatory law in the form of an amendment to the May bill as suggested by the gentleman from Virginia [Mr. FLANNAGAN].

A number of years ago, out in the district I represent, there were two practicing attorneys. They finally pooled their interests and entered into a copartnership agreement. Later difficulties arose between them. In their agreement was found this language:

The respective parties to this agreement agree at all times to be candid and honest with each other.

Candor and frankness on the part of the Congress and administrative agencies and officers are necessary if our Government is to succeed. This was never more so than during these trying days when unity of effort is so essential. Plain language in the drafting of legislation or orders is of prime importance, and there must be but one interpretation of any law so far as the legislative and the executive branches of the Government are concerned. Therefore, if Director Hershey has finally concluded that he has authority to circumvent the Tydings amendment, it is high time that the Congress goes on record one way or the other as to the validity of his interpretation.

Mr. Speaker, what I have said above has been read to General Hershey, who was considerate enough to call at my office today, and we discussed this whole matter thoroughly. In view of that discussion I dislike very much to make this statement; however, in justice to our local boards, as well as to the Congress, I feel that there is a definite disagreement between a majority of the Congress and General Hershey as to his interpretation and effectiveness of the Tydings amendment. If the local boards are not to be permitted to use discretion in deferring absolutely essential farm workers, then the Tydings amendment should be repealed at once. I in no way impugn the motives of General Hershey in doing the job assigned to him. He has a disagreeable task. His job is to secure the men for military service required by the military authorities. If all physically fit men between the ages 18 through 25 are to be inducted, and if that is the law, then that should be done. I do not believe that is the law, and I am fully convinced that if the selective feature is eliminated in the administration of the law, then the entire system will fail because a battle front cannot be maintained without a home front.

A "Rubber Stamp" Congress

REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 8, 1945

Mr. GAVIN. Mr. Speaker, in the passing of the farm census legislation the American people have the answer to the "$64 question": "What kind of a Congress will the new Congress be?" The answer is, "Rubber stamp."

On opening day the distinguished gentleman from Mississippi engineered a coup and put across the Un-American Activities Committee. Everyone was greatly encouraged. Here was a Congress that would assert itself. But I am afraid they will be disillusioned because it looks like the answer is to be, "Rubber stamp."

It is a well-known fact that when the executive branch of the Government swallows the legislative branch the Congress automatically becomes a "rubber stamp." That is how the term originated. That is what makes the American people uneasy.

Last week in the work-or-jail legislation we heard about the scarcity of manpower—900,000 men needed for the armed forces and 750,000 needed for industry. We who opposed the bill were blasted all over the lot for daring to offer opposition.

This week we had the farm census legislation to put some 28,000 to 30,000 men and women, now in productive enterprise, into nonproductive enterprise to gather and compile farm statistics at a cost of some $14,000,000. They will gather facts and figures, which when compiled, will be about as much use as the millions of dozens of eggs now rotting in storage. If these people were producing food instead of figures this census might be worth while.

So all I can visualize is that the boys over there now doing the fighting will come home and take off their coats and go to work to pay the taxes to meet this $14,000,000 bill to keep thousands on the public pay roll. Will they not be pleased about that.

The American people have been anxious to know what the trend of the new Congress would be. Well, they have it—"rubber stamp."

For 12 years up to 1942 we heard about the rubber-stamp Congress. The people tired of it and elected a Congress that reasserted itself and reclaimed its prerogatives and for 2 years, from 1942 to 1944, the American people were greatly encouraged. But it looks as though this Congress will return to the rubber-stamp days.

Now I ask the Members on the other side of the House after passing this farm census legislation, and it was passed by a majority on he other side of the House, to please discontinue talking about a manpower shortage and constantly telling us about the boys who are over there doing the fighting, because it is just a plain insult to their intelligence and to ours as well. It was simply this—the boys were shepherded together and the results speak for themselves.

I thought the new Congress would have the courage of their convictions, would do the right thing. But bureaucracy is again becoming fashionable, after a couple of off years, and bureaucracy must be maintained regardless of the cost and regardless of how much manpower and money it takes from the war effort.

I feel quite certain the boys who are doing the fighting will be concerned about matters of this kind when they return.

In conclusion, I might say that it looks to me as though the executive branch of the Government is about to swallow the legislative, and the old term rubber stamp is to be with us for the next 2 years.

Resolution of the Legislature of Oklahoma Commending the President, the General Staff, and the Congress in the Conduct of the War

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 8, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave granted me, I am submitting herewith for the RECORD a resolution recently adopted by the Legislature of Oklahoma, now in session, strongly commending the Commander in Chief and the leaders of our armed forces in the present world conflict.

It will be noted that the resolution also commends those Members of Congress who have supported the war effort. The resolution follows:

House Concurrent Resolution 4

Concurrent resolution commending the policies and activities of President Roosevelt, as Commander in Chief, the General Staff, and the Congress of the United States, in the conduct of the war

Whereas under section 2 of article II of the Federal Constitution the President of the United States is Commander in Chief of the Army and Navy; and

Whereas for more than 3 years Franklin Delano Roosevelt, in his capacity as Commander in Chief, has diligently and efficiently performed valuable services to the United States of America and to the Allied Nations in the prosecution of the war; and

Whereas the General Staff of the military has, by the application of skillful strategy and noble leadership, performed like services under the command of their chief; and

Whereas the Congress of the United States, by introducing and supporting beneficial war legislation, has made a great contribution to the success of the Allies in the winning of the war against the Axis Powers: Now, therefore, be it

Resolved, That the House of Representatives of the Twentieth Legislature of the State of Oklahoma, the honorable senate concurring herein, do commend the Commander in Chief of the Army and Navy, the General Staff, and the Congress of the United States for their part in bringing to a speedy end the aggression of Axis Nations; be it further

Resolved, That the House of Representatives of the Twentieth Legislature of the State of Oklahoma hereby urge the Congress of the United States to devote a portion of their time to consideration of world peace plans, to the end that the work of the Commander in Chief, the General Staff, and itself will not be for naught; be it further

Resolved, That a copy of this resolution be transmitted by the clerk of the house of representatives to the President of the United States, to each member of the General Staff, and to each of the Senators and Congressmen representing the State of Oklahoma.

Adopted by the house of representatives the 5th day of January 1945.

JOHNSON D. HILL,
Speaker of the House of Representatives.

Adopted by the senate the 11th day of January 1945.

JAMES E. BERRY,
President of the Senate.

Dr. E. B. Fred Is University of Wisconsin's New President

REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 8, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, I wish to call the attention of the Members of Congress to the selection of Dr. E. B. Fred as the president of the University of Wisconsin. Dr. Fred has been with the Agricultural College, a department of the university for 32 years. He is one of the leading bacteriologists of the Nation. He has been dean of the Agricultural College. He was born at Middleburg, Va., and has a dairy farm in Virginia.

Beyond the personal satisfaction of serving a great university to secure a great president, I am impressed by other factors which may appear provincial to some people.

The factors include first—that this great State—noted for its liberal legislation—selects as its president one of the outstanding agricultural leaders of its agricultural college for its president. This in itself is very complimentary to the profession of agriculture.

Second, the important statement made by Dr. Fred when he accepted the post and I quote:

He pledged himself to the concept of scholarship and research outlined by the late Charles R. Van Hise, former president of the University of Wisconsin and emphasized that financially poor but industrious students must always be given equal footing at the university.

Let me repeat that at this institution the financially poor, but the industrious and the ambitious and the persons with the desire to equip themselves to best serve society in whatever field they choose will have equal footing with those with greater amounts of worldly goods.

This is real educational democracy; this is a program that all right thinking people will support; this is the formula that, when applied, makes for real progress of a people.

We congratulate the great State of Virginia for providing such an outstanding son. We thank the great State of Virginia for contributing such an outstanding leader. I am sure I represent the unanimous sentiments of every citizen of Wisconsin when I say that we all expect to see Dr. Fred carry on the traditional Wisconsin spirit, which, in short is, "Ye shall know the truth and the truth shall make you free."

The following news article appeared in the February 1, issue of the Waupaca County Post:

REGENTS NAME DEAN E. B. FRED AS PRESIDENT—FRED REFERERD TO THE POLICY OF THE LATE CHARLES R. VAN HISE

MADISON, WIS., January 25.—Edwin B. Fred, dean of the college of agriculture since 1943 and former dean of the graduate school, was named president of the University of Wisconsin by the board of regents Thursday, January 25.

Dean Fred succeeds Clarence Dykstra, who assumes the provostship of the University of California at Los Angeles February 15. Fred is the twelfth chief executive of the university and will begin his new duties at once.

His appointment came a few minutes after a special committee headed by A. Matt Werner, of Sheboygan, had nominated him for the post.

A native of Virginia, Fred is 57 years of age. He attended the Virginia Polytechnic Institute before receiving his doctorate at the Universit yof Gottingen, Germany.

From 1907 to 1913 he was bacteriologist at Virginia Polytechnic Institute. He became assistant professor of bacteriology at Wisconsin in 1913, and was appointed dean of the university's graduate school in 1934, serving until he was named dean of the agricultural college 2 years ago.

In a short acceptance speech, Mr. Fred described the purpose of the university as that of accumulating and disseminating knowledge; stressing scholarship and research. He pledged himself to the concept of scholarship and research outlined by the late Charles R. Van Hise, former president of the University of Wisconsin and emphasized that financially poor but industrious students must always be given equal footing at the university.

The Agricultural Census Bill

EXTENSION OF REMARKS
OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. COCHRAN. Mr. Speaker, as one of three or four Democratic Members who opposed the bill to take the agricultural census I was asked by a number of Members why I voted against the additional appropriation.

First let me say I voted against the appropriation in the last Congress. This matter has been before the House on several occasions and in the end some one made it a political issue. I do not approach matters of this kind from a political standpoint.

Just a few days ago I voted for a bill that provided for the conscription of manpower. I never thought I would live to see the day I would vote for legislation of that character, but when I was told by those in charge of the Army and Navy as well as the five-star generals on the eastern and western fronts, that they needed more ammunition and more men I supported the measure. I did not want it ever to be said in the event activities on the battle fronts had been stopped because of lack of supplies that I was in any way responsible for such a condition.

As part of my remarks, I include a letter written to the St. Louis Post-Dispatch by a private serving on the western front. It follows:

"GIVE US MORE AMMUNITION"

To the EDITOR OF THE POST-DISPATCH:

I've been bombed, shelled by artillery, strafed, and have run into a few booby traps, but so far haven't had it too bad. I've lived in foxholes full of mud and water, and now am in an old abandoned German home, in the cellar. I've sweated out many air raids and barrages laid down by enemy artillery, and I cannot see where I have any kick coming, because I'm only one of millions.

We do have a legal gripe, though, and I thought you back home, with all your hardships, like shortages of cigarettes, gas, tires, and whisky, would like to hear about it.

Why can't we, who are doing the job the best we know how, get all of the ammunition we need? If we had all we could use, instead of having it rationed, we could shorten this war.

That we capture two or three towns some days doesn't mean we just fire a few big guns and walk in. It means we fire our quota of artillery ammunition, and then the doughboy fights his way through a hail of death and destruction, inch by inch, to his objective.

With an unlimited supply of ammunition, we could put on a softening-up preparation that would cut down on death and make Jerry pull in his horns quicker. Therefore, you would be able to print news of 8 or 10 towns a day taken, instead of just a few which have cost a lot of American blood and life.

Each day we can't fire at every target we see adds that much time to this war and makes each fighting man wonder why in the hell he doesn't get ammunition. We all realize the people are doing a swell job for us over here, but now isn't the time to slack down. Now is when we really should put on pressure, and more each day, so the "supermen" won't have a chance ever to relax.

Pvt. (1st cl.) HARRY LIENHARD,
An Overland (Mo.) Soldier.
SOMEWHERE IN GERMANY.

It is such expressions as this that caused me to support that legislation.

I recall in the last session of Congress the appeals from those representing agricultural districts for an appropriation of millions of dollars to bring farm labor from Mexico, and the West Indies. In the last few weeks we have heard many Members on both sides of the aisle speak of the shortage of farm labor and assail the drafting of men who were working on the farms.

It seems to be admitted that 25,000 or more people will be required to take this agricultural census. Each and every one of them will require additional assignments of gasoline for their cars. Whenever a Government agency tells you that 25,000 or more men will be needed you can be assured that it will be more and not less than the figure submitted.

The chairman of the committee that handled this bill stated that every business—commercial, labor, industrial, and agricultural organizations—in the country favored its passage.

I come from a great industrial area where well over a million people reside. I might also say that included in that area is part of a county, the soil being used for agricultural purposes which is as rich as any soil in the United States. I receive a tremendous mail. It so happens that one of our Senators was nominated for Vice President and naturally he was active in connection with the campaign. The other Democratic Senator was defeated in the primary. Residents of this metropolitan area wrote me they were unable to contact the Senators so they contacted me, as many of them have over a long period of years who do not reside in my district.

I do not feel that my memory fails me when I say I have not received one letter from a businessman or from a laboring organization favoring the passage of this bill. I do recall one letter I received urging that a manufacturer's census be taken and I promptly advised the writer of that letter I was opposed to it at this time.

Mr. Speaker, I could absolutely see no benefits that would accrue as a result of taking an agricultural census now. One of our colleagues told me that just before he left home he was visited on his farm by a representative of the Census Bureau who presented him with a questionnaire and asked him to fill it out. He told me it took him over an hour to answer all the questions, and this man is an attorney.

In my opinion the best thing we can do at the present time is to leave the farmer alone and not require him to be filling out questionnaires.

Mr. Speaker, I am perfectly willing to answer for my vote on this legislation. I might also say that I voted for the motion to recommit which read as follows:

No one shall be exempted or deferred under the Selective Service Act, or relieved from the assignment to essential industry or to agriculture under any law of Congress, by reason of being employed in preparing for, taking, compiling, or publishing the quinquennial census of agriculture in the United States.

I cannot understand how there could be any objection to provide that no one should be exempted or deferred under the Selective Service Act simply because they were engaged in taking this census. The motion failed but I express the hope that no selective-service board will exempt or defer any individual who is employed by the Census Bureau in this connection.

If what we were told is true, that there is a shortage of manpower, that production of munitions of war must increase,

and that legislation to draft the necessary workers was needed, then I can see absolutely no justification for taking an agricultural census at this time.

Commemoration of Eighty-ninth Birthday of Former Senator Robert L. Owen, of Oklahoma

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, on last Saturday, February 3, in the Speaker's dining room of the Nation's Capitol, the Oklahoma delegation in Congress had a luncheon in honor of one of the Nation's outstanding and most useful citizens, former Senator Robert L. Owen, of Oklahoma.

The occasion was in honor of Senator Owen's ninetieth birthday anniversary. Many other prominent Oklahomans were present on this historic occasion to pay tribute to one of the two first Senators from our State elected in 1907, when the great commonwealth of Oklahoma joined the Union. Among those who paid eloquent tributes to Senator Owen on the occasion mentioned was another well-known statesman who served also with distinction as one of Oklahoma's first Senators, Hon. T. P. Gore. His forceful and eloquent tribute to his colleage of many years in the United States Senate follows:

Mr. Chairman, I desire to say first that I have seldom found myself in agreement with George Bernard Shaw, the great Irish playwright, but with one of his epigrams I find myself in perfect accord. He said that youth is too precious a thing to be wasted on the young. Youth was not wasted on Senator Owen. He hoarded it. He had the foresight to go West earlier than the rest of us and there he discovered the fabled fountain of youth. The only trouble is that he monopolized it—although he had always professed to oppose monopoly.

We meet to commemorate the ninetieth birthday of Senator Owen. Since February 3, 1856, when the Senator first answered "present," 89 years have come and gone. Senator Owen's life has spanned nearly one-twentieth of all the time that has come and gone since the Star of the East stood still above the Manger at Bethlehem. His life spans more than one-half of all the years that have come and gone since our fathers brought forth this Republic on the glorious Fourth day of July 1776. In his time he has witnessed more material progress, mark, I say, material progress, than the human race had previously achieved since time began.

But after all neither seconds nor cycles are the best measure of time. The tick tock of the clock is not the best of all speedometers. As I have known him I have often thought that Senator Owen has acted upon the old adage that the west way to kill time is to use it. In that respect he reminds me of the great Napoleon who once said, "I may have lost a battle, but I never lost a minute."

It happens that Senator Owen and I were sworn into the Senate on the 16th day of December 1907—37 years ago. We had been elected by the legislature on December 10—which, incidentally, was my thirty-seventh birthday. Senator THOMAS, who sits at this table, and now honors a seat in the Senate, was then a member of the State senate and had the wisdom to cast his vote for Senator Owen and myself. Senator MOORE, who sits at this table, and who now shares with Senator THOMAS the honor of representing Oklahoma in the Senate, cast his vote for the men who elected Senator Owen and me to the Senate.

Of the 90 men who made up the Senate at the time Senator Owen and I were sworn in, not one is alive today. All of them have crossed the Great Divide. Senator Sutherland, afterwards Justice Sutherland, was the last to wrap the drapery of his couch about him—was the last to join the innumerable caravan.

Senator Owen was thrice elected to the Senate. He served more than 16 years in that body. He retired from choice. I retired for reasons too delicate and too numerous to mention Senator Owen's fingerprints will be found on all the great measures that were passed during his tenure in the Senate. They were years crowded with service. I remember in reading the autobiography of John Morley, the great English statesman, that he closed a summary of his career with this remark: "I said things that made a difference" That is about the highest claim he could have made. That is about the highest tribute that one man can pay to another. It means that such a man was a living force, that he was an effective force, that he exerted an influence, that to some extent he changed the course of human events, that to some extent he changed the current of history.

It is a still higher tribute to say that such changes improved the state of human affairs, accelerated the pace of progress, and contributed to the sum total of human well-being and human happiness. Owen as well as Morley said and did things that made a difference. No man as active as Senator Owen in the furtherance of his views could entirely escape opposition, but I believe that none of his opponents ever challenged either his sincerity or his ability. Ability is a gift, sincerity is a virtue. Owen has both.

It happened that Senator Owen and I were in public life during the First World War. We have survived to witness another world war. Hegel was wrong when he said that the only lesson we learn from history is that we learn no lesson from history. We learn that history repeats her tragedies. Today we see those of you upon whom our mantles have fallen wrestling with the problems of a second world war, a second world war in a single generation. We see you wrestling with problems some of which have defied solution in the past, wrestling with problems some of which may defy solution in the future. We see you trying to find ways and means to prevent war and to insure peace. You may fail again. But you cannot afford not to try. It may be that 8,000 treaties of peace have been made and broken during the last 3,500 years. But no matter how bloody the past and no matter how bloody the present you cannot afford not to try to find the answer. All will agree that it were better to have tried and failed than not to have tried at all. To try is the one duty that you will not default. The statesman always has this recourse: To take conditions as they are. To take the resources at his command and to make the best of the situation that confronts him, no matter how desperate.

In times like these when the present is as dark as the future you must, if I may say so, do a great deal of instrument flying. I wish that I could put you on a beam that could not but guide you aright. I cannot, but I do know that the best all-weather beam in these circumstances and in all circumstances is simple even-handed justice. Justice unto all. Justice means rendering unto each his due. The man and the nation that obtain justice may complain but they have no just complaint. The men and the nations that mete out justice to others may not escape all complaint, but they will escape just complaint. A Greek philosopher once said: "Nothing is unjust that is useful." America would reverse that judgment and say: "Nothing is useful that is unjust."

We all join in wishing for our distinguished guest continued good health and good fortune.

Another fitting and timely tribute in the form of a letter comes from another brilliant, eloquent statesman from Oklahoma, who also served with distinction and honor in the United States Senate, Hon. Josh Lee, at present a valuable member of the Civil Aeronautics Board. It follows:

CIVIL AERONAUTICS BOARD,
Washington, February 6, 1945.

Hon. ROBERT L. OWEN,
Washington, D. C.

MY DEAR FRIEND: Allow me to congratulate you and thank you for the inspiring address which you delivered on the occasion of the luncheon given in celebration of your eighty-ninth birthday.

Your address on the global alphabet was a masterpiece for the vigorous expression of noble ideals. You never lacked for a word nor used a surplus one. Your quotations from the Scripture and the classics were flawless. Your zeal for banishing illiteracy by means of a universal language was contagious. It was obvious that the audience hung on your words and shared your hope for the establishment of a better world through the medium of a common language.

There seems to be a direct connection between the future of aviation and a universal language. The airplane has made every man neighbor to every other man. Therefore, we need a language by which we can communicate with each other.

It is my sincere wish that you have many more birthdays and that you may continue, as in the past, to contribute to the betterment of mankind.

Very sincerely yours,

JOSH LEE, *Member.*

Those Oklahomans who heard Senator Owen on this occasion agree that he was never in better form or made a deeper impression on his hearers. For the most part he discussed his global alphabet that is the subject of so much discussion throughout America and the world. His address follows:

My dear friends, you must surely know how deeply I appreciate the presence, the good will, the commendation of those who have done me the honor of this luncheon on my eighty-ninth birthday, and the presence here of every Member of the Oklahoma delegation in the House and the United States Senate, as well as my "post graduate" friends, Hon. Thomas Pryor Gore and Hon. Josh Lee, who served many years in the United States Senate. Two finer orators than these "post graduates" cannot easily be found. I deeply appreciate the commendation of Senator Gore in his reference to my attempts to serve the American people. His inimitable wit is famous throughout the United States.

I am particularly pleased to see here Hon. ELMER THOMAS and Mrs. Thomas. The State of Oklahoma has had in Senator THOMAS a statesman and a public servant of the highest type, whose faithful and patriotic services could not be exceeded by any man. I rejoice to see his new honors as chairman of the Agricultural Committee of the United States Senate, a great committee whose chair-

man is a great American and worthy of all honor.

The presence here of so many ladies gives me special pleasure, for they know that I have been the champion of the rights of women during my entire life.

Within the few minutes that I may speak with propriety I shall confine myself to one or two vital points which I think deserve your attention.

All of you know my legislative career, the long and persistent efforts I have made to perfect the bulwarks of democracy through the political education of the people by such agencies as the National Popular Government League and the columns of the CONGRESSIONAL RECORD, but I wish today to use the fleeting moments to call your attention to a matter which I deem of supreme importance to the people of the United States, to the people of the United Nations, and to the people of the whole world, including the Germans and the Japanese.

The weakness of government which leads to the Four Horsemen of the Apocalypse—war, famine, pestilence, death—is the weakness of ignorance of great leaders who rely upon physical force, military power, fear, and economic monopoly to bring success and happiness to their own people.

It is ignorance and lack of vision in high places which has resulted in the wars of all the centuries past. But the twentieth century brings great promise of putting an end to the ignorance of leaders through the opportunity now of abolishing illiteracy and ignorance throughout the whole world, beginning with the least of the individuals.

Over 60 percent of the nationalities of the world or their people do not read and write any language, and of the remainder the percentage is not high of those who are sufficiently educated to guide the people in so governing their affairs as to bring peace, prosperity, abundance, and happiness instead of war and human agony.

When I came into this world I entered an atmosphere of friendship and loving kindness and for every day of a long life I have been fed, clothed, and sheltered by the unselfish work of God's little messengers. To them I have an unconquerable sense of gratitude and a passionate desire to reciprocate the kindnesses which I have received.

In the reading room of the Library of Congress on one of the pillars I recall this sentence:

"Be noble and the nobility that lies in other men, sleeping but never dead, will rise in majesty to meet your own."

My dear friend, MONRONEY, of this Oklahoma delegation, put in the CONGRESSIONAL RECORD, July 8, 1943, a review of a book, The Silent Billion Speak, written by Rev. Frank C. Laubach, Ph. D., which demonstrated in a wonderful way the truth of this Christian doctrine. The Moros, who had been fierce enemies of the white race, became loving friends of the Government of the United States through the friendship of Frank C. Laubach and his missionary friends, who taught the Moros how to abolish illiteracy through a phonetic alphabet which they could learn in one day and with which they could write, print, and read the Moro language. This enabled them to have printed instruction in the care of babies and in the laws of health, cultivation of the soil, the principles of animal industry, and various occupations by which to increase their productions and mutual services.

It is my profound conviction that the work of the Committee on World Literacy, 156 Fifth Avenue, New York, established by the representatives of 123 foreign mission societies, is now, through similar phonetic alphabets in other nationalities, abolishing the illiteracy of the whole world.

The Russian people, under Lenin and Stalin, adopted a phonetic alphabet of 33 letters and an intensive educational program for the common people, financed by the state, from the kindergarten, elementary schools, universities, and technological laboratories which within two decades has increased the national income and production of the Russian people, including 200 dialects, over 400 percent, and the end is not yet. They are electrifying all of Russia by harnessing water power, developing the coal and oil fields of Russia, and using the finest engineering skill in the world.

What it has done for Russia which 4 years ago was unprepared for war is now being realized by the unhappy leaders of the German people who thought of themselves as the "master race" and of other people as inferior and only fit for slavery. This heartbreaking blunder is bearing fruit which is bitter to the German people and to the distressed people of Japan.

During my life, and particularly in the twentieth century, the development of human intelligence and understanding in the United States has been profoundly significant, bringing about a transition from the ox wagon to the airplane, from the pony express to steel highways, electrified railways, universal use of electricity for light, heat and power, the radio which takes the human voice around the globe in a split second.

In the United States alone in December 1943, we had 57,000,000 radio receiving sets and 1,700 broadcasting stations, and the pictures taken at this luncheon by the Associated Press and other news agencies are being sent by wire to many subscribing papers throughout the United States.

Enormous has been the expansion of the marvelous American press and its newspapers and magazines. It is a miracle of modern knowledge and distribution of every form of human intelligence. Unspeakable are the great results in the United States, results which are establishing profound truths with regard to human relationships. It is my mature opinion and profound belief that nothing can possibly prevent the new world for which this war is being fought and a peace that shall be permanent, based on justice, mutual cooperation, human brotherhood, and human understanding.

In the United States there are hundreds of thousands of churches of many different denominations, and hundreds of thousands of fraternal and social organizations based upon mutual service and brotherhood, teaching the doctrines of charity, loving kindness and mercy. I understand there are over 60,000,000 members of the churches alone.

With many of the fraternal and social organizations I have been affiliated and I personally know their benevolence and good intentions. I am a life member of Master Masons, Elks, Scottish Rite (thirty-second degree), and a member of the Knights Templars, Shrine, Woodmen of the World, Loyal Order of the Moose, etc., and I have been a member of all the leading clubs of the city—the Cosmos, Chevy Chase, Columbia, University, Metropolitan, and I know by personal contact the fundamental goodness of the average human being in the United States. I reject the doctrine that the heart of man is desperately wicked. It is sufficient explanation to say that the ignorance of man leads to deplorable results through misunderstanding, through prejudices due to differences of languages, of race, of color, of religion. The antagonism can be and will be removed when men can understand each other and know the good that is in each other.

It is for this reason that during the last 8 years I have spent literally thousands of hours in perfecting the global alphabet presented to the United States Senate in Senate Documents Nos. 49, 133, and 250, of the Seventy-eighth Congress, and in various letters explaining the matter in the CONGRESSIONAL RECORD.

The global alphabet is strictly a phonetic alphabet. The use of a phonetic alphabet is not new. Moses used one in writing Genesis 2,767 years ago. There are over 350 different phonetic alphabets in use in the world now. But in the United States the people have not realized the importance of a phonetic alphabet because they have made such wonderful progress in spite of the lack of it.

The phonetic alphabet which I am presenting to you and which I trust may meet your approval and support consists of 33 letters made in a mnemonic form. They are as simple in form as humanly possible, requiring only one stroke of the pen. The alphabet can be learned in 2 hours by a child 10 years of age. Every letter of the global alphabet begins and ends on the center line of the printed space. They are stenographic in quality. The English language can be written with the pen at least three times as fast with the global alphabet as with the Roman letters.

With the global alphabet, every language in the world can be printed, written and read, and can be composed on the monotype or linotype machine and printed on the rotary printing press.

Under my direction there is now ready for the compositor a book teaching the Spanish people to speak English and the English people in the same book to speak Spanish. Conversational Spanish and English can be taught with this book in 90 days using not exceeding 1,500 words.

The same pattern can be used to teach the Portuguese, the Russian, the Chinese, and I have these books in the process of preparation.

Within 30 days, the same pattern could be used to prepare bilingual books for the 30 leading languages of the world.

My objective is to print these books on the rotary press at a cost which will not directly exceed the cost of the paper itself, and to have them distributed so as to teach the whole world conversational English.

I assure you of my profound conviction that with the support of the Government of the United States, and with the support of the American people, English can be made the conversational language of the whole world within 2 or 3 years. The ignorance of the human race and illiteracy and poverty can be abolished by this mechanism. The radio can be used locally and internationally for the instruction of the whole world through the English language and I am appealing to you and to the friends of the human race everywhere to give their personal, political, and economic support to the global alphabet and to the World Language Foundation which has been organized by my friends as a means of financing this world movement through an educational, charitable organization that would safeguard the funds and have them properly applied for the purposes presented.

Before the Acting Librarian of the Congressional Library, who was invited to look into this matter by Assistant Secretary of State, Hon. Archibald MacLeish, I presented the evidence showing that the global alphabet had been endorsed by the greatest linguists in the world, some of whom I quoted in Senate Document 250, but a number of which I submitted in another memorandum.

I sent the Senate documents explaining this alphabet to over 200 linguists.

There has been no authority controverting the truth of what Dr. Laubach and Dr. Mario A. Pei, of Columbia University, have said in regard to the value of this alphabet for the purposes intended.

Time precludes my going into further detail but the record speaks for itself. I have delivered here to those who are present copies of the official organ of the railway brotherhoods, Labor, of February 3, edited by Hon. Ed. Keating, explaining the global alphabet, and giving a picture of it. The picture takes only about 4 inches square.

Please accept for the members of your committee my heartfelt thanks for the luncheon given by you in honor of my birthday and for so many good wishes expressed at this table. I shall cherish the memory of this meeting.

Pauper's Oath

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I include the original resolution of the Costello Post, American Legion, Washington, D. C., regarding the so-called pauper's oath and the second front-page editorial appearing in the Stars and Stripes National Tribune endorsing the resolution.

Surely there is no greater blot on our system of caring for our deserving veterans than the present requirement that boys who have fought and suffered for their country must sign a pauper's oath before being given needed and well-earned hospital treatment.

I am confident that my colleagues who have demonstrated their interest in our veterans' welfare by supporting legislation to assist them in their attempt to reestablish themselves in civilian life will be willing and eager to right this wrong as soon as they are fully aware of the humiliation and distress it causes our veterans. This practice is insulting and unjust to our war heroes and demands immediate correction.

The resolution follows:

MUST A VETERAN IN NEED OF HOSPITALIZATION SWEAR TO A PAUPER'S OATH?

Be it resolved, That the existing and written method of interrogation for admission to veteran hospitalization, as non-service-connected patients or as service-connected patients seeking treatment for ailment other than cause of discharge—either emergency or extensive cases—is un-American, degrading, and in addition clothed with the dubious but legal power of subjecting a veteran of the World Wars to the possibility of prosecution by arrogant or antagonistic governmental bureaucrats;

Whereas that the membership of this post respectfully suggests that Veterans Administration official be requested to authorize and institute a more democratic and more appropriate procedure of ascertaining and determining the financial status of an applicant or his/her eligibility for hospital treatment;

Whereas that these pleadings are not submitted for the intention of removing proper or necessary restrictions and safeguards for hospital admittance but to eliminate the apprehension of being stigmatized in official records by a so-called act of pauperism, and to remove the contingency of being coerced or threatened by overzealous public officials: Therefore be it

Resolved, That the Vincent B. Costello Post, No. 15, of the American Legion, Department of the District of Columbia, is authorized and directed to recommend for the consideration by the delegates of the national convention of the American Legion to be assembled at Chicago, Ill., September 18–29, 1944, the deletion of questions Nos. 5 and 9, respectively, from Veterans Administration Form P–10, "Application for Hospital Treatment or Domiciliary Care," otherwise known as the pauper's oath.

Approved:

THOMAS COSTELLO,
Commander.
JOSEPH LEIB,
Vice Commander.

The editorial follows:

[From the Stars and Stripes of February 8, 1945]

MORE ABOUT PAUPERS

Late last September this newspaper took violent exception to and condemned vigorously the employment of the "pauper's oath" by the Veterans Administration. It is required from all war heroes who apply for hospital treatment. We had paid our respects to this offensive business many times during earlier months but our lawmakers had been so occupied with other matters that little attention had been accorded the many complaints from our comrades which we had aired through these pages, and, too, we suspect that representatives of the veterans' agency had used one means or another to quiet the fears of Congressmen who had inquired about it.

Now our legislators are awakening to the humiliation that faces men who have fought for this country's existence but who must swear they are indigent in order to be admitted to hospital treatment. Representative RAYMOND S. SPRINGER, World War No. 1 veteran, of Indiana, and Senator WILLIAM LANGER, of North Dakota, have bills pending before appropriate committees of both Houses of the Congress asking amendment of that infamously black statute of 1933, known as the Economy Act, so that neither law nor bureau-inspired regulation may require a showing of need for hospital admission purposes. Congressman JAMES H. MORRISON, of Louisiana, introduced a new bill last week seeking the same ends, and he advises that JOHN RANKIN, World War No. 1 chairman of the House committee handling such legislation, has assured him early hearings can be expected. There are numerous other bills pending before that and other committees asking that "needs clauses" and "income provisions" be deleted from laws particularly specified. On the whole, things appear a little brighter for veterans who must look forward to institutional care but who protest the practice of signing an oath that is both un-American and loathsome.

And to complete the recording of new events, it is noted that NOBLE J. JOHNSON and EARL WILSON, representing Indiana constituencies in the Congress, and several others of the solons have expressed themselves publicly in opposition to administration insistence on having a veteran declare himself a pauper or lie like a trooper in order to receive from the Government only what his service has led him to believe he has justly earned. The question on the application form, "Are you financially able to pay?" and the instruction to list "the total value of your property, both real and personal," have also aroused the ire of World War veteran, Congressman J. HARDIN PETERSON, of Florida, who had it printed in the CONGRESSIONAL RECORD alongside a Canadian application to show that other countries are not so exacting as we. PETERSON has promised to help wipe out the vicious requisite.

Nor has the Veterans Administration been idle. On the best of information we have been told that this agency has finally seen the light and has been considering a modification of its form, and, on authority that is absolutely unimpeachable, we have learned that the Veterans' Administrator, General Hines, has had a trouble-shooter on Capitol Hill attempting to head off legislative action by trying to mollify Members who have thought first of veterans and secondly of men who are paid to administer laws enacted by the Congress.

These moves behind the scenes will not do. Men who have borne arms in defense of their country, whether on their home shores or in foreign lands, must not be subjected to this indignity. The law states, and the people demand, that no man of war shall be penalized for attempting to better his financial condition. The Constitution of our country provides against discrimination as between individuals. Whether that fiendishly conceived penalty clause applied to the Economy Act appears at the top of the hospital application blank where it is presently printed in bold, black letters, whether it be in the middle or at the bottom, or whether it is suggested to some applicants that it will not apply to them and pointed out to others that it does, makes not one iota of difference. It is as black in conception as it is in print, and legislation must wipe it out. It hits veterans smack in the eye and labels them paupers seeking something as mendicants that they have earned as a right. They are entitled to maintain their self-respect.

We have the highest regard for General Hines, whom we have praised here without stint. He has a tremendous job and, although he has erred as humans will, he has done a splendid work during his long tour as Veterans' Administrator. We have heard him defend "needs" clauses as a bar to further attempts at economy at the expense of veterans, and we know him to be sincere in his purpose. Nevertheless, no man, however competent, can possibly attend to all of the details of jobs as great as his. We are convinced that some of the general's advisers have sold him a bad bill of goods in this instance, and his fears that an overload of applications for treatment will prevail if the bars are let down are, in our opinion, without foundation. Even so, the care of veterans is as much a part of the cost of war as the guns they once carried, and that much the Congress recognizes without argument.

We cannot bring ourselves to believe that our affluent comrades will take undue advantage of free hospitalization. There should be no delay in according it to those who require it. To make veterans read that penalty provision is to make them debate their right to something to which they are normally entitled, or to make of them sneaking criminals. To require them to list their assets to be assayed by all who would snoop is to demand knowledge that is not the Government's business. To insist upon their subscribing their hands to an oath that they are not able financially to pay for a service that they should expect by virtue of fighting for their country in time of war is to humble and embarrass them and make of them unwitting paupers. The practice is positively indecent. It must be discontinued.

Is It To Be Law or a Military Dictatorship?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. REED of New York. Mr. Speaker, I have this day received a letter from a sound and successful businessman in my district who accurately portrays conditions as they exist in the agricultural areas of three great counties in western New York. The reason for inserting this

letter under leave to extend is to emphasize the importance of prompt and favorable action by the House on House Concurrent Resolution 27, introduced by Hon. WILLIAM LEMKE, of North Dakota, the purpose of which is to make plain in no uncertain terms that the time has not arrived when even military officers can with impunity ignore the plain mandate of law, as has been done in ignoring the Tydings amendment. Militarism in its most arrogant form could be no more ruthless in dealing with the civilian population than has been done in stripping men from the farms of the Nation contrary to law, thus endangering the food supply of this Nation and of those liberated peoples of Europe who look to the United States for food to save them from starvation:

I have just read your statement in regard to Major General Hershey's interpretation of the Tydings amendment in the deferring of the farmers from the armed service.

It does seem a thoughtless idea to empty the farms of essential workers, as many of these farms are really below the minimum for their successful operation, even under the most favorable circumstances.

Does General Hershey know the difficulties that this winter weather has placed in the path of the farmers who are trying their best to keep cattle from starving due to their inability to get food in for them and to get their milk out to the towns and cities?

One specific instance is that of Louis Kasbohm, on Chautauqua Road, who has been snowed in but has been able to travel cross country under the most adverse circumstances to secure food and make delivery of eggs from his flock of 7,000 New Hampshire Reds. An important feature of his work is the hatching and delivery of 6,000 chicks every week. He has to bring a big truck load of food from Buffalo each week. He has one son in foreign service, and one son and his wife to help him, while his daughter can be of some assistance when she is not in the hospital at Cassadaga.

There are doubtless thousands of similar cases throughout western New York, where country roads have not yet been opened and families are isolated, but these are things that General Hershey apparently does not take into consideration.

I certainly hope that you and others alined with you will be successful in correcting the situation.

The Alarming Air-Crash Scandal

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. O'KONSKI. Mr. Speaker, day after day we read in the newspapers heartbreaking dispatches from every section of the Nation announcing an alarming number of service air crashes. I think it is about time for Congress to do something about this scandal. I think Congress has the right to know the unvarnished truth concerning this situation.

I am about to relate a most amazing incident in connection with these crashes. It is a striking example of how patriotic vigilance can help in our war effort.

On November 24, 1944, the Washington Star printed the following Associated Press dispatch. It reads:

FOUR PLANE WORKERS FIRED AFTER CRASH KILLING SIX

SAN DIEGO, CALIF., November 24.—Officials of Consolidated-Vultee Aircraft Corporation have disclosed that four employees were dismissed as the result of a bomber crash here Wednesday in which six civilian crew members were killed.

The company announcement was made after it had been reported there weren't enough bolts in a wing section of the giant Navy-type Liberator which plunged into a ravine and exploded, starting a brush fire.

The crash occurred soon after the left wing of the craft shook loose from the fuselage.

This story caught the attention of Joseph Leib, Washington free-lance writer. He immediately visualized the significance of the innocent-looking dispatch and air-mailed it to Governor Warren, of California. In an accompanying letter he urged the west coast chief executive to take immediate action, pointing out that if the Consolidated Aircraft Corporation saw fit to dismiss the mentioned workers, the cause must have been of a serious nature. And, if so, the public ought to know the facts, making sure that such a tragedy would not happen again.

Governor Warren acted promptly. He, in turn, referred the newspaper clipping and Leib's letter to the district attorney at San Diego with instructions to make a thorough investigation.

Action came swiftly. On December 14, 3 weeks later, the San Diego coroner and the district attorney undertook a methodical probe to determine the cause of the ill-fated plane crash.

On January 8 the coroner's jury rendered a verdict holding the Consolidated-Vultee Aircraft Corporation guilty of "gross negligence." The case now awaits grand jury action. The following dispatch appeared in the Washington Star on January 8, 1945. It reads:

GRAND JURY TO PROBE CRASH OF CONSOLIDATED BOMBER

SAN DIEGO, CALIF., January 8.—The county grand jury will confer today with the district attorney on a coroner's jury verdict which held Consolidated-Vultee Aircraft Corporation guilty of gross negligence in connection with the crash of a Navy-type Liberator bomber last November 22.

Six civilian flyers were killed in the crash, attributed by inquest witnesses to the absence of almost 100 bolts from the outer wing panel, which sheared away during the take-off and caused the plane to plunge out of control.

District Attorney Thomas Whelan said that, despite the verdict, he would seek involuntary manslaughter complaints against those believed responsible. The company denied its inspection methods were as described by the jury—lax and haphazard.

It should be emphasized that the coroner's jury found that the company's methods were at fault rather than individuals who worked on the fatal bomber. Fortunately, the wing was available as evidence. Investigation disclosed that because 96 rivet holes had never been filled in splicing the panel to the inner wing that tragedy overtook the plane soon after it took off.

Mr. Speaker, imagine, 96 bolt holes out of a total of 116 remained untouched as the plane took off. The chief inspector of the Consolidated Aircraft Corporation testified that "undistributed paint over spray on the splice indicated few bolts had ever been installed in it."

The Assistant Chief of Flight took the stand to state that planes were tested on the assumption that they have been completely inspected before leaving the assembly lines.

In addition the assembly station work sheet was produced as evidence to show that the company's records stated that the splice had been inspected. It bore the plant inspection stamp "1025" and a naval stamp—"USN-162."

Although the Consolidated Aircraft Corporation produces these planes for the Navy Department it took the interest and the influence of the Governor of California to force a thorough investigation into the functioning of the Navy contractor's inspection system.

Mr. Speaker, I wonder why the Navy Department was so derelict in this case. What was the Navy stamp—"USN-162"—doing on the inspection records? What kind of inspectors do they have anyway? I think we have a right to know whether they are utterly incompetent or whether they are influenced by company officials as have been proven in other cases?

Company officials do everything in their power to hush up such tragedies. That is why few of them are brought to public view.

In this case word has just reached me that the San Diego district attorney has dropped further action against the aircraft corporation.

It must be recalled that the District Attorney opened the matter only after the Governor of California interceded and had urged an investigation.

This is not the first time Consolidated Aircraft was faced with such a tragedy.

On June 2, 1943, the Washington Star carried an Associated Press story from San Diego in which a $250,000 four-motored Consolidated bomber crashed killing the chief test pilot and his assistants. The story went on to say that a company spokesman said that there were "evidence of sabotage," adding that the plane had been "thoroughly tested, and things like that just don't happen."

I think that it is the solemn duty of Congress to find the answer.

I am wondering if every Member of Congress realizes the full significance of these revelations. I am wondering whether or not this Congress is satisfied and willing to ignore this scandal and wait until tragedy comes closer to their own homes or loved ones. I think we have waited long enough for an official explanation of these crashes. I think it is time for Congress to act.

The Rocky Mountain News, of Denver, Colo., a Scripps-Howard newspaper, carried the following editorial on Saturday, October 2, 1943. It said:

ARMY OWES AN EXPLANATION

Four Army bombers have crashed in Colorado since last Sunday. Over 30 officers and men have been killed. What are the causes of these accidents? Up to this point the Army has offered no single word of explanation. Except for its four terse bulletins that so

many were killed on a "routine flying mission," the Army has maintained aloof silence. This, we feel, is a serious mistake. Let's have an explanation now.

Bombers are still crashing in Colorado and still the War Department is silent. That editorial appeared 15 months ago, but it was completely ignored. Why? Yes; why? What are the causes for these crashes? Is the War Department protecting someone?

I am angered at the calloused indifference to these alarming service air crashes by high officials of our Government.

Listen to this statement by General Arnold, Chief of the Army Air Corps, made on October 2, 1944, and appearing in the Nation's newspapers under these headlines:

MORE PLANES LOST IN TRAINING THAN COMBAT, ARMY ADMITS

More Army airplanes have been lost in training pilots in this country than in combat. That is a startling disclosure by the War Department this week. * * *

Since Pearl Harbor, it said, 17,500 planes have been lost in continental United States, 11,000 in crashes and wrecks, and that is 3,000 more than have been lost by enemy action.

It was also disclosed that there have been 5,600 fatal flying accidents in training, involving about 11,000 deaths.

Verne T. Irons, of Irving, Tex., who was chief inspector at the North American Aviation Plant at Dallas, Tex., resigned last year in disgust after registering a vigorous protest because the company had relaxed its inspection standards in its attempt to produce service ships in a hurry. In a sworn affidavit, Mr. Irons charged that on one plane "thousands of rivets of the wrong type were used in the main center section of the airplane, through lack of competent inspection. This was not discovered until the center section was practically complete. These rivets were removed and replaced. In this operation, the center section was twisted several inches out of alinement. Every time this condition was mentioned to the top supervisory and management officials, they would immediately inform me to shut up and say nothing."

Mr. Speaker, such is the information coming to the attention of Congress.

Since early 1942, Joe Leib, who has made a comprehensive study of service crashes, has pleaded for a special congressional committee empowered to scrutinize and check company and service inspection methods and to review service crash reports and accidents. He has no quarrel with subcommittees or with the Senate War Investigating Committee.

But he rightfully believes that the investigation of service crashes is a big enough job for a full-time committee.

I believe that if such a committee were appointed with the power to act we might be able to do something about this tragic situation.

Otherwise, subcommittees of Congress will continue to issue alarming reports and then do nothing about it.

For instance, I hold in my hand a report from the Senate War Investigating Committee dated July 10, 1943, page 30, as follows:

AIRCRAFT ACCIDENTS

In addition to the foregoing the committee has been engaged in a study of military plane crashes and at a subsequent date will report on this subject. The committee is concerned about the large number of such casualties, particularly in noncombat operational flights in this country.

Mind you, that was on July 10, 1943—17 months ago. Nothing since has been heard about it. Everyone remembers the Truman committee indictment of the Curtiss-Wright Corporation for the production of defective motors.

In this connection I wish to call attention to the fact that the secret of dive bombing which Hitler used to terrorize the people of Europe was given to the Germans by officials of the Curtiss-Wright Corporation.

How this secret fell into Hitler's hands is explained in a letter that appears in the famous munitions investigation reports. This letter was signed by the president of Curtiss-Wright and was addressed to his sales agents in foreign lands. Here is the amazing letter:

We have been nosing around the (Navy) bureau in Washington and find that they hold as most strictly confidential their dive-bombing tactics and procedure, and they frown upon our even mentioning dive bombing in connection with the Hawks or any other airplanes to any foreign powers.

It is also unwise and unethical at this time, and probably for some time to come, for us to indicate that we know anything about the technique and tactics of dive bombing. It may be all right to put on a dive-bombing show to show the strength of airplanes, but to refer in contracts to dive bombing or endeavor to teach dive bombing is what I am cautioning against doing.

Mr. Speaker, there you have it. Here was an American company willing to sell out vital military secrets to foreign powers. At this very time Curtiss-Wright was selling its planes to the Nazis, helping to arm Hitler for this war.

And, yet, the vice president of Curtiss-Wright, Mr. Theodore P. Wright, was made dictator of american aircraft production, by such appointments as Director of Aircraft Resources Control Board of the War Department and Director of Aircraft Production Board of the W. P. B.

This meant that he had full charge of all raw materials and priorities.

No wonder Curtiss-Wright received more war contracts than any other manufacturer in the Nation, with the single exception of General Motors. That fact comes from the Truman committee.

Here is another amazing story carried in the Washington Star on July 11, 1943, under this headline "Aircraft report accuses Wright of 'gross laxity.'"

The story, an Associated Press dispatch, went on to say:

In a report charging delivery of defective airplane engines to the Army and Navy, the Senate Truman committee yesterday called the Curtiss-Wright Corporation guilty of gross negligence about inspection practices designed for the safety of airmen.

Five days later, on July 15, Senator TRUMAN threatened Curtiss-Wright that he would make public his committee's secret testimony on which it based its startling charges. But that threat was never carried out.

I present another amazing story that appeared in the St. Louis Post-Dispatch on January 22, 1943. It was an Associated Press report from Kansas City, Mo., and read:

Practices at war plants in this area which "tolerate, encourage, or overlook" defective products or assembly in war materials were condemned by a Federal grand jury here. The report was made in the case of a foreman of the North American bomber plant, who was arrested by Government agents and charged with concealing a defect on an engine part with chewing gum, so it could pass inspection.

The grand jury further added that such "practices have been engaged in by both employees and supervising personnel" after making an investigation of the bomber assembly plant.

On February 1, 1944, a House Military subcommittee issued a startling report, No. 1052. That was 11 months ago.

On page 10, it reads:

FLYING TRAINING ACCIDENTS

An increase in the number of accidents is to be expected in the greatly expanded training program. However, we are sincerely alarmed to discover a recent rise in the rate of those accidents. We are particularly alarmed to learn that the rate continues to rise. An accumulation of experience, development of aircraft, and instruction methods should produce a reduction in the rate.

There is no braver man than the young American who volunteers to fight for his country, individually and in the air. It is regrettable that even one of these should die before he has a chance to face the enemy. We exhort the Air Forces to more strenuous effort in this regard.

I am appalled and sickened by these facts.

What is behind the hideous power that prevents a thorough investigation of these great American catastrophes? Maybe our Military and Naval Affairs Committees of the House should stay at home long enough to find out.

Medical Care Insurance—Portion of Ninth Annual Report of Social Security Board

---

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a portion of the Ninth Annual Report of the Social Security Board—the portion that deals with medical care insurance. It is a succinct statement of the need for national health insurance. I hope every Senator will read it. I refer to pages 26 to 31 of the report.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

MEDICAL CARE INSURANCE

Health among a people depends on many factors other than medical care—among them, the amount and distribution of national income, the level of education and of sanitary safeguards, and climate and other environmental factors. Because the United States is the richest of the nations and is known throughout the world for its natural advantages and its progress in education, sanitary controls, and scientific achievement, it is often declared that Americans, as a people, stand first in health. It is argued that our present arrangements for making medical services available to individuals are fully justified by our health record.

SECURITY OF LIFE

Available statistics do not bear out the claim that the United States is the healthiest Nation. Probably the best single basis for international comparison is the death rate among babies in their first year of life. In the years preceding the war in Europe, according to statistics of the League of Nations, 7 countries had lower infant mortality rates than the United States. From 7 to 11 countries—the number differing for various age groups—had lower death rates among children and adolescents, and 20 or more countries had lower rates among persons aged 35 to 64.[1] Death rates among the Negro population in the United States are typically higher than those of white persons. Even if international comparison is restricted to the white population, however, our death rate is by no means the lowest. In the expectation of life for white boys at birth, the United States ranked fifth among the prewar nations; for white men at age 20, it ranked ninth; at age 40, twelfth; and at age 60, thirteenth.

Despite past progress in preventing sickness and prolonging life, the United States has not yet achieved for all its people—and in particular for those in the working ages—the level of security of life which has been attained in some other nations with much smaller economic resources.

PROGRESS IN PUBLIC HEALTH

Much of the spectacular progress in lowering the general death rate in this country has been in preventing deaths from the communicable diseases of childhood and from typhoid fever, tuberculosis, and pneumonia and influenza. Between 1900 and 1940 typhoid fever and diphtheria were all but wiped out, and death rates for other communicable diseases in this group were cut down by from 60 to 90 percent. For all other causes of death taken together, the decline was only 16 percent. The decline in the general death rate in recent decades has been due chiefly to the decline in certain infectious diseases, which have been controlled largely through public measures for sanitation and various other activities of public-health departments.

This progress is still spotty. If all States had had as low an infant mortality rate as 1 State had in 1942, some 35,000 babies could have been saved. If, in 1941, all States had had the tuberculosis rate of the lowest State, some 42,000 deaths could have been prevented, mostly deaths of men and women in the productive ages. This was about the number of the Nation's war fatalities at the end of nearly 2½ years of fighting.

It is not an accident that deaths which could have been prevented through accepted public-health measures and sanitary controls are relatively the most numerous in States which lack adequate facilities for controlling such diseases and spend inadequate amounts for public health. Hundreds of thousands of lives could be saved each year, and additional hundreds of thousands of families saved needless suffering and expense, if the time-tested public-health measures now actually in effect in some parts of the country were in full use everywhere.

PRESENT BURDENS OF SICKNESS

A much larger part of the existing burden of ill health, disability, and postponable death now comes from illness which cannot be prevented or controlled by methods which automatically protect the whole community. Full use of the resources of modern medicine to reduce suffering, prevent disability, and prolong vigor and life demands increasingly the services which doctors must give patients individually, one by one. Such care also demands increasing use of necessarily costly facilities and techniques.

With progress in saving lives of babies and children, a growing proportion of the population lives to middle age and old age, when the most important causes of disability and death are diseases of the heart and arteries, cancer, and other chronic ailments. Most of these kill slowly, after a long period of illness, and gradually increasing disability. Many of them attack in the years of life when responsibilities for family support are heavy. Disability insurance, as well as medical-care insurance, would be of particular importance in encouraging workers to seek medical advice at an early stage, when adequate care might prolong their usefulness and their lives. They would know that if the diagnosis was what they feared, some support would be at hand for them and their families. Most people will not go to doctors until they have to if they know that loss of earnings will mean catastrophe to the family or fear that they will not be able to pay for the care they need.

General morbidity rates and death rates are averages, made up of the experience of groups who have been able to benefit from all advances in scientific knowledge and skill, and of those who have had scant share in this progress. Sickness comes oftener and lasts longer, and death comes earlier, in the homes of the poor than of the well to do.

REASONS FOR LACK OF CARE

To some extent, the inadequacy of the medical care received by the American people as a whole is due to the fact that some places, especially rural areas, lack adequate medical and hospital facilities. These are areas where average income is low. Present resources for medical care are unevenly distributed, because hospitals tend to cluster in cities where large numbers of persons seek their services and financial resources are ample, and doctors also locate in cities and towns where they find hospitals and laboratories and a better chance to earn a living. Even when medical facilities are ample, however, a considerable part of the capacity of hospitals and the time of skilled practitioners goes unused in ordinary years, though in the same places there are sick people badly in need of services. Ignorance and inertia have some part in the failure of people to get medical services they need, especially early in illness when services are most valuable. By far the most important reason, however, for the lack of needed care and for the volume of charity required of doctors, hospitals, and the public is the present method of paying for medical care—when sickness is at hand and family income is likely to have been cut down or stopped.

METHODS OF PAYING MEDICAL COSTS

In an ordinary year the American people pay about $4,000,000,000 for all civilian health and medical services, including cost of hospital construction. Of this total, about four-fifths comes from private funds and one-fifth from public funds. The total expenditure, governmental and private, for all health and medical services is equivalent to about $30 a person a year. But in any year some families pay little or nothing to doctors and hospitals, while others pay hundreds or even thousands of dollars. The difficulty with medical costs is that no family can know how much or how costly medical care they will need or can limit their needs for care to what they can afford. If costs could be averaged for the types of medical services which are ordinarily bought individually, most self-supporting families could pay for adequate medical care without hardship.

Tax-supported care: For certain major forms of medical care or care of certain groups in the population, much or all of the cost has been "averaged" through payment from the tax funds to which the whole community contributes, not merely the sick person or his family. In 1943, for example, 97 percent of all beds in hospitals for mental and nervous diseases were in publicly owned and operated hospitals, and 85 percent of all beds for tuberculous patients were in tax-supported hospitals. These types of long-continued care obviously are too costly for any but the richest families to bear individually. These diseases, moreover, have long been recognized as endangering public health and safety and leading to public costs for broken and dependent families.

The Federal Government, again for obvious reasons, has always been responsible for medical care of the armed forces. In addition to care of service-connected injuries and illnesses, moreover by the end of the war some 16,000,000 veterans will be able to receive publicly supported medical care for non-service-connected conditions through veterans' facilities.

From colonial times, care of the sick poor has been considered a public responsibility, though often provided very inadequately if at all. It is estimated that total public expenditures for medical care of the indigent and low-income groups—including expenditures of the Federal Government, the States, and their localities—are at least $150,000,000 a year.

Most of the care given under the arrangements outlined above is "state medicine" in the sense that it is financed from public funds, is given through publicly owned facilities, and is given for the most part by physicians or others paid directly by Government agencies. It represents not only a method of financing costs but also a way of organizing medical and institutional practice. Since "state medicine" has ordinarily been used as a term of opprobrium, it should be pointed out that some of these areas of medical service, notably care of mental illness and prevention and care of tuberculosis and other communicable diseases, are those in which progress has been outstanding and for which the United States is known favorably throughout the world.

Insurance methods: Another group of arrangements has been developed in the United States through which costs of medical care are distributed among employers or the individuals directly concerned, or both, without recourse to tax funds.

Costs of medical care for work-connected injuries, and in some States also of occupational disease, are insured under State or Federal workmen's compensation laws; only one State lacks such legislation. These laws make costs of industrial accident and disease a part of the cost of production.

In recent years a large number of middle-class families have been able to average some of their medical costs through membership in voluntary prepayment plans. The membership of Blue Cross plans, which cover certain hospital bills, includes about 15,000,000 persons, or about 11 percent of the population. Voluntary prepayment plans for medical care, established by industry, medical societies, and community and other groups, probably cover about four or five million persons, about half of whom are counted in the number covered by Blue Cross plans. These families pay a regular fixed amount each

[1] From tables in Statistical Yearbook of the League of Nations, 1941–42, pp. 40–41, 62–67; and League of Nations, Annual Epidemiological Report for the year 1938, pp. 65–67.

month and know that, within limits fixed by the contract, their hospital or other medical bills will be paid if they become sick. Contracts are commonly restricted to surgical expenses or fix extra fees for some services. In addition, commercial insurance companies sell policies—usually to indemnify hospital or surgical expenses or both—on an individual and group basis. The scope of the protection is always limited and often is restricted to care of accidental injuries. All in all, possibly from thirty to thirty-five million persons have some protection against hospital and medical costs under the Blue Cross and other voluntary prepayment plans and commercial insurance. Comprehensive protection against medical and hospital costs is limited to a few million.

Workmen's compensation and the other arrangements mentioned above are forms of insurance. They are ways of distributing and paying costs, not forms of medical practice. In one way and another, they help to cut through the barrier of costs by distributing medical care expenses over the whole group of insured persons, the well and the sick, and by distributing the costs over periods of time—the years of earning as well as the weeks or months of sickness. In the usual voluntary prepayment plan, a patient picks his doctor or hospital from all participating in the plan; doctors and hospitals decide whether or not they wish to join such plans. These plans cause no change in the personal relationship between a doctor and his patient, except to wipe out misgivings of both about a bill and to lessen the other important failing in that relationship—that so many people have no relationship with any doctor.

All the voluntary forms of medical care insurance mentioned above are fulfilling valuable functions in their limited sphere. They are necessarily more costly than the arrangements which could be evolved with wider sharing of sickness risks and with the administrative economies feasible for larger units. Their great shortcoming is that they reach so small a part of the population and fail to reach those who have the greatest need of medical-care insurance. From the standpoint of both the public and the families concerned, the great majority of the population must have some better way to pay medical costs if American families are to achieve the level of health and economic independence which our national resources should assure.

Compulsory social insurance: Neither the course of present developments in this country nor experience in other countries which have tried voluntary health insurance gives any indication that comprehensive and adequate arrangements to insure medical costs can be made in any way except through a compulsory insurance system. In this aspect of health security the United States faces a situation not unlike that in old-age security a decade ago. At that time many employers had established sound retirement systems for their workers; some persons had banded together to provide for themselves as a group or had made adequate individual provisions through annuities or other forms of commercial insurance. It was clear then, however, as it is clear now for medical-care insurance, that these voluntary arrangements could not be expected to extend to even a majority of the population in need of insurance or to the groups whose needs were greatest.

Medical-care insurance would enable self-supporting families to pay for and get needed medical services without any important alteration because of the insurance system in present forms or organization of medical practice. Moreover, families dependent on public funds could be covered through payment of contributions on their behalf by the agencies administering assistance. They thus would receive care in the same way in which others receive it; the stigma and, typically, the inadequacy of poor-law medicine could be wiped out.

Contributions equivalent to about 3 percent of annual earnings would pay for adequate basic medical and hospital services for both workers and their dependents. A more comprehensive system would cost the equivalent of about 4 percent. These costs would be no more than now is spent by families on the average. They are less than the average expenditure by families in the low-income groups, since, contrary to the general impression, low-income families spend, on the average, a larger proportion of their incomes for medical care than families in better circumstances, though—because of their more frequent and severe illness—they receive much less in relation to what they need.

Public discussion has centered around three alternative methods of providing medical-care insurance. It has been suggested that it could be established on a State-by-State basis, without participation by the Federal Government. It could follow the pattern of unemployment compensation, in which Federal legislation gave inducement to States to enact laws and establish insurance systems. Or, following the analogy of old-age and survivors insurance, it could be established as a Federal system.

For reasons outlined in the following section of this report, the Board believes that it would be simplest, most economical, and most effective to establish comprehensive protection through Federal legislation, while providing authority to utilize State agencies and other facilities. In any event, administration of benefits should be so decentralized that all necessary arrangements with doctors, hospitals, and others would be worked out on a local basis. The general pattern of arrangements with hospitals and doctors should be developed with the collaboration of professional organizations and with careful regard for regional, State, and local circumstances. In each area of administration—local, State, and Federal—policies and operations should also be guided by advisory bodies representing those who pay the insurance contributions and those who provide the services.

The much-advertised fears of "socialized medicine," "regimentation" of doctors, hospitals, or patients, loss of the pattient's freedom to choose his doctor, and deterioration of quality of care can be made wholly groundless. A system of medical-care insurance can and should be so designed as to avoid these disadvantages. By making services readily available to those who need them, without fear of the costs, the quality and effectiveness of service may be improved, and the incomes of doctors and hospitals may be made better and more secure. If, at the same time, professional education, research, and the construction of needed facilities are financially aided, progress in medicine and improvement in national health can be greatly accelerated.

The American Dollar and the Bretton Woods Plan

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have an address by Dr. Edwin Walter Kemmerer on the subject of the American dollar and the Bretton Woods plan printed in the Appendix of the RECORD.

Dr. Kemmerer is professor emeritus of international finance, Princeton University, and president of the Economists' National Committee on Monetary Policy. I believe every Member of Congress will find his discussion of this important subject most interesting.

I have checked with the Public Printer with reference to the cost, and I am advised that the address slightly exceeds the number of words permitted for insertion in the Appendix without reporting the cost, which the Public Printer now informs me will be $143. Regardless of this, I ask unanimous consent for its insertion in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN DOLLAR AND THE BRETTON WOODS PLAN

(By Edwin Walter Kemmerer, professor emeritus of international finance, Princeton University; president, Economists' National Committee on Monetary Policy)

(Professor Kemmerer asserting that monetary stability existed under the international gold standard before 1914, lays its failure thereafter to economic instability. Alleges that Bretton Woods plan, instead of fostering stability, does the opposite, by allowing flexible paper-money standards to many nations, while a few adhere to a rigid standard. Says plan threatens to debase the American dollar and, therefore, should be rejected. Outlines a nine-point program for an international gold standard and urges rehabilitation of our monetary system on a gold basis.)

My theme tonight is the American dollar. I shall first take a glance at its history. Then I shall try to forecast what would happen to it if the Bretton Woods stabilization plan should be adopted. Finally, I shall state in brief outline my judgment as to what our future American monetary policy should be.

Although my remarks will be from the standpoint of the American dollar, in the field of money I am a pronounced internationalist. Most of what is said, therefore, concerning the Bretton Woods plans and the future of the American dollar will apply in principle to the monetary units of other advanced countries.

THE AMERICAN DOLLAR PRIOR TO WORLD WAR NO. 1

The clause in our Constitution giving to Congress the exclusive power to coin money and regulate the value thereof clearly contemplated a metallic money standard. Aside from the period of the Civil War greenback-standard and from a few brief and slight lapses in times of great emergency, the standard American dollar both de facto and de jure has always been a full-weight gold or silver dollar. For two generations of American bimetallism the dollar was both a fixed weight of gold and a fixed weight of silver, while under the gold standard from 1879 to the First World War, it was a fixed weight of gold. During all the years of bimetallism the pure silver content of the standard silver dollar was never changed and the pure-gold content of the gold dollar was changed less than a total of 4 percent—covering two inconsequential alterations made to adjust a defective bimetallic ratio. The gold content of our dollar was never changed an iota during all the years of our gold-coin standard.

The American standard from 1879 to 1914 was a true gold standard, operating in a world in which most of the leading nations, and a large and continually increasing number of the lesser ones, were using successfully the same standard, "the international gold

standard." This was a highly automatic standard, in which the respective money units of the different countries carried their full money value in their gold content. A $10 gold piece contained $10 worth of gold under this standard; moreover, gold moved freely in both national and international trade, and gold bullion could be converted into coin at the mint under the free coinage privilege and gold coins could be readily melted down into gold bullion without appreciable expense. All other kinds of money, Government notes, bank notes, and token coins, were kept at par with gold, and were usually readily convertible into gold on demand. There was in those days almost no monetary management by governments and very little by central banks, except that of occasional small changes in central-bank discount rates. Our present much-used words "monetary authority" was unknown. There was a popular proverb: "We have gold because we cannot trust governments."

This international gold standard, though far from perfect, worked reasonably well. The few countries still on the silver standard were trying to get over to gold and the few that had lapsed from the gold standard to inconvertible managed-paper-money standards were striving to get back to gold. Everywhere it was taken for granted that the international gold standard would be the world's monetary standard for a long future, and that the real problem was not one of finding a substitute for the gold standard but one of improving that standard by international cooperation.

About the only criticism of the international gold standard one heard in those days was that gold was not as stable in value as an ideal standard should be. It had, however, been more stable than any other metal for many years, and had been much more stable than any of the many managed-paper-money units with which a number of countries had been recently struggling.

Concerning the stability of gold in those pre-war days, John Maynard Keynes, who is today the world's most vigorous critic of the gold standard, said, in 1923 referring to England's 88 years' experience with the gold standard ending in 1914, "* * * the remarkable feature of this long period was the relative stability of the price level." Then, after citing figures proving this stability, he added: "No wonder that we came to believe in the stability of money contracts over a long period. The metal gold might not possess all the theoretical advantages of an artificially regulated standard, but it could not be tampered with and had proved reliable in practice."

THE INTERNATIONAL GOLD STANDARD AFTER FIRST WORLD WAR

Then in 1914, the First World War struck us. At its outbreak there were 59 countries on the gold standard. Under the stress of the war, the gold standard was practically driven off the map within the brief period of 3 years. But, be it remembered, during these same years the silver standard also broke down in the few countries that still retained it, and all countries resorting to paper-money standards suffered serious inflation. In a few countries this inflation carried up prices only a few hundred percent but in some other countries it carried them to astronomical heights.

After the war there was everywhere a popular longing to get back to a solid monetary standard, to something in which the people had confidence; and in the distracted world of that time there was no other commodity in which they had so much confidence as gold. Then, as now, Charles Dickens' phrase "as good as gold," meant the best, the world over.

Accordingly in every part of the world plans were discussed and measures taken looking toward a return to the international gold standard. It was a striking fact that in those early post-war years there was almost no public agitation for any other kind of monetary standard than gold. The International Financial Conference held at Brussels in 1920, at which all the important nations of the world—39 in number—were represented, resolved unanimously: "It is highly desirable that the countries which have lapsed from an effective gold standard should return thereto * * *." Two years later, the International Economic Conference held at Genoa declared: "It is desirable that all European currencies should be based upon a common standard. * * * Gold is the only common standard which all European countries could at present agree to adopt."

With the removal of its gold-export embargo in June 1919, the United States became the first country to return to the gold standard. During the next 10 years most other countries of the world came back to gold.

The new gold-standard currencies, however, were required to function in a war-weakened world, whose finances were in bad shape and whose economic systems had been grossly distorted by the war.

Furthermore, the type of gold standard introduced was very different from that which had prevailed before the war. In most countries, although not in the United States at that time, a gold-bullion or gold-exchange standard superseded the old gold-coin standard, and there was no gold coin in circulation. The gold reserves of the new gold-standard systems were frequently inadequate. And, most significant of all, the time-tested old type of international gold-coin standard, with its fundamentally automatic system of operation, was replaced by a new and highly managed nationalistic type. Government management of economic affairs which had reached new heights during the war persisted after the war was over. This was particularly true in the field of money. Directly and through central banks, which they increasingly controlled, governments managed their currencies on a large scale. Central banks no longer depended for their monetary and credit control chiefly upon the modest manipulation of discount rates and occasional minor operations in the open market, but resorted extensively to large open market operations, the exercise of foreign exchange controls, and the manipulation of reserve requirements. Some of this management was scientific and useful. Much was political and harmful. Natural checks and balances of economic forces were all too often interfered with by ignorant meddlers. Normal economic forces were side tracked before they were given a chance to correct evils. It was not so much a question of management or no management as one of too much management and too many incompetent, political managers.

Slowly then, during the latter twenties, most of the world struggled back to a gold standard, but it was a very different kind of gold standard than the one prevailing before the war.

England returned to gold in the summer of 1925 but did not complete her legislation for this return until July 1928. Very unwisely she deflated to her pre-war gold parity. Italy and Poland returned in 1927, France in 1928, and Sweden in 1930. The United States was the only important country having a gold standard throughout the twenties. Obviously, therefore, there was not very much international gold standard in the world during that decade. William Adams Brown, in the most intensive study of the twentieth century gold standard that has yet been made, says: "In the history of the international gold standard 1928–29 is a landmark because it was the only year during which that standard was almost universally in effect in countries not traditionally attached to silver." But, these were the years in which the world economic crisis began in Australia, Germany, and Belgium. It struck the United States in the stock market crash of October 1929, and soon led to the break-down of all the recently established gold-standard systems of the world, those of Argentina, Austria, and Uruguay breaking as early as December 1929.

The United States gave up its gold-coin standard early in 1933 and adopted in January 1934 a new, weak, hybrid type of inconvertible, gold-bullion standards, after a debasement of 41 percent in the century-old gold content of the American dollar. It still retains this standard. Since the world crisis of the early thirties no other important country has returned to gold, no other is today on the gold standard.

The world, therefore, has had very little experience with a true international gold standard since 1914, and that little experience has been in a very unstable period, between the two greatest wars of history. The failure of such a gold standard at such a time is not a fair test of the merits of a true international gold standard, a standard with a previous long record of successful operation in many countries. It is because, however, of such an alleged failure, that we have before us today the Bretton Woods stabilization plan.

THE BRETTON WOODS STABILIZATION PLAN

What would the adoption of that plan do to the American dollar, the dollar in which is payable all of our bonds, public and corporate, all mortgages, all life insurance, all pensions, all bank deposits and all wages?

The Bretton Woods plan provides for a collection of national managed-paper-money standards. While each country would have its own monetary unit, as in the past, these units would be tied together by mutual agreement, and be subject to controls administered by an international board of governors, one governor for each member state, with a committee of 12 or more executive directors and a managing director. Each member state is given 250 votes plus one additional vote for each $100,000 share of stock owned, an arrangement which is especially favorable to the smaller states. With a few exceptions, all decisions are to be made by a majority of the votes cast. For the 44 members of the Bretton Woods Conference the initial stabilization fund was fixed at $8,800,000,000. A member's required contribution is called its quota. The largest three quotas which combined constitute about 60 percent of the fund are those of the United States $2,750,000,000, the United Kingdom $1,300,000,000, and Russia $1,200,000,000. From these high figures quotas run as low as $500,000 for some of the smaller states. Only a very minor part of each quota is required to be paid in gold. The fund is essentially a loan fund. The great majority of the states represented at Bretton Woods are small states in terms of population and business. Twenty-one of the 44 were in default when the war broke out in 1939 on dollar loans made to them by the United States.

The par value of each member state's currency is to be expressed in gold, and official computations relating to the currencies of members are to be on the basis of par values. Limits are prescribed beyond which the price of gold and exchange rates are not normally permitted to go.

Before considering the provisions of the Bretton Woods plan as regards the values of the different national currencies, it should be noted that nearly every general provision is modified and whittled away by so many exceptions that it loses much of its force and most of its clarity in a maze of qualifications. It would be futile in a short after-dinner talk to cite and try to explain these exceptions. This is one of the reasons why there is so much difference of opinion in high places in the United States and abroad as to the meaning of the plan, a good illustration being the question to be considered

later, as to whether or not the plan is a gold-standard plan. Why, for example, Lord Keynes can say that it is "the exact opposite" of the gold standard, and Sir John Anderson, British Chancellor of the Exchequer can declare, "I believe there is in fact no foundation for the view that this scheme in any way involves a return to the gold standard," while the eminent British economist, Paul Enzig, can say the plan "is a most vicious form of gold standard, far worse than the one this country [England] was fortunate enough to abandon in 1931," and while our American coauthor of the plan, Harry D. White, while criticizing the gold standard in no uncertain terms, and expressing great doubt as to the possibility of maintaining a gold standard, can make the surprising statement: "Those countries which elect, as does the United States, to adhere to the gold standard can, of course, do so without in any way complicating the operations of the fund." With reference to this statement may I say by way of digression that it would be a strange sort of international monetary stabilization if a few countries should retain a rigid gold standard while all the other countries were on highly flexible paper-money standards.

At the proper time the fund is to request each member to communicate to it the par value it desires for its currency, based on the rate of exchange prevailing at a designated date. This is to become the real par value unless within a specified time the member desires a change, or unless the fund notifies the member that in its judgment the par value which the member has requested "cannot be maintained without causing recourse to the fund on the part of that member, or others on a scale prejudicial to the fund and to members." If any country persists in refusing to accept for its monetary unit the gold value which the fund wishes to prescribe for it, its only alternative is to get out.

The par values of member currencies when once adopted, though administratively flexible, are not expected to be permanent. In fact, frequent changes of par value seem to be contemplated as an important instrument of monetary policy. Such changes are divided into two classes: (1) Changes in the par value of the monetary unit of individual members and (2) uniform changes by all members. Let us consider these separately.

A member is permitted to change the par value of its currency only "after consultation with the fund" and in order "to correct a fundamental disequilibrium." It is provided, however, that, if the proposed change, together with all previous changes, does not exceed 10 percent of the initial par value, "the fund shall raise no objection." If it goes beyond 10 percent, but not in excess of 20 percent, the fund may either concur or object, but must declare its attitude within 72 hours, and if it goes beyond 20 percent, the fund may either concur or object, but is allowed more time to make its decision. The liberality of these provisions is insured by the requirement that the fund must agree to a proposed change without any stated limits if it is "satisfied that the change is necessary to correct a fundamental disequilibrium," and the fund cannot object to a proposed change on the ground that it disapproves of "the domestic, social, or political policies" for the carrying out of which the member is proposing the change.

The penalty for making an unauthorized change in the par value of one's currency is to render the guilty member ineligible to use the resources of the fund "unless the fund otherwise determines," and if the member persists in its noncompliance for an unreasonable period, it is required to withdraw from membership in the fund.

These provisions on their face would seem to open the door very wide to a member state wishing to debase its monetary unit. The variations readily permitted are large. The condition "necessary to correct a fundamental disequilibrium" can mean all things to all men. Can anyone conceive of a situation in which a nation desiring to change the par value of its monetary unit would not be doing so, or at least claiming to be doing so, largely by reason of its "domestic, social, or political policies"? Could the fund's authorities in making their own decisions help from being influenced by their judgment concerning the wisdom of those domestic policies? Nations do not ordinarily deliberately plan a policy of inflation and subsequent debasement. They slide into currency debasement down a political toboggan, and they usually receive their initial push, as well as other pushes on the way down, by unsound domestic, social, and political policies, involving the exploitation of their currency system for fiscal purposes.

In addition to the provisions permitting changes in the par values of the monetary unit of individual members, there is a provision to enable all members to make uniform changes at one and the same time. Specifically the provision is that the fund by a majority of the total voting power may make uniform proportionate changes in the par value of the currencies of all members, provided that each such change is approved by every member which has 10 percent or more of the total quota, and provided further that the par value of a member's currency shall not be changed if the member objects within 72 hours of the fund's action.

Since nearly all the members will be debtor nations, and since public opinion is usually strongly resistant to deflation, this provision, realistically speaking, is one to make possible by political action world-wide inflation. And, more than that, it will make such world-wide inflation dangerously easy. The action requires only a majority of the total voting power, if there is an affirmative vote of every member which has 10 percent or more of the total quotas. Only three members have that much, namely, the United States, the United Kingdom and Russia. Of these only the United States will be, for a long time to come, a creditor nation. Suppose, however, that we as a creditor should not want a world-wide monetary debasement at a time when most of the debtor nations should, including the United Kingdom and Russia, how long could we successfully oppose it? Moreover, would it not be likely, before any vote on this subject should be called for, that a large number of individual nations would have individually reduced the pars of their respective currencies, and by doing so would have placed those which had not done so in a strongly disadvantageous position as regards the payment of international debts and competition for export trade? Internationally the poorer currencies would drive out the better ones in a manner analagous to Gresham's law. It would be a case of the survival of the unfittest. Instead of giving the world international monetary stabilization which is the declared object of the plan it would give it precisely the opposite.

Do we in America want to make the value of our dollar so easy to alter? Even if we do, are we willing to place the power to alter it so largely in foreign hands, the hands of our debtors? If the gold standard seems too rigid—as some of its critics maintain—would not a plan of this kind give the world nationalistic monetary fluidity of flood proportions?

IS THE BRETTON WOODS PLAN A GOLD-STANDARD PLAN?

The stabilization plan of the experts submitted to the Bretton Woods Conference was at first frequently interpreted in the United States to be a gold-standard plan. The values of the respective monetary units were expressed in gold, so likewise were the quotas whose gold values were supposed to be maintained and a minor part of which were payable in gold. On the other hand, the respective monetary units were variable administratively, and frequent changes in their definitive gold pars were apparently contemplated as an important instrument of monetary policy. Such a concept is clearly contradictory to the principles and practices of the historic gold standard, under which a change in the gold content of the unit of value is looked upon as a break-down of the gold standard. Be it remembered that there was not a single change in the gold content of the pound sterling throughout nearly a century of Britain's gold-coin standard, and not one in that of our own American gold dollar, from the beginning of the gold-coin standard in 1879 to its demise 56 years later.

John Maynard Keynes, whose ideas largely prevailed in the development and final formulation of the Bretton Woods Stabilization Plan, said in a speech in the House of Lords, May 23, 1944: "If I have any authority to pronounce on what is and what is not the essence and meaning of the gold standard, I should say that the plan is the exact opposite of it." And then, after referring to his long-time opposition to the gold standard, Keynes said: "Was it not I, when many of today's iconoclasts were still worshippers of the calf, who wrote that 'Gold is a barbarous relic'?"

Yes, the Bretton Woods plan is, as Keynes says, the exact opposite of the gold standard. It is a collection of managed-paper-money standards which, in practice, would be largely controlled by a politically dominated international board. This board would be controlled by debtor nations who, most of the time, would believe their interests to be in the direction of monetary debasement and of extensive borrowing from the fund. The United States would provide the greater part of the gold funds available for borrowing, and would find itself under heavy international pressure, both political and economic, continually to debase the American dollar.

In my judgment the Bretton Woods stabilization plan, for this reason if for no others—and there are others—should be rejected by the American Congress.

BRETTON WOODS AND INTERNATIONAL COOPERATION FOR WORLD PEACE

The administration of late has been saying that the Bretton Woods plan is an integral part of a comprehensive, unified, one-piece program for international reconstruction—a program planned by the United States and other peace-loving nations to improve economic conditions generally throughout the world. It covers Dumbarton Oaks proposals, lend-lease, tariff reduction, cartels, food, and agricultural organization, etc. To this effect, Secretary Morgenthau recently called the Bretton Woods plan "the historical pattern of international economic cooperation that world peace demands. * * * The fate of the Treaty of Versailles," he said, "adds to the significance of the course we adopt on the Bretton Woods proposals. * * * We must always keep in mind that other nations are anxiously asking whether the United States has the desire and ability to cooperate effectively in establishing world peace. If we fail to ratify the Bretton Woods agreements they will be convinced that the American people either do not desire to cooperate or that they do not know how to achieve cooperation." If we in the United States fail to approve this particular plan of world monetary and credit reform we will, we are told, pull down on the heads of all of us the whole recently visioned temple of international peace and comity.

This attitude on the part of the administration tends to make the opponents of the Bretton Woods plan appear to be selfish isolationists, which most of them are not. In fact, nearly all of these opponents desire fundamentally the same end as do the pro-

tagonists of Bretton Woods, namely, a sound and stable international monetary system, efficient production, freedom of trade, and peace and comity among nations. It is precisely because so many of us believe that the Bretton Woods plan would be in conflict with these worthy objects as that plan would actually work out in the kind of a world we shall be living in, that we oppose the plan.

There is an erroneous implication in the recent statement of Secretary Morgenthau that "* * * the Bretton Woods Conference had to succeed because there is no other method of dealing with international monetary and financial problems than through international cooperation." Of course, there is no other satisfactory method for dealing with these great international problems than by international cooperation, but there are many other methods of monetary and financial cooperation than the Bretton Woods plan.

Realistically speaking, and for the reasons previously stated, the trend of the Bretton Woods system would, in fact, be toward multiple paper-money standards and monetary nationalism. The only prospect today for a truly international standard is gold, and the only realistic monetary internationalists are the advocates of an international gold standard.

What then should be done?

AN INTERNATIONAL GOLD STANDARD PLAN RECOMMENDED

My recommendations, very briefly summarized, would be the ones I gave last April, in testimony before the Committee on Foreign Affairs of the House of Representatives. They are:

1. The first requirement of any post-war monetary standard that can be wisely adopted internationally and maintained for any considerable time is that it shall have the confidence of the people. To this end it should be simple and be a development out of a long, common experience. This requirement alone should put the Bretton Woods stabilization plan out of the running. That plan is so complicated that even very few economists pretend to understand it, and among those few there is much disagreement. There is much wisdom in the old companion proverbs: "The greatest truths are the simplest" and "The people distrust what they do not understand."

2. My second point was well stated in the 1931 report of the MacMillan committee of 14 eminent British economists and financiers, including John Maynard Keynes. It said: "There is, perhaps, no more important object in the field of human technique than that the world as a whole should achieve a sound and scientific monetary system. But there can be little or no hope of progress at an early date for the monetary system of the world as a whole except as a result of a process of evolution, starting from the historic gold standard."

3. No sound currency can long exist anywhere unless it rests firmly upon the foundations of a balanced budget and otherwise sane fiscal policies. The financial structure must be built up from the bottom, not down from the top. The report of the Genoa International Economic Conference a quarter of a century ago well said:

"So long as there is a deficiency in the annual budget of the state which is met by the creation of fiduciary money or bank credits, no currency reform is possible. * * * The balancing of the budget will go far to remedy an adverse balance of external payment by reducing internal consumption. But it is recognized that in the case of some countries the adverse balance is such as to render the attainment of equilibrium in the budget difficult without the assistance in addition of an external loan."

4. The monetary unit should be established in each country after a conference with other countries, but without any compulsion from them whatever. The determination of the size of a nation's monetary unit is affected with such a great public interest and is so highly prized as a prerogative of sovereignty that it is impracticable to subject it to outside interference. If compulsory interference from outside is undertaken it is not likely to be effective.

5. While there should be some management of the gold standard, both international and national, this management should be kept as small as possible and should be superimposed upon a system that is fundamentally automatic in its operation.

6. There should be a high degree of freedom in the international movement of goods and services. The gold standard can function over high tariff barriers, as it has many times in the past, but high tariff barriers are obstacles to international trade and to the smooth and orderly functioning of any monetary standard.

7. The principal monetary authority in each country should be a central bank.

8. An international gold standard will call for an international bank with which the central banks of all gold-standard countries should be affiliated and to which they should contribute the necessary capital. The functions of this bank should be exclusively of a monetary and banking character. It should be a central bank of central banks. The bank should not make long-time loans to its member banks nor otherwise enter the field of fiscal operations.

9. The United States Government should promptly declare its intention to rehabilitate its own gold standard after the war, and should, in due time, call an international monetary conference of all other countries desiring to return to a gold basis, with the object of formulating plans for the restoration of the international gold standard and for international cooperation to make that standard a better standard.

I want to close this address with a question pertinent for a democracy. How would the American people vote if they were fairly presented with the question: What kind of an American dollar would you prefer, for the payment of your wages, your defense bonds, your life insurance and your bank deposits, and for the carrying on of your business, a gold-standard dollar or a managed-paper-money-standard dollar of the Bretton Woods type, largely under the control of a governmentally appointed international board of managers?

Destitution in Italy

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein three letters recently sent from Italy indicating the desperate plight of some Italian people:

DEAR BROTHER-IN-LAW: After a long time and after many years we can thank God, at least, that we are alive. My son and I are well. Your father, up to now, is in good health. You know that he is very old. I am happy that you are all well.

I suppose you know that in this war, you are considered the most fortunate, for you have experienced no days of fear and horror; isn't that so? But I need not tell you all we have been through. As you must already know by your radio and newspapers.

Everything has been taken away from us. All our sheep, cows, pigs, and donkey. We have undergone many hardships. Now, in order to start over again, it would take, at least, 20,000 lire. Where will I get this money? I don't know what to do. Best regards to you and your family.

Your sister-in-law.

DEAR UNCLE: I am writing this note to let you know that I am well, along with my mother and grandfather. How are you getting along?

In our town you can find nothing. If you can send a package, please send some clothes and shoes. Please send them as soon as possible.

Regards to all.

Your nephew.

NOVEMBER 26, 1944.

DEAR SON: After a long silence, I received your letter that I longed for very much. It finally reached me and you can imagine how happy I was. I am happy that you are all well and we are too.

Thank God we have been left alive, but I can tell you we suffered terribly, it was a year of torment. We pray to God that those sad days will not return again. We find ourselves in bad times. We have to do our best, especially when we can't find any clothes or shoes.

My dear son, if you will, please send me a pair of shoes and a suit, for at my death I have nothing to put on, because here, there is nothing. I have been left naked.

If you can, when you receive this letter, send me a package. I have heard that you can send packages now, so I think you will send me one.

Best regards to your wife and children. I regret that it hasn't been possible for me to know my grandchildren, but I send them my blessing, that's all I can do.

There is nothing else to say, except that I wish you a merry Christmas if this letter arrives on time.

Best regards.

Your loving father.

A. M. Ettesvold, Typical Midwestern Farmer

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. SHIPSTEAD. Mr. President, last year an interesting survey was made in the six States of Minnesota, North and South Dakota, Montana, Iowa, and Nebraska. This area is 82 percent rural. The survey conducted was nonpartisan, nonpolitical, and factual. It was conducted by Station WNAX at Yankton, S. Dak.

The survey, as conducted, is explained in the document presented herewith for printing in the RECORD. The purpose of the survey was to determine, through case histories, carefully examined and recorded, who was to be considered the most typical Midwest farmer in the area of the six States. I am proud to state

that the honor was awarded to an old neighbor and friend of mine, Mr. A. M. Ettesvold, and his family. I ask unanimous consent that the record of that survey, including the history of this family, may be printed in the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

CASE HISTORY OF MR. ANTON M. ETTESVOLD, MORRIS, MINN.

If there is such a title as an "All American Farmer," the title belongs to A. M. Ettesvold, who lives on a farm about 3 miles north of Cyrus. He was born in 1877 which makes him 67 years of age at the present time and still active and going strong. He bought his father's homestead in 1904 and added an extra eighty in 1911.

Mr. Ettesvold has always been active and progressive in community projects and held many offices. From 1905 to 1940 he served on the Town Board of Supervisors (chairman for several years). He served on the Cyrus Farmers' Elevator board of directors from 1903 to the present time. He served on the Cyrus Mutual Telephone board from 1910 to 1930. He has been a member of the Cyrus Consolidated School from 1926 to the present time, and is chairman of the board. Fourteen years he was on the Cyrus Shipping Association Board, and in 1932 he was a member of the Stevens County Welfare Board. He was relief certification officer in Stevens County from 1933 to 1937.

From 1940 and until the present time he continues on the Stevens County Board of Commissioners. From 1938 to 1941 he was chairman of the State farm tenancy program of the State of Minnesota. He is an ex officio board member of the Douglas R. E. A. since 1940. He was a trustee of the Skandia Free Church for several years, and sexton now. He was chairman of the Stevens County Civilian Defense at time of organization.

Mr. Ettesvold's farm consists of 333 acres. He raises small grain, corn, and alfalfa. He has overcome many obstacles—2 years of drought, 1 year of complete hail-out, 4 years partly hailed out, and he has had the average family sicknesses with heavy hospital and doctor bills to pay. His success today is due to his own initiative. He has raised a family of 11 children and has given them all a good education. He is a patriotic and public-minded citizen, has always been interested in better farming, and is a good religious citizen. He has taken an active part in all war drives, such as bond drives, salvage drives, and so forth.

He was married to Rosetha Lee December 31, 1905. They have added the following buildings and improvements to their farm home through the years: Chicken house, two silos, granary, garage, workshop, well, well house, and corncrib. They built a new house in 1926, put in electricity in 1941—R. E. A. project—installed sewage system in 1942, and running water to the buildings in 1944.

Eleven children were born to them, and all are living. They have a service flag in their home which has six stars on it, denoting six in the service of their country. Those not serving in that capacity are either engaged in agriculture or engaged as teachers or homemakers. Their children are as follows:

Maynard Oliver, born 1907, graduated from Cyrus High School in 1925—salutatorian; attended Concordia College, Moorhead, Minn. graduated cum laude from St. Paul College of Law, 1935. He began practice of law in Elbow Lake, Minn.; became partner of Ruben Nelson at Breckenridge, Minn. In 1937 he served as city attorney and 2 years as county attorney of Wilkin County before being drafted. He is now serving in the Army in England, with the rank of corporal. His wife, Charlotte, is serving in the WAC.

Alvin Rudolph graduated from the Cyrus High School in 1926—valedictorian. He attended Concordia College, graduated with distinction from the University of Minnesota. In 1937 his major was agricultural economics. He was employed by the Federal Land bank until drafted. He served in Africa and Italy and now is in the United States. He has the rank of master sergeant.

Clarence graduated from the Cyrus High School in 1927. He farmed with his father until 1938, when he was married. He bought his own farm in 1943 in Framnas Township, not so far from his father's farm. He is a member of the Stevens County A. A. A. Board. He has one son.

Mildred graduated from the Cyrus High School in 1930, married Oscar Weers, and lives on a farm near Morris, Minn. They have three children.

Werdna graduated from the Cyrus High School in 1930, valedictorian; attended Glenwood Normal training department, and taught in Stevens County rural schools 6 years. She married Carl Weers and they live on a farm near Morris, Minn. They have two children.

Winfred graduated from the Cyrus High School in 1931, salutatorian. He was graduated from the University of Minnesota with distinction in 1937. He received his master's degree at Purdue University in 1939. He was assistant professor of agricultural economics at the North Dakota Agricultural College from 1938 to 1942. He was married in 1941. He is now first lieutenant in the Army Air Corps.

Earl graduated from the Cyrus High School, 1933, valedictorian. He farmed with his father until 1942 and is now serving in the Army as staff sergeant in antiaircraft.

Thelma graduated from the Cyrus High School in 1935, salutatorian. She attended Glenwood Normal; taught in Stevens County rural schools for 3 years. She attended the University of Minnesota; graduated from St. Cloud Teachers College in 1941. She taught in Santiago and Osakis, Minn. She enlisted in the SPARS in 1943 and now holds rank of ensign.

Nina graduated from the Cyrus High School in 1938. Graduated from St. Cloud State Teachers' College in 1941. She taught in the Stevens County rural schools 2 years and is now teaching fifth and sixth grades at Chokio, Minn.

Rose graduated from the Cyrus High School in 1940, salutatorian. She attended the St. Cloud State Teachers College for 1 year. At the present time she is a student at the university, where her major is journalism.

Kermit graduated from the Cyrus High School in 1943. At present he is helping his father run the farm. He is also adult leader of the Framnas 4-H Club.

All the children have been active 4-H members, winning prizes, trips and distinction in their projects.

Mrs. Ettesvold has been a very active P. T. A. member of the Cyrus school; served as its president. When the service flag was presented to the P. T. A., Mrs. Ettesvold received the honor to accept it as she had the most stars on it. She also took part in county home demonstration work; is one of the organizers of the Framnas Jolly Workers, is also active in Ladies Aid work in her church. Mrs. Ettesvold's brother, Alfred T. Lee, makes his home with them and is assisting in every way possible to keep the ball rolling till the boys come home when the war is won.

Mr. Ettesvold is the typical "all American" in all respects.

(NOTE.—Since this case history was written, their oldest son, Maynard Oliver, was killed in action in France on September 26, 1944.)

BRIEF RÉSUMÉ OF MIDWEST FARMER DAY

Midwest Farmer Day, sponsored by radio station WNAX, is to honor all farmers whose production of food has been so important in the eventual winning of the war and the peace. Soldiers on our fighting fronts have been given medals, and rightfully so; workers in war plants have received E awards, and in some cases medals, for their achievements.

To the best of our knowledge, WNAX is the only one thus far to pause and pay proper tribute to the farmers for their war efforts. We at WNAX are familiar with the tremendous job they are doing in the face of many obstacles—shortages such as that of farm machinery, manpower, etc. We could relate hundreds of stories of these "soldiers of the soil" and their individual efforts in increasing their production of beef, pork, and grains; We could tell of the long hours of hard work in the fields—hard hours put in, knowing that he must produce more food that this world might be fed; knowing that his job was one of the important ones in bringing back home that son who is now fighting on foreign soil.

The States of North and South Dakota, Iowa, Nebraska, Minnesota, and Montana stand out in the purchase of War bonds. The fact that this area is 82-percent rural is additional proof that the farmers are doing their share to help finance this war.

WNAX sensed the responsibility to tell America of the job being done by the Midwest farmer. This, we feel, has been accomplished through the facilities of the Columbia Broadcasting System with their coast-to-coast programs—Trans-Atlantic Call, Columbia Country Journal, and Vox Pop. These three radio programs originated in Yankton, and used as their themes the story of the Midwest farmer and the part he is playing in winning the war.

Months before Midwest Farmer Day, letters were sent to bankers, county extension agents, and newspapers in our five-State area, asking them to submit to us case histories on outstanding farmers in their particular area. In writing these case histories, they were asked to consider several points; such as, the success of the farmer due to his own ambition and initiative, his increased crop and livestock production, his community standing and community activities, the part he played in the various war drives—the scrap drives, War bond drives, etc.

Several hundred of these case histories were received from the five States. On the 23d of August, the five extension editors representing their respective States, came to Yankton; and from these case histories they selected their first and second choice. On Midwest Farmer Day, September 4, the winning family from each State was brought to Yankton. The entire day was set aside to pay tribute and thanks to the Midwest farmer for his part in the war effort.

The day's entertainment, which was all absolutely free, started with a chuck-wagon breakfast, put on by 55 modern cowboys from Winner, S. Dak. They brought over 50 head of horses to Yankton, along with the chuck wagon, to participate in Midwest Farmer Day.

This was followed by the inductions as chiefs into the Rosebud Sioux Tribe of Maj. Gen. James A. Ulio, Adjutant General of the United States Army; Maj. Gen. C. H. Danielson, commandant of the Seventh Corps Area; Hon. Chan Gurney, senior Senator from South Dakota; Brace Beemer, the Lone Ranger; and Parks Johnson and Warren Hull of the Columbia Broadcasting Co.'s coast-to-coast Vox Pop show.

At noon a banquet was held in honor of the five farm families. All the dignitaries present participated in the banquet paying tribute to the midwest farmer. This was the second banquet, the first being given in their honor by the chamber of commerce and local dignitaries in Yankton, upon their arrival the Sunday before September 4.

The afternoon performance before approximately 35,000 people was opened by Governor Sharpe, of South Dakota. Appearing on this program in addition to Governor Sharpe were Governor Thye, of Minnesota; Rufus Howard, secretary of agriculture, Nebraska; the Honorable Kenneth Simons, of North Dakota; Maj. Gen. James A. Ulio and Gardner Cowles, Jr. In addition to these dignitaries, there was entertainment featuring the Lone Ranger of radio fame, along with the WNAX radio artists, the WAC band from Fort Des Moines, Iowa, and the 70-piece Air Corps band from Sioux Falls, S. Dak.

At the close of the afternoon performance, the five farm families were introduced to the audience, the case history on each family read and turned over to the judges, Maj. Gen. James A. Ulio, Maj. Gen. C. H. Danielson, Senator Chan Gurney, etc., at which time the selection of the outstanding typical farmer was made. A parade, made up of both bands mentioned above, horses, cowboys, Indians, and celebrities, and covering an area of better than eight blocks, was also a part of the afternoon performance.

The importance of the event was shown by the Columbia Broadcasting System, when it originated three coast-to-coast programs from here. Also one of Columbia's clients, who originated its program from Yankton, in order that it might be the first to announce to a national audience the name of the farmer to be given the title of typical Midwest farmer. As they put it, the citation was given to him, and through him the thanks and praise was carried to all farm people of the Midwest for their contribution to the war effort.

The Vox Pop program was followed by the speaker of the evening, Major General Danielson, who spoke on the farmer's part in the war effort. In connection with both Major General Danielson's and Major General Ulio's talks, two Army exhibits—one from the Ordnance Department and one from the Quartermaster Department—were on constant display, and were undoubtedly viewed by the 60,000 people gathered in Yankton throughout the day.

The second talk of the evening was given by Capt. Ralph W. Ilmanen, a Troop Carrier Command hero. Captain Ilmanen told of what food meant to the boys in the South Pacific. Captain Ilmanen has made in excess of 275 missions over "the hump."

As a part of the evening performance, J. Norman Lodge, commonly known as the Old Sarge—a veteran of both wars and now a war correspondent, brought a message from the battle theaters, again paying tribute to the farmer and what food means to the boys in the battle theaters. Also featured on the evening performance were the Army bands mentioned previously, Gray Gordon's Tic Toc Rhythm Band, and other entertainment.

The climax to the night performance was the presenting of 1943's Typical Midwest Farmer who in turn, turned the crown over to the 1944 winner, and the awarding of gifts of appreciation to the winner. The winning farm family received a certificate giving them a farm tractor as soon as production of farm tractors makes it possible. In addition, they are to receive a trip to Washington in January, to be the guests of their Congressmen, to participate in a banquet given in their honor, and to take part in the inauguration of the next President of the United States. The runner-up families were awarded a $100 War bond, plus $25 War bonds to each member of the family. In addition, they were given a farm wagon chassis and other gifts of use in the farm field. Each farm wife received an electric dehydrator for home use. The evening performance was closed with a fireworks display, carrying the slogan:

CARRY ON TILL VICTORY

This is a brief summary of our effort to pin a medal on the midwest farmers for their efforts in food production. All of us are very much aware of the importance of this food army and of their record of increased production in spite of the shortage of equipment and manpower.

Comments from Washington, New York, and across the United States have been so overwhelming that Midwest Farmer Day in Yankton, S. Dak., will undoubtedly continue to be an annual event and grow in importance.

Look magazine covered the entire day and pictured the event as the biggest farm picnic in the world. This further informed radio listeners from coast to coast of the importance of the farmers' work in winning the war and the peace.

As you know, in order to present such an outstanding day, considerable effort and time were needed from the employees of WNAX. An event this large takes months of preparation. We are already starting the ground work for next year's Midwest Farmer Day in Yankton, S. Dak.

The Red Mass at Catholic University

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. MURDOCK. Mr. President, on Sunday, February 4, 1945, at the National Shrine of the Immaculate Conception at the Catholic University of America here in the Nation's Capital, the Red Mass, the solemn votive Mass of the Holy Spirit, for the Courts and Congress of the United States of America was celebrated. In connection with this very impressive and important religious service the sermon was delivered by the Most Reverend Duane G. Hunt, bishop of Salt Lake City.

I have known Bishop Hunt for a great many years, having met him first as a member of the faculty of the University of Utah when I was studying law at that institution. I was at that time thoroughly impressed with his sincerity, his intelligence, and character. He has for many years been considered one of the great religious scholars, teachers and leaders of western United States. His selection to deliver the sermon in connection with the celebration of the Red Mass here in Washington indicates that his worth, sincerity and ability are recognized throughout our Nation.

I was fortunate enough to be able to attend the Red Mass and to listen to the sermon delivered by Bishop Hunt. In the audience I noticed many of my colleagues from the Senate and the House of Representatives. I was thoroughly impressed by the solemnity and the beauty of the Red Mass and also by the excellent and exceptional sermon delivered by Bishop Hunt.

I realize that many of my colleagues for causes beyond their control were unable to attend this religious function, and because of the timeliness and the importance of the sermon delivered by Bishop Hunt on that occasion I ask unanimous consent to have it included in the Appendix of the CONGRESSIONAL RECORD. I am sure that all my colleagues who heard this sermon will join me in commending it to the Members of the Senate and other readers of the CONGRESSIONAL RECORD.

I also ask unanimous consent to have a brief description of the Red Mass, which has been prepared and delivered to me by the Catholic University, follow the sermon of Bishop Hunt in the Appendix of the RECORD.

There being no objection, the sermon and description were ordered to be printed in the RECORD, as follows:

THE SANCTITY OF HUMAN RIGHTS

"For our wrestling is not against flesh and blood, but against the principalities and the powers, against the world rulers of this darkness, against the spiritual forces of wickedness on high." Ephesians vi: 12.

In the present desperate crisis of civilization, we may well ask if the shadow of tyranny will eventually be lifted or if it will settle down over the world as a pall of darkness for centuries to come. The answer is to be sought not merely in the clash of arms on fields of battle; not merely in the deliberations of parliaments and diplomatic conferences. Over and above these, it is to be sought in the clash of opinions in the field of thought. It is to be sought in the age-old spiritual conflict between truth and error.

The subject of human rights may be approached from two opposite points of view. The one is that of principle and law; the other is that of physical force. The one is identified with religion; the other, with the cult of nationalism. The one exalts the authority of God; the other, the authority of the state. And, strangely enough, there is nothing else. Between these two extreme points of view there is no logical stopping place. Either we are climbing up toward the one or we are being pulled down toward the other.

The Christian point of view starts, where all logical reasoning must start, with the existence of God. It looks to Him as the First Cause, the one necessary and uncreated Being. It declares that He is the Creator of all things: "In the beginning God created the heavens and the earth."

Concerning man, Christianity understands that he is not the product of blind forces of nature. He is a creature, created according to the will and purpose of God. He is made to God's own image and likeness, being given immortality and being endowed with an intellect and a free will. There is set before him a noble and worthy end, which he is commanded to attain. In the words of the children's catechism: "Man is created to know God, to love and serve Him on earth, and to be happy with Him forever in heaven." This statement, so childlike in its implicity, nevertheless is most profound. It discloses the only secure foundation for justice among men.

For the fulfillment of any command God gives appropriate means. In order that man may attain the great purpose of his creation God endows him with certain rights. Among these, that of life itself is primary. This is more than a right, of course; the preservation of life is a duty. Similarly, there is the right to worship God and obey His commands; also, a duty. Then there are the freedoms. Man has the right to physical and spiritual security, free from interference and fear. He has the right to express himself freely, in speech, in press, in association, in art, in work and in play. There is the right to own property, with the corresponding right to choose property. There is the right to marry, and the right not to marry. There is the right of marital fidelity; and the right of parents to possess their children in unbroken homes.

These are men's natural rights. They are his moral possession, even though at times he may not be able physically to defend them. They belong to him, not because he is a subject of civil government or a citizen of a country or a member of society. They belong to man precisely because he is man. They are called natural rights because they are due to men's nature and because they come through the process of nature. Even so, they are supernatural in origin, tracing back to God, who is above nature.

Man is a special being, made so by his Creator. God intends that men shall live together, with each man respecting the rights of every other man. Inasmuch, however, as man has free agency and thus may choose to do evil, there is always present the possibility that some men will interfere with the rights of their fellowmen. The regulation of conduct, therefore, is necessary. Civil government, with physical power to enforce its laws, is necessary.

Let it be noted that government does not give authority to itself. The idea is self contradictory. Authority comes to government from above. It is indicated implicitly in man's social nature, through which it flows from Almighty God, the Author of man's nature. It follows, as a matter of course, that government is not absolute. It is bound, no less than the individual man, to submit to the divine and objective code of morals.

The principles by which governments live and act and rule should come from above, not below. They should reflect the purpose of God, not the selfishness of man; the perfection of God, not the weakness of man. They are not to be compromised in favor of popular demands or national ambitions. They are not to be interpreted as judges wish them to be. They are to be stated as they are. They are to be drawn from the unfailing deposit of God's truth, from the laws of nature and revelation, and, through the highest skill of legal genius, are to be applied to problems of government. Each new definition of law, therefore, should be a further unfolding of God's wisdom, a new enrichment for mankind.

Both man and government are thus expected to give glory to Almighty God; the one by honorably exercising his rights and the other by securely protecting those rights. This, my friends, is the Christian concept of justice and of the relationship between man and civil government. And I would have you note the order; God is first, man is second, and government is third.

This scheme of things has found one of its noblest expressions in the United States of America. Its statement in our Declaration of Independence has few equals in all the political documents of American history. "We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

This has been our creed. It was the basis for our Federal Constitution, which we ordained to "establish justice" and to "secure the blessings of liberty." It became the guide for our State constitutions and for statutes and judicial decisions. It has been woven into the very fabric of our society. With liberty for ourselves at home and honorable dealings with our neighbors abroad, honorable for the most part, this creed, this religiously inspired creed, has given us a century and a half of glorious history.

Now consider, if you please, the opposite point of view, that of nationalism. It takes a variety of forms, depending upon circumstances, and expresses itself in varying degrees of frankness. In one country it may be identified with emperor worship; in another, with hero worship. In former centuries its defenders talked about the divine right of kings; today they talk about social utility or national destiny or racial supremacy. It may be called nazi-ism or atheistic communism, or merely totalitarianism. They are all similar. They all stem from the same root, the notion that civil government, as the spokesman of society, is above law.

I have said that in the correct order of things God is first, man second, and government third. It is highly significant that, whenever God is left out, the order of the other two beings sooner or later is reversed. Government sets itself up in the higher place, that of master, which it can do by its collective physical power, with man relegated to the lower place, that of servant. Precisely to the degree that government ignores God, it makes itself supreme, and then substitutes might for right.

The reason is as clear as the weakness of human nature. As in man, animal passions and appetities must at all times be held under control by the higher faculties, so it is also with civil governments and nations; selfish inclinations, greed for conquest, and lust for power, must be subdued by respect for law, by love for God, and for neighbor. Physical force at all times must be dominated by spiritual idealism. Once let a nation cease to look above itself for moral guidance, once let it regard itself as all-sufficient, and it is doomed eventually to surrender to the downward pull of lower nature.

This pressure of nationalism is one of the most powerful forces within the whole wide range of human experience. It is always present, even when only dormant; in every country it must be reckoned with. As is to be expected, it characterizes pagan countries. What is not to be expected, however, is that it should become dominant in Christian countries.

The experience of Germany warns of what may occur anywhere. The German Nation did not fall suddenly into its present madness. The groundwork had been laid over a period of many generations in the field of speculative thought by the writings of the anti-Christian philosophers, Trietschke, Nietsche, Marx, Hegel, Fichte, and others. Their doctrines, as a noxious leaven, had worked through German minds and had produced the superstate psychology. Under its spell, millions of Germans—the great majority, it would seem—became unbelievably apathetic about the preservation of their individual rights. They were victimized by the worst of slaveries, that of the soul.

The record of nationalism is its own condemnation. As the means to their ends, governments of modern nations have not hesitated to commit every kind of crime. They have suppressed freedom of speech and association; confiscated private property; banished citizens to foreign lands; punished alleged law violators without trial; proscribed religion; sterilized the socially unfit; snuffed out the lives of the insane, the aged, and the incurables; ruthlessly exterminated political opponents and racial groups. Against such crime, what plea could the injured victim make? His rights, he had been told, come from the state. The state had given, the state had taken away; blessed be the name of the state.

The curse of nationalism extends in both directions. If a government has no respect for the rights of its own people, it certainly feels none for the rights of other nations. It plots wars to acquire territory and power, with no question of morality raised, only that of opportunity. And in the prosecution of such wars, again, no human right is respected. It would seem that in the present-day massacre of civilians and the murder of helpless prisoners and hostages, civilization has sunk to an all-time low.

Against this monstrous thing freemen throughout the world have risen in righteous protest. Against it we of this country are fighting with all the resources at our command; against it our young men are now dying on distant battlefields. And yet, here at home, in our own speculating about human rights and government, we have begun to drift in the same evil direction.

For the most part, totalitarianism in our country is still in the academic stage, that of classrooms and textbooks. This is the stage of preparation, wherein currents of thought are generated. And here, we note regretfully, a considerable advance has been made. The truth is that the major premise of totalitarianism is now being widely taught to the youth of our country.

Of late years, to explain what I mean, the doctrines contained in the Declaration of Independence have been increasingly ignored. They are regarded as old-fashioned. The explicit avowal of God-given rights, for instance, is no longer generally rehearsed in the classrooms of secular colleges; it is repudiated in many standard textbooks of political science and law. In contrast, the social-origin theory is favored and is being taught. And this puts society, and thus the State, in place of God as the source of human rights and of law; and this is the major premise of totalitarianism.

So that it will not appear that I exaggerate, I quote from a textbook recently published by a professor of a well-known college, his statement being typical of the school of so-called liberal thought. "Viewed from the high point of twentieth century historical and ethnological research, the Declaration is not wholly convincing. Only in a limited sense, if at all, have men ever been created equal, nor are they endowed with any rights except those they can obtain and hold, nor were governments, in spite of certain American precedents, originated to secure these 'unalienable rights.'" And there is the story. That we have only such rights as we are able to obtain and hold, is pure totalitarianism.

Let there be no mistake, however, about the attractiveness of this doctrine. It is attractive, as a matter of course, to those who deny the existince of God. It is attractive, likewise, to those who look for novelty, and who identify progress with repudiation of the past. It is attractive, also, to the liberals among us; strangely so, because when carried to its ultimate limit it destroys all individual liberty, the very thing the liberals profess to demand. Being attractive, it is dangerous; and it is pointing us toward the very type of tyranny which now, by blood and tears, we are attempting to destroy.

In this conflict, this spiritual conflict, you, the representatives of the legal profession, are the front-line warriors. To you is entrusted a sublime duty, that of defining and defending God-ordained justice. You are to attack the heresies of the day and by the force of your scholarship to destroy them. You are to turn back the current of the times and direct it once more into channels of truth, back toward our Declaration of Independence, back toward the Christian concept of justice.

In this high endeavor you have a right to the clarifying influence of the Christian religion. In sanctuaries like this, dedicated to the worship of God, you are reminded of His superlative estimate of man's worth. Here you are taught that human souls are so precious that our divine Lord Himself died to save them. Here in this sacred place you catch a glimpse of the unique and exalted dignity of man.

You have the right, moreover, to the prayers of the church, such as the devotions of this morning. Here is being celebrated the greatest act of worship ever entrusted to God's representatives, the renewal of the sacrifice on Mount Calvary. It is being offered in honor of the Holy Ghost, the spirit of truth, and is offered to you.

If the apostolic successors need the help of the Holy Spirit to protect them against

error, it would seem that you, also, need supernatural help. And so the church prays for you, prays that God will enlighten your minds and strengthen your wills. She prays that you will cooperate with the grace of God and thus serve well and faithfully the cause of justice. May it be said of you, after the manner of the inspired text: "You have loved justice and hated iniquity; therefore, God has anointed you with the oil of gladness."

THE RED MASS

For centuries it has been the custom in France for judges and the legislators, to participate in the Red Mass. The tradition was initiated by the judges who, conscious of their human limitations, met at the Holy Sacrifice of the Mass to invoke the aid of the divine source of wisdom and justice in their deliberations.

The unique term, "the Red Mass," was adopted because the particular petition of the mass sought the aid of the Holy Spirit, symbolized by the flaming fire of divine love and wisdom. The vestments of the priests were red, and the robes of the justices who attended were scarlet.

The solemn significance of this votive mass was evidenced by the fact that a special chapel was erected in Paris during the reign of Louis IX, St. Louis of France (1225–1270), as a proper setting for this beautiful ceremony. Le Sainte Chappelle, an architectural gem, was used but once during the year and then for this impressive ceremony.

The spirit of this particular mass for the Holy Spirit may be understood from one short passage in the sequence:

"O guide our minds with Thy blest light,
With love our hearts inflame,
And with Thy strength, which ne'er decays,
Confirm our mortal frame."

The custom was adopted later in England where for several centuries members of the judiciary and the bar have joined in the Red Mass, celebrated at the time of the opening of the courts.

In the United States the tradition was inaugurated in New York. Today the observance takes place in New York, Illinois, New Jersey, Pennsylvania, California, and Massachusetts.

The Catholic University of America Law School inaugurated the annual custom of the Red Mass in the Nation's Capital as a part of the celebration of the jubilee year of the university in 1939.

Certify Labor Leaders

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very interesting and instructive editorial entitled "Certify Labor Leaders," taken from the January-February 1945 issue of the Railroad Workers Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CERTIFY LABOR LEADERS!

To eliminate any trouble, it is wise to learn the cause of it. This fundamental principle is applicable to all trouble, including labor trouble. When one examines unionism, evidence is brought forth that labor trouble seldom starts at the bottom. It is generally promoted at the top and by individuals who are either incapable of coping with ordinary grievances which are bound to arise, or by those who promote grievances for the sole purpose of creating turmoil and for a very definite purpose.

Now do not get this writer wrong—that all labor leaders are either incapable or just plain agitators. I am not trying to create this impression because I firmly believe that most labor leaders are conscientious and capable people striving to bring about harmonious relationship between employers and their employees. Unfortunately this class is not in the public eye very much of the time.

I do, however, intend to bring your attention to certain individuals who are heading labor unions, that labor would do well without. Their hearts are not in unionism, never were, and never will be. To them, unionism is just a means of gaining their selfish objectives irrespective of the outcome to the union they control. It is because of these people that I say, we should certify labor leaders.

You may ask yourself, "What does he mean when he says 'certify labor leaders' "? Well, to start with, I believe union leadership is a profession, an occupation one should be well proud of. It is an important one, too. Union leaders, whether they be good or bad, are important members of human society. Their actions, good or bad, do affect industry and in fact, our entire economic and political structure as well. Therefore, it is important to every citizen of these United States, whether members of organized labor or not, to demand that the responsibilities of this profession, like all recognized professions, be placed in the hands of responsible people.

Every thinking person realizes that many labor leaders are not in keeping with this profession. Daily news items tell us of aliens, fugitives from justices, ex-bootleggers, etc., etc., heading labor unions. With this type of leadership the outcome can only be detrimental to the best interests of unionism and our country as a whole.

Before we can ever expect to have peace and harmony in unions we must place men at the helm who believe in peace and harmony. I do not believe we can expect a square deal from the type of representative just mentioned in the above paragraph. To my mind, unionism, when operated in accordance with the true principles as laid down by the founders of this system, is something every workingman; yes, and every businessman, will welcome because it can be beneficial directly or indirectly to all elements of society. When the union members themselves appreciate true unionism they will realize it is for the betterment of conditions of honest workingmen, industry, and our Nation as a whole. When they come to this realization they will rid themselves of those not worthy of this worth-while cause.

If unions are to be accepted as part of our American way of life, then they must operate accordingly. But how can they be part of our way of life when, in many instances, they are headed by aliens, people who accept the benefits of our American system and yet do not appreciate it enough to become part of it? Yes, we have, and I can prove it, union leaders who are not citizens of the United States although they have been in this country sufficient time to have availed themselves of this great privilege. But, no. Their hearts belong to some other system of government, and in some cases, a system hostile to ours.

Our unions should profit by the leadership of the greatest union of all times, the union of the United States of America. When you examine the by-laws of this union you find, and in no uncertain language, that office holders of this union must be citizens of the United States. Therefore, it would be wise for all labor unions to incorporate a similar bylaw in their constitution. Then every aspirant for office in a union would be required to produce a certificate of citizenship in order to be eligible to hold office, whether this office be elective or selective. Further to this suggestion, the unions would do well by having a committee whose duty it would be to examine all candidates and appointees to office, and report its findings to the organization as a whole, either in regular meeting or regular convention. I do not believe that persons unbecoming unions would be able to slip into office because such a committee, made up of rank-and-file members, would never certify aliens or people with backgrounds unbecoming good unionism.

When you dig into the alien situation you begin to ask yourself, "What's stopping an alien labor leader from being in collusion with the country of his allegiance against the United States, if his country is going to profit at our expense?" What would stop a labor leader, heading a key industry, from slowing down the industry through labor trouble? It can be very beneficial to his country and highly detrimental to ours, especially during times of war if we happen to be producing something not to the liking of his country. I say, let us not take a chance, and a good way to safeguard America and our unions from being jeopardized by the actions of aliens and other undesirables in unions is to certify labor leaders.

Frankly yours,

MAURICE R. FRANKS,
Editor.

Paying for Public Education

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of an address which I delivered in the New York Times Forum on January 23 last, on the subject, Paying for Public Education.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The greatest security of any nation is the enlightened spirit of its citizens. If the individual is blessed with knowledge, the nation is girded with strength.

In the past, education in our Nation has been held to be a State function. The States have in large measure delegated their powers over education to local units of government and placed a large part of the responsibility of financial support of schools upon the resources of local communities.

The result of our dependence upon local resources for the support of education is the wide and grievous disparity of educational opportunity offered to the children in the various communities in all parts of the Nation. On the one hand we find the children in our wealthier communities being taught by well-paid and well-trained teachers, with good books, an ample supply of teaching materials and modern instructional equipment, and attending school in modern and well-equipped buildings. On the other hand we find several million children in the poorer communities being taught by poorly paid teachers who are not even graduates of high school and sometimes not even graduates of an elementary school, with a few worn-out textbooks, no modern tools of

learning, and attending school in mere shacks.

At the time of our entry into the present World War, more than 5,000,000 children aged 5 to 17 were not in any kind of school. In 1940 over 1,000,000 children were enrolled in classrooms that had less than $500 a year for their financial support. At the other extreme over 1,000,000 children were enrolled in classrooms that had over $4,000 a year for their support. Everything necessary to good education is found in classrooms upon which $4,000 or more per year is expended, while hardly anything necessary to good schooling is found in those upon which less than $500 a year is expended.

The penalties of educational neglect are heavy and inescapable. During the present war, by November 1944, Selective Service had rejected some 4,500,000 men because of educational, mental, and physical deficiencies, a large percentage of which deficiencies could have been prevented by good public schools. It is a startling fact that in the present war nearly as many men have been rejected as were drafted in the First World War. Instead of being a part of the Nation's human wealth, these men are a burden of debt which we must carry because of our shortsightedness. If the unmarried men who have been rejected could have been accepted, it is entirely possible that we might have avoided the drafting of married men, with all the social consequences incident to the breaking up of families.

The duty of the Federal Government to protect our lives and safeguard our liberties is universally recognized. Yet there are many who still refuse to admit that any duty rests upon our Federal Government to protect the citizen and the Nation against the dangers of ignorance. The States simply cannot meet the full responsibility of education as many of them do not have the wealth or financial resources.

The appalling differences in educational opportunity, both among the States and within the States, are due to the differences in economic conditions that lie largely beyond the control of the several States. These differences are differences in wealth, in income, in taxpaying ability, in the extent of absentee ownership of natural resources and industry, and differences in the number of educable children in proportion to adults. The poorer States and communities have the largest proportion of children. States least able to support schools have the most children to be educated.

With these differences there cannot be equality of educational opportunity throughout the Nation except through Federal aid. Even if we had a suitable uniform tax plan in all the States, there would be nine States which, if they used every penny from the plan for education without any expenditures whatever for other governmental functions, still would not have sufficient revenues for an adequate program of public education.

Much of the wealth of the richer States has been drawn from the poorer States, but these poorer States cannot tax this wealth. Alabama, primarily an agricultural State, sends millions of dollars each normal, peacetime year into other States for the purchase of automobiles, farm machinery, clothing, and manufactured goods and commodities of all kinds. Alabama cannot tax the profits derived from the millions of Alabama dollars sent out of her borders. The Federal Government can tax these profits.

The Federal Government takes the sons of the poorer States in this time of war and sends them into battle where many of them will die to save our Nation. Why should not the Federal Government aid in educating the sons of these poorer States to live and serve our Nation in time of peace? If the Federal Government can spend billions for war, it can afford to spend millions to give American children their birthright—health and education.

If the past be a guide to the future, fears that Federal aid might mean Federal control of our schools are without foundation. The long experience of the Federal Government has demonstrated again and again that there can be Federal aid to the States for education without Federal control. Land grant aids, beginning with grants to Ohio in 1803, and the two Morrill acts of 1862 and 1890, providing for the land-grant colleges, large annual Federal appropriations for vocational education, and many other acts of Federal aid prove that Federal assistance without Federal encroachment can be given.

Federal grants should be made to the States for general elementary and secondary schools. Grants should be made according to an objective formula written into the law, so that the amount of money going to a State will be a matter of arithmetic and not subject to the discretion of any Federal official. The funds should be granted through the United States Office of Education and expended by the States through their respective State departments of education, according to the laws of the States. The Thomas-Hill-Ramspeck bill, now pending in Congress, will definitely establish such a policy and such a program for Federal aid to education.

The time is at hand when Federal aid must be provided. The national interest and the people's welfare demand it.

Ours is a government in which sovereignty resides in the people. The fundamental instrument of policy and control is the popular ballot. Such a government must depend upon the degree of enlightenment and the loyalty of the masses of the people.

Education is the strength that we possess. Public education is the means by which the citizens of the democratic nation are given the opportunity to acquire the knowledge and the will to serve effectively the ideals, aspirations, and institutions of our country. The public-school system is the agency through which the democratic state undertakes to perpetuate itself. If we fail to give to the children of our country, its future citizens, the opportunity to receive enlightenment, the opportunity to build and develop character, intelligence, and leadership, we deny democracy itself. We shut off the springs from which the democracy receives its life-giving waters. If we shut off those springs, the inevitable end must be the death of democracy.

Manpower in the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two telegrams which I have received from the editor of the Portland Oregonian, Mr. Palmer Hoyt, one dated February 4, 1945, dealing with the problem of manpower in the great Pacific Northwest, setting forth evidence that there is a surplus of manpower in that area, in that thousands of workers are being laid off. We are really confronted with an unemployment problem, apparently, in that area. These telegrams bear upon the so-called work-or-fight measure.

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Portland Oregonian of February 4, 1945, entitled "The Coercion Bill."

I submit this evidence because I think it has a bearing upon the burden of proof which rests on those who favor the work-or-fight bill, namely, to present evidence—not opinion, but evidence—showing that there is a need for it from the standpoint of the manpower problems of the country.

There being no objection, the telegrams and editorial were ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., *February 4, 1945.*

Hon. WAYNE MORSE,

Washington, D. C.:

The following article appeared on page 1 of the Oregonian news section, Sunday, February 4:

"More than 3,000 members of the war-swollen boilermakers Local 72 have been laid off by Portland shipyards in the last week, Ralph Calhoun, union business agent, revealed Saturday.

"The disclosure came after Calhoun and a representative of the United States Employment Service had conferred most of the day with 20 women welders discharged at the end of the "graveyard shift" at Albania Engine & Machine Works Saturday morning. The women were offered other jobs, said United States Employment Service Representative James Bagan, but declined them.

"The welders stormed their union headquarters and demanded some sort of action, Calhoun stated, and most of them are puzzled that they were laid off while work-or-fight legislation is being debated in Congress.

"'There wasn't anything I could tell them,' the business agent declared. 'The personnel agent at Albina told me when I called him that more people were going to be terminated every week. I called the United States Employment Service so the women could speak their piece to somebody who is supposed to know the answers.

"'There is a manpower shortage in this area just the same as all over the country,' he continued, 'but there isn't any worker shortage. The women have been working in the shipyards for a long time, and if they were needed they could continue. Men are being fired, too.'

"Calhoun pointed out that this is the first time Portland has had more labor than it could absorb since the beginning of the war. His statement also highlighted the crisis the city might face when the war ends. 'These people haven't any money,' he asserted, 'I've given away more money than I've made in the last week just to help men with families get something to eat, they're out on a limb,' Calhoun continued. 'They haven't any place to sleep. A lot of them, and no money to rent a place. Several men slept in the railroad station last night.'

"L. C. Stoll, War Manpower Commission head in the Portland district, said that as far as he knew every person discharged from the shipyards up to noon Saturday had been offered a job in some other shipyard or 'another high-priority industry.'"

The January 28 issue of the Oregonian carried on page 1 an article telling of 2,000 employees of Swan Island shipyard laid off because of lack of materials and resulting changes in shipbuilding schedules.

L. C. Stoll, War Manpower Commission head here said at the time that the efficient workers among the 2,000 would find employment in other shipyards, while those with poor attendance records would have to talk over their troubles with the unions.

A. R. Nieman, assistant general manager of the Swan Island yard, reported that the

yard's new shipbuilding schedule had been reduced from six ships a month to a ship a week.

Stoll said Swan Island in about 60 days will be in need of some of the workers being laid off now.

Speaking of the cooperation that exists here between unions and shipbuilding management. Stoll said: "If unions and management in the rest of the United States would cooperate as well with the United States Employment Service as they do here, there would be no need of a national manpower conscription.

PALMER HOYT,
The Oregonian.

PORTLAND OREG., *February 7, 1945.*
Hon. Senator WAYNE L. MORSE,
Washington, D. C.:

Attached is report of speech made in Portland by Lee C. Stoll, head of war manpower in this State.

With little hope being given by the Army, Navy, or Maritime Commission of future war contracts in the Portland area, and the prospect that labor requirement here will be definitely eased within the next 30 days and drastically reduced by June, there seems no excuse for anyone talking at this time about work-or-fight legislation so far as Oregon is concerned," State War Manpower Commission Director Lee C. Stoll declared before the Rotary Club, Tuesday noon.

In what he termed a "fact finding" presentation of the 1945 manpower problem, Stoll said employers and labor alike must face the fact that Oregon is no longer a mecca for job seekers. Even after stopping all recruitment of workers from other States as of January 15, the W. M. C. can "meet any schedule the high command in Washington asks," he declared. We are not asking deferment for any men under 30 in the shipyards.

At present there are two or three jobs available for every lay-off, not always in the same classification, but with generally the same wages, Stoll said, and the need for workers in transportation, warehousing, teamster jobs, lumber and food processing will continue throughout the year.

He urged employers to "go along with the W. M. C. on the questions of priorities and distribution of labor, with my solemn pledge that our policies will always be for the best interests of everyone concerned."

As to the work-or-fight bill, Stoll declared there "could be no more muddled mess accomplished than for the draft boards in the State of Oregon to freeze men in war plants based on their own judgment." As to postwar public projects, Stoll asserted it mould be a very poor job of planning to rush these through so that workers let out of war industries could move from one to another, with the result that the projects would be dissipated by the time returning servicemen reach their home here.

E. P. HOYT,
Oregonian.

[From the Sunday Oregonian of February 4, 1945]

THE COERCION BILL

It should be called the "fight or join the union bill," though of course there will be the alternative of going to jail.

That, however, sums up the situation. Under the measure which the House of Representatives passed in response to Mr. Roosevelt's urging (246 to 165, with three out of four of Oregon's Congressmen conforming), male citizens between 18 and 45 must stand by for work in war industries, and the only leeway given is the provision that they shall have a reasonable choice of employers among the war industries. And since all or virtually all war industries are operated under the closed-shop system, the bill as it has gone to the Senate requires that the manpower of the country become unionized.

So far as this page is concerned, it believes the program belated and unnecessary. It believes the failure of the Congress to protect the individual citizen against involuntary unionization to be inexcusable.

Mr. Roosevelt's proposal for a universal draft was offensive to start with. Our people have been doing their job of production. The war is well along—at least the war against Germany. There is absolutely no likelihood that anything that might be done in the way of reorganizing America's manpower would have any effect upon the outcome of the German side of the war. And no one in his right mind would argue that when Germany is beaten there will be need for a labor draft in America for the purpose of finishing off the Japanese. And this being the situation, what possible excuse can there be for fastening upon America, at this late hour in the war, the principle of civilian coercion?

At the beginning of the war, as a matter of sheer national necessity, this page would have voted for a universal service bill. Today it believes that action toward that end is not a matter of national necessity at all, and that, indeed, the organization of such a draft will employ more manpower than will be saved, in the brief time remaining. Consequently one can only reach the conclusion that political and ideological purposes are playing a part—that coercion of our civilian population would not be resorted to when the Russians are at the approaches to Berlin unless those behind the movement were thinking of the future effect upon American policy and tradition. It just doesn't make sense at this hour.

Put it this way, and brutally: Mr. Roosevelt, as a master politician, is interested in the effect upon our 12,000,000 fighting men when he stands out as the champion of the idea that the home front should fight as hard as the battle front. His bright-eyed followers are interested in the general program of breaking down private industry in favor of government, and of forcing the people into unionism.

If there is such a thing as an emergency requiring the civilian population of the United States to be subjected to Government order as to where they shall work—which we deny—then the failure of the Congress to protect that population against being forced into the opposition's way of life is still a matter that cries to high heaven.

We are not proud of the fact that three of Oregon's Congressmen—MOTT, ANGELL, and STOCKMAN—supported the measure as it stood, and that only HARRIS ELLSWORTH said "Nay."

War Housing

EXTENSION OF REMARKS
OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. DE LACY. Mr. Speaker, under leave granted me to extend and revise my remarks in the RECORD, I include a statement made on my behalf before the Committee on Appropriations subcommittee which is now considering the request for a deficiency appropriation for war housing:

Gentlemen, I have asked that this statement be read to your committee in the interest of the war workers and war industry of this Nation—in the interest of victory in the war itself.

I humbly suggest to the gentlemen of this committee, who have in their great wisdom dealt with many similar problems and given true leadership in solving them, that they favorably report the request of the National Housing Agency for a deficiency appropriation of $90,000,000 for temporary war housing.

In fact, gentlemen, I believe that the $90,000,000 request by the National Housing Agency is a most modest one. I would venture to say that it is indeed quite inadequate.

If we in the Puget Sound area of Washington State, where virtually every ablebodied person is engaged in war production, are to meet the production goals set for us and supply the manpower which we so desperately need, then we alone need at least one-half of the $90,000,000 appropriation. We of the Pacific Northwest are not selfish when we say this. I have talked with representatives from Chicago, from Detroit, from California, and I discover that their needs are just as desperate as our own. I am told that all of this money could be expended in any one of these localities and still not solve the need for housing.

I would like to present you with some facts regarding my own district, which includes the great war producing centers of Seattle and Bremerton, Wash.

Under the proposed appropriation, the National Housing Agency has tentatively allocated for Seattle: 1,000 family units and 632 dormitory accommodations, and for Bremerton: 1,200 family units and 1,400 dormitory accommodations.

And this, gentlemen, is a section where the War Manpower Commission informs us we need 26,000 additional workers. These are workers needed desperately for the production of the great superfortresses by Boeings, for the tremendous shipyards in Seattle, Kirkland, and Bremerton—workers needed by the Navy itself at its naval air station in Seattle and its navy yard in Bremerton. This is an area where production has constantly risen, an area where no cut-backs are contemplated, and where, even if we look forward to the happy day when the war in Europe is won, we will have a still more intensified program of production for the much closer campaign in the Pacific and in Japan.

There are no housing facilities available today in Seattle or Bremerton for the workers who are already on the job. I was a worker in the naval construction yard, a machinist in shipbuilding, before I came here as the Representative of my district. I worked with men who were forced to sleep all night in their cars, while they worked all day. Some of them finally found a dismal shack or a trailer in which to crowd together with others, and some of them, unfortunately, went back to their farms or their far-away homes.

Today, we are informed by the War Manpower Commission that 26,000 more of such workers are needed. The House of Representatives, in its wisdom, heeded the call of our Commander in Chief and Chiefs of Staff and passed limited-service legislation to provide the manpower which is needed. But men cannot work where they cannot live. And no such legislation can bring 26,000 men to Seattle and Bremerton to sleep in their cars or in the now infamous "hot beds," kept warm as the workers sleep in shifts.

To provide accommodations for 26,000 workers, we would need approximately 20,000 units at least. At the estimated cost of $2,900 a unit for temporary family accommodations, that would mean that we need in this vital area alone nearly $58,000,000.

I am not now asking either an increase beyond the $90,000,000 requested or a greater allocation of that sum for my own district. I am well aware that the condition in my district simply reflects the problem found in

every war center of the Nation. I am detailing these facts to you, gentlemen, so that there will be no hesitancy in approving the full request.

Other pertinent facts regarding my district are these: Kitsap County, in which is located the great shipbuilding center of Bremerton, has increased its population by 118 percent from April 1, 1940, to June, 1944. Here was a community of less than 45,000 persons in 1940, and today the Bureau of the Census tells us, there are nearly 100,000 persons crowded together in this war center.

For this double population, we have so far provided 12,282 family units and dormitory accommodations for 3,542 through public housing, and 638 units through private housing. We are, therefore, asking 55,000 persons to crowd into accommodations we have built for no more than 43,942 persons at a maximum. Even when we add the 1,200 family units and 1,400 dormitory units now contemplated by this present appropriation, it means that workers will still live crowded together like ants, and some will still use tents and the most primitive shelter. And these are the workers we are asking to step up production, and who are stepping up production even under these outrageous circumstances.

In the Seattle area the situation is identical. Here the population has leaped 18.3 percent, or from 452,639 in April 1940 to 535,464 in June of 1944, demonstrating a need for quarters for at least (as of last June) 82,825 persons, and here is the housing we have provided: Public, 14,186 units, and private, 11,081 units including new construction, conversions, single-person units, and 3,000 units which have been scheduled but are either still under construction or haven't been started.

Here again we have provided for about half the actual housing needs.

Yet we face an ever-increasing need. Of the 26,000 needed workers, the War Manpower Commission reported late in 1944 that the Seattle area, excluding nearby Renton, was expected to hire 3,600 in-migrant workers in the early part of the year. The Boeing plants and Boeing subcontractors alone were to employ 3,400 of these in-migrants. Since this W. M. C. certification, the Navy Department has reported that the naval establishments in this area alone are to increase employment by 1,600 workers. The War Department reports, too, that the Boeing plant in Renton which employed 9,334 workers on December 1, 1944, is scheduled to employ 10,400 during the first half of this year.

Since the local labor supply is exhausted, these must be in-migrant workers, and they must be housed. Vacancies in the area are virtually nonexistent. Today, hundreds of employes of the Boeing Renton plant must be housed in projects in Kirkland, 20 miles away, and from where there is no regular transportation. Because of the shortage of dormitory units, many single workers have been housed in family units, thus aggravating the shortage of accommodations.

The Army Air Forces has strongly urged that additional housing be supplied for Boeing employes and the Navy Department is equally concerned in obtaining housing for the workers being brought to the area for the naval establishments.

The Seattle Chamber of Commerce telegraphed me on February 6 in part:

Manpower analysis, based on actual check with industries, indicates need for some 26,000 more workers in the greater Seattle area: Dock workers, transportation, port of embarkation, aircraft, shipbuilding, and repair. The Seattle Chamber of Commerce urgently recommends immediate allocation of funds for emergency temporary public housing. * * * These recommendations are submitted at the urgent request of Seattle's major war industries and have the unqualified support of their officials.

For these pressing reasons, gentlemen, may I urge upon you a speedy and favorable action on the request before you.

Heroic Polish Boy Scouts Keep Their Movement Alive

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

HEROIC POLISH BOY SCOUTS KEEP THEIR MOVEMENT ALIVE

When in September 1939 Poland was invaded by her enemies, Boy Scouts and Girl Guides faithful to their promise, performed their duty to Poland to their utmost, adding a glorious page to the history of the Scout movement. The war service teams were formed in August and immediately after the treacherous attack in all places they undertook a large quantity of the auxiliary duties as messengers, guides, fire watchers, aircraft spotters. They also started canteens, auxiliary hospitals, rest centers, etc., for the armed forces and refugees.

In the famout defense of Warsaw, under the flow of bombs and shells, Scouts and Guides played an important part in performing all these auxiliary duties. Supplying food and munition to the first lines, they fought with soldiers and civilians of the capital. In some places Scouts took part in the actual fight armed with rifles. Gorki Wielkie, the center of Scout training, was defended by the spontaneously formed armed unit of Scouts from Silesia. Spontaneous armed Scout units were formed in Bielsko, Sosnowiec, and Lwow.

After 5 weeks of struggle the organized resistance was brought to and end. The incredible persecution, never before known in history, started. Scouts and Guides were among the first who suffered such as in Bydgoszcz and Krakow. In many places Scouts and Guides were shot immediately after occupation only for wearing uniforms. All Polish national life had to go underground.

The war did not stop Polish Scouting. In fact, one of the most remarkable features of Polish Scouting during this war is its vitality. All over the world, wherever Poles are scattered on their way to liberated Poland, Scouts and Guides everywhere carry on. Patrols, crews, and troops were formed in concentration camps and internment camps, in prisons, among deportees, in the forces rebuilt in France, then in Britain and in the East, among children in the schools, and among children evacuated safely from Russia to the British Empire.

In France, where the supreme council of the association was established, Polish Scouting contributed a great deal to the reconstruction of Polish forces. In the first units of this Army there were to be found many Scoutmasters and Scouts of the Polish Scout movement. Practically all those fit for service came in a voluntary body to the Polish Army. The same thing happened in other countries where Poles lived. Polish Scouts from Latvia, Rumania, United States, Argentina were first who volunteered for the Polish forces in France and then in Great Britain. It will be of interest to mention that Scouts in the Polish Army initiated a meeting of Allied Scouts in France. It took place in March 1940, in Rennes, the capital of Brittany, where a number of British, French, and Polish Scouts were present.

In Rumania, Polish Scouting developed widely. Over 20 troops with a total of 700 Scouts were organized. They had their own periodical magazine, We Shall Return. Their work was stopped by the evacuation of most of them after the fall of France in 1940.

ONE HUNDRED THOUSAND IN BRITAIN

Great Britain is now a strong center of Polish scouting. There the supreme council of the association and the headquarters are established. Altogether there are over 100,000 members of the movement in Britain. Most of them are Scouts and Rovers serving with the Polish Army, Air Force, and Navy in that country, the others belonging to troops or companies attached to Polish schools now operating in that country. Some meet only during holidays as many are in different English schools. A strong group was formed spontaneously in army units and air force stations soon after Polish forces arrived in Britain in 1940. Military authorities regard them favorably as they do much to keep up the men's spirits.

The main object for Polish Scouting in Britain is to prepare, as far as possible, the reconstruction of scouting in Poland and in other east-central European countries after the war.

The most numerous centers of Polish scouting in exile are now in the east and in Africa. There are now about 8,000 Polish Guides and Scouts in the following countries: India, Iran, Palestine, Egypt, Tanganyika, Uganda, Northern Rhodesia, Southern Rhodesia, and South Africa. (In Palestine and Rhodesia troops and companies were formed as early as 1940 among boys and girls evacuated from Rumania through Cyprus after the collapse of France.) Troops, companies, and packs have been organized spontaneously among the children evacuated to these countries in 1942 and 1943 from Russia.

NEED LITERATURE

As most of these children are orphans, scouting means much to their education and they stick to it, as it takes the place of a family for them. This also explains the high percentage of membership among young people in Polish settlements. All this accounts for the special part scouting performs among Polish communities in exile. There are heavy difficulties, and a great need to have important handbooks reprinted. The monthly magazine Scout gives much valuable help. In the Polish Army in the Middle East, there are about 1,000 Rovers and Scouts organized in the same way as in Britain in Army Rover Crews.

Recently, New Zealand has offered her hospitality to a group of Polish children so a new center of Polish scouting will be started.

Mexico is another place where Polish children found temporary homes. Scouting plays the same essential part there as in the east and in Africa.

All over the world goes the call "Czuwaj"—"Be Prepared." In the exotic countries and places, known before only from tales and stores, Polish camp fires are burning and Polish songs resound.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. BRYSON. Mr. Speaker, my attention has been called to an item in the

Washington Daily News of February 6, 1945, a concrete example of what is happening to the youth of our country and probably contributing to the problem of juvenile delinquency.

I am proposing to reintroduce my bill to suspend the manufacture and sale of alcoholic beverages for the duration of the war. I think it might be an effective method of solving these problems. Under unanimous consent to extend my remarks in the RECORD I include the article in question:

BOYS, 10 AND 12, DRUNK; WOMAN, 37, IS ACCUSED

As the result of a drunken spree by two boys, 10 and 12 years old, Mrs. Winnie Beckman, 37, of 630 M Street Southeast, today was arraigned in Police Court on charges that she "coerced and permitted minors to drink alcoholic beverages in her home until they became intoxicated." Bond was fixed at $1,000. The boys were removed from a streetcar at Eighth and H Streets Northeast at 10:40 p. m. Sunday, and taken to Casualty Hospital, suffering from alcohol poisoning. It was reported they did not stop vomiting until 5 a. m. They are still at the hospital.

Described as a friend of the boys' families, police said Mrs. Beckman told them the boys had been frequent visitors at her apartment, but she denied giving them wine or whisky. One boy lives with his grandmother; his father is in service. The second, son of separated parents, lives with his father and an older brother.

Resolution of the Legislature of the State of Arkansas

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. CRAVENS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including the following resolution:

House Concurrent Resolution 5

Concurrent resolution memoralizing the Congress to enact suitable legislation providing that grazing lands, timber-growing lands, and agricultural lands now owned by the United States Government within the National forest areas in northern and western Arkansas be placed back on the market for sale, homestead, donation, or other methods of disposal to private ownership, with extended priorities given to World War veterans, and for other purposes

Whereas House Concurrent Resolution No. 10 was adopted by the Fifty-fourth General Assembly of the State of Arkansas and approved February 19, 1943; and

Whereas said resolution memoralized the Congress, the Departments of Interior and Agriculture, and the Forestry Commission, to provide funds by taxation or otherwise to assist in the operation of county government and for county debt service for the 25 counties in Arkansas where the Ozark and Ouachita National Forest maintains large forest areas; and

Whereas said resolution also asked that no additional grazing or agricultural lands be acquired for forestry purposes; and

Whereas many thousands of acres of United States Forestry-owned lands were purchased from timber companies desiring to go out of business, and from landowners who were in distressing financial circumstances during the early days of the depression, and many thousands of acres of such lands are lying along and adjacent to hard-surface Federal and State highways, or along high-class State and county highways, and were purchased in many instances for nominal sums and also in other instances, for fabulous sums; and

Whereas said resolution also asked that many thousands of acres now owned by the United States Government and used for forestry purposes, which lands are more suitable for grazing and agricultural uses than for forestry purposes, be placed back on the market for sale, homestead or otherwise, for ownership for grazing and agricultural purposes; and

Whereas since the adoption of said resolution of February 19, 1943, copies have been furnished to the Arkansas delegation in Congress, the President of the United States, the Departments of the Interior and Agriculture, the Forestry Commission, the regional forestry offices, the supervisors of the Ozark and Ouachita National Forests, and also many Representatives and Senators in Congress from other States; and

Whereas on November 18, 1943, the Joint Committee on Reduction of Nonessential Federal Expenditures, through its chairman, HARRY F. BYRD, United States Senator from the State of Virginia, filed its report, which report has also been referred to as the Byrd report on Federal ownership of real estate; and

Whereas said report disclosed the alarming fact that more than 20 percent of the lands in the United States was now owned by the Federal Government for essential or nonessential purposes; and

Whereas said report disclosed that the percentage of said ownership ranged from .02 percent in the State of Connecticut to 68 percent in the State of Utah; and

Whereas said report disclosed the fact that there have been 60 departments connected with the United States Government in the purchase, acquisition, and ownership of these lands, many of these departments overlapping in function with other similar departments; and

Whereas said report also disclosed the fact that many local county governments in many of the States other than Arkansas are in distressing financial circumstances due to the fact that many thousands of acres of taxable lands have been taken from the tax rolls; and

Whereas said report disclosed the additional fact that many thousands of acres of nonessential lands have been acquired by the United States Government through real-estate brokers on cost-plus or commission basis; and

Whereas many of the 25 counties in the State of Arkansas—within whose confines the Government has acquired grazing and agricultural lands for forestry purposes—are now in distressing financial circumstances; and

Whereas World War veterans are now returning and will continue to return, and veterans of other wars, and others, are now and will in the near future be entitled to, and will demand both small and large areas of lands for grazing, timber growing, and agricultural purposes: Now, therefore, be it

Resolved by the house of representatives (the senate concurring therein):

SECTION 1. That the prayer of said Resolution No. 10 of 1943 be renewed.

SEC. 2. That some immediate action be taken by the Congress to reimburse the 25 counties in Arkansas, and allocate to them sufficient funds to assist in the operation of local county government, debt service, and other purposes.

SEC. 3. That no more grazing, timber growing, or agricultural lands be acquired for forestry purposes in any of the counties so financially distressed.

SEC. 4. That said lands now owned by the United States Government for forestry purposes which are more suitable for grazing, timber growing, and agricultural purposes, and all such lands along and adjacent to the leading hard surface Federal and State Highways, and along and adjacent to high-class State and county highways, be placed on the market either for purchase, homestead, donation or other means of acquisition and ownership, giving priority at all times to World War veterans.

SEC. 5. That a copy of this resolution be spread upon the Journals of the House and Senate, a copy transmitted to the President of the United States, a copy to each of the members of the President's Cabinet, including the Secretary of State, a copy to each of the Representatives and Senators in Congress; a copy to the Regional Forestry Office, and copies to the Supervisors of the Ozark and Ouachita National Forests.

South Dakota Boy Is Navy's Second Ranking Fighter Ace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am inserting in the RECORD at this point a news story clipped from the Daily Argus Leader, of Sioux Falls, S. Dak., issue of January 30, 1945. It reports the big home-coming celebration which the citizens of Cresbard, S. Dak., tendered to its distinguished hero, Lt. Cecil Elwood Harris, who holds the honor of being the second ranking fighter ace of the United States Navy.

Lieutenant Harris is the type of young man who has had a typical South Dakota background of experience and education. He grew to manhood in an area where freedom and liberty are as prevalent as the fresh, clean air which envelops South Dakota. He developed courage and self-reliance in a community where these characteristics were the dominant factors among the great pioneers who settled the West and developed its prevailing glorious opportunities. He has well earned the tributes which are now being extended him as one of South Dakota's outstanding sons.

Mr. Speaker, South Dakota although not the largest State in the Union, takes pride in its contributions to this global war. It was Joe Foss, another South Dakotan, who as a flier in the Marine Corps was the first in this war to equal Eddie Rickenbacker's famed record of downing 26 enemy planes in aerial combat. Many another South Dakotan has distinguished himself on the land, on the sea, or in the air in feats of valor and patriotism in this war.

In addition, Mr. Speaker, the vast productive fields of South Dakota have contributed mightily to the world's food supply during these terrible years of war and its farmers, men and women alike, have worked hard and long to make this

possible. The mines and factories and shops of South Dakota have also operated without work stoppage or inflated profits to produce the implements of war. In this fifty-fifth year of its statehood, South Dakota works proudly and productively with its sister States, and its sons and daughters are in the vanguard of the Nation's embattled heroes as each day brings victory closer to our colors.

The news article follows:

CRESBARD ACE WELCOMED BY GREAT THRONG—FRIENDS, DIGNITARIES GATHER TO GREET SECOND RANKING NAVY FLIER

ABERDEEN, January 30.—Bearing the laurels of war that few other Navy fliers can boast—the Navy Cross, the Silver Star, two Distinguished Flying Crosses—Lt. Cecil Elwood Harris came home to Cresbard Monday night, and though subzero temperatures and a biting winter wind leveled the prairies, State dignitaries, hometown folks, and Handy County friends overflowed the local high-school auditorium to welcome back this young man who is now the Navy's second-ranking fighter ace.

Representatives of American walks of life, the state, education, and the military, the speakers honoring Lieutenant Harris included Gov. M. Q. Sharpe, Dr. N. E. Steele, president of NSTC, and Dr. Ray Stratton, of Huron, State commander of the American Legion.

GREAT OCCASION

For Mr. and Mrs. Howard Harris, the parents, the occasion was one of great moment, for on the platform, also, was another son, Capt. Gerald Harris, home on leave from Camp Swift, Tex., while regret must have surged through them that their third son could not have been with them: Corp. Calvin Harris, now somewhere on the Belgian front.

A gathering of the clan and intimate friends at the Harris home preceded the affair at the high school. An informal outline of his career showed that Lieutenant Harris was graduated from Cresbard High School, attended N. S. T. C. for a year, taught school for 3 years near Onaka, S. Dak., and then returned to N. S. T. C. for C. P. T.

WHOLE STATE PROUD

Harris joined the Navy in 1941, was at Jacksonville, Fla., for 3 weeks, then to Corpus Christi for flight training, where he won his wings in March of 1942.

Governor Sharpe eulogized Harris by stating that "The whole State is proud of him, for he is entirely a product of South Dakota." The Governor directed his remarks to the younger folks in the audience, maintaining "that you now know you can get an education right here in communities such as Cresbard, and then go out into the world and make good in a big way.

"But Lieutenant Harris probably wasn't out to set a record, as much as he was bent on showing the enemy what an American fighting machine is like," Sharpe declared.

IMPORTANCE STRESSED

"The real importance of this event," he emphasized, "is that it is the first time it has ever happened here. Cresbard, the county, State, and Nation has a right to be proud of Cecil Harris' accomplishments.

"For we are the first Nation ever to come out and fight for the idea that all men are created equal. It doesn't make any difference what race, religion, color, or creed you are, you are given an equal chance in this country."

Governor Sharpe also reminded his audience that equality of opportunity also means "equality of obligations, too. We must all of us consider the post-war world. We must be strong enough in a military and commercial way, that we can enforce the principles for which Americans, such as this young man, are fighting."

Labor's Views on the Pending Work-or-Jail Legislation

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the Members of this House a writing which appeared in the recent issue of Labor. Every Member should read this timely article.

SENATORS, PLEASE READ THIS ARTICLE BEFORE YOU VOTE TO DRAFT AMERICAN LABOR FOR PRIVATE PROFIT

A powerful accumulation of evidence showing that there's no need for a law to draft labor for private profit was carried this week in the February issue of Labor's Monthly Survey, the research publication of the American Federation of Labor.

If every Member of the Senate were to read the Survey's carefully documented facts and figures and based his vote on the evidence contained therein, the May bill establishing forced labor wouldn't have a ghost of a chance of enactment.

At the very outset the Survey pointed out that the Federation can find no proof of a manpower crisis—"except a crisis in manpower waste."

"Careful examination of the facts has revealed no manpower shortage which could require national service legislation," the Survey declared. "In spite of newspaper headlines claiming a production crisis, December war production records show an outstanding achievement. Sharply increased schedules were exceeded, or met within 1 or 2 percent.

"Although the goals were exceptionally high, we came nearer reaching them than in almost any other month of our peak war production year.

"This was all done voluntarily by free American labor and employers in cooperation with the Government."

Actually, back in December 1943, the workers turned out more munitions than the peak monthly schedule laid down by the War Department for this year, the federation pointed out. Besides, labor productivity has zoomed since then and thus workers should easily be able to meet 1945 demands without the slightest compulsion, the A. F. of L. stressed.

Under Secretary of War Robert P. Patterson recently sought to scare the Nation and Congress into support of a labor draft by brandishing figures of 1,600,000 workers to be needed by midyear—900,000 for the armed forces and 700,000 for industry.

However, the A. F. of L. survey charged that Patterson gave only one part of the picture.

"Patterson's figures for industry are misleading because they account only for workers to be added to pay rolls and do not show that workers laid off from other industries will be ready to fill many of these jobs," the federation asserted.

"He released only one side of the manpower balance sheet, withholding figures showing that the supply is more than adequate to meet the demand."

The A. F. of L. then presented the whole picture. On the supply side, it revealed the following sources: Released veterans, 400,000; young persons reaching working age and other new workers, 550,000; employees to be laid off through cut-backs, 350,000; available through increased productivity, 100,000; from present jobless and from released Government workers, 100,000; through transfers from nonessential industries, 100,000.

That adds up to the 1,600,000 cited as necessary by Patterson, but actually far more workers can be secured. Tens of thousands could be obtained from cost-plus plants that are hoarding labor, and several hundred thousand more from nonessential work, the A. F. of L. contended.

On the demand side, only 300,000 of Patterson's 700,000 have been rated as critically needed—150,000 as of last January 10 and the rest by June 30. In view of the record flow of workers back to war plants in the past month, the first 150,000 jobs have undoubtedly been filled, the federation declared.

As for the other 150,000 wanted during the first half of 1945, the survey said: "Needs such as these have always occurred and been filled throughout the war program. Certainly that is no manpower crisis."

Furthermore, unemployment has been skyrocketing because of cut-backs, and jobless insurance payments have mounted in the past year all the way from 152 percent in California to 502 percent in Michigan, the federation disclosed.

The survey listed a dozen big plants where lay-offs, ranging up to 12,500 per plant, are under way, with the armed services making no effort to place new contracts in such factories.

"Such waste of skilled manpower and machinery is hard to understand while the armed services proclaim a manpower crisis," the A. F. of L. emphasized.

In view of such conditions, if free labor is displaced by compulsory labor, war production is bound to suffer, the federation warned.

America's Place in the Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 8, 1945

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech which I delivered in Detroit, Mich., at a civic dinner on the evening of Monday, February 5, which was also carried to the Nation on the radio networks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen, with deepest gratitude I thank you for this generosity. Under the pressure of the times in Washington, I rarely get back to home, sweet home during these days which try the souls of men and test the fate of nations. You may understand, therefore, why I so deeply appreciate your hospitality. I shall respond by taking advantage of the occasion to tell you what is in my heart regarding the dedications which must be closest to yours.

If it is possible to have glorious days on bitter battle fronts, these are glorious days. America's intrepid soldier-sons, sustained by the invincible marines and by the greatest Navy in the world, are in Manila. MacArthur has kept his word. He has returned. Tokyo is next on the road to avenging justice and liberation. Meanwhile, the United Nations' climax in Europe what is probably the greatest campaign in the history of war. The core of Axis infamy faces numbered hours. Our great Russian allies may have already reached Berlin.

We have a right, upon our prayerful knees, to glorify these omens of the conclusive victory to come. But we also have the solemn obligation to remember that this is only the beginning of the end; and to accept these precious, hard-bought encouragements only as a spur to even more relentless efforts until the last pirate walks the plank. We are called now to supreme effort—and then we are challenged to the crowning task of building a successful peace which shall justify this sacrifice, vindicate justice, and protect free men in a free world.

God bless the United Nations. God bless America.

In the time at my disposal I concentrate tonight upon these peace aims. We have relative unity in the fraternity of battle. We sometimes drift dangerously away from equally indispensable fraternity for peace. It is our responsibility to see that if this unity-for-peace disintegrates, it is not our America which shall be held at fault when the books of history are balanced. We cannot serve this solemn function by further silence in respect to our attitudes. It confuses our allies. It often provides them the reason which they plead to justify decisions which collide with our ideals. It even confuses our own people who frequently cry out in anguish for the definition of our aims. It is time for us to say what we will do. It is time for us to say what we will not do. And it is time to start the doing.

As a basis for our thinking, let me lay down three fundamentals. The first is the recognition of a physical fact. Since Pearl Harbor, the ghastly countenance of war has become more sinister than ever before in the nightmares of the human race. The awful science of mass murder has made more progress in 3 cruel years than in all the centuries since time began. And this new science is only in its lethal infancy. Contemplate the robot bomb in its maturity. Contemplate the refinements of "jet propulsion" when it still further reduces this foreshortened world to an intimate neighborhood. Contemplate a war of push buttons in which human flesh and blood are at the mercy of mechanized disaster. I need not labor the point. This war, God knows, is bad enough. But World No. 3 will open new laboratories of death too horrible to contemplate. I propose to do everything within my power to keep those laboratories closed for keeps. I make this pledge in the name of humane common sense. But more, I make it in the name of American self-interest.

Times have changed. The oceans are no longer moats around our ramparts. Once upon a time Detroit could wait for an enemy to get to Windsor. In the next World War, an enemy halfway around the globe will be as close. No nation hereafter can immunize itself by its own exclusive action. Only collective security can stop the next great war before it starts. Therefore collective security is to our advantage. And we serve America if we can help to make it work.

This brings me to my second fundamental. We cannot make it work alone. Unshared idealism is not enough. It takes something more than a "paper league" to keep the peace. An unjust peace will break out of any strait jacket the wit of man can devise. Collective security will be no stronger than the merits of the cause it implements. Therefore it is to our own American self-interest also to keep this objective forever at our masthead—peace with justice. Not because we want to meddle in the problems of other continents. But because there can be no peace without justice.

I am talking, for example, about the basic aspirations of the Atlantic Charter. It is bone and sinew of our flaming forward march. I quote:

"No aggrandizement, territorial or otherwise."

"No territorial changes which do not accord with the freely expressed wishes of the people concerned."

"The right of all peoples to chose the form of government under which they will live."

"Sovereign rights and self-government restored to those who have been forcibly deprived of them."

There will be differences of opinion in the grand alliance about the meaning of these precious things. I do not say that we, by dictation, can have it all our own way. But I do say that, by the same token, no other member of the grand alliance, by dictation, can have it all his own way either. I do not speak belligerently. I speak with deepest respect for the utterly magnificent contribution which each of our major allies is making to the coming victory. But I speak with equal respect for our own fabulous American contribution. I speak with a profound prayer that the friendly, helpful unity among us shall never fall apart. But I speak also in the belief that candor now will do more for this priceless unity than will disillusionment tomorrow.

This brings me to my third fundamental. The President has correctly said: "The nearer we come to vanquishing our enemies the more we become inevitably conscious of differences among the victors." How do these dangerous differences disclose themselves? Usually by unilateral decisions in which one or another among the United Nations pronounces its own ultimatum regarding its own present or post-war plans and purposes. It puts its own interpretation upon its own rights regardless of the fact that these rights, for all of us, all flow from our common effort. I assert that all vital decisions should also flow from the same sort of a common effort. Let me illustrate what I mean. The army that gets to Berlin first—all honor to it—does not win for its nation the right to settle Germany's future just because it got to Berlin first. No nation's army would have reached Berlin at all except for the heroic, common combat of all the other nation's armies. This is just another way of saying that unity, unity for an ultimate lasting peace, is a constant necessity which must be nourished by all of us through constant, coordinated consultation in war and then in peace, and through a reasonable regard for mutual sensibilities.

Now, let's put these three fundamentals together and see whether they do not plainly point an immediate plan of action. You will remember the fundamentals. First, the inexpressibly vital need to prevent World War No. 3 through collective security. Second, the paramount importance of a just peace if it is to be a permanent peace. Third, the hazard to these objectives if each of the United Nations goes its own way even before we have clinched our total victory. Let's frankly face our American responsibilities in this connection.

Why do our allies take these disunifying steps? What's the major reason for Polish controversy? For planning satellite conquests? For the Anglo-Soviet agreement of 1942, the Soviet-Czechoslovak agreement of 1943, the Franco-Soviet Treaty of 1944, and similar actions yet to come? What's the reason given for the resurgent movements toward the old power politics which has been the world's prime curse?

It's a perfectly human and understandable reason. It is the frankly expressed fear of reborn Axis aggression in the years to come. Twice within one generation our continental allies have seen the German monster rise and overwhelm them. Twice within one generation they have been driven to the valley of the shadow by this military aggression. They do not propose to be exposed again. Unless and until they know that they can depend upon America to join effectively in keeping Germany and Japan demilitarized, they will continue to go their own way. The truth of the matter is that it was the failure to keep Germany demilitarized after World War No. 1 which made possible World War No. 2.

In the face of these circumstances I ask you whether our immediate duty—our tremendously great immediate opportunity—is not clear? America has the same self-interest in keeping Germany and Japan permanently and effectively demilitarized as have her closer victims. America also has the keenest self-interest in preventing the fear of reborn Axis aggression from driving the world into another era of separate alliances, because that, too, is the road to another war. Here is one common danger—one common objective—in which we have a complete and basic common interest.

Why not face it now? Why not act now? Regardless of any other peace plans, here is one thing that must be done—namely, the permanent demilitarization of Germany and Japan—unless we are blinder than bats in respect to history following World War No. 1, and unless we are to be guilty of the colossal sin of dissipating victory after World War No. 2.

It is in response to this irresistible logic of events that I propose America shall sign up now with all her major allies in a hard-and-fast treaty, ratified by the Senate of the United States, which pledges our constant armed cooperation, instantly available through the President of the United States without further reference to the Congress, to keep Germany and Japan out of piracy for keeps. I propose that we say—beyond misunderstanding—that this fiendish thing shall not rise again. I propose that we shall practice what we preach. I propose that no other nation shall have any chance to use our silence as an alibi for ulterior designs, if such there be. I propose action instead of words. I propose action now—before it is too late. I propose it for the sake of a better world. But I say again and again and again that I propose it for our own American self-interest.

Aside from the incalculable major advantage thus to be gained, there are two other advantages of scarcely lesser moment.

When we have relieved our allies of any legitimate fear of reborn Axis aggression, we also have relieved them of any legitimate need to make unilateral decisions in the name of self defense. We shall have earned the right to demand that whatever such decisions may have been unavoidably made in the process of war, all such decisions shall be subject to correction in the post-war peace by whatever international organization we set up to perpetuate the solidarity of the United Nations. In plain terms, we shall have earned the right to demand peace with justice—the only kind of peace which can survive. A spoilsman's peace will not survive. Therefore peace itself is the issue at this point. Furthermore, one of the greatest arguments against early action on the Dumbarton Oaks plan for a post-war league will have been substantially removed because, otherwise, it can be persuasively urged that America is asked to sign a warrant to help sustain an unknown future "status quo" which may be too repugnant to us to deserve any such fidelity from justice-loving America.

This brings me to the second dreadfully important dividend from this program. It brings me to Dumbarton Oaks. If we first deal with our enemies through unequivocal post-war restraints, we have left only our friends to consider in charting our post-war peace league. This immensely simplifies our problem. I hasten to add, lest there be misunderstanding, that this demilitarization treaty is no substitute for Dumbarton Oaks. The latter is the indispensable sequel to the former.

The only real controversy inside America respecting Dumbarton Oaks is whether the

President shall have the power, without reference to Congress, to join our armed forces with those of the peace league to stop renewed military aggression. After we have given him this unquestioned power in respect to our enemies, the creation of such a power for use against our friends becomes almost an academic question from the standpoint of reality.

Remember, we are now arranging a peace formula with our friends. We are now talking only about the future use of force against one of our present Allies who subsequently threatens the peace of the world. It will have to be a present major Ally who breaks a solemn pledge to abandon force as an instrumentality of foreign policy, and who has successively defied all of the intervening machinery for the pacific settlement of disputes, contemplated by Dumbarton Oaks. This means full investigation and report; then conciliation; then mediation; then arbitration; probably the intervention of international law through the medium of a new world court; perhaps even economic sanctions. The new crises will not be a blitz. It will finally reach the last recourse—namely armed force—only after the other United Nations (which is to say, the conscience of the world), have been put upon serial notice that one of our present, major Allies proposes to assault civilization. Such a final challenge would be of such gravity that no President—whether he has the actual power or not—would think of committing America to such a war without knowing that he had his country and the Congress behind him. On the other hand, no Congress would hesitate for an instant to respond to a just challenge. The Senate declared war on Japan in 13 minutes and on Germany in 5. That proves we can act when necessary. It means little, in a practical sense, whether the President himself is given this final power or not, so far as the functioning of the peace league among our present friends is concerned. But in a practical sense, it may mean much in the decision of the American people whether they might reject the whole Dumbarton Oaks adventure, if they are asked to give the President this exclusive final power against one of our present Allies in the face of a plain constitutional injunction that only Congress can declare war.

Oh, but you ask, if "only Congress can declare war," how can you give the President plenary power to use our armed forces to keep the Axis permanently demilitarized? The answer is that for 150 years the Constitution has permitted the President to use this plenary power, without reference to Congress, for "the national defense"—short of war—and it repeatedly has thus been used without question. The permanent demilitarization of the Axis, when once authorized by Congress through the Senate's ratification of a treaty, would not involve a new "declaration of war." It would only be the lengthened shadow of the present war. It would clearly fall within the Presidential authority under the Constitution.

Now you probably ask: "Should the Peace League have no force available, except against our erstwhile foes?" My answer is that the Peace League certainly should maintain constant staff work in planning the ultimate mobilization of military force; it certainly should have peremptorily available, so far as we are concerned, such military force as is traditionally granted under the Constitution to the President for national defense; but, remembering there is to be unlimited force against our present foes, it does not otherwise need the final war power which the Constitution of the United States commits exclusively to the Congress—and thus to the people—of the United States.

But my fundamental answer is that the genius of Dumbarton Oaks, in correct perspective, is not the use of military force at all. The genius of Dumbarton Oaks is the exact opposite. It is the substitution of justice for force. It is the substitution of international law for piracy. It is the substitution of peace for war. Its genius lies in the organization of these pacific mechanisms which shall stop future frictions short of the necessity for force. Its genius lies in the mobilization of the vigilant moral and spiritual power of enlightened civilization against the dark and evil forces of recurrent savagery. If this power has been dormant and impotent it is because it has lacked a vigorous world instrument for organized expression. In my deep conviction, Dumbarton Oaks, in proper form, can supply this tremendous instrument.

All of these benedictions become possible just as soon as we have permanently quarantined the Axis lusts. Oh, yes, I have oversimplified the problem. I have no illusions that this tough old world will suddenly quit its sins because a formula is born. I promise no Utopia. I am not so naive as to believe that the earth can suddenly rid itself of national rivalries. But I submit that here lies a way of hope. It will take us out of our foreign policy vacuum. It will untie our tongues and once more make us vocal in behalf of our ideals. It will save us from the dangerous misunderstandings which our continued silence might invite. It will certainly promise a better peace, and therefore a safer and a longer peace. And it is practical because it plainly conserves self-interest for all concerned in this great fraternity of Allied war (unless self-interest involves ulterior and sinister designs).

I do not object, my fellow citizens, to the vigilance of any nation in behalf of its own self-interest. That is what nations are for. I want our intelligent, American self-interest just as vigorously protected by our spokesmen as British self-interest is always protected by Mr. Churchill and as the self-interests of the Soviets always are protected by Mr. Stalin. But I cannot escape the conviction that an Insurance Policy against World War No. 3 is basic in the self-interest of every civilized nation in this distraught world, America emphatically included.

We give up nothing except the inevitable curse of another involvement in another war if it ever comes. We do not sacrifice our independence. We join no world state. We do not desert the Constitution. We leave the Stars and Stripes in all their pride and glory on the domes of Washington. We simply join ourselves, in continued united fraternity with our battle comrades, in a great, effective cooperative adventure for a better earth. We do it for the sake of free men in a free world. We do it in the name of justice. We will not do it if justice is denied. If we can start it now, our Allied unity will have new vigor. The end of all our present wars will respond more quickly to our prayers. We shall vindicate our soldier-sons. We shall keep the word of promise to our hopes. We shall save our children's children. We shall have earned the right to beseech God's blessing of our dreams.

Three Strikes and Out—Hillman to Roosevelt to Wallace

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. PLUMLEY. Mr. Speaker, in the old days you had to be able to knock out a home run to get to first base against the Evers-to-Tinker-to-Chance trio. What an outfit! Yet they had nothing on the Hillman-to-Roosevelt-to-Wallace combination which has three strikes on the American people, now.

You do not believe it? Did you see in the Washington Post this morning what Reid Robinson, a C. I. O. vice president, speaking in the absence of Sidney Hillman, told the world trade-union conference in London yesterday? He told the conference of "our successful campaign in returning to the Presidency of the United States Franklin Delano Roosevelt." He stated further that the C. I. O. would not rest until Henry Wallace "fits securely in the office to which President Roosevelt has appointed him—and as Secretary of Commerce helps to realize the goal of 60,000,000 jobs in the United States and world-wide good neighborly relations."

Foul ball! Three strikes; you're out! Enough said.

Gross Misrepresentation of Hon. Fred M. Vinson in Houston Post Editorial—Are We Facing Runaway Inflation?

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. PATMAN. Mr. Speaker, if people continue to denounce, criticize and censure the Government's stabilization and price-control program and those who administer these laws, it is possible that one of these days the people will lose confidence entirely in the program and permit inflation to take hold, which will very quickly destroy our country.

It is just as necessary that we hold the line against inflation on the domestic front as it is for our fine, brave fighting men to hold the line and push forward against our enemies on the fighting fronts.

GROSS MISREPRESENTATION

I have never known a time when there was so much misinformed and so many gross misrepresentations being made by certain newspapers and certain radio commentators in this country as are being made now.

At the same time I recognize that the owners and managers of these newspapers and radio stations must be patriotic people and I want to appeal to them in their own selfish interests to give consideration to the thought that they are helping our enemies by carrying on a campaign against the only tower of strength that protects our country on the home front—the stabilization and price control program.

IF CONTROLS OFF TOO QUICKLY, COUNTRY GONE

These criticisms of price control and stabilization during the war and those who administer these laws are calculated to cause so much disunity and lack of respect for the necessity for these laws that when the war in Europe is over it

is possible that a majority of the people will say, "Let us get rid of all controls of all kinds."

This will be fine if we have production sufficient to meet the demands for the goods that the enormous amounts of money are available to buy. But we know now that this will not be possible immediately after the European war is over. It will take time. All controls should be taken off just as quickly as possible, but not so soon that the way will be opened up for inflation.

REAL PERIOD OF DANGER

I am inserting herewith the following figures which are based on price indexes as collected by the League of Nations:

Country	January to June 1939=100			Indicated month
	1941	1943	1944	
United States of America	106	125	127	August.
United Kingdom	129	129	131	July.
Japan (Tokyo)	122	133	146	May.
Sweden	134	150	149	July.
Switzerland	127	149	153	Do.
Brazil (Rio de Janeiro)	117	145	164	Do.
Costa Rica	101	157	166	August.
Peru	118	146	172	Do.
Spain	157	167	173	May.
Portugal	122	154	173	June.
Finland	143	190	201	July.
Mexico	106	159	210	Do.
France	150	237	256	April.
Bolivia (La Paz)	195	309	335	Do.
Turkey	138	233	442	May.
Iran	153	656	855	June.
China (Chungking)	958	6,074	21,000	July.

Nearly all countries, including both belligerents and neutrals, have price controls, but the systems vary greatly. It is interesting to note that there has been a greater price rise in some of the leading neutral countries than in the leading belligerent countries. This would seem to indicate that there is a direct relationship between effective control over prices and the attitudes within the country brought about by the pressures of war and a sense of national urgency.

This suggests that our real period of danger in this country will lie at the end of the European war when some of this feeling of national urgency may be inclined to diminish.

AN UNFAIR EDITORIAL ATTACK

As evidence of the kind of information that I am sorry to say is being published in some of the newspapers of our country, and I especially regret that one of our Texas newspapers has been guilty, I am inserting herewith an editorial that appeared in the Houston Post, Tuesday, January 30, 1945. It is as follows:

CHOICE OF EVILS

As an alternative to Henry Wallace as Federal loan administrator, Fred M. Vinson would be highly preferable.

As a successor to Jesse Jones and a filler of Mr. Jones' shoes, Vinson is just another lame duck bureaucrat.

Since the voters of Michigan decided, in 1942, that they didn't care to keep Mr. Vinson in the Senate any longer, he has been taken care of with Washington jobs. First he was appointed price administrator, to succeed Leon Henderson. That office proved a little too hot for Fred to handle, and he was kicked upstairs—made Director of Economic Stabilization. And now comes word from well-informed officials that Vinson is to be appointed Federal Loan Administrator if Congress passes the George bill divorcing the lending agencies from the Commerce Department.

This is a rather uncheering prospect. The American people would feel safer if a man of successful experience in business and financial affairs were handling the tens of billions of dollars that go through those agencies, especially in the critical times ahead, and that someone with first-hand knowledge of industry—someone who has met a pay roll—were handling the disposition of nearly a hundred billion dollars worth of war plants which Uncle Sam will have on hand when peace returns. Instead, it appears that those matters are to be administered by one who entered the bureaucratic business after losing his job as Senator, and who never before worked at much of anything but politics.

But at that, Mr. Vinson would be infinitely better than Henry Wallace.

I have replied to the editorial as follows:

The EDITOR, THE HOUSTON POST,
Houston, Tex.

SIR: Your editorial of January 30, 1945, entitled "Choice of Evils" is inaccurate and unjust to an outstanding and unselfish public servant.

You refer in most derogatory terms to the Honorable Fred M. Vinson, Director of Economic Stabilization, a man with whom I had the pleasure of serving many years in the House of Representatives and who possesses the complete confidence of the Congress and the people of the United States. Judge Vinson served as a Member of the House of Representatives from the Commonwealth of Kentucky from 1924 to 1938. In the latter year, he resigned from Congress to accept an appointment as Associate Justice of the United States Court of Appeals for the District of Columbia. In 1943, at the request of President Roosevelt, Judge Vinson resigned from this lifetime post in order to accept the difficult assignment as Director of Economic Stabilization. In this assignment, he has rendered outstanding and successful service in holding the line against inflation.

In my opinion, Judge Vinson deserves only the praise and gratitude of his countrymen for giving up a lifetime post in order to accept a thankless wartime task. Instead, he is in your editorial columns made the victim of a sneering and uninformed jibe.

Let me point out some of your errors. You state, "Vinson is just another lame-duck bureaucrat." This statement is untrue.

You state:

"Since the voters of Michigan decided, in 1942, that they didn't care to keep Mr. Vinson in the Senate any longer, he has been 'taken care of' with Washington jobs."

Mr. Vinson was never defeated for the Senate by the voters of Michigan either in 1942 or in any other year. He is neither a citizen nor a resident of Michigan. He was never defeated for the Senate, nor was he ever a candidate for the Senate in Michigan or anywhere else. He was neither defeated for nor was he a candidate for any office in 1942 in Michigan nor anywhere else. In 1938, after he had been reelected by a large majority in 1936, Mr. Vinson resigned from the House of Representatives to accept a judgeship.

You further state that Mr. Vinson "was appointed Price Administrator to succeed Leon Henderson." Mr. Vinson never served as Price Administrator, either as Mr. Henderson's successor or otherwise.

You further state, "That office proved a little too hot for Fred to handle, and he was kicked upstairs—made Director of Economic Stabilization." Since Judge Vinson was serving on the United States Court of Appeals at the time of his appointment to his present post, this statement is also untrue.

Any newspaper, of course, is entitled to express freely its opinions as to the capacity or record of any public official. But, if these opinions are to be taken seriously, they should be based upon facts and information rather than distortions and misinformation. Your attack upon Judge Vinson, based, as it is, upon misstatements of fact, can serve only to discredit those responsible for its publication.

Sincerely yours,

WRIGHT PATMAN,
Member of Congress.

Contribution of Amarillo Region to War Effort Outlined by John Boyce

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. WORLEY. Mr. Speaker, it gives me pleasure to bring to the attention of the House a speech recently made by Mr. John Boyce, of Amarillo, Tex., which reflects an outline of the contributions made to the war effort by the people of the Texas Panhandle.

No section has contributed more in manpower, food production, or all-out 100 percent war effort than these Texans.

CONTRIBUTION OF AMARILLO REGION TO WAR EFFORT OUTLINED BY BOYCE

A brief review of the contribution of Amarillo and the Panhandle to the war effort was given by John Boyce, president of the Amerillo Chamber of Commerce, at the noon luncheon Friday. Mr. Boyce said his survey was by no means complete but did give some idea of the vast amount of civilian war activity.

His talk in part follows:

The number of men and women from the Panhandle counties who are now serving in the armed forces runs into the thousands. No part of the country has made a greater per capita contribution. This is accounted for, partly, by the early voluntary enlistments and the many * * * from this area into Federal Service some 4 years ago, in November 1940. Although these people are undoubtedly our most important contribution, there is still a much larger number in the Amarillo area who are working in essential or semi-essential war industries. This number approximates 129,000 war workers.

These essential workers are located at Borger, Pampa, Dumas, Amarillo, the north Panhandle oil and gas field, and wherever else war plants are located in the Panhandle district.

A FEW CONCERNS

To give you some idea of the smaller concerns actually working on Government contracts, let me name just a few here in Amarillo, which, of course, can be duplicated in almost every other section of the Panhandle.

Amarillo Tent & Awning Co. has manufactured thousands of canvas articles under contract for the war effort.

Others are Amarillo Box Factory, Star Manufacturing Co., and Jack Ellis and associates.

All four of these companies are manufacturing wooden boxes which are used as crates for shipping artillery shells loaded by Pantex and other ordnance plants.

The Jewell Food Distributing Co. and the Mac-A-Lou Food Products Co. have completed contracts for the Government.

Star Machinery & Foundry Co., Superior Manufacturing Co., Johnson Bros., and Willborn Bros. Co. have completed many contracts for the War and Navy Departments.

Several local sash and door companies have Government contracts. The Amarillo Uniform Co. has completed a number of contracts.

METAL ARTICLES

Likewise, a number of welding and machine companies, making rivets, keys, and numerous other metal articles, have been awarded contracts.

These and many others will give you an idea of the scores of smaller war plants and firms in the Panhandle making their direct contribution to the war effort.

Now, to turn to the larger field, let's include:

The zinc smelter at Amarillo and the one at Dumas.

The two helium plants, one at Amarillo and the other 35 miles north at Exell.

The rubber plant at Borger.

The high octane gasoline plant at Phillips.

The Cactus Ordnance Works at Etter.

The Pantex Ordnance plant near Amarillo.

Power generating plants of the Southwestern Public Service Co., at Amarillo, Sunray, Borger, Mobeetie, Clovis, Tuco Switch, and Denver City. They have still other generating plants which, although outside of the Panhandle area, are nevertheless tied into this system.

Carbon black plants, oil refineries, gasoline plants, compressor stations are dotted all over the north Panhandle country. Then, too, there are hundreds of miles of pipe lines conveying gas to war industrial sections.

GRAND WAR JOB

Our railroads, the Santa Fe, Burlington, and Rock Island, with their thousands of workers in this territory, are doing a grand wartime job. This also applies to our air lines, bus, truck, and other forms of transportation, all of which employ hundreds of our citizens. They, too, are doing a fine job.

Our farming, livestock, packinghouses, elevators, all are essential industries; and each is doing its bit to win the war.

Then, to get into the military strictly. There are sizable military installations at Dalhart, Hereford, Childress, Lubbock, Pampa, McLean, Clovis, and Amarillo.

Now let's not overlook our hotels, apartment houses, and dwelling house owners. They, too, are making their contribution.

Automobiles, food, fiber, drugs, hardware, and machinery—manufacturers and distributors of every kind and variety, wholesale and retail, together with many of the professions and services, are all doing their bit and making their contribution to the war effort.

In Memoriam—Mrs. Ruth Hanna Simms

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. MASON. Mr. Speaker, Mrs. Ruth Hanna Simms, a former Member of Congress, died Sunday, December 31, 1944, at the Billings Hospital in Chicago, after a valiant fight for recovery following an emergency operation made necessary by a serious pancreatic ailment. Her death ended a career that was successful to a marked degree in business, in agriculture, in civil affairs, in the crusade for woman's rights, and in politics.

Many tributes expressing appreciation of her greatness, her leadership, and her sterling qualities were paid to her memory by leaders in all walks of life. The following statement from Gov. Tom Dewey is only one of many received:

The passing of Ruth Simms brings to Mrs. Dewey and me a feeling of deep personal loss. Her tremendous energy and the warmth of her friendship will leave bereft countless friends in every State in the Nation, who knew and loved her as one of the great women of our time.

A thumbnail sketch of her life, listing the many responsible positions she filled, taken from the Rockford Register-Republic of Rockford, Ill., reads as follows:

As the daughter of Marcus A. Hanna, Ohio "President maker," banker, industrialist, editor, and United States Senator, Mrs. Simms was born 64 years ago to a heritage of great wealth, political leadership, and business acumen. Throughout her life—first as secretarial aide to her famous father, then as wife and most trusted political adviser of the late Senator Medill McCormick, later as a Member of Congress and senatorial candidate in her own right, and finally as the wife of Albert G. Simms, New Mexico Congressman and businessman—she was deeply involved in politics nationally and in her three home States, Ohio, Illinois, and New Mexico. * * * As a Republican leader from New Mexico she played an important part in winning Gov. Thomas E. Dewey's nomination for president at the G. O. P. national convention this year. In 1940, she had served as national cochairman of Dewey's preconvention campaign.

Politically, Mrs. Simms was a liberal Republican. Throughout her life, she was identified with such reforms as woman's suffrage, child labor legislation, and betterment of the condition of wage earners in general. In 1912, she allied herself with Theodore Roosevelt's Bull Moose campaign and was active at national campaign headquarters of the Progressive Party.

Mrs. Simms was the owner and publisher of the Rockford Consolidated Newspapers, the most influential newspapers in northern Illinois, outside of Chicago. Her dauntless spirit and philosophy of life are so well epitomized in the following editorial, which appeared in the Rockford Register-Republic on Monday, January 1, 1945, that I feel it should be included in these remarks. It expresses the attitude of those who knew her well, who worked for her, and whose loyalty she so well deserved.

IN SPIRIT

There were two elements which commanded her entire life. One was her sense of loyalty; the other was her feeling that work is a privilege. Her loyalty, which came from a spirit both magnanimous and just, exacted loyalty, because she challenged us beyond loyalty to friendship.

Work to her was a privilege, and that conception shaped her life, shaped her associations, shaped her essential democracy. It was not by accident that her earliest public service was in the field of woman's suffrage and the Women's Trade Union League; for, endowed with wealth, with social place open to her at her bidding, she was seeking the privilege of work and usefulness. And not for herself only, but for women generally. And her final illness dated from a fall from a horse on her Trinchera ranch, where she had taken over management of production of thousands of head of cattle and sheep on the war food front, and was riding herd and keeping books and keeping things going in spite of shortage of manpower.

Work was a privilege which she had sought and, having won, held to be the most precious of possessions. Her democracy sprang from a feeling that what she had won should be the privilege of all. She was tender and generous in need, but her choice was to give others the opportunity to share in an experience of work which she found spiritually rewarding.

By religious upbringing, Ruth Simms was a Quaker, and the tenets of that faith touched her life in two ways. One was in a magnificent stamina in time of trouble or grief which bespoke deep spiritual roots. She never let us know how deep her hurt; she comforted the comforters. The other was in her attitude toward war, an antipathy which went very deep and which, in conjunction with her sharp realism, made it possible for her to see what some could not see: Beyond the quick glory, the lasting grief. Yet when war came, she threw her energies unflaggingly into patriotic activities and productive work.

Politically, Ruth Simms had intense convictions on the dignity and responsibility of Government. She was angered by the cynical or flippant, and this anger arose from her sense of democracy, which was wounded when public men seemed to talk down to a public which she met as an equal. In her political addresses, when she ran for House and Senate, there was acceptance of the integrity and understanding of listeners. This acceptance was no more beguiling compliment to voters; it sprang from an implicit faith in the people who had America in their keeping.

There was nothing of fear in her political philosophy. Clinging to her faith that there would always be a place in society for those to whom work was a privilege, she was not timorous of change, for she had preached forward-looking evangels as a young woman. But she wanted courses to be taken in full knowledge of the people, and not to be arrived at by means that impeached the people's dignity and betrayed their integrity. Political disappointments came to her, but she held to her faith.

To us in the News Tower, Ruth Simms was never far away. She laid no dictation upon us. For her newspaper she asked good faith and good will toward the public. She asked sincerity and good conscience from us in our tasks. She gave us loyalty and friendship and inspiration. In spirit, she is not far away.

The words of Ella Wheeler Wilcox are appropriate and fitting as a climax to this editorial tribute to Mrs. Simms. I close with these words:

There is no death!
What seems so is transition;
This life of mortal breath
Is but a suburb of the life Elysian,
Whose portal we call death.

Racial Theory at Bastogne

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette:

RACIAL THEORY AT BASTOGNE

It was at Bastogne that a trapped American division stuck to its guns and blunted

the Nazi offensive and may have shortened the conflict in some of the fiercest fighting of the war. It was at Bastogne, too, that the theory of racial superiority on which the enemy holds no copyright took a beating.

With that One Hundred and First Airborne Division whose commander simply said "Nuts" when the Germans called on him to surrender was the Nine Hundred and Sixty-ninth Field Artillery Battalion, composed entirely of Negro enlisted men. Though they must have heard from time to time that Negro soldiers belong in labor battalions rather than combat divisions because they might not stand up under the strain of conflict, they were too busy on that occasion to pay much attention to that excuse for racial discrimination. Setting up their 155-millimeter howitzers, they poured out the fire which contributed as much as anything else to holding the enemy at bay.

How these Negro soldiers stood by their white comrades has now been revealed in a statement of the War Department paying deserved tribute to their courage. They not only remained as cool and calm as anyone else under that ordeal; they showed the same ingenuity when it became apparent that superhuman effort was needed to stem the German advance. Leaving only the actual cannoneers to man the guns, the rest of the men in the battalion picked up rifles on that bloody field and fought infantry fashion in the line with white soldiers who had been trained for that particular job.

The casualties were very heavy in that crucial engagement of the war, and the Negro battalion lost as many men proportionately as the white division. But some of them managed to stay on their feet until armored forces came up from the south to turn back Von Runstedt's drive which those heroic fighting men had checked. Some of them will be coming home some day. And will we then tell the Negro heroes of Bastogne who fought beside the white heroes of Bastogne that they must go back to living on the other side of the color line in the free America which they helped to save?

Air and Sea Service

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Call-Bulletin of January 23, 1945:

AIR AND SEA SERVICE—COORDINATED TRANSPORTATION VITAL TO MAINTAIN UNITED STATES MERCHANT MARINE LEADERSHIP

The American President Lines has withdrawn its application to the Civil Aeronautics Board for a certificate of public convenience and necessity to establish post-war air transportation service in conjunction with its steamship operations to the Far East.

The company's president, Henry F. Grady, explained that the withdrawal was made because of a belief the present Civil Aeronautics Board is opposed to steamship lines entering the field of international aviation.

"This is not to be construed as any change in the company's policy or program which is based upon a conviction that in order to meet the keen international competition in overseas Pacific trade," Mr. Grady said, "the premier American flag steamship service in that field must ultimately have a coordinated and integrated air and sea transportation service."

The policy of whether the shipping companies of this Nation should be permitted to engage in air traffic, as a supplementary and necessary service, should not be a matter for determination by the Civil Aeronautics Board. It is a matter for determination by the Congress. What the Nation's policy should be, and what it will be, must be established in law.

The authority of the Civil Aeronautics Board then, as now, will be to pass upon the merits of individual applications for providing such service, in accordance with governmental policy the Congress enacts.

The Civil Aeronautics Board has interpreted existing law as prohibiting steamship companies from engaging in traffic by air. If that interpretation is correct, then it is the duty of the Congress to amend the law, or to write a new law, if necessary, to provide that authority.

The steamship companies of other maritime nations already have such authority. If the American steamship companies don't have it, then the United States Merchant Marine will become a second-rate or a third-rate merchant marine because it will not be able to compete with foreign steamship lines.

As Mr. Grady points out:

"Such a service is not only of the greatest importance in developing sound American air operations in this area, but it also is vital in maintaining the position of the United States Merchant Marine in the Pacific."

It is vital, as well, to maintain the leadership of our merchant marine in the Atlantic. Without such leadership, American foreign trade will suffer, and that in turn will be reflected in our unemployment statistics.

Late Frances Sweeney Given Pope Leo XIII Medal

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following reprint from the Boston Traveler, Friday, January 19, 1945, concerning a posthumous award of the Pope Leo XIII medal to the late Frances U. Sweeney, former executive secretary of the American-Irish Defense Association of Boston, and vice chairman of the Massachusetts Citizens' Committee for Racial Unity:

LATE FRANCES SWEENEY GIVEN POPE LEO XIII MEDAL—POSTHUMOUS AWARD TO BE MADE JANUARY 31 BY BISHOP SHEIL IN CHICAGO

CHICAGO, January 19.—A posthumous award of the Pope Leo XIII medal for outstanding work in social education will be made to the late Frances U. Sweeney, of Brighton, on January 31, the Sheil School of Social Studies here announced today.

In disclosing that the award will be made during the school's second anniversary celebration by the Most Reverend Bernard J. Sheil, D. D., senior auxiliary bishop of Chicago and founder-director of the Catholic Youth Organization, the school said:

"Founder and editor of the Boston City Reporter, Frances' Sweeney fought unceasingly for social justice. Until her death at the age of 37 on June 18, 1944, Frances Sweeney continued to devote all her energy to combating prejudice and injustice."

Irving Stone, author of Lust for Life, wrote after her death: "Fran Sweeney could not be discouraged, could not be beaten down, could not be frightened, could not be put in her place. She was a one-man crusade. She burned with some of the holiest and most unextinguishable passion for social justice that I have ever seen. I say unextinguishable, because the light that is Fran Sweeney is not put out by her death. She will remain a symbol, a heroic figure to those of us with less courage, less fortitude, less revulsion against intolerance."

Miss Sweeney was executive secretary of the American-Irish Defense Association of Boston, and vice chairman of the Massachusetts Citizens' Committee for Racial Unity.

Mrs. James Sweeney, mother of Frances, will accept the Leo XIII medal on her behalf from Bishop Sheil, at the annual dinner of the Sheil School faculty, to be held at the Hotel Continental (Chicago) on January 31.

The Leo XIII medal was presented for the first time in 1944 to Sister Vincent Ferrer, O. P., professor of economics and political science in Rosary College (River Forest, Ill.). The medal itself was designed by Graham Carey, and was struck by John Gove, of Boston. Of silver, 2 inches in diameter, it shows the hand of the Holy Father in the exercise of his role as teacher. The inscription is a quotation from the Gospel according to St. John (8:32): "The truth shall make you free."

Democracy Rescues Its Own

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the American people were thrilled and made happy when General MacArthur's forces in the Philippines recently liberated 513 survivors of the Bataan "death march" and a day or so later when there were liberated 3,700 civilians who had been held by the Japs in the Bilibid prison in the Philippines.

The New York Times of yesterday contained an editorial, entitled "Democracy Rescues Its Own," which describes the feelings of the American people concerning these episodes, and under leave granted I submit same herewith:

DEMOCRACY RESCUES ITS OWN

Perhaps we can write a new definition of democracy out of the American reaction to the news from the Philippines. A democracy is a system of society in which the natural warmth of the human heart has full play, and in which joy over the rescue of prisoners long in the hands of a brutal enemy makes people forget for a moment the pride of victory. Lieutenant Colonel Mucci and his Rangers set the pattern on January 29 when they liberated 513 survivors of the Bataan "death march" at Cabanatuan, in a thrillingly daring raid deep into enemy territory. Now there have returned from death as our troops charged into Manila 3,700 civilians held at the Santo Tomas prison camp and

800 prisoners of war and 550 civilians held in the Bilibid prison. In one of the strangest episodes of the war, 66 Japanese soldiers were allowed to march out of Santo Tomas and back to their own lines in order to save the lives of 221 civilian captives who might have been killed if Brigadier General Chase had chosen to shoot it out with Lieutenant Colonel Hayashi.

The freeing of these prisoners cannot change the course of the war. Any Nazi, any Japanese militarist, would have shrugged off any concern for them if the situation had been reversed. Why bother, they would have asked, about a few thousand individuals caught in the trap of war? They should be glad to die for Hitler or the Emperor. A democracy can't take that point of view. If saving these hapless captives, these starving men and women, these children crying for bread, these wives separated from husbands, these "angels of Bataan," every one of whom, thank God, survived—if doing this when it was done had threatened to delay victory a little or make it more costly, still it would have been done. This is the American, the democratic way. We fight bitterly against a savage foe, but the toughest fighting man cares tenderly for his own people, who were dead and now are alive again.

If these episodes hold our attention, if we find our thoughts returning to them again and again while the fate of the world is at stake, if our eyes moisten as we read our papers and a lump comes into the throat, let us not be ashamed. For our whole war, east and west, is a gigantic rescue operation. Our soldiers kill that men may live. We are unrelenting now in order that mercy and justice may rule in years to come.

The Census

EXTENSION OF REMARKS

OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. TAYLOR. Mr. Speaker, I am in entire accord with the position taken by the gentleman from New York [Mr. TABER], concerning this legislation. It is inconceivable that in the light of the statements recently made on the floor of the House about manpower shortages that legislation of this nature would receive even passing consideration. Under the provisions of this bill $15,000,000 over-all would be spent partially to employ an estimated 27,000 people to take an unneeded agricultural census. Most of the information that would be elucidated from such a census is now already known by the Department of Agriculture.

In my own county of Rensselaer, the county agent has performed a very excellent service to the farmers in that county. Thanks to his efforts, advance notices regarding feed, fertilizer, seed, and machinery shortages, and suggestions as to how to meet and supplement these shortages with substitutes, have reached every farmer in the community. His advice and help is now urgently needed if the farmers are to meet the emergencies which have arisen. Certainly his efforts, or the efforts of anyone else who could be used in the agricultural field, should not be channelled now in another direction. I believe that this agency now has enough statistical agricultural information to meet any present need for it, and new information on the subject cannot possibly be of any service.

Common sense dictates that in view of the evident shortages of farm labor, it becomes far more important to keep this labor on the farm-producing foodstuffs, than it is to send 27,000 census takers to the farmers of this country to find out that which the country, and particularly the farmers, already know. If there are 27,000 people now available whose services are to be used to take a census, then I venture to suggest that these same people be first used to plow the soil, plant, and reap the harvest, and then take the census, since it becomes relatively far more important to first produce the products of the farm, than to find out how little we have now, or will have in the future, to eat. In passing this bill we seem to be closing the barn door after the horse has left.

The expenditure of another $15,000,000 for the purpose of taking the census should not be passed over lightly. Some day we will have to tax back every dollar of this expenditure. Each of us would feel better physically, as well as mentally, if this $15,000,000 has to be spent, to have it used for the more constructive purpose of providing pools of farm machinery, fertilizers, feed, and other farming necessities to meet the present emergency. The census can wait, but a greater production of food is now imperative.

Bankers on Bretton Woods

EXTENSION OF REMARKS

OF

HON. FRANK L. SUNDSTROM

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. SUNDSTROM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

BANKERS ON BRETTON WOODS

After careful studies by several committees, the American Bankers Association has published a report in which it contends that Congress should not approve the proposed International Monetary Fund, but that it should approve, with modifications, the proposed International Bank for Reconstruction and Development. The bankers recommend also an expansion of the American Government's Export-Import Bank, the repeal of the Johnson Act, the removal of hampering barriers to international trade, and the firm stabilization of the United States dollar in relation to gold."

The association's report is well reasoned, lucidly written, and conciliatory in tone. It is clear that the authors have made every compromise that they thought could safely be made so that the proposed program might be considered with a minimum of essential changes.

The rejection of the proposed fund is based on reasons that for the most part have already become familiar. The fund is too big, too elaborate, too complicated, too difficult for the public to understand. The language of the agreement is so vague as to be susceptible to widely different interpretations. It grants credit automatically, as a matter of right. It does not stipulate that the loans shall be good loans. It provides no real control over the policies of borrowers. It may tempt borrowing countries to continue on the easy political past, instead of making the maximum effort to put their economic affairs in order. It threatens a repetition on a large scale of the errors we made after World War No. 1, when we lent too much too carelessly.

It overlooks the fact that the outside world as a whole already has more gold and dollar exchange than ever before; that our own gold stock has been going down, and that we are about to be forced to lower our legal reserve requirements. It would force us to supply dollars even to countries with which we might be having serious political differences, or countries whose trade policies discriminated against us.

The bankers believe, however, that if the proposed International Bank for Reconstruction and Development were adopted by Congress, and authorized also to make loans for the purpose of aiding countries to stabilize their currencies, it would accomplish every good purpose that the fund would accomplish without its accompanying dangers. For the bank agreement provides that the loans made must be for specific purposes; that they must be examined by a special committee; that they must offer promise of repayment; that the country whose currency is lent will have a veto power, and that the bank will not make loans which can be reasonably made through private channels. If the bank were adopted, moreover, and the fund rejected, the world would avoid the danger of jurisdictional conflicts and potential confusion and rivalry between two separate institutions. Acceptance of the bank would also avert the psychological danger to world cooperation of a total rejection of the Bretton Woods proposals.

The American Bankers Association committees have brought in a constructive and statesmanlike report. It is to be hoped that not only Congress but the administration itself will study the report in the same spirit.

Resolutions Adopted by the Polish-American Congress, District of Connecticut

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

Whereas recent events on the military fronts in central Europe indicate that the present war in that sector of the world is fast approaching a climax; and

Whereas many of the countries, small and large, whose lands had been taken and whose people had been enslaved by the totalitarian bestial lust for conquest and power are now fast coming under the jurisdiction of the Allied forces and the people therein are being liberated; and

Whereas most of these countries have been at all times an integral part of the Allied cause whose people for centuries have stood for the principles of justice and liberty; and

Whereas among these nations is Poland, who first exposed the treachery of totalitarianism and which, even facing utter extinction, fought alone against the forces of the enemies of justice and freedom at a sac-

rifice unparalleled heretofore, being true to all of her promises to her allies and respecting every treaty and covenant made with them, never having at any time conducted a war of aggression; and

Whereas one of our allies, Russia, has indicated a desire to annex certain portions of Poland and other small countries and to impose her will and influence upon the Governments of Poland and these other little countries; and

Whereas this conduct on the part of our ally, Russia, does not comply with the original principles of the Allied cause when Poland was invaded and the countries of Great Britain and France found those acts of aggression cause for a declaration of war upon aggressor, Germany; and

Whereas the present attitude of our ally, Russia, does not square with the principles of the "four freedoms" and the enunciations set forth in the Atlantic Charter which served as an inspiration for the whole civilized world and which caused our own boys to most willingly undertake all hardships and make sacrifices for the fulfillment of the promises to the world made thereby; and

Whereas the fortunes of war have caused most of these little nations to be reoccupied by the military forces under the command of our ally, Russia, which participated in the original act of aggression upon Poland but which later was compelled to join the Allied cause for its own security but at present seeks legal approval of that portion of the original aggression that she undertook; and

Whereas certain groups and individuals acting in their own individual interests only are disseminating propaganda of misapprehension by various propaganda machines: Be it therefore

Resolved, That the Polish American Congress for the District of Connecticut acting herein as a district member of the Polish American Congress of America, consisting of church societies and organizations, civic, welfare, social, veteran, educational, beneficial, political, fraternal, clubs, and societies of Americans of Polish descent, do hereby go on record urging that the coming peace be based on justice. That the principles of the "four freedoms" and the enunciations of the Atlantic Charter should be put into operation. We desire to go on record as commending the refusal of our Secretary of State, Mr. Stettinius, to place any approval for the surrender of any territory of Poland to Russia as urged recently by Prime Minister Churchill of Great Britain. We further urge that our Commander in Chief, the President of the United States, in the coming meeting which is to take place with Prime Minister Churchill of England and Marshall Stalin of Russia, to most forcefully insist and demand collaboration for the bringing about of a peace based on justice seeking to forever demilitarize those who have been guilty previously in causing wars creating bloodshed and to refuse to recognize any unilateral creation of boundaries originated since the beginning of the present conflict. We still further urge and request that if the present conflict is not over in Europe at the time of the said meeting that the matter of boundaries and questions of Government be postponed for deliberations after the military phase of the war is completed. We do further condemn any instrumentalities that seek to influence public opinion by sowing seeds of misapprehension thereby causing injustice to Poland and other freedom-loving nations by exposing them to the dangers of an imposed sphere of influence against their will; be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, the Secretary of State, to our Senator and to our Members of Congress.

Attested to by:

JOSEPH KOZAKIEWICZ,
Secretary.
LUCIEN MACIORA,
President.

The Late Hon. James F. O'Connor

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent granted me by the House, I am inserting in the RECORD a memorial adopted by the Montana Legislature on January 18, 1945. It is a privilege for me to bring this token of high esteem to your attention because it shows how the people who knew Jim O'Connor best appreciated him.

Memorial by the House of Representatives of the Twenty-ninth Legislative Assembly of the State of Montana consequent upon the death of Representative James F. O'Connor, Second Montana District

James F. O'Connor was born in California Junction, Iowa, May 7, 1878, and received his elementary education in the schools of Harrison County, that State. After being graduated from high school he entered the University of Nebraska Law School, completing a 3-year course in 1904. In the same year he came to Montana and located in Livingston, which remained his home until the time of his death.

Possessed of a magnetic personality, a deep student of his profession, and commendably ambitious, he quickly won a recognized place in the civic, political, and professional life of his community and the State. Early in his career he was chosen to the district judgeship of his judicial district, being at the time the youngest man to occupy that honored position. In 1916 he was elected as one of the representatives of Park County in the State house of representatives and, when he took his seat at the beginning of the session in 1917, was accorded the almost unprecedented honor of being chosen speaker of the house for his first term, which position he filled with dignity, ability, and impartiality.

Following the end of his legislative term, he served in several responsible public positions until 1936 when he was elected to the National House of Representatives from the Second Montana District and was reelected in 1938, 1940, 1942, and at the recent election in 1944, for his fifth consecutive term.

The same qualities which gave him eminence in the public affairs of his State enabled him to establish himself as an outstanding leader in the national assembly. His untiring energy, high talents as an orator and ready grasp of the larger affairs of state brought his rapid advancement to the chairmanship of one of the most important committees of the House and high positions on other major committees.

The successful political career of Congressman O'Connor was the result of his undeviating devotion to the varied interests of his district and State and effective work in behalf of these interests in committees and before the House. He was particularly diligent in answering the appeals of his constituents who requested him to represent them before the various departments, boards, and bureaus of the Federal Government.

Congressman O'Connor passed away in his sleep at his apartment in Washington, Monday, January 15, 1945.

Whereas it has pleased the Creator to remove from our midst, James F. O'Connor; and

Whereas James F. O'Connor served with distinction as a member and the speaker of the fifteenth Montana Assembly; and

Whereas he was an honored and valued official in many fields of public service in the State of Montana; and

Whereas his sudden passing robs the State of Montana of a most distinguished public servant; now, therefore be it

Resolved, That the House of Representatives of the Twenty-ninth Legislative Assembly of the State of Montana, expressing the sentiments of all the people of Montana, hereby express to the members of the family of James F. O'Connor the sincere and heartfelt sympathy and condolences of all the members of this house in this time of their bereavement. May they be comforted in the knowledge that their loved one who has passed served worthily and with great distinction the people of his adopted State and his deeds will be remembered with gratitude by all of the citizens of Montana; and be it further

Resolved, That a copy of this resolution be forwarded to his family and spread upon the journal of this house.

TOM STOUT,
of Fergus County, Chairman.
DAVID F. JAMES,
of Liberty County.
RALPH C. BRICKER,
of Cascade County.
Dr. R. P. MINNICK,
of Treasure County.
FRANK W. HAZELBAKER,
of Missoula County.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, the spirited debate and the controversy which has followed the action of the House in making the un-American activities a permanent committee has been well answered by the editorial so ably written by David Lawrence in the February 7 issue of the Washington Evening Star.

Under unanimous consent to extend my remarks in the RECORD, I include therewith this editorial:

HART UNIT HAMPERED BY ITS PREDECESSOR—WRITER SAYS NEW DIES COMMITTEE CAN DO "CONSTRUCTIVE SERVICE"

(By David Lawrence)

What is an "un-American" activity? Representative MUNDT, Republican, of South Dakota, has been endeavoring to elicit from all sides some definition for the guidance of the House committee which was recently formed as a permanent unit to succeed the Dies committee.

There can be no doubt there is a place for such a committee, but there is considerable doubt as to what constitutes a legitimate orbit for its inquiries.

One of the handicaps under which the new committee starts is that its predecessor unquestionably did injure the reputation of innocent parties while seeking to get at the persons really guilty of subversive activities.

There are unfortunately many misguided persons in America who think it is "un-American" to be radical or socialistic and who really want to define "un-American activities" as the articulation, either by individuals or groups, of all beliefs on social or economic questions that happen to be

contrary to their own, and perhaps even adverse to their pocketbook interest.

The new committee, of which Representative HART, Democrat, of New Jersey, is chairman, can do a constructive and a patriotic service by putting as much affirmative emphasis on what constitutes an American activity as has been placed on the negative or un-American activity side.

For one thing, it is American to study all forms of government and to examine all philosophies, whether left wing or right wing. It is American to assume toward any citizen a tolerant view by respecting his right to be left wing or right, radical or conservative, as well as his right to economic opportunity, irrespective of race, creed, or color.

FALLACIES NEED EXPOSURE

It would be American even to teach objectively what communism or fascism really is; provided, along with such courses, the fallacies of such systems were as sympathetically presented by the teachers.

But it is decidedly un-American for any organization or association to receive financial or moral support for any foreign government or interest and to pose as an American organization when it is, in reality, either openly or clandestinely dedicated to the furtherance of the objectives of a foreign government or group.

There have been in the past such un-American activities on the part of citizens of the United States who have acted in behalf of interests in Great Britain, Germany, France, and Japan, as well as Russia.

The ways of foreign propagandists are devious and subtle. Some governments bestow their rewards in the form of ribbons and decorations. Others bestow financial rewards, and still others employ at substantial fees American lawyers to do ordinary legal work, only to expect them to take an active part in the formation of societies and associations which at the bottom have for their purpose the furtherance of policies of certain foreign governments.

Some of these seemingly un-American activities may really prove to be legitimate but, if so, there can be provision by law for their periodic disclosure by the listing with the Department of State of all persons engaged in such activities.

Too often, however, only through the investigative power of Congress is it possible to get to the bottom of the intrigues that are employed by foreign interests to influence legislation or to exert an influence on our own domestic or foreign policies as applied by the executive branch of our Government.

LINE OF DEMARCATION

International friendship requires that citizens of all countries shall have access to Americans for the presentations of their respective points of view, but there is a line of demarcation between full disclosure or legitimate petition as distinguished from illegitimate influence and covert pressures.

It is un-American, moreover, for misguided citizens to distribute literature preaching hate against religions or races they don't happen to like. Too many American businessmen are sucked into contributing funds for these allegedly American activities which are, in fact, the very antithesis of true Americanism.

A committee of Congress can, by constant exposure, reveal to the American public and to well-meaning citizens the pitfalls to which they are so often subjected.

As for so-called subversive activities that seek to undermine our institutions of Government and which basically seek to overthrow by physical force or by economic violence our constitutional system of Government, this is a line of inquiry that may overflow occasionally into the activities of innocent groups, but corrective processes are always available when mistakes are made. There must be every assurance that truly subversive activities are not permitted to escape detection just because the line of inquiry sometimes enters a so-called twilight zone of investigation.

Nomination of Henry Wallace To Be Secretary of Commerce

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1945

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials from the Philadelphia Record favoring the confirmation of the nomination of Henry Wallace to be Secretary of Commerce, also Mrs. Roosevelt's article My Day, of recent date, entitled "Wallace Versus Jones—One Looks Forward, the Other Backward," and a telegram sent to me by Anita McCormick Blaine (Mrs. Emmons Blaine). I have an estimate from the Public Printer, which indicates that the cost of printing will be $121.40.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of February 1, 1945]

HENRY WALLACE, FIGHTING LIBERAL

We are for Henry Wallace.

We want him as Secretary of Commerce with all the trimmings.

We believe we voice the sentiments of the overwhelming majority of the 25,610,946 citizens who voted for Roosevelt.

We are supporting Henry Wallace because he stands foursquare for those principles of New Deal economy which the Record has long championed.

We are supporting Henry Wallace because he is a fighting liberal—and fighting liberals are becoming as scarce as hen's teeth down in Washington. The only one we can think of in Henry's class is Harold Ickes. Both men happen to share many of the same faults and the same virtues. They both get fighting mad at reactionaries and call them mean names.

Of course, they should not do so, especially in wartime, but if the Record were too critical on that score, it would be a case of pot calling the kettle black, for the Record has occasionally handled the opposition without a velvet mitten.

So when Henry hauls off and labels his conservative opponents "Fascists" as he has on several inopportunities, we realize he is "misspeaking." We also know that such overstatements indicate that Henry really cares and is willing to fight for his principles.

All our great leaders misspeak themselves occasionally. President Roosevelt is a frequent offender. Nevertheless, he has held the confidence and respect of the majority of Americans for 12 years. The President misspoke himself on the Atlantic Charter when he said it had not been formally signed. He misspoke himself when he talked about Dr. Win-the-War taking the place of Mr. New Deal.

Mr. New Deal may have to stand aside for Dr. Win-the-War until V-day, but Mr. New Deal is far from dead. The same policies which brought such great benefits to so many millions since 1933 must be and will be reinstated for post-war reconstruction.

That is exactly what Henry Wallace proposed in his masterful statement before the Senate Commerce Committee. He took the eight points in the President's economic bill of rights, amplified them and applied them to post-war problems in such a clear and forthright style that everyone who reads that statement must be impressed with its logic and importance.

Unfortunately comparatively few citizens had the opportunity to read it. Because our daily newspapers are so largely conservative and because Henry, the fighting liberal, is anathema to most of them, the complete text was printed in only 4 newspapers, the combined circulations of which are less than 3 percent of the 45,000,000 daily circulation of all newspapers in the United States. That is the reason the Record is reprinting 1,000,000 copies of that statement and will print as many millions more as it can find means to distribute throughout the land.

There are many definitions of a liberal. According to the creed of the Record a liberal extends a helping hand to those below to come up to the new level.

Henry Wallace is that kind of a liberal—not one of those halfway liberals who stretches a condescending hand to help the other fellow only a little way up.

Right here and now let's issue a solemn warning that halfway liberalism won't go with G. I. Joe when he comes marching home. It has got to be all-the-way liberalism of the Henry Wallace type if we want to avoid a wave of discontent and radicalism. We have passed out of the era when the soup line and apple selling kept the unemployed from making too much noise about their misery.

Some conservatives have not awakened to that fact. They still live in those good old days of a soft labor market when a three-line want ad would bring to the factory a queue of willing workers a block long and the foreman could pick the huskiest lads.

That past-epoch thinking is the key to the fight on Wallace. The National Association of Manufacturers, dominated by the giant industrialists, is preaching: "Leave it to us industrialists and we will create the 60,000,000 jobs. We don't want Government help or interference."

If they were sincere, why would they want to assume this heavy responsibility alone? Why wouldn't they want Government cooperation, as outlined by Henry Wallace, with a backlog of Government work to take up the slack in employment in case private enterprise could not carry the whole load? Why wouldn't they welcome as head of Government lending an outstanding liberal who could go much further in aiding big business than a conservative without loss of public confidence?

The answer is obvious.

Keeping everybody at work means higher wages, shorter hours and more union demands. The half-way liberals would like to compromise this situation with just enough people unemployed to hold labor in hand. We think such a compromise would throw us into a tailspin with an aftermath of radicalism which would make Henry Wallace's political philosophy appear as ultra-conservative as Joe Grundy's does today.

Henry Wallace has proven himself one of the country's ablest administrators and clearest thinkers. He has had as much experience as any man in the Nation lending Government money during his 8 years as Secretary of Agriculture. We don't believe that anyone can sincerely question his eminent fitness for the combined job of Secretary of Commerce and Loan Administrator.

Henry Wallace is the Nation's leading champion of the New Deal's liberal principles and policies. That is the real objection to him.

Because President Roosevelt, as Commander in Chief, has had to give all his time and attention to fighting the Axis, he has neglected the reactionary enemies of the New Deal within the party—and these reactionaries have been gaining in strength and importance in their own opinion. Now they have the nerve to think they are going to make the Democratic Party over along conservative lines, which is just what happened to the Republican Party after the Civil War.

By pressing for a vote on confirmation of Wallace as Secretary of Commerce before a vote is taken on the George bill to divorce the loan administration from the Commerce Department, Senator BAILEY reveals this sinister purpose most clearly. There is no excuse for such a procedure. It is plainly the attempt of reactionaries to drive liberalism, as personified by Wallace, out of the Democratic Party.

Another straw in the wind is the defeatist attitude in this crisis of Robert E. Hannegan, National Democratic Chairman, and other party leaders.

Don't these gentlemen realize that the Democratic Party shorn of liberalism would be an empty shell of its former self? Don't they realize if the Democratic conservatives ride herd on the liberals, they will drive labor out of the party, split the party wide open and force a coalition of liberal Democrats with Willkie Republicans?

Unless the party leaders awaken to this danger, they will leave the Democratic Party, like Samson, shorn of his locks with strength left only to destroy the temple of liberalism, which it took 12 years to build and which should be our refuge from radicalism in post-war recovery.

[From the Philadelphia Record of January 27, 1945]

FIGHT FOR PROSPERITY AS WE FIGHT THE WAR

Fight for post-war prosperity as we are fighting the war.

That is the inspiring message which Henry Wallace gave his country Thursday in the form of a statement before the Senate Commerce Committee.

It reminds us of the Record's oft-repeated slogan during the Hoover depression: "Let's fight the depression as we fought the war."

Then we were referring to World War No. 1 when we spent some $40,000,000,000 and, according to the conservatives, had ruined the country by raising the national debt to $26,000,000,000, a stupendous sum for those days.

President Roosevelt had to defeat the penny-pinchers then to win the battle against the worst depression in the Nation's history. After V-Day we will have the same struggle to counteract a post-war depression, only on a much greater scale.

We will have to overcome the prejudices of those citizens described by Henry Wallace as "people who set their sights too low for war" and "are now asking the American people to set their sights too low for prosperity. They do not grasp the strength and the spirit of America."

Thus Henry Wallace throws down the gage of battle. In his masterful statement he charts the Nation's post-war course. This address and his subsequent testimony before the Commerce Committee leave no doubt in our minds that he is the Nation's outstanding leader to carry on where Roosevelt leaves off.

Anyone who reads Wallace's statement will realize instantly how false and foul have been the attempts to paint him as a crackpot and wild-eyed visionary.

He has given the Nation an American charter, a charter of the economic rights of man.

That charter will live on, remain a burning, unquenchable challenge, no matter what the outcome of this fight in the Senate.

Votes may reject the nomination of Wallace, but votes can no more destroy this American charter than short-sighted power politics can destroy the Atlantic Charter.

As to Wallace himself, for the Senate to slur this great national leader by depriving him of any of the administrative powers exercised by his predecessor would be as foolish as it would be futile.

The Senate Commerce Committee yesterday voted against Wallace and for separation of the R. F. C. from the Commerce Department.

The attempts by Senate pygmies to hobble this New Deal Gulliver will increase public enthusiasm for him and confidence in him. The less power Wallace is given, the more eager the overwhelming majority of his fellow citizen will be that he should have greater power and influence in shaping our post-war economy.

Wallace's address to the Commerce Committee is a most complete and clear chart of New Deal principles applied to post-war problems. We regret that of all the metropolitan morning newspapers in this country, only the New York Times, the Boston Globe, and the Philadelphia Record ran the complete text. The Washington Star, a Republican evening newspaper, printed the text yesterday. Apparently it was the only evening newspaper in America which recognized its importance.

As a public service the Record is printing 1,000,000 copies for distribution to those who may not have had the opportunity of reading the complete text.

[From the Philadelphia Record of January 31, 1945]

IF NOT WALLACE—WHAT? N. A. M. PLAN NO ANSWER

If not the program of Henry Wallace for post-war prosperity or one quite similar, then what?

If we do not exert every instrument and resource of business and Government to provide 60,000,000 jobs, then what?

The National Association of Manufacturers offers an alternative.

In effect, the N. A. M. urges us to tie one arm behind us. And try, thus handicapped, to lick the problem upon which the fate of free enterprise, of the Nation itself, hinges.

Big business, it argues, can handle the monumental task of employment alone. It can do the job all right, if Government will keep hands off.

That should be set to music—a dirge.

The N. A. M. is currently propagandizing Americans with its "process of prosperity" program.

Among material circulated is a booklet published by the N. A. M.'s National Industrial Information Committee. It contains laudable aims such as "increasing the opportunities of all to earn and buy."

But the accent is on increased production.

A factory can produce until it blows the roof off. But its products cannot be sold and the factory can't make profits, unless Americans have the money to buy. They won't have the money unless they have jobs.

The first step on the road to post-war prosperity must be jobs. They are the foundation. Without jobs for all who need them, anything else we do is building castles in the air.

The N. A. M. is also circulating an address made last December by Executive Vice President Walter B. Weisenburger. The N. A. M. program, he says, is not mealy mouthed:

"It goes into detail; how management intends to constantly improve the efficiency of production and distribution. How, by that course, the consumer is given better bargains, resulting in bigger markets, and in the end more jobs for all."

"* * * In the end." That's exactly where we would get it if industrialists who commune with the nineteenth century had their way and put jobs last.

Everybody agrees that the bulk of post-war jobs must be provided by private industry. If it can provide all, if it can provide 60,000,000 jobs, so much the better. But we cannot predicate our future on an "if."

Government through public works and generous credit terms to big and small business alike must take up unemployment slack—the reserves must be ready.

Americans, those at home and those who will return from battle, will rightfully demand it. A little unemployment is a dangerous thing. It feeds on fear, retrenchment, becomes big, disastrous unemployment. It must not get a start.

Wallace's program for a prosperous America does not stand or fall by whether or not he is confirmed as Secretary of Commerce. The Wallace program is bigger than Wallace.

But this is true: His confirmation would provide greater assurance that this plan for prosperity would be made the Government's official program and that it would succeed.

[From the Philadelphia Record]

DO THE SENATORS HATE 60,000,000 AMERICANS, TOO?

We suggest to our United States Senators a reading of history—

Before they vote on confirmation of Henry Wallace.

History shows it is much easier to get rid of men than to kill ideals.

Some Senators apparently believe that if they can only dispose of this felow Wallace now—once and for good—there will be an immediate end to all the crack-brained nonsense about 60,000,000 jobs after the war.

We suggest to the Senators that if they do reject Wallace, they are going to be bitterly disappointed. They will be no more secure in their reactionary victory than was Macbeth after he had murdered Banquo.

You might think from the attitude of some of our Senators that it was Henry Wallace who wanted 60,000,000 jobs, all for himself.

Wallace wants those 60,000 000 jobs for 60,000,000 American citizens. Whatever the Senate does about making Henry Wallace Secretary of Commerce—

It simply can't legislate those 60,000,000 American citizens out of existence.

To the contrary, rejection of Wallace will only intensify the real issue. It will make the demand for 60,000,000 post-war jobs more insistent, make these ideas which disturb the cozy reaction of certain Senators more annoying, not less.

We suggest to the Senators that if the jobs are not in sight when the need appears—this Nation may be faced with a crisis far more serious than that from which President Roosevelt rescued it in 1933.

The people may not be so patient next time. They know now that depressions are not supernatural phenomena but the fruit of human blundering.

As Thomas L. Stokes points out in his column on this page today, the most disheartening angle of the conservative fight upon Wallace is the attitude toward the whole post-war problem:

"It can't be done."

That's what they were saying in 1933. Then Roosevelt proved that where the will exists, the means can be found.

Senator BAILEY, chairman of the Senate Commerce Committee, leader of the committee fight against Wallace, ought to know better. BAILEY sat in Congress in the dark days of 1933 when the banks were closed, the Nation's business was prostrate, and the smoke from the burning shacks of the bonus marchers was still fragrant in Washington.

So should Senator VANDENBERG, another committee member who voted against Wallace. VANDENBERG was there in '33. So was PAT MCCARRAN. So was HIRAM JOHNSON, hating Hoover as lustily as he hates Roosevelt.

After 12 years they still cry "it can't be done."

They will have to learn better. All over again. And no matter what they do to Henry Wallace.

That's why it merely makes sense for the Senate to confirm Henry Wallace today.

Wallace can give the Department of Commerce a liberal leadership which will assure both big and little business a chance to go forward when the war ends. He can give the people confidence that their Government will be prepared to fight the problems of peace with the same determination that it has fought the war.

Senators may vent their fury against Wallace with votes. They may sneer and revile. They may even bind him with the chains that were on the White House gates when Hoover lived there.

But when the war is over, as surely as great Birnam Wood came to Dunsinane Hill, the voice will be heard again demanding jobs.

Not Wallace's voice, then. The voice of the American people.

[From the Philadelphia Record of February 2, 1945]

WALLACE AND LIBERALISM WIN FIRST ROUND IN SENATE

Backers of Henry Wallace yesterday won the first and apparently the decisive round of the epic Senate battle over his confirmation as Secretary of Commerce.

By the narrow margin of 43 to 41 the Senate voted to defer action on the Wallace nomination, and take up consideration of the George bill—a "bill of divorcement" which removes the R. F. C. and other lending agencies from the Commerce Department.

A few hours later the Senate passed the George bill, 74 to 12.

In political terms, this means Wallace is almost sure to be confirmed as Secretary.

Wallace's Senate foes sought action on his nomination first. They knew a number of Senators would refuse to vote to confirm Wallace if it meant giving him control of R. F. C. and the lending agencies, but would vote for confirmation if Wallace did not have such control.

So, by taking the R. F. C. out of the Commerce Department first, the objection of those Senators to Wallace is now removed.

We think it was a shabby objection. American liberals wanted to see Wallace made Secretary of Commerce on the same terms as Jesse Jones, with "all the trimmings."

But this much we know. Even with the George bill, the President is almost certain to name a liberal to head the R. F. C. and other lending agencies, a liberal who will try his best to create 60,000,000 jobs, which both the President and Henry Wallace stand for.

So, though this specific fight is compromised, the real issue, full employment as Federal policy, is not compromised at all.

There is no doubt that Wallace's enemies, well aware that yesterday's would be the crucial vote, had mobilized every last ounce of their strength for the show-down.

It wasn't enough.

True, the fight is not all over. But at least hate takes a holiday.

Deferment of action on Wallace's confirmation not only gives time for hotheads in the Senate to cool, it affords time also for some of the Democratic insurgent Senators to reappraise their position.

Democracy is a system of give-and-take, compromise, meeting halfway. Party organization in a democracy works the same way.

When the President named Stettinius and five conservatives to the State Department, the liberals protested. They recognized frankly that conservatism has a right to substantial representation in the Federal Government. But "five of a kind" was too much. However, when the show-down came, they voted to go along with the President.

Apparently the Democratic conservatives mistook that contribution to Democratic party unity as a sign of weakness. Ever since they have acted as if the liberal wing of the party—which contributed most to the victory last November—had no right to representation, almost no right to be heard.

Such an attitude offers little hope for the future of the Democratic Party.

If a majority of Republican Senators want to continue to appear before the public as rank obstructionists who just can't pass up a chance to embarrass the President, that is their affair. They have paid for that attitude in four successive defeats.

Today the conservative Republican hope for future victory over the Democratic Party is the same hope Hitler has for victory over the Allies—the hope that those on the other side will fight among themselves.

There was a time, in 1920's, when the Democratic Party did let disunity bring a succession of defeats. Those were the days when Frank Kent made his famous remark that "the Democratic Party has a genius for snatching defeat from the jaws of victory."

That genius has been safely buried for 12 years. It is up to the conservatives in the Democratic Party whether it stays buried, or whether they go on trying to remake the Democratc Party into a hating image of the G. O. P.

[From the Washington Daily News]

MY DAY—WALLACE VERSUS JONES: ONE LOOKS FORWARD, THE OTHER BACKWARD

(By Eleanor Roosevelt)

FRIDAY.—In the past 2 days I spent a longer time on reading the newspapers than usual, and that is because I have done what I hope every other interested person is doing. I have read the full statements made by Jesse H. Jones and Henry Wallace, and as much of the questioning as was reported in the papers.

The reason I hope that other citizens throughout this Nation have taken the time to do this same thing is that I think they will find the two statements, with the questions and answers, a great help in clarifying their own thinking.

Mr. Jones has been for years a gentleman well known in business circles. Mr. Wallace was primarily a farmer, and the one business he was engaged in grew out of his scientific farming knowledge.

We are frequently told that farming is not an occupation where people accumulate vast incomes but that we are a Nation where a great many people still go in for farming because they like it as a way of life. Mr. Wallace has been, in his chosen field, successful; but much of his time has been given to Government work, and some of his most successful experience in business has come through Government work. Directing the Commodity Credit Corporation, the Farm Security Administration, the Farm Credit Administration, and the Rural Electrification Administration, and making some $6,000,000,000 worth of loans is proof of vast experience, however.

What stands out, as you read—at least, for me—is that one man is looking backward and the other man is looking forward. We are at a period, it seems to me, where this attitude of mind is not something which you can judge by physical age. Some old men, like Albert Einstein, are always looking forward.

I do not think it is time wasted to read carefully what these two men have to say and to decide where one stands oneself, because it is a fundamental decision which is going to face many of us, and not just in any one field. Who is to be the Secretary of Commerce and who is to have the powers of the R. F. C. are perhaps the immediate questions before Congress, and the rest of the country is deeply interested; but the interest of the rest of the country is even deeper than this particular decision. We know, we people in the United States, that the world is facing new and unpredictable conditions. We know that to meet these conditions we will have to have realists leading us, who face what the conditions are. At the same time, we know that adherence to old and outmoded answers may lead to destruction.

I have always had complete faith in the power of the American people to make up their minds as to what they wanted, and to be wise in their decisions, if they had at hand the facts on which to base their judgments. In this particular moment of our history, I think the statements made by Mr. Jones and Mr. Wallace are essential facts which the American people need to have in making their decisions for the future.

CHICAGO, ILL., *January 27, 1945.*

Senator JOSEPH F. GUFFEY,
The Senate Office or Residence,
Washington, D. C.

MY DEAR SENATOR: I offer a serious thought concerning the question of the confirmation of the appointment of Mr. Wallace. If the people receive the idea that the Senate is trying to block the progress of all the people economically, the Senate will possibly be the one on trial. The Senate should recognize that that body was the force that blocked the cooperation of the United States with the world after the last war. Without assuming that the United States could have improved the actions of the League, it is true that the United States did not try to by joining it. It is easily understandable that had the United States taken a part in that effort it would have been better for the world. If the idea dawns on the people that a repetition of what was effected politically after the last war by a few blind Senators is now being attempted economically, the Senate may find itself in a dangerous place in its road. In the deep and vast problems that face us today Henry Wallace is an enlightened and honest guide—conservative—not radical. Conservative of the interests, the rights, the lives of all people and of the essential responsibilities of those who do the people's work.

He should be given more responsibility, not less. His influence must be conserved for the United States and for all people.

I am,

Sincerely yours,

ANITA MCCORMICK BLAINE.
(Mrs. Emmons Blaine.)

Corp. Michael Sapetti

EXTENSION OF REMARKS
OF
HON. EVAN HOWELL
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. HOWELL. Mr. Speaker, among the many young men from the Twenty-first Congressional District in Illinois now serving their country in the armed forces, is Corp. Michael Sapetti, of Kinsaid, Ill.

His splendid efforts have recently been described in the public press. The article follows:

CORP. M. SAPETTI KEYMAN IN SUPPLYING EQUIPMENT TO PLANES

AN AIR SERVICE COMMAND DEPOT IN ENGLAND.—Corp. Michael Sapetti, son of Mr. and

Mrs. Sapetti, of Tovey, is a keyman behind the scenes of the supply war in Europe.

Serving with a station complement squadron at an Air Service Command depot in England, he is working long hours wrestling with the thousands of complex problems that arise in keeping equipment moving to the men of the combat air forces.

A soldier since February 1, 1943, he has been overseas 14 months.

He attended the Kincaid high school.

Universities and Public Agencies Have Part in Developing Fundamental Resources

---

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 8, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include herein an address delivered by Dr. Harcourt A. Morgan, Vice Chairman of the Tennessee Valley Authority, as reported in the Tennessee Alumnus, autumn, 1944.

The article is an interesting study of the methods universities can and should follow in helping develop our national resources in conjunction with public agencies, such as the Tennessee Valley Authority.

Dr. Morgan had made an excellent record as a member of the board of directors of the Tennessee Valley Authority. Prior to that time, he was president of the University of Tennessee. He was recognized as one of the foremost educators in the Nation.

The address is as follows:

We are here today in observance of a significant event. The University of Tennessee, established in 1794, now is in its 150th year of service to the people of the State and the Nation. We can look back upon a long and varied history of development and growth, and of accomplishment. We can look about our beautiful campus and admire the sturdy buildings which are outward reminders of the progress we have made. We can regard with deep satisfaction the increasing numbers of young, ambitious, and serious students who come to our lecture halls and classrooms to train their minds to cope with modern life. And we can congratulate ourselves on the forward looking members of the faculty who instruct in the intricacies of all the branches of knowledge and human concern.

These things, the fruits of a century and a half of endeavor, we look upon now and we find them good.

But this should be more than a period of self-congratulation. It also should be an occasion of stock taking. We may well take pride in the distance we have come and the heights we have achieved; but we must, if we are to be true to ourselves and to the institution which we have created, look into the future to see where we are going.

HOW MAY UNIVERSITY BEST SERVE

What course must we plot and toward what objectives must we strive? What is the place of a great university in the world of today, and especially in the years following a global war? How best may it fulfill its functions in the complex society in which we live? How best may it contribute to the peace and prosperity longed for by troubled people of the earth?

I have been asked to speak about the university and its relation to public agencies. It is a timely subject and one for deep and sober exploration, for throughout the land the functions of universities have been more and more integrated into the needs and keyed to the desires of the body politic. We have long ago left behind the days when universities were ivied retreats from the hurly-burly of the world, peopled by scholarly men immersed in the study of Greek and Latin, or higher mathematics, or metaphysical philosophy, or any of the other so-called cultural pursuits. Such studies are still to be found in the curricula, and they should remain there, but they have been pretty completely overshadowed by the more utilitarian aspects of education.

General knowledge of Greek is confined to enough of the Greek alphabet to identify the campus fraternities and sororities, and Greek and Latin linger chiefly in the nomenclature of the sciences, like biology and medicine; but commercially useful Spanish does a relatively booming business. Few students essay the heights of the higher mathematics, but many burn the midnight oil over scarcely less abstruse formulas of use to engineers, accountants, and statisticians who, by reducing life to digits and plotting mystic curves therefrom, tell us where we have been, where we are, and in what direction we are headed.

PREPARES FOR LEADERSHIP

Our students in the field of physical and natural sciences seek to prepare themselves for service in the modernly equipped research laboratories where their work will eventually result in practical benefit, in countless ways, to people generally.

The universities—the University of Tennessee as well as others—have been preparing themselves to be leaders in a modern world, and they are well fitted to adapt themselves to the new concept of leadership and cooperation. I am not complaining that this new approach to things as they are in this world came so late. I am satisfied that it has come at last. It is late, but not too late. Until recent years the agencies of the people pretty much had to go it alone. There was a sharp line separating national agencies whose concern was the development of the Nation's basic resources and the agencies of the people whose concern, in theory at least, was to prepare the youthful mind for the adult world. These two groups—the national agencies and the local agencies—were not able to work in close relationship, and this was through no fault of the local agencies. The national groups grew remote. Their headquarters were miles away geographically and many more miles away mentally and spiritually. And then something happened. It had been coming on gradually in the minds of men and it took form, at least in this valley, when Federal authority left the seat of government, rolled up its sleeves, and came to the agencies of the people, prepared to work jointly with them in a common cause. Both in the Nation at large and in the States as well there was a growing conviction that the business of resource development had a direct relationship to day-to-day living, and that the answer never would be found unless the national and local groups pooled their minds and abilities.

The University of Tennessee was ready for the job. Let me mention just one example. T. V. A. harnessed the destructive waters of the valley and from the controlled rivers created the energy to permit it to develop and improve concentrated plant nutrients, and the universities, as partners, tested and demonstrated their value to the soil. The Authority and the university jointly worked out programs and processes and machines of material benefit to the people. They have pooled their resources to develop better implements and machinery needed in an integrated program of the resources of the valley.

RESEARCH GETS PRACTICAL TEST

Along the same lines, the political scientists of the universities occupy themselves to a greater extent with the practical problems of government in the interests of better administration, and sociologists are called from their teaching to help deal with current development. The theories developed from cloistered study find their testing ground in practical everyday affairs.

Thus the university of today is a far cry from the pristine concept of university organizations in medieval times, which were concerned largely with theology, law, medicine, and philosophy. Today there is scarcely a phase of life which the university does not aim to touch in some fashion. In its own right, the university contributes to the furtherance of the common affairs of men. And, more important still, from its classrooms there go forth the men and women who do the practical work of the world, who operate factories, farms, and mines, who build dams and power plants and irrigation systems, who seek truth endlessly in laboratory and field research, who enter the field of government to provide there the countless services demanded by the people, who write in newspapers and magazines or speak over the radio to shape public opinion, and who are elected to office where they formulate and carry out policies of far-reaching effect on the lives of all of us.

What these men and women think as they leave the university, what grasp they have of the make-up of the world and man's place in it, shapes not only their lives but those of the rest of us.

IMPORTANCE LONG RECOGNIZED

The importance of the university in shaping social and political trends and events has long been recognized, and sometimes universities have been crammed, willy-nilly, into molds designed to further the ends of institutional prestige, overshadowing truth and science, becoming addicted to narrow ideologies.

The prostitution of the university as a means to an end reached the depths in Nazi Germany, amid the smoke from burning pyres of books. A few years ago, the University of Gottingen, Germany, celebrated its centenary, as today we observe a sacred milestone in the history of our own institution. How the true scientists and teachers, if any by that time remained at Gottingen, must have writhed to hear the following:

"We renounce international science. We renounce the international republic of learning. We renounce research for its own sake. We teach and learn medicine, not to decrease the number of microbes, but to keep the German people strong and healthy. We teach and learn history, not to say how things actually happened but to instruct the German people from the past. We teach and learn the sciences, not to discover abstract laws, but strengthen the implements of the German people in competition with other peoples."

AMERICANS HAVE DIFFERENT CONCEPT

We have another concept of what the role of a university should be. We believe that the university should be a place to continuously prepare seekers after truth and propounders of the discovered truths for the benefit of mankind. We do not seek only those truths which will benefit our own

small group, or our own Nation, but universal truth. It is the function of a university, as we see it, to seek after truth in order that we may better understand the world we live in and to reveal and translate those truths so that they may be applied to the problems of living and of perpetuating the human enterprise.

This is the ideal. But we well may ponder whether or not we are achieving it. There is no doubt but that in the past century education's contributions to general advancement have been greater than in all previous history. We have discovered more about the nature of man and the world in which he is a contributing partner during this period than ever was known before. When universities were first organized, little was known of the physical world; today we have identified some 90 elements and of these we have determined that some 20 are essential to all life processes. We have piled fact upon fact of the physical world until we have amassed knowledge which enables us to build a civilization based upon scientific truth and technology without parallel. Due to research and invention and the resultant development of technology based on the resources of elements, we have so vastly expanded man's powers that the possibilities are almost limitless.

HUMAN RACE WASTES RESOURCES

Yet at the same time, the human race has in countless ways used its powers to squander resources at a faster and faster rate. It has heedlessly decimated mines and forests and has wasted the resources of land and water. It has, time after time, gone contentiously to war and wasted resources which are essential to peacetime development. It has done this chiefly, I think, out of ignorance and as a direct result of the lack of a common understanding of basic resources which could underlie a common faith in the human enenterprise.

Universities and agencies of government and the people themselves will fail in their efforts to promote peace and practical democracy over the world unless they find the ways and means, equitably and with understanding, of learning to know what our fundamental resources are, developing them, utlizing them, and conserving them.

For the present and until the task is thoroughly completed, this, then, is the problem to which the university should devote itself.

I think that this will require a drastic change in our identifying and thinking as to what are the basic resources to which research and education should be applied. We have progressed so fast in the very late centuries in what we liked to call "the conquest of nature" that we have failed to keep pace—in common knowledge at least—with the facts of natural laws which must rigidly govern our use of the basic resources which nature has, in some cases prodigally and in others sparingly, given to us to work with. We have, if I may be permitted a trite saying, been unaware of the forest because of the trees.

MUST KNOW RELATIONSHIP

This is illustrated in our present educational system, where "subjects" are neatly tucked away in compartments and seldom related back, and only then remotely, to the resources and the elements by which men live. We have in our teaching generated specialists, which is all right if each specialized field knows and understands its relationship to the common problem of resource development in its application to the total economy of people. It is not all right for the university to create an engineer or a doctor who thinks his profession is an end in itself or merely a way to make a good living. The engineer must understand the contribution the dams he builds make to resource development, and the doctor should have as deep a desire for soil fertility maintenance as does the agriculturalist, if for no other reason than of the nutritional elements involved.

A few years ago one answer was given by Morris Llewellyn Cooke, in an article published while he was Administrator of the Rural Electrification Administration. In hiring its engineers, the R. E. A. drew upon the leading engineering colleges of the country and then, in initiating the new employees, gave an indoctrination course ending with an examination.

One of the questions in this examination was "Do you believe that the engineer has any social responsibility for his work?"

The answer, among a class of 10, Cooke reported, was a virtually unanimous "No."

RESULT OF "FRAGMENTATION"

Clearly the impression that these young men had carried away from college was the conviction that if they learned and practiced the technical side of their profession they had fulfilled their mission. If they were hired by either private industry or government to build a dam or erect a power line, their sole concern was to do a good technical job, whether or not their work was socially useful, whether or not it added to human enrichment, or whether, as in some cases it well might, it retarded mankind's advancement was the concern of others.

This is the result of what I have termed "fragmentation" of the educational program. We are in an age of specialization, in which members of society concern themselves with limited advanced fields to the practical exclusion of all others, and more important, to the exclusion of any over-all concept of the manner in which their immediate work fits into the whole of life. We have specialists in industrial production, specialists in government, specialists in minerals, agriculture, electrical, chemical, civil, and mechanical engineering, specialists in interstate commerce and international trade, and specialists in international political relations. To this compartmentalized specialization the universities have contributed. We must remove the partitions and give the specialists that elbow room they need to bring them in contact with other fields which have their common mooring of elements and energy.

The time has come—if, indeed, it is not long overdue—for the universities to take the lead in the new concept of education, fundamentally based on elements and energy. I am convinced that only by doing it will men come to understand one another and the age-old friction between men gradually disappear. The universities must knock the chips from men's shoulders.

MUST KNOW LIMITATIONS, POWERS

In short, on the basis of what we have learned in the past few centuries, we should reach back to explore the past, to learn both man's limitations and his powers in connection with the elements and energy he has to work with, and bring about a broad understanding of the facts, forces, and purposes of a total demonstration of these integrated resources.

It is essential to discern, to learn, and to make a matter of common knowledge, that the elements, the energy, and the mind and spirit of man are the basic resources and are the common heritage of all mankind. They are the only things, too, he has to work with for the present good and future development of the human race.

The carriers of elements and energy—the air, the water, and land, and sun—are likewise a common universal legacy. Arrayed in various combinations are found the elements by which plants, animals, and human beings live, each to contribute its part to the passing parade of Nature's and man's operations.

Most of man's scientific knowledge of the world about him is of relatively recent origin. It was not known during most of the long ages in which man fashioned his own civilization. Man began early to till the soil, but centuries passed before he understood the elements he was dealing with. To a considerable extent this knowledge of resources was likewise lacking when commerce and industry began to be developed. Political science and economics emerged under similar handicaps. Man was building his world out of these fundamental resources of elements and energy whose true relationship to life he did not understand.

TRADITION LIMITS SCOPE

In short, what has happened has been that most of our institutions and concepts developed and became set along traditional lines during periods when scientific guidance was in its infancy. As a result, we find our institutions and agencies handicapped by old cultures and traditions and economic and political alignments which often run counter to the modern interests of mankind when those interests are viewed in the light of the scientific facts. These traditional approaches limit man in the exercise of his full powers toward the present world objectives of peace and opportunity for every human being to make his own peculiar contribution. They act to limit mankind's full productiveness.

They will continue to do so as long as they stand in the way of common action based on common knowledge of the scientific facts about elements and energy and the laws which govern their use.

It is the dawning of this realization which perhaps accounts for the world-wide interest in the development of the Tennessee Valley. The whole world had become uneasily aware of something gone wrong with the complacent policy of noncooperation. Here the agencies and the universities of the Tennessee watershed have actually set a pattern of development, under the Tennessee Valley Authority Act, for the development of basic resources along scientific lines. Here, for virtually the first time, we have set up objectives, based on what science has taught about the nature of elements and energy and their interrelationships, of making full use of our potential powers.

And beginning a few years ago, we have had an expression of almost world-wide interest in the trek of hundreds of representatives of foreign lands who have come to study our approach to problems which they face. And what these representatives approve is all that is implied in the program for capturing elements and energy of falling water and soil fertility and the harnessing of these returnable sources of wealth in order that the powers of people may be extended while at the same time the exhaustible sources of elements and energy may be conserved and judiciously used. This means that the nations of the world are becoming aware of the interrelationship of these basic resources.

MUST USE ALL RESOURCES

The capture of energy through modern vegetation is equally as important, if indeed not more important, to the welfare of present and future generations as the processes of capturing electric energy either by steam or hydro-electric plants.

Science has provided us with the knowledge of basic resources which greatly enhance our ability to obtain energy from the soil. We have within our grasp, as we have been demonstrating here in the Valley through the joint program of the T. V. A. and the universities and other agencies, a chance to vastly increase human well being through improved land practices.

The responsibility of the university and the agencies is clear, and I will cite only one illustration of many.

Together, the universities and the T. V. A. and other agencies have demonstrated that phosphate is one of the key elements basic to good soil management, yet most soils are deficient in it. The facts are known to soil scientists, to the chemical engineers and chemists, and to many farmers. We know, too, that phosphate is one of the limited elements with which man has to work, and that the deposits of this vital mineral occur in widely spaced areas and that under present conditions it is not being used generously enough to even begin to replace the phosphorus annually removed from the soil by crops and erosion. We know, too, that one of the reasons that phosphate is not more widely used is that the distribution of plant nutrient materials has been carried on in the commercial tradition, guided by a custom of supply and demand enunciated long before we found out through scientific research how vital this material is to all human life and to the full development of human powers. Viewed in this light, the use of this single element becomes not the concern of a few scientists, of the farmers, and farm organizations, and of the commercial interests, but a question of transcendent interest to everyone—whether he lives in country or city, works in a bank or factory, or teaches in a college of liberal arts. The same is true of all the other elements—only when the basic understanding of what they are, of their uses, of their relative abundance or scarcity is widely disseminated and taken into account by everyone will each generation make its potential contribution.

UNIVERSITY MUST PURSUE TRUTH

It is to this task of seeking truth through research and, by translation and wide dissemination, bring the results into cooperation along with a basic understanding of their implications, I believe to be one of the greatest contributions that a university can make. The elements which are necessary to all the units of life are fewer in number than the letters of the alphabet; I look forward to the day when everyone will be as familiar with the alphabet of the vital elements which underlie everyday existence as he is with the alphabet of letters.

That is the job for the university. It also is the job of the university to develop a common faith in these basic resources. A common faith must rest upon universal truth, and universal truth must be found in those creations of nature which apply to the life and activities of man, no matter what part of the globe he inhabits or what economic or governmental system he lives under, or what his span of life contributes to the culture of his generation.

The spirit and mind of man have made long strides forward in discovering the elements of life and the natural laws which govern them. And the search for truth goes on. We have, through science and technology, opened up the path toward a vast increase in the powers and capabilities of man. By promoting a broad understanding of what the findings of science mean, we can widen that path into a spacious avenue to the future.

After this meeting, we are, I understand, to break into small groups for forum discussions of the university's place in relation to agriculture, business administration, education, engineering and industry, health, home economics, law, the liberal arts, and the press.

I should like to urge upon you that in your discussions of these many subjects you keep in mind a full realization that our success in any and every one of these fields must inevitably be related back to the fundamental elements which underlie plant, animal, and human energy. Only when we attain a universal understanding of these facts will we open the way to full development of our powers.

Address of Vice Admiral Ben Moreell

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Vice Admiral Ben Moreell (C. E. C.), United States Navy, Chief of the Bureau of Yards and Docks, United States Navy Department, Washington, D. C., delivered to the graduating class of Civil Engineer Corps officers, Camp Endicott, Davisville, R. I., January 6, 1945:

It is with mixed feelings of pride and trepidation that I address the members of the graduating class of civil-engineer officers this morning; pride because I have the honor of welcoming into the Civil Engineer Corps of the Navy one more group of young officers who have been prepared to share the burden of our tasks; trepidation because custom has decreed that one addressing a graduating class should present rules of conduct which, if followed, will, presumably, lead to successful careers.

I believe it appropriate to bring to your attention, in brief form, some of the accomplishments of the great organization of which you are about to become a part. The war emergency is generally taken as having started on July 1, 1940, since that date is the beginning of a national fiscal year, and as it came as soon after the invasion of the Low Countries by the German forces on May 10, 1940. Since July 1, 1940, there has been confided to the Civil Engineer Corps of the Navy what I believe to be the greatest sustained construction program in the history of the world. In money value the total authorized to date is, in round figures, $9,500,000,000. But this does not include the costs of pay, transportation, and subsistence of our officer and enlisted personnel by whom a large part of the construction work has been accomplished. If due allowances are made for these it is estimated that our construction effort from July 1, 1940, to date would represent in money value a total of approximately $12,000,000,000.

But the money value is not an adequate measure of our effort. The true measure is the importance of our work to the accomplishments of the fleet, the Air Forces, and the Ground Forces which we have supported.

It has been our good fortune to have assigned to us construction operations of the greatest diversity of character and the widest dispersion of location. We have built, in many places throughout the world, works ranging in size from the most insignificant and commonplace to those of the greatest magnitude and complexity. We have had projects for the construction of sidewalks at a cost of several hundred dollars, and we have had such projects as the construction of an underground, bombproof Diesel and fuel-oil storage, costing in the neighborhood of $75,000,000. We have had entrusted to our care the construction of shipbuilding and ship-repair plants, port and harbor works, aviation training and operating stations, ammunition depots and ordnance-production facilities, supply depots, training stations, artillery training ranges, radio stations, hospitals, fleet operating bases, fuel depots, housing projects, and floating and graving dry docks.

Prior to the organization of the Seabees in December 1941, these works were constructed by private contractors under the direction of Civil Engineer Corps officers at many localities throughout the world.

We have constructed, utilizing the services of private contractors, bases in the United Kingdom, in West Africa, in Iceland, in Newfoundland, Bermuda, at numerous places in the Caribbean area, in South America, Panama, Alaska, the Hawaiian group, Midway, Wake, Guam, the Philippines, and Samoa. All of these are in addition to the extensive program of construction which we have carried on within the continental limits. Our extra-continental work to date accounts for approximately $4,000,000,000 of the total of $9,500,000,000 previously cited.

One of our contracts for the construction of facilities to support the fleets in the Pacific Ocean areas is the greatest single construction contract in the history of the world in money value, in diversity of construction, and in dispersion of location. The final contract cost was about $300,000,000. The contract involved the construction of practically every type of naval and civilian facility. The operations were conducted from San Francisco as a logistics base westward to the Philippines. The contract extended from August 1939 until June 1944. At the peak, 50,000 men were employed on this work.

What is the significance of these tremendous operations? The work of the Civil Engineer Corps has only one reason for being. It is to support the operations of the fleets, of naval aviation, and of the Marines. Recent fleet operations in the Pacific have served to confirm the conclusion that every naval ship or aircraft of whatever type or size is dependent upon shore-based facilities for its maintenance and support. Roughly in proportion to size, a ship may be regarded as self-sustaining for longer or shorter periods of time. The capital ship, with its living accommodations for a large crew, its considerable resources in machine shops and other repair equipment, its storage spaces for repair and other materials and supplies, may be said to be self-sustaining as regards mechanical maintenance, except drydocking, for about 18 months. At the end of that period the accumulation of repair or alteration work which is beyond the capacity of the ship's forces or the resources of the fleet repair ship requires the facilities of a navy yard for general overhaul.

As the size of the vessel decreases it becomes more and more dependent upon its shore support. At the opposite end of the scale of combat vessels, for example, is the submarine, which is self-sustaining for relatively short periods of time. And even more dependent on shore facilities is the aircraft, which is self-sustaining only while it is actually in flight.

Involved in the consideration of this problem is the all-important one of providing ashore recreational and rehabilitation facilities for the crews of vessels which have been subjected to intensive service.

Behind the so-called first line or direct services to the fighting forces there is a vast establishment that is backing up the line, a great productive and service organization that must see to it that the fighting forces shall have in personnel and matériel what they need, when they need it. This means factories, shops, supply depots, training schools, hospitals, and other production and processing facilities.

In summary, it can be stated that while we of the Civil Engineer Corps of the Navy must approach our tasks as a service force for the fleets with due humility, we should minimize neither their importance nor the vital part they are playing in bringing victory to our arms.

Our Civil Engineer Corps has expanded by leaps and bounds as the operations of the fighting forces have grown in magnitude and

dispersion. On July 1, 1940, the corps consisted of 267 officers and no enlisted personnels. As of December 31, 1944, we have actually on board 9,212 officers and 236,000 enlisted men, with an approved quota for June 30, 1945, of 10,650 officers and 272,000 men. With the organization of the Seabees in December 1941, the Civil Engineer Corps assumed added responsibilities and a vastly increased scope of function. Where previously our construction operations were conducted largely by utilizing the services of private contractors, our extra-continental work is now conducted almost in its entirety by our own officers and men. This means that all of the planning, procurement, and actual construction organization which had previously been accomplished by skilled private contractors now devolves upon our own shoulders. The order of magnitude of this burden can be gaged from the fact that our extra-continental construction operations are now being conducted at an expenditure rate of $2,000,000,000 per year.

In addition to construction work, the Corps has been called upon to demonstrate its versatility by undertaking special tasks of the greatest importance to the fleets, such, for example, as loading and unloading of ships, demolition and removal of obstacles for assault operations, pontoon fabrication, assembly and operation, camouflage, fog dispersal, and other highly specialized functions.

That we have accomplished our assignments to the satisfaction of those in authority is attested by the commendatory statements which we have received from the top command in every theater of war. Ours have been the duty and the privilege of participating in every major amphibious operation conducted by either the Army or Navy throughout the world. Our Seabees have taken a prominent part in every assault in the Pacific Ocean, in the operations in north Africa, in Sicily, in Italy, and in the Normandy invasion, and they have conducted themselves with honor and distinction.

I mention these brief statistical data not to impress upon you the great accomplishments of the Corps which you are about to join, but rather to emphasize the responsibility which rests upon your shoulders to perpetuate the history and the tradition of our organization, a history of accomplishment and a tradition of service to the fleets, a willing and eager service, a "service with a smile," if you please, coupled with a tradition which is perhaps best epitomized by the Seabee slogan, "Can Do," a slogan conferred upon us by a high-ranking officer of the line who, when asked in the course of an inspection of a lonely atoll in the far Pacific whether he had seen anything of the work of the Seabees, replied, "Oh, you mean the 'Can Do' boys."

I mentioned earlier my trepidation because of the custom of offering to graduation classes what might be called recipes for success. I cannot give you such recipes. All I would presume to do is to point out the lessons which can be learned from my own mistakes and from those of others. I have always felt that the greatest advantage can be garnered from a study of failures. I have had in mind for some years the preparation of a record which I propose to entitle, "An Anthology of Engineering Failures," in which I propose to discuss the failures of great engineering structures and the reasons therefor. I feel strongly that from such studies the profession can gain great benefits.

And so it is with our relationships and progress in the Navy. In retrospect, in my own case, I feel that my contribution to the efficiency of our naval forces would have been more effective and more durable had I recognized early in my career that most problems with which we are faced, even the most complex, can be solved by a resort to basic principles.

I know now that there are no substitutes for sound knowledge, experience, and hard work, and that these, together with the simple virtues of piety, sincerity, loyalty, humility, and tolerance, all of which go to make up that indefinite thing called character, are the foundation stones of engineering efficiency.

I have found, too, that my engineering education had a serious lack. Some time ago I was asked by the chancellor of the university which I attended to comment, in the light of my experiences, on the adequacy of the engineering courses. My comment was to the effect that there was one great deficiency, namely, that not only had the university failed to teach me anything about how to deal with human beings, how to handle men, if you please, but they had not even told me that it was an important thing to know.

To me this is the greatest knowledge which an engineer can have. We accomplish our works through the medium of human beings, and they are all different one from the other. You will find that each has his idiosyncrasies, his likes and dislikes, and even his prejudices. I have found that a deliberate study of how to deal with your superiors as well as with your subordinates is the most important task for an engineer to undertake and to master.

I have found, also, through hard experience, that just as we decide engineering questions by resort to basic engineering principles, so must we decide moral questions by resort to basic moral principles which our religious and lay teachers have expounded for us so well, and that, in many instances, the moral values involved in an engineering decision far transcend in importance the engineering values.

I have found, too, that engineering problems should be approached with humility but with boldness. The things we know are to the things that remain to be known as a drop of water is to the oceans. But this should not be an encouragement to futility; rather should it be a challenge to our determination to achieve.

Experience has taught me that engineers must plan ahead not only for the development of a specific engineering project but for the basic pattern of future operations. We must have vision, moral as well as material. A great engineer has given this advice:

"Make no little plans, they have no magic to stir men's blood and probably themselves will not be realized. Make big plans, aim high in hope and in work, remembering that a noble, logical diagram once recorded will never die, but long after we are gone will be a living thing, asserting itself with ever-growing insistence. Remember that our sons and grandsons are going to do things that would stagger us. Let your watchword be order and your beacon beauty."

I have found that to achieve success in any major operation it is necessary to have the unswerving loyalty of one's subordinates, and this loyalty can only be gained by showing a confidence in their ability and in their devotion by decentralizing to them the authority and the responsibility necessary for the accomplishment of their tasks. They will never learn to swim if they are not permitted to enter the deep water without artificial support.

I have found, also, that I could learn something from almost every man, no matter how humble his station. Many of the most valuable lessons of engineering and construction have been learned from contacts with the man who works with his hands. Those of you who have had experience on construction work know that there is a right way and a wrong way to dig a ditch. You can learn this from the ditch digger, as I have.

You are about to enter on your careers as commissioned officers of the Civil Engineer Corps of the United States Navy. You have a great responsibility. We are engaged in a war of extermination with cruel and ruthless enemies. You have had the training, both military and technical, which will enable you to discharge your duties, but you must supplement this training by unfailing devotion to those high moral principles which we are fighting to maintain.

There is still a tremendous work to be done. The news from the European area in the recent past would indicate the expenditure of personnel and matériel of war by our armies at a rate unprecedented in the history of warfare. The resistance of the enemy is increasing in intensity, and this presages the need for more and more power if we are to destroy him without expending large numbers of our own forces.

In the Pacific our recent landings in the Philippines mark a notable advance, but still leave us far from our ultimate goal. The fierce resistance of the Japanese in the face of annihilating fire is indicative of the intensity of the campaign which lies ahead. A recent calculation indicates that the Japanese Empire now has under its domination approximately 2,950,000 square miles of territory and approximately 456,000,000 people. In the continental United States we have an area of 3,000,000 square miles with 132,000,000 people. Certainly, no one would attempt to equate the productivity of the people and manufactories in the areas under Japanese control with our own. But it must be borne in mind that we are faced with the obligation of carrying the attack across vast oceans to distances varying from 7,000 to 9,000 miles, and that we must have great preponderance in quality and quantity of men and matériel if we are to achieve victory within a reasonable time and at minimum cost.

To achieve this victory, we must face our responsibilities squarely, with boldness, with determination to achieve, and with faith in our leadership. We must subordinate our personal predilections to the discipline of higher authority.

I feel it appropriate to defer here to custom by quoting the following from the great leader, Stonewall Jackson, who said:

"Men and officers must obey, no matter what cost to their feelings, for obedience to orders, instant and unhesitatingly is not only the lifeblood of armies, but the security of states and the doctrine, that under any conditions whatever, deliberate disobedience can be justified, is treason to the commonwealth."

I wish you Godspeed in the important tasks upon which you are about to enter.

Address of Gov. Thomas E. Dewey

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include the following splendid address delivered by Gov. Thomas E. Dewey, of New York, at the annual Lincoln Day dinner in the city of Washington on the evening of February 8, 1945. The address of Governor Dewey follows:

At this Lincoln Day dinner we Republicans traditionally take stock of ourselves. We ask ourselves how far we have strayed from

the fundamentals of our political faith. We rededicate ourselves to the eternal principles of human freedom for which the name of Lincoln stands.

It is particularly important that we reexamine our faith after a national election. It fell to us to conduct a campaign when our country was engaged in the greatest war of all history. That was a grave and difficult responsibility for an opposition party because any campaign has within it the dangers of divisions on our national purposes. Instead, the campaign made it clear to all the world that the united determination of the people of America to fight the war to total victory was greater than ever before. Moreover, our will to build a lasting peace was lifted by our party above partisanship and we made a lasting contribution toward the actual building of the structure for international peace.

At the same time we vigorously performed our duty as the party of the opposition in pointing out the defects in the policies of the present administration and the startling contradictions between its promises and its performances.

As Americans we accept with good grace the verdict of the majority. As members of the party of opposition we shall stanchly carry forward the banner of our political faith. There are 22,000,000 of us—nearly 46 percent of the voters—who believe today in that political faith.

We have no excuse for existence as a political party—we have no excuse for our service in public office, unless we are deeply conscious of the overwhelming tragedy which stalks the world today. The normal life of a majority of the people of the world has either been uprooted or its natural development set back. Tens of millions of young men have been giving their most productive years to warfare. An appalling number of them will come back to their homes with deep scars and many will never come home.

Over almost every home in our land there is a sense of brooding fear or of irreparable loss. At the same time, there is a gallant courage and determination in the heart and mind of every American to beat down the forces of evil, and this time to keep them down.

Certainly this is the time for reexamination and reaffirmation of the things we believe in. It is the time to cast aside those things that are not fundamental and to reaffirm those things that are true.

It is increasingly clear to everyone that neither justice nor freedom can long continue to exist in a world beset by periodic total wars. Modern warfare strikes down the youth of the world. It also strikes at the heart of freedom itself. By its very nature it forces even freedom-loving countries to regiment their people in order to fight total war.

Moreover, the terrifying developments of science have made war no longer a matter between next-door neighbors. We have learned to our sorrow that aggression anywhere in the world endangers all the rest of the world. We now know that in the future, aggression will be possible by air from bases thousands of miles away. If there is an aggressor anywhere in the world, all of us are his imperilled neighbors.

It is obvious that we cannot and must not risk another great war. It is equally obvious that aside from adequate military forces and bases for our defense in the future, our only hope of avoiding war lies in effective international cooperation for peace.

War is an evil which has scourged mankind from the beginning of time. It is not likely suddenly to disappear from the earth of its own accord. As I have said so often, peace must be waged with all the vigor and skill with which we wage war or we shall always be having to wage war.

We have nailed to our masthead one principle to which I believe we must everlastingly adhere; or principles will count no more in the face of force. That is that we, as a Nation, can, we will, and we must take a full, responsible part in the establishment of collective security among nations.

The opinion of our people has crystallized. They want the United States to accept its responsibilities for the vital decisions affecting the future of the world. Those who speak for our country need no longer hide behind fine phrases and glittering generalities. There need no longer be any doubt anywhere, that the American people are prepared to exercise their great power actively, continuously, and effectively in the interest of a just and a lasting peace.

There is now in progress a conference among the Three Great Powers among the United Nations. The results of that conference will go far to determine the course of the rest of the war and the nature of the peace to come. At that conference the President of the United States has, I am sure, the wholehearted support of both political parties and the prayers of the American people for his every effort in the interest of our country and of world peace.

Our people are prepared to uphold the hands of their own representatives. They ask in return that the decisions to be made shall be in harmony with our American ideals of liberty and justice. They ask that the actions to be taken shall not be concealed and shall not be devious. They ask that they shall not ignore the opinion of mankind. Our people insist that mighty decisions shall not be made in the cynical spirit of power politics. The structure of international peace must progress further and faster or it will be left behind in the swift movement of world events.

In the past 3 months, the liberation of peoples and nations has pressed forward with increasing speed. The governments of Bulgaria, Jugoslavia, Italy, and Greece, the government and boundaries of Poland have one after the other in rapid succession required action and decision. Yet, we learned, day after day, that events required action and our own Government was absent from the scene. We have seen the American people in the humiliating situation where they were compelled to learn of these tremendous events from the debates in the British House of Commons. Moreover, we learned from those debates that while the powder kegs of Europe were being dealt with once again the representatives of our own Government were uttering pleasant generalities and leaving our allies to decide the fate of the world.

During all of that critical 3-month period the clearest call for constructive action came from the distinguished senior Senator from Michigan, ARTHUR H. VANDENBERG.

In giving their wholehearted support to decisions to be made at the present conference and to action in the future, our people are perfectly aware that they cannot have everything just as they want it. Our allies have strong views of their own. We know that conflicting views must be reconciled. But we insist that decisions be made with us and not without us—with our representatives in the discussion, every day, on every subject, and not occasionally or part of the time. Our people cannot accept compromises without a new, firm knowledge that the American Government took its part and did its best in advancing the principles and faith for which Americans are dying all over the world. We shall accept neither isolationism nor abdication.

The time has come for the hard, painstaking labor of translating ideals and generalities into reality and action. The conference now in progress is, we hope, a great step to that end. From now on, these problems cannot hang in suspense for many months at a time. They cannot be left to the rare meetings between the heads of nations. Time and events move too fast. Ideals and great purposes are too easily lost by default. We are not content that our Government sit idly by and merely, as we have been told, be "kept informed." Millions of Americans are in the front lines of battle. Our Government must likewise be in the front line of decisions which flow from those victorious battles.

There have been these in other countries and some in our own, who choose to interpret the almost equal division of the American people between candidates and parties in the last election as proof of division in our fundamental purposes and intentions. The fact is that our differences concerned only who were the most effective individuals and what were the most effective methods of carrying out the ideals and purpose upon which we as a people are strongly united. Let that be understood by everyone, everywhere in the world. Let is be understood that the representatives of our Government have the wholehearted support of the American people in every step they take which advances the cause of a just and lasting peace.

So, as we give all-out support to action toward carrying out our ideals, we want to be sure that those ideals have been vigorously represented. We want to be sure of action guaranteeing the permanent disarmament of Germany and Japan. We want to be sure of action to transform the agreements reached at Dumbarton Oaks from pieces of paper into living reality. We want to know that the things left unfinished are moving toward solution.

As a nation we have strong views concerning the freedom of the peoples of Europe. We want to know that those views are represented in the decisions concerning the future of the people who have suffered so much through conquest and reconquest and final liberation. We want to know that it is liberation in truth—that we have in fact crushed out war-breeding totalitarianism wherever it infected those nations. We want to know that we have not fought this war in vain.

As, in the name of Lincoln, we take stock of our purposes in the world, we must also inquire whether we are upholding his ideals at home.

Our Nation was founded upon the classic liberal principle that government is the servant of its people and not their master. Hand in hand with this political idea of human freedom went the belief that men may be free politically only so long as they are free economically. These were the contagious, compelling, exciting truths out of which our country was established and became great.

These were not our ideas alone. They were in response to the clarion call to human freedom which swept over the western world in the eighteenth century. During that century the French Revolution and the American Revolution were fought to establish the right of people to rule themselves and the right of the individual to be free. By evolution the same principles were then also being established in Great Britain and elsewhere.

Today these liberal principles are under challenge. They are no longer self-evident to a large portion of the world. It is said that individual freedom can no longer exist in a modern industrial society; that government must be supreme, and the people must be its dependent servants.

The wheel has had a full turn between the eighteenth and twentieth centuries. The intrusive idea today is again that all wisdom is in government, and that it should exercise all power. Even as we fight a total war against that idea, it infects the minds of people everywhere.

We find people from all walks of life and of all shades of political thoughts right here in our own country who are afraid that we cannot have security and full employment and at the same time maintain the liberty and dignity of the individual. There are

others who joyously proclaim that the new road to Utopia is through government action alone, which leads inevitably to totalitarian control over our people. While professing their concern for the individual they would crush him, leaving only a soulless automaton who takes his orders from the state.

Adding together those who are afraid for human freedom and those who basically have no interest in it, we have a large body of opinion in our own country going down the primrose path toward totalitarianism.

How to achieve our objective, security, and full employment, and also preserve individual liberty: This is the crucial question of our time. It is the hard core of every political decision we make.

We have seen in our country a long, persistent effort to increase the power of Government over the individual. We have seen a cavalier willingness to saddle the people with unlimited debt in the peacetime behind us and in the plans for the peace ahead of us. We have seen a smooth willingness on the part of Government to find pleasant excuses in the name of false liberalism to bring the daily lives of our people under its increasing control.

There are those who want to take the easy way of spending the Nation into bankruptcy and chaos, while the Government takes over the control of the lives of every individual. They believe that to cure every ill you pass a law and appropriate a billion dollars. They would like to have the Government finance every business, from a gasoline station to a steel corporation, while it quietly takes over control of every aspect of our economy. It is by that process that life, liberty, and the pursuit of happiness would be stifled and liberalism would become a dead thing in history.

Here is the real battle of the years to come. Must the people of America deny their own heritage and surrender to an absolute state? Must we, too, when peace comes, join the march backward 200 years to individual subservience to the master state?

Let us on this occasion proclaim our faith in a better way. It is the way of progress not only toward ever-increasing security but also toward ever greater freedom of the individual. At times it may be the slower, harder road. But it is the only road for Americans to take.

It is perfectly obvious to the rest of the world and it ought to be to us, that America has staggeringly outproduced every other nation in the world. Our 130,000,000 people have produced many of the winning instruments of war for Great Britain, Russia, and China, as well as for ourselves. It is obvious to the rest of the world and it ought to be to us, that this is because of the enormous initiative and inventive genius which springs from the very heart of our system. Ours is a system which rewards achievement, in which men can create and build with the full knowledge that they and their families will benefit, as well as society as a whole. Ours has been a system whereby labor is free to work, to organize, and to share to the limit of its productive capacity in the good things of life which are produced by all.

The very heart of that system is the classic liberal concept that every man is his own master and that government exists to keep him free. It is in the natural development of that system that we assert that neither accumulations of great wealth nor monopoly—that neither government nor any individual—shall control the lives of other Americans. It is that system which guarantees and must make effective equal rights for all, regardless of race, color, creed, or national origin.

These are the principles for which Lincoln lived and died. If we are to justify the purpose for which we exist, we must follow in the path he set. It is of little importance whether the course is popular or unpopular at the moment.

What is important is that we follow unfalteringly the road of freedom on every issue. It is that road which 12,000,000 young Americans will want to take when they come home to enjoy the peace they have won. It is that road which opens to them unlimited vistas of achievement. To travel that road is their inalienable right. It is the right freely to produce to the maximum for their own enjoyment. It is the right to join a union free from the dictation of either government or employer. It is the right to become an employer without government dictation, whether on a farm or in a shop.

It is the right to use the initiative, the character, and skill these young Americans have developed in these dreadful years of warfare, for the advancement of their country and themselves and for the security of their families. It is the right to enjoy social security without any leader or party claiming a political debt for it.

It is the right of 12,000,000 young Americans to come home to a country where we have preserved and enlarged the area of human freedom while they fought and bled for it. It is the right to come home without finding the heavy hand of Government telling them where they shall work, at what and for how much. It is the right to have a government which knows that it is their servant and not their master.

If we who follow the faith of Abraham Lincoln will hold high the principles of that faith, liberal government under God shall not perish from the earth.

Automobile Use Tax

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. BRYSON. Mr. Speaker, as an extension of my remarks, I enclose a resolution passed by the House of Representatives of South Carolina under date of February 7, in which I fully concur.

I sincerely trust the Congress will soon repeal the $5 automobile tax.

The resolution follows:

House resolution memorializing the National Congress to repeal the Federal motor-vehicle use tax

Whereas the National Congress imposed by Federal statute, section 3540 of the Internal Revenue Code, and it was enacted by the Congress as a part of the Revenue Act of 1941 (sec. 557), which places a tax of $5 annually on all cars; and

Whereas in the Treasury's report on H. R. 5143 (78th Cong.), a bill to repeal the automobile use tax, was investigated at the response of Chairman DOUGHTON of North Carolina, of the Ways and Means Committee, it was then considered that it should be among the first for repeal when the end of the war emergency permits any reduction in the level of Federal taxes; and

Whereas it appears that the automobile use tax is an undesirable method for raising Federal revenue, as it does not take into account the value of the vehicle, it duplicates automobile license taxes imposed by the State, is very difficult to collect the taxes under the procedure now taken, and is a very unfair tax: Now, therefore, be it

Resolved by the House of Representatives of South Carolina, That the Representatives in Congress from South Carolina be urged to sponsor, if necessary, a bill to repeal the automobile use tax now in force and being collected by the Federal Government, and to support any bill pending for the repeal of the tax above referred to; and be it further

Resolved, That a copy of this resolution be sent to the Members of Congress from South Carolina.

The Wallace Controversy

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks, I include the following articles on Mr. Wallace that appeared in the Washington Post, February 4, 1945:

WALLACE'S NEW YORK SPEECH ON 1921 PANIC HELD IN ERROR

Testimony of Henry A. Wallace's late father arose last week to dispute an implication given by the former Vice President in his efforts to bring about confirmation of his nomination to head the Commerce Department and control the Reconstruction Finance Corporation and other Government loan agencies.

Wallace, on January 29, at a testimonial dinner given for him in New York by the Union for Democratic Action and the New Republic, dwelt on the need for providing 60,000,000 jobs for Americans after the war, and the plans he would follow to attain that objective.

TELLS ABOUT CONDITIONS

In the course of his discussion he said:

"Our economic illiteracy after World War No. 1 gave us the smash of 1921, the crash of 1929, and economic conditions abroad which inevitably led to the rise of fascism and nazi-ism."

The implication that the smash to which Wallace referred had come in 1921, after the Republicans had taken over the Government following Wilson's 8 years in the White House, stirred numbers of Washingtonians who had watched at first hand the development of economic distress that followed the war's end.

Perusal of records of Senate hearings of that period brought official evidence that the smash was already a fact in 1920, months before the Republican Party replaced the Democratic administration, and that it was being felt severely in Wallace's home State of Iowa.

GROUP HELD HEARING

The Senate's Select Committee on Reconstruction and Production held a hearing at Des Moines, Iowa, on November 12, 1920, and among witnesses was Henry C. Wallace, editor of Wallace's Farmer and father of the man now awaiting Senate action on his second Cabinet appointment.

Senators Calder and Kenyon, and others of the committee, heard the distinguished farm editor testify.

"Our corn this year costs between 90 cents and 95 cents a bushel to produce. That is the actual cost on a cost-accounting basis, taking into consideration all of the factors included in it. It is selling now between 55 cents and 60 cents. Our oats costs around 75 cents to produce and it is selling at around 40 cents. Our wheat costs $1.88 to produce, and it is selling at about $1.40. These

figures I am giving you are the cost of production on the farm and the sale price on the farm. Now, when you remember that our production this year is 127,000,000 bushels above the 5-year average, and when you remember that only 20 percent of our corn goes off of the farms, crosses county lines, you will see that a slight increase in the cost of production has a terrific effect on the price."

It was not until 4 months after this testimony that the Republicans inaugurated Warren G. Harding as President.

COALITION IS SEEN

Southern Democrats were reported last night to be joining House Republicans in support of proposed George-bill amendments to curtail further the powers which Henry A. Wallace would exercise if he were confirmed as Secretary of Commerce.

Such a coalition would assure House approval of the Senate-passed bill in a drastically revised form. Senate concurrence in the revision, some observers believed, might move President Roosevelt to veto the bill. And if that happens, the Senate might reject Wallace's nomination when it comes up for action March 1.

WALLACE'S DEMEANOR AT HEARING LEFT SENATORS UNEASY

(By Bert Andrews)

In all that has been written about the Wallace-Jones fight one fact has been almost completely ignored and this is that the demeanor of Henry A. Wallace under fire played a large part in arousing Senate opposition to giving him the vast fiscal powers that were held by Jesse H. Jones.

The dictionary defines "demeanor" as: "Behavior, deportment, carriage, bearing, mien," and in Wallace's case the definition can be broadened to include the way he reads from a manuscript, the way he laughs, the way he combs his hair or leaves it tousled, depending upon the occasion; the way he talks when speaking extemporaneously, and the way he sits in a witness chair.

For the benefit of future historians who will want to know every last reason why a majority of the Senate felt uneasy about putting pursestrings in the Wallace fingers, it should be explained then, that not everything that happened at the Senate Commerce Committee's hearing shows up in the transcript of the session.

ACCORDING TO TRANSCRIPT

The transcript, at one point, reads as follows:

"Mr. WALLACE. Let me put it this way, to sum it up in a nutshell, that if during the last 10 years of this century the present type of financing and the present taxation had been in effect it would have been impossible to have anything like the present automobile, the present electrical industry, the present chemical industry, and if we want in 1970 to have the Henry Fords and Edisons of 1945 to 1950 coming into flower it will be necessary to make possible a type of financing for small business which does not exist today."

"Senator RALPH O. BREWSTER, Republican, of Maine. That is rather a severe indictment of 12 years of this administration, isn't it?

"Mr. WALLACE. I feel it is a severe indictment of the past 30 years.

"Senator BREWSTER. We will take it all in." (He meant into consideration.)

Now, as this reporter saw it, the incident occurred like this:

Senator BREWSTER said: "That is rather a severe indictment of 12 years of this administration, isn't it?"

WALLACE LAUGHS 40 SECONDS

At BREWSTER'S last word, Wallace began to laugh, pro-Wallace onlookers might valiantly have defended the laugh as a warm-hearted chuckle. Strictly neutral observers would have described it as being, at best, a very nervous laugh. One anti-Wallace Senator said later, "Why, that man's got the damndest giggle I ever heard in my life. It gives me the shivers." After Wallace had been chuckling, laughing, or giggling for perhaps 10 seconds, this reporter's eyes dropped to the second hand of his watch. Wallace continued chuckling, laughing, or giggling for exactly 30 seconds more.

The record does not show, probably because the stenographer did not catch BREWSTER'S words, that it was not until BREWSTER insisted on an answer by saying, "Well, isn't it?" that Wallace gave his answer—that he regarded it as "a severe indictment of the past 30 years." Nor does the record show that the faces of some of the Senators as Wallace laughed were a strange study of men who just didn't understand Wallace, who regarded him as a strange man who did not measure up to, or down to, their standards of normalcy, who couldn't quite figure out why Wallace should have thought Senator BREWSTER'S question funny enough to evoke 30 or 40 seconds of mirth. Nor does the record show that Senator BREWSTER'S expression, as he said, "we will take it all in," seemed to imply, "Well, maybe this man's got something on the ball but what it is, is beyond me."

WALLACE FUMBLES CUES

The transcript, at another point, reveals that Senator CLAUDE PEPPER, Democrat, Florida, very much a Wallace man, asked questions designed to give Wallace a chance to show that he had founded a profitable seed corn business and therefore had as good grounds as anyone else to say that he knew how to run a business. The transcript goes on:

"Mr. WALLACE. Last year this company sold more than $4,000,000 worth of seed corn. I resigned as president of the concern when I came to Washington, and shortly thereafter I got my brother into the business. Last night he called me up to wish me luck at the hearing this morning, and I asked just out of curiosity how much money the concern owed the banks at the present time and was told it was $800,000. Of course, if the sales of corn go well between now and next May, all of that money will be paid off. Last year, I believe, they borrowed something like one million dollars. They have always paid off the money they borrowed at the banks."

What the transcript does not show is that Mr. Wallace, in the minds of some of the Senators, did not make the very point he was trying to make—that the concern was a going one. Nor does it show that, because of lack of clarity on Wallace's part the impact on some of the Senators was that reflected by one who said later, "Was he trying to show that the criterion of success is how much one can go into hock to the banks for?"

Here are some of the other things that the transcript does not show: That Wallace read his prepared statement, which was a thoroughly-lucid presentation of his economic and political philosophy, in a manner that seemed to some of the Senators to be, to say the least, uninspired; that he startled some of them by appearing with his hair slicked down for the first time within their memory; that he sometimes slouched in the witness' chair in a way that took him too far from the microphones.

And topping all of the things that the transcript does not show are these facts:

That few of the Senators on either side of the aisle feel that they really know Wallace or understand what is going on in his mind.

That this feeling is so pronounced that some of them say, in private, that even if they subscribed completely to all the economic and political views of Wallace, they still would balk because of an indescribable feeling of uneasiness, at designating him as the instrument to carry out that program.

Report on Sentiment of German People in Aachen

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of reports of three American educators attached to the psychological warfare branch of the Twelfth Army group. These men carried on extensive conversations in an informal manner with German residents of the city of Aachen in order to determine their attitudes. The reports of this group are most illuminating and I feel justified in drawing them to the attention of the Members of the House:

I

LUXEMBOURG, January 8.—Some astonishing ideas about the state of mind of the German people have been brought out of the Aachen area by an intellectual task force composed of three American scholars. These men, surrounded by a material task force of tanks and armored cars, went into the area to do a job for the psychological warfare branch of the Twelfth Army group. In the course of their work they peeled off the armored escort, and talked as ordinary mortals to hundreds of German civilians.

What they found out changed some of their own basic conceptions of the Germany of today. The trio who conducted the brain penetration are Dr. Saul K. Padover, one-time assistant to the Secretary of the Interior and an authority on Austro-German history; Dr. Paul Sweet, professor of German history at Bates College, Lewiston, Maine, and Lewis F. Gitler, coeditor of German Psychological Warfare.

Dr. Padover stressed the point that the observations and conclusions of his colleagues and himself are personal, and in no way to be taken as official.

"To me the most astonishing thing that came out of our talks with these Germans," Dr. Padover said, "is their lack of nationalism. They don't want to govern themselves, and in a dozen different ways they expressed the same idea: They regard Germany's future as an Allied problem. One after another they expressed the hope that they will be treated as some sort of American colony. They declare that they are not at all ready for the burden of self-government. Instead of resisting the thought of being ruled, they welcome it with almost childlike relief."

Dr. Padover admitted that, like almost all of us, he had entertained the idea that the years of intense Nazi propaganda, combining nationalist themes with slogans of racial superiority, had created a fanatic German.

"But many Germans to whom we talked," Dr. Padover continued, "regarded nazi-ism as a kind of foreign rule. It was brought in by Hitler, himself a foreigner, and in the last years it was supported, in each locality, by SS troops and other forms of coercive police, from other regions."

Dr. Padover said he believed the weakness of German nationalism can be explained by the way the Nazis cut off the German people from their own history and cultural traditions. There was no German ideal, but a Nazi ideal; there were no German heroes, but only Nazi heroes, like Hitler and Horst Wessel.

He cited the case of a weaver's daughter who thought Bismarck was some kind of poet and Goethe a musician.

The father of an SS man, an old carpenter, told Dr. Padover he only wished the Rhineland could become some part of France or Belgium right away. An elderly school teacher voiced a common sentiment when she said: "Germany is kaput, and we would prefer our part of it to become an American colony."

An ex-soldier, who called himself a pacifist, declared, "I don't care what happens to Germany. I'm only looking out for myself."

A real-estate broker, a storekeeper, and a housewife all agreed that the Rhineland should become a separate territory, and this thought was advanced often enough, Dr. Padover said, to upset the common belief that the Germans want passionately to stick together.

Nor has racial indoctrination been a great success, he added. Young girls, when asked whether they would have any hesitation about marrying Frenchmen, Russians, or Americans, almost invariably responded that this would depend not upon race at all, but upon whether they were in love. When asked about marrying Jews, they expressed the same attitude.

The question of anti-Semitism, indeed, provoked some strange responses.

Many of these Germans had never known any Jews. Some said, "When the Jews were here they had stores, and you could buy things. Now you can buy nothing in the stores."

A factory worker and a girl, who had been in Hitler's Maiden League, expressed a common thought, "The attack on the Jews," they agreed, "was Hitler's greatest mistake."

On this point, Dr. Padover noted, "You invariably evoke signs of guilt. One woman told us she cried and cried when the Aachen Synagogue was burned because it was a place of God. Aside from the Jewish question, guilt and self-pity are the most common emotions. They pity themselves because they were forced into everything by the Nazis, and they feel guilty because they allowed this to happen."

II

LUXEMBOURG, January 9.—In my first dispatch I told how three members of an "intellectual task force," attached to the Psychological Warfare Branch of the Twelfth Army Group, had found German civilians in the Aachen area lacking any interest in the future of the Rhineland as a part of the German state, and lacking also in those traits of supernationalism which most of the world believes have been indoctrinated in the people by Hitler and the Nazi Party.

The three American educators who reported some of their astonishing findings to me are Dr. Saul K. Padover, one-time Assistant to the Secretary of the Interior, and an authority on Austro-German history; Dr. Paul Sweet, professor of German history at Bates College, Lewiston, Maine, and Lewis F. Gitler, coeditor of German Psychological Warfare.

In the talks of his colleagues and himself with civilians, it was found that once again the military caste had escaped as blameless, Dr. Padover told me. The generals, in the view of Aachen residents, only acted as professional men, doing their best, and moving under the necessity of carrying out the commands of the Nazi higher-ups.

It is accordingly the Nazis who are the scapegoat, and who are now blamed for everything. As one girl put it, who talked with the three American scholars, "The fatherland means the aims of the Nazi Party. You cannot love a fatherland that starts and loses wars."

Most of the civilians, Dr. Padover found, blame Hitler only for losing the war, not for launching it. Nevertheless, Hitler is blamed. And the SS are offered up for punishment.

"Shooting is too quick a punishment for them," the civilians say. "They should be made to labor as slaves."

An old printer, the father of an SS man, said with equanimity, "If the SS men must be executed as war criminals, let them execute him, too."

The three educators tossed aside the traditional form-following methods of question-asking in their investigation of the German mind. Instead, they held long conversations in which they extracted complete histories of Germans of every type. Railroad workers, printers, bookkeepers, factory hands, housewives, grocers, policemen, Nazi Party members, Hitler Youth members, doctors, and actors were all got to talking freely. Their attitudes on a variety of subjects were, directly or indirectly, brought out. The past of Germany was in their lives, the future of Germany was in their fears, and in these long conversations they inevitably revealed their true sentiments about the Allies, about Russia, about democracy and socialism, about war.

Padover, Sweet, and Gitler were astonished to find that 12 years of propaganda and persecution had not changed the convictions of old-time Social Democrats, Socialists, and Communists. They talked to many persons who had been through terms in concentration camps, and had come out stronger than ever in their original beliefs. One woman who had been a Communist deputy in the Aachen City Council, though three times jailed, had continued her anti-Fascist stand till the day the Americans arrived.

While there seemed to be no organized underground movement, these people nevertheless clung to their ideologies, and waited in the belief that Hitlerism had to pass.

They could not fight it any more. The machine was too strong. Only two of the people who talked to the Americans said they wanted to continue to fight. The rest believed the German people were helpless, and had to wait for Allied guns to liberate them.

Most Germans simply claim to be "unpolitical." There was a playwright who had retreated to a tiny hamlet where he wrote about ancient Greece; and there was the one-time mayor of a small town who simply retired.

"They said they were waiting for us as liberators," Dr. Padover remarks. "And they were quite distressed by our nonfraternization policy. Many of their people had hoped we would pick the Nazis and punish them, instead of treating all Germans as equally guilty."

Another surprise the scholars received, in these conversations with Aachen civilians, came from the attitude of the young, the 'teen-agers, whom they had expected to find thoroughly indoctrinated and fanatical. The fact was most of them expressed anti-Nazi sentiments.

"They want some kind of freedom," Dr. Padover explained. "They want to have fun and do the things other young people do, instead of being regimented. They don't know a thing about democracy, can't define it, don't know what it is, but they will all tell you they want some kind of liberty. They admire Americans because we have such great resources, and we are winning the war. Instead of hating us for beating them, they admire us as victors almost as though their own people were not concerned. This was one of the most startling signs of a weak nationalism. One kid even said, quite unconsciously, 'We live under the yoke of the Germans,' and made it plain he regarded the Nazis as an outside or foreign kind of government."

Dr. Padover added that he believed this generation of German youth can be saved by being given a set of goals and a wholesale indoctrination in democratic ideas.

"It is the generation of young Nazi adults," he said, "that contains the real fanatics, and many of them are beyond change. But the 'teen-age youngsters have grown in the midst of war. They are not at all beyond redemption."

These three men probably know more about the inside of Germany today than any other Americans. They were not inside much of Germany, but the sliver we hold is quite a typical sample. As one old Social-Democrat said, there are still thousands of Germans in jails and concentration camps for their anti-nazi-ism, which should be evidence enough that all Germans are not alike.

It would seem that we might have a harder policy against the Nazis and the SS men, and differentiate between them and the Germans who are glad to be freed. In any event, it is clear from the personal reactions of the men in this intellectual task force that at least one of our conceptions about Germany needs reexamination. We may be quite wrong about the intense nationalism of her people and about the fanaticism of her youth. We may save ourselves a great deal of labor and trouble and erase some fears if we investigate these suggestions fully and adapt our policy to what we find out to be the actual truth about the German mind, and the attitudes of the German people today.

Labor-Draft Bill

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. ELLIS. Mr. Speaker, under leave to extend my remarks, I submit to the House a letter received from Mr. Joseph S. Clark, of my district. Mr. Clark is a laboring man, a patriotic American, and a good citizen. As his views represent the opinion expressed by thousands of laboring men and women in West Virginia, I place it in the RECORD for the consideration of my colleagues:

WILLIAMSTOWN, W. VA.

Hon. HUBERT ELLIS,

Member of Congress, Washington, D. C.

DEAR MR. ELLIS: As a laboring man working at a local plant, I am pleased with your stand in regard to the labor-draft bill now before Congress. Not only myself but many of my fellow workers are of the opinion that this bill is but another way in which to bring American workmen to the status enjoyed by foreign masses—that of servitude and serfdom.

Already we are paying portions of our wages into so-called unions for which we receive no benefits; but only orders and reprimands. We are further compelled to meet W. M. C. requirements, pay the greater portion of American taxes, and give our brothers and sons as sacrifices on the altar of freedom.

We know that taxation finally is paid by the common people (hidden or otherwise) and we also know that practically all business dealing with Government orders are on a cost-plus basis.

We know, as do those now leading our Nation, that the average worker is a poor, misinformed creature, subject to all the propaganda and doctored truths given us by the glib tongue of the paid orator and through the press. Yet we know, too, that we of the silent masses have a greater power of reasoning than those in high places realize.

Yes, we workmen are, individually, bearing our burdens in silence—afraid and coerced by political and labor organizations. Still our mental status is as high as those front leaders who think we are but children

to be cared for by the hand of authority as it sees fit. Little do these leaders who would enslave us know the thoughts expressed in confidence by these children.

As men and as workers, we, the individual laborers of this Nation, ask only the right to work in a free atmosphere with as little regulation as possible. We are Americans, endowed with the love of freedom such as our fathers enjoyed.

Under the excuse of carrying the war to a successful conclusion, those in power would make us merely a part of the gigantic machine which they control.

Yes, Mr. ELLIS, may we thank you for your fight against the trend toward a nation composed of the ruled and the rulers.

Yours respectfully,

JOSEPH S. CLARKE.

Address of George J. Chryssikos, of New York, at the Naturalization Proceedings Held in the Court of Common Pleas of Hudson County, Jersey City, N. J.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George J. Chryssikos:

My new fellow citizens, a great many years ago I stood before the bench of the court in the same position as you are today. Several decades ago I took the oath of allegiance to the United States. I received my naturalization papers and became an American citizen. Like you, I was not privileged to be born in this country. Almost 40 years of enjoyment of the rights of American citizenship have reinforced my convictions that beyond doubt this is the best country in the whole world. I am proud to be an American citizen. Together with all other citizens I am grateful to the founders of this Republic because they made America a free country and placed the Constitution of the United States between me and all those who would deprive me of my rights. Whether in my home, or on the streets, or in a public conveyance, or at my place of work, or in this courtroom, I breathe the air of freedom.

This day is one of the most important in your life. You have crossed the bridge which separated you from the citizens of the greatest and safest democracy in the world. Today you have really entered the United States of America spiritually as well as physically.

From now on the Government of the United States is your Government—which means your servant and your protector. To many of you this is a novel experience, because not all governments are servants of the people. There are governments, we know, which consider the people as their servants and impose their arbitrary might on all except a chosen few. There are governments which, instead of protecting the people, subject them to all kinds of abuses.

As American citizens you are entitled and even expected to exercise control over the acts of the Government, to see that its three branches—the executive, the legislative, and the judicial—live up to their obligations, which include the promotion of the common welfare of the people, the safeguarding and perpetuation of the Republic, the inviolability of its laws, and the protection of the rights of the individual.

At fixed intervals you will be called to the polls to express with your fellow citizens in a decisive way your opinion regarding the administration of National, State, county, or municipal affairs by those in power. Your votes will be a factor in the popular verdict which decides the fate of every administration in this free country.

America has adopted you, trusting that you will contribute to its welfare and to its strength with the loyal performance of your duties as well as the exercise of your rights as citizens. It is of the utmost importance to your new country and to you that the ideals of rights and duties are completely balanced in your conscience. This essential balance will be effected if you realize that your private welfare lies in the welfare of the country.

Your adopted country is now fighting for its very existence. It is fighting for its freedom, for its rights, and for its place in the world as a great nation. Its enemies are your enemies. Their success in this war would mean that you, as American citizens, would have to submit to their dictates, to accept whatever fate their savage selfishness, their greediness, and their hatred of freedom would reduce you to. To defend your rights so threatened, you, your sons and your daughters, your brothers and your sisters, must defend the country to the utmost of your power. You must be ready to do all that the safety of America and its future requires You must accept cheerfully every sacrifice which is required of you for the complete and final defeat of the enemies of the United States. The war which this country, allied with the United Nations, is waging against Germany and Japan is the supreme test of the loyalty which you have solemnly sworn to the American flag. Victory over our common enemies must be your most fervent wish. Its achievement must ever be the common aim of all those who take pride in calling themselves American citizens.

Millions of American men are now called upon to shed their blood, it may be to give their lives, in defense of our country. We on the home front must bear with courage and fortitude whatever our chosen representatives and public officers, in the exercise of their wisdom, ordain as necessary for the welfare and safety of our fighting men and women, whose particular needs must come first. Our individual interests must remain secondary to the general interests of our country. In this time of great emergency, every citizen is called upon to contribute his mite to the prosecution of the war. When victory comes each of us will then have the opportunity to receive his individual share of the great bounty of our glorious country; but let us remember, this share will, of course, be measured by the degree of the personal contribution that you and I have made to the welfare of our Nation.

Tune In on Capitol Hill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from This Month for March 1945:

TUNE IN ON CAPITOL HILL

(By Victor Riesel and Paul Sann)

Suppose, weary of such moth-eaten radio fare as John's Other Wife, Stella Dallas, or Life Can Be Beautiful, you flicked your dial one afternoon and heard:

"Ladies and gentlemen, we bring you now the Senate of the United States."

And for the next 3 or 4 hours your loudspeaker brought you a debate on the most controversial issue of the day.

Now, this isn't going to happen tomorrow, or the day after, but it is an intriguing postwar possibility. In the past session of Congress, one Representative introduced a resolution calling for the broadcasting of the deliberations of the House and Senate.

The resolution died, of course, because the suggestion is both impractical and premature as of this moment, but it does reflect the people's rapidly growing interest in the day-by-day proceedings of the councils which govern them.

The daily newspaper, crammed with global reports in place of lurid sex crimes and local trivia, best illustrates this hunger for first-hand information on the social, economic, political, and governmental currents affecting daily life—not only in the world capitals but even in the most remote crossroads hamlet.

In a sense, this is a projection of the old town hall sentiment onto the vast and limitless scale opened up by radio and the coming perfection of television and frequency modulation (FM).

Even now, almost unnoticed, this process is well under way. Witness the success of such radio programs as the Town Hall Meeting of the Air, the People's Platform, the Chicago Round Table of the Air, and the scores of radio forums on contemporary events. The key to the popularity of this type of broadcast lies in the unrehearsed spontaneity with which Government officials and other experts present their plain, uncensored opinions on big issues.

On another scale, this same increased interest in the economic and social phenomena of our time has accounted for the spread of broadcasts devoted to labor arbitration and the domestic problems of wage earners.

As far as municipal affairs are concerned, the New York City Council, airing all of its sessions over the city's own station, WNYC, built up a listening audience of 1,000,000 persons per broadcast. The council proceedings in those early days of its organization frequently were devoted largely to bombast and petty bickering.

Even at that, however, a Princeton University study of WNYC's mail showed that three of every four listeners reported increased civic knowledge, while half of them said they would use the information thus gained, in voting.

City Hall cynics used to refer to the broadcasts as the "funniest show in town," but for all the political word slinging, the real issues were aired. The study brought out that 49 percent of the listeners regarded the broadcasts as educational, 15 percent considered them entertaining, 32 percent viewed them as both educational and entertaining, and 3 percent saw them as propaganda for one side or the other.

All in all, "the relationship between the city government and the citizen is seen to be increased and strengthened by the broadcasts," the Princeton report concluded.

By the same token, the broadcasts provoked resentment against the ward-heeler type of politician who had not heretofore been exposed to large audiences. This man, schooled in the intimate and corrupt aldermanic sessions of the city's "tin box" era, found himself held up to a most unfavorable light in public debates with the new and progressive type of lawmaker elected to the council under proportional representation.

Indeed, the heavy WNYC mail provoked by the broadcasts showed a distinct anti-Tammany sentiment among the listeners. This, regrettably, killed the broadcasts after 2 years, for the Democrats had a majority in the council. Hardly satisfied with this

triumph, the Democrats since have tried to wipe out the station itself. But they have failed, and today Mayor LaGuardia's regular Sunday afternoon broadcasts, covering the whole broad range of municipal problems from the supply of meat to taxes and the subway fare, attest to the station's popularity.

Toledo and Buffalo also have broadcast official city government proceedings.

The only national experiment in this field is that of New Zealand, which started broadcasting the sessions of its house of representatives after its Labor Party came into power in 1935.

Labor Party officials initiated the broadcasts, first, because they felt that the press had been unfair to their cause, and, second, because they considered New Zealand an unusually politically conscious community. The physical set-up of the parliamentary broadcasts consisted of distributing microphones at intervals before the Government and opposition benches.

In the beginning, the full daily session was aired; later the broadcasts were limited, with the house going off the air at 11 p. m., although the sessions frequently lasted much longer. This necessitated some adjustment of normal parliamentary procedure—an equal number of speakers from both parties had to be given the floor in debates, and equal time had to be allotted to them during the more popular listening hours.

When the war broke out, the speaker of the house was vested with the authority to suspend the broadcasts when they tended to touch on military secrets.

For those who preferred music, or programs in a lighter vein, the Government thoughtfully provided a variety of broadcasts over its own local stations during the hours of the Parliament airings.

In this latter connection, it is interesting to note that Parliament had by far the biggest daily listening audience. Just as in New York City's venture in broadcasting, the New Zealand lawmakers had their moments of pointless debate on trivial, purely partisan issues, but the people listened. The tomfoolery was outweighed, in the people's mind, by the right that accrued to them to sit in on the sessions of government.

The use of the radio as a medium of education on public affairs has caught the imagination of the American labor movement. The Congress of Industrial Organization's Chicago Convention early this winter voted to enter the broadcasting field through the operation of commercial FM stations.

C. I. O. leaders view FM as the answer to the restrictions placed on labor by the big networks. The 5,000,000-member organization has instructed local union leaders to study their community problems in preparation for applying to the Federal Communications Commission for licenses to operate FM stations.

The United Automobile Workers, largest union in the world, already has filed application for six noncommercial, educational stations in Newark, Chicago, Detroit, Flint, Cleveland, and Los Angeles, where it has large memberships. The union hopes to broadcast its regular meetings.

These broadcasts of the future, aimed not only at the Nation's 15,000,000 organized workers but also at the man in the street, might well condition the American public to the point where it would demand the same privileges extended to the people of New Zealand—that is, the right to tune in on the men governing their lives.

What Our Men Overseas Are Thinking

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maj. William H. Burnham:

WHAT OUR MEN OVERSEAS ARE THINKING

(By Maj. William H. Burnham)

How the minds of the men in the armed forces are working; their attitude toward the future; and what they expect when they get home, should have a bearing on all plans being formulated for their future.

To get a background for the reactions of these men, let us briefly look at what happens to them if they land in the Pacific area. First, most of them are terribly young. The average age in our fighter squadrons, including the older officers, was just 22. These boys have been taken from life during their fun period when movies, whistling at the girls, leaning against the drug-store window, should have been their normal pastimes. They are plunged, after some training, into an environment of which they had never dreamed and onto an island of which they have previously never heard. They may be in the assault wave wading ashore; they may fly in; or they may follow on transports, but regardless of the method of arrival it is all new, strange, and trying.

KEEP THEIR HUMOR

They see their friends die; they subsist on rations full of vitamins but lacking beefsteak appeal; they sleep on the ground until the tents go up; they have no showers or latrines until they build them; everything in fact which they associate with home life disappears quickly and to them apparently finally—everything except their humor and wit—thank God.

Is it any wonder then that these youngsters with plenty of time to think balance the pros and cons of questions, estimate the real values of life (though they would never admit it) and have the outlook of mature men? They are dealing with life in the rough and raw. Sham, political trickery, and the self-inflated importance of others are quickly penetrated.

These boys are realistic, yet they are not hard. All we have to do is to watch them with the dogs, the chickens, the goats, the pigs (all of Japanese origin) or see them finding chocolates for the native kids, to realize that underneath they still have those instincts of kindness and the home touch which made them outstanding among all the other soldiers of the world. They are not tough, or hard but they are realistic and factual.

SEE WAR AS A DIRTY BUSINESS

How are they thinking? Let us first take their attitude toward the war. In it there is little or no glory for them. They see it as a dirty business that has to be done and their one object is to do it quickly and thoroughly. On the return from missions in which there has been a fight with the enemy the entire discussion between them and their pals may be a thumbs-up gesture—an O. K., a pretty tough, or have they heard from Jonesie yet? They are not talkers nor do they believe they are doing anything particularly outstanding. It's their job. After a mission when 14 Jap fighters were shot down by one of our squadrons—a banner day—the intelligence officer had difficulty in ascertaining who had shot down what until the bomber crews whom they were protecting arrived and talked, out of gratitude. Their modesty, if it can be called that, is refreshing and it is not false. There is nothing about these fighters of ours which is false. They are realistic, clear-thinking, hard-hitting men.

These men receive medals—the Distinguished Service Medal, the Distinguished Flying Cross, the Air Medal as incidental to their business of winning and finishing the war. You will see most of them wearing them in the States—never in the combat zone—for as one squadron commander who had been on leave said to his pilots when he returned, "you better get some medals for when I walked down Market Street, San Francisco, with no ribbons on all the kids hollered, 'slacker.'" Incidentally he had the Distinguished Flying Cross.

These boys are creative, imaginative, and desire to be busy. The self-constructed showers not only showed initiative but imagination and a certain resourcefulness in acquiring pumps, both manual and gasoline, which had all the appearances of Government issue. They have built themselves tables and chairs and, due to the ever-pressing laundry question, have constructed hundreds of washing machines with the plunger made of old Spam cans, the tub wall of a Jap gasoline drum, and the propelling energy, not himself but the wind, harnessed by means of a windmill, and the discussion between the inventors as to the most efficient angle of the blade is endless. The shell necklaces and bracelets made by them would probably, if laid end to end, stretch to Tokyo, and will.

DREAM OF GOING HOME

These boys are homesick. Regardless of whether they come from Florida, Maine, California, Connecticut, Kansas, or Ohio, they dream of home constantly, of their return to their families, to their normal life, and to a job. What do they mean by a normal life? They think of a job with chance advancement. They dream of being with their wives and kids or of marrying and raising children. They have a great desire to return to their own place in a normal world and resume their contacts of social nature. These rights they have earned, and it is up to everyone at home to see they get them. Here in this State, the Connecticut Reemployment Commission, created by Governor Baldwin and headed by Carl A. Gray, and local reemployment and veterans' advisory committees are doing a tremendous job. But all of us must be vigilant. We are only beginning to tackle this problem.

WANT INDEPENDENCE

These boys do not want to be dependents. They are too proud. The word "bonus" was not heard in 2½ years of close association with these men. Even the wounded want only the right to earn their way in life. I still remember the look on the wounded Tarawa marine veteran's face when I stepped back to let him go ahead of me on the carrier coming from the Gilberts campaign.

Let us bend every effort then to see that they do not fall the prey of professional organizers eother through discouragement or believing themselves nonadapted to this world. Let us bend all our thinking and work to finding him a job—a proper job—and to helping him establish himself in the second new environment he has had to face in the past 2 years.

These men will be more tolerant than when they went away. When the bombers are overhead they are not thinking of whether it is a white or black, a Jew, an Irishman, a Czech, or a Chinaman who is

driving the enemy away either by manning the antiaircraft or piloting the fighter.

What do these men fear? Not the enemy, certainly; not that they will be killed, wounded, or maimed, but:

1. That there will be no job for them upon their return.

2. That the old-fashioned run-around from pillar to post will be their only reception.

3. That inertia, improper planning, and inactivity will find industry, education, the community, and their families unprepared to aid them in readjusting themselves to the peaceful world they have won for us and themselves.

That these fears do not become a reality is our responsibility—yours and mine. We cannot and must not fail.

Francisco Aguilera Joins the Hispanic Foundation

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. BENNET of New York. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I include an article by Dr. Henry Grattan Doyle, dean of George Washington University, and president of the Cosmos Club, of Washington, which appeared in the December 1944 issue of Hispania. It is my information that the appointment of Senor Aguilera as Assistant Director of the Hispanic Foundation of the Library of Congress marks the first time such a high rank has been given to a Latin American. The article is as follows:

FRANCISCO AGUILERA JOINS THE HISPANIC FOUNDATION

Dr. Archibald MacLeish, the Librarian of Congress, has announced the appointment of Sr. Francisco Aguilera, a citizen of Chile, as Assistant Director of the Hispanic Foundation, the Library of Congress, of which Dr. Lewis Hanke is Director. Sr. Aguilera brings to his new task wide experience as a writer, teacher, educational administrator, and lecturer, and demonstrated ability as an interpreter of Hispanic American civilization to English-speaking Americans and of Anglo-Saxon American civilization to Latin Americans. A poet of real inspiration, he has not only produced original verse but skillful Spanish verse translations of poetry originally written in English, notably MacLeish's Conquistador. He has a wide acquaintance with writers and artists throughout the hemisphere. His fluent command of English, both literary English and everyday American, combined with his exceptional skill as an architect of words in his native tongue, makes him an ideal choice for the position he has assumed.

Francisco Aguilera was born in Chile in 1899, and holds degrees from the University of Chile and from Indiana University. He also did graduate work at Yale University. He came to the United States in 1920, remaining until 1928, when he returned to Chile to become assistant professor in the Institute of Philology, University of Chile, and director general of secondary education in the schools of Chile. He also served as an editorial writer on La Nación. In 1930 he returned to the United States. His teaching career includes 2 years as instructor in Spanish at Williams College and 11 years as instructor in Spanish at Yale University under the late Frederick Bliss Luquiens. For the past 9 years he has been connected with the division of intellectual cooperation of the Pan American Union, and for the past 2 years has served as assistant director of the Washington Inter-American Center, holding this post concurrently with that of assistant director of the division of intellectual cooperation at the Pan American Union.

In addition to numerous original works in prose and verse and many translations, Sr. Aguilera has been since 1938 a contributing editor of the Handbook of Latin American Studies, published by the Harvard University Press. He has also collaborated in the preparation of a number of textbooks, among them the Whitman and Aguilera Course in Spanish Composition (Longmans, Green); Introducción a la Historia de la América Latina (D. Appleton-Century Co.), on which he collaborated with Prof. Ernest J. Hall, of Yale University; and a forthcoming record-and-textbook course, New World Spanish on Victor Records, prepared in collaboration with Henry Grattan Doyle. He has contributed many articles and reviews to learned and literary journals in Latin America, Spain, and the United States, among them some significant reviews published in Hispania. Among the principal duties of the new Assistant Director will be that of developing the collections and services of the Library in the field of Hispanic languages and literatures.

Dr. Robert C. Smith, the former Assistant Director of the Hispanic Foundation, has been transferred, along with the Archive of Hispanic Culture, which he directs, to the Division of Prints and Photographs of the Library of Congress, of which he has been appointed Assistant Chief. Dr. Smith will also serve as Exhibit Officer of the Library. Dr. Smith will contribute to these important assignments exceptional skill and wide knowledge.

Sr. Aguilera's appointment brings into the service of the Library of Congress, and therefore of American education and scholarship generally, a man who is almost unique for his possession of a variety of talents, aptitudes, and experience, all of which can contribute in sound and scholarly ways to the development of the Hispanic Foundation and, in the larger sense, of inter-American intellectual and cultural relations. Several years of close association, as friend and collaborator, have given me a deep respect—indeed, a tremendous admiration—for Francisco Aguilera. His contribution to the Hispanic Foundation will, I am sure, be noteworthy and lasting.

HENRY GRATTAN DOYLE.

Are We Children?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. HOFFMAN. Mr. Speaker, are we children who must be kept in ignorance of the real purpose of the administration until it has attained its end? All too often from London or Moscow we first learn of the foreign policy of the administration, of the whereabouts of the President and his advisers. Many times news of what our fighting men are doing, of what is happening to them, comes to us first from foreign correspondents, our own American newspapermen having been smothered under a cloak of secrecy. That is not as it should be.

Not only is this true as to foreign policy, but here at home the Government moves by indirection, concealing its true purpose. Congress is told it must support a bill because it is a necessary war measure, when in truth it is nothing of the kind.

A recent illustration is the so-called work-or-fight bill, which was jammed through the House with specches by the administration's leaders telling us that it was necessary for the successful prosecution of the war; that men and women must be conscripted to work in the factories in order to get munitions of war.

The bill is now stalled in the Senate because administrative agencies cannot agree as to how the power given should be used.

Just a few days later, the same administration forced through a rubber-stamp Congress a bill which will require 27,000 employees to take a farm census at the cost of $15,000,000, and at the same time refused to adopt an amendment which would make them subject to draft.

That is to say that, while, on January 2, the President issued a directive under which essential farm workers are being inducted into the service, on February 7 the administration refused to accept an amendment which would make the 27,000 Federal employees taking the farm census subject to the draft, as are agricultural workers.

If essential farm workers are to be drafted, is there any reason why Federal employees taking a census and who are eligible should not be drafted?

NAVY HOUSING

Recently the House gave the Navy $1,500,593,500 to carry on the war. But the Navy has never had authority to build housing for its civilian employees. Authority and money for that has been given to the F. H. A., but back came the Administration on the 7th and asked the House to permit the Navy—not the F. H. A.—to spend $41,265,000 for housing facilities.

For Federal employees the Government has built hundreds of homes which have never been occupied. So the House turned down the Navy's request to spend $41,265,000 for homes. Congress has never refused to give the Army and the Navy whatever it asked to further the war effort, but there are indications that it is not going to permit either to go into businesses which do not further the war effort.

DRAFTING OF NURSES

Next week Congress will be asked to vote on a bill to draft nurses into the armed service—this notwithstanding the report there are between seven and eight thousand registered, graduate male nurses available who the armed forces are not using.

In my judgment, there is no need to draft nurses. Women are just as patriotic, more willing to make sacrifices, kinder and more charitable, than are

the men and, if the Government will shorten the nursing course as it shortened every other line of training, give adequate pay and competent instruction, it will get all the nurses that it needs.

So long as New Zealand, Australia, South Africa, and Canada—integral parts of the British Empire—refuse to draft their men to carry on the war, I can see no reason why we should draft our women for foreign service.

ADMINISTRATION'S PURPOSE

Today, though we are engaged in two great wars, the administration, instead of devoting its whole attention to the wining of those wars, is still following its 1935–37 policy—a policy of strengthening its political fences; of spending; of the grabbing of power by the Federal Government; of centralization and regimentation, ignoring the fact that our history, prior to this war and our experience in this war, have demonstrated that a free people will voluntarily outproduce and outfight a regimented people, a totalitarian nation.

Let the administration tell us what it wants and, if its causes are just, there will be no slackers.

Lincoln's Ideals Must Be Ours Today

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of Hon. JOSEPH W. MARTIN, Jr., minority leader of the House of Representatives, at the Lincoln Day dinner, Hotel Statler, Washington, D. C., Thursday, February 8, 1945:

It is a happy privilege in behalf of this magnificent gathering of Republicans to extend a warm welcome to the able and distinguished Governor of New York, Thomas E. Dewey.

In 1944 he was selected to carry the standard of the Republican Party. He made a forceful, vigorous campaign, was only a scant distance back of victory. Twenty-two million Americans wanted him for President and so expressed themselves in a campaign conducted during a great world war. That was a remarkable tribute of confidence.

Governor Dewey, we are delighted to have you with us; we will enjoy your address and wish for you a most pleasant stay here.

We are assembled tonight to again pay homage to and reaffirm our faith in the character, the ideals, and the labors of a great man, a great American, the father of the Republican Party—the immortal Abraham Lincoln.

Lincoln had the courage, the statesmanship, and the knowledge to preserve the Union; he mobilized democracy; he shattered the shackles which held the Negro in bondage. These were acts of a mighty leader. But Lincoln lives today in the hearts of liberty-loving people everywhere on the globe because he dedicated his life and his work not to a single country or a single race, but to all mankind and the whole world.

As equal justice, tolerance, individual freedom to all were the ideals of Lincoln for his own countrymen, so were they his ideals for mankind everywhere.

Lincoln placed duty to his country high above partisanship in his day; we, today, place duty to our country high above partisanship. But we must, at the same time, be alert that saboteurs do not secretly undermine the foundations of our free Constitutional Government, our free economy, and our free society while we are fighting to uphold our high ideals on battlefronts all over the world.

The present war is a war of all the people, irrespective of race, creed, or color. The issues of victory will vitally affect not only the present generation, but the liberty, the privileges, and the happiness of hundreds of millions who are to come after us.

We hope we are in the final phase of this terrible war. But victory—complete victory—must be our first consideration until it is assured.

Lincoln in his day fought to preserve the greatest experiment in free government ever attempted by the human race. We today must fight to preserve it. Democracy is not only the ideal of free souls; it is a system of enlightened production and distribution.

Ours is a biparty system of Government. Every problem of the Nation is the problem of the Republican Party which Abraham Lincoln founded. Just as our party had its birth to preserve the Nation, so today it is dedicated to the task of saving the Nation.

America faces many serious problems. Problems confront business, private enterprise, free agriculture, and constitutional government.

All citizens who firmly believe in the principles and the way of life which have made this country great and its people happy, have become gravely alarmed as they have witnessed the growing governmental controls, regulations, and restrictions, some of which, born of the necessities of war, now threaten to become a grave menace to our traditional freedom. Red tape and regimentation are falling over their own feet.

Lincoln did not fear to speak out plainly when he felt plain speaking was needed for the welfare of his countrymen. We must not fear to speak plainly today for the welfare of our country. We must expect to face violent criticism and abuse, but American ideals can be saved only by plain talking, and honest, forthright action.

We must not underestimate the cleverness and the perseverance of those who do not want our traditional American way of government, economy, industry, and society to exist in post-war America. The war has given a tremendous impetus to those who are joined, in effect, in a broad alliance of various shades of fascism, communism, socialism, leftism of one degree or another.

The schemers diligently spread their alien doctrines through the newspapers, over the radio, in book or pamphlet, from the public platform and in the colleges. They have the right, guaranteed by our Constitution, to propagandize. No one would deny that right. But we who do cherish our sacred heritage must fight back. We must not let them sabotage freedom in America.

These alien doctrinnaires smear characters, undermine accepted American institutions and practices, create doubt and suspicion, ridicule, lawful government of, by, and for the people. They endeavor to create public hostility against the Congress as an institution, belittle our concepts of free enterprise and equal opportunity. Their purpose is to tear down the Constitution and replace it with absolutism. Only through untiring vigilance can they be prevented from attaining these objectives. We must maintain our democracy as a mutual-benefit society.

Many of these advocates of totalitarianism have infiltrated into Government bureaus and departments. Their political theories may vary, but they are bound together in one common basic aim. That is to get control of sufficient governmental machinery and worker organizations to be able to restrict, regulate, and regiment all of America. Let's not let democracy be the greatest casualty of the war.

I have said a major part of the design of these schemers is to discredit the Congress. A typical example of this well-planned effort was in evidence last year during the consideration of a bill providing a means of voting for members of the armed forces. Most of the Republicans and a substantial number of Democrats advocated a law providing for observance of constitutional methods in the exercise of this most important right of the citizen. The administration and its faithful propagandists denounced the adherents of the Constitution as trying to deprive the soldiers of their ballots. Of course, the contrary was the fact. We desired to give the soldier a full ballot—one just as good as the civilians had and which could lawfully be counted.

The constitutional adherents won and the soldiers had their ballots.

Now comes the Secretary of War with a statement which fully justifies the fight we made for a full State ballot for service men and women. Of 7,800,000 eligible to vote, the privilege was exercised by 2,800,000. That is a pretty good proportion when we consider how widely scattered our service people were and how many of them were engaged in combat duties. But more significant is the Secretary's statement that in the 10 States which afforded the opportunity of a choice, 34 percent used the State ballot and only 2 percent the so-called bob-tailed ballot, advocated by the administration.

Thus we have complete justification for the attitude of the Congress. It is something to be borne in mind when next the propaganda pack gets busy.

A philosopher once said: "A democracy that goes to war, if beaten, loses its liberty at the hands of its adversary; if victorious, it loses its liberty at its own hands." You say that cannot happen here. Well, maybe not. I hope not, but I am not too sure, unless we exercise ceaseless vigilance.

"A house divided against itself cannot stand." America cannot remain free, half socialistic and half a representative republic. We must either be completely a democracy or entirely a socialistic autocracy. I am for a complete representative republic.

The war brought to the executive branch of the Government power and controls undreamed of in peacetime. It is a trait of bureaucrats always to try to stretch their powers beyond those limits intended by Congress. We have seen these powers many times expanded. It is historic that bureaucrats will cling tenaciously to power over the people even after the need for the exercise of such power has passed. Administration officials are already insisting these controls must continue after the war. Some even intimate they must remain over us for all time.

Thus there hovers over our Nation the threat of complete domination by a bloated bureaucracy. To a very great degree, the people must depend upon the Republican membership of the House and Senate to rescue them from such domination. Fears of primary reprisals, threats of purges, and loss of patronage cannot prevent us Republicans from discharging our responsibilities to the people. We intend to safeguard the people against bureaucratic abuses and excesses of power. We will be ready to fight for the return of these powers to Congress when the war emergency is over. We shall demand the correction of abuses of power whenever and wherever they appear. The Bill of Rights

is not a bill for bureaucratic extravagance and waste. It is irresponsible borrowing and spending which make wildcat dollars.

As Lincoln well said: "Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them."

And it is to the Republicans in Congress, and patriotic Democrats who may join with us, the people of this country are looking to save their liberty. We must not fail. We must not accustom the people to bondage through new-fangled political nostrums.

A problem fundamental to all freedom confronts us. Shall we continue to have virile private enterprise, functioning so as to give individual opportunity and jobs for all who want to work? No one can deny that under our system of economy, the people of America have made greater progress and have enjoyed more of the good things of life than under any other system yet devised by man. There is no substitute for liberty.

Yet danger signs are everywhere. The reasons motivating the substitution of Henry Wallace for Jesse Jones are deep and significant. One can readily visualize the difference such a change could make in our postwar economy. As director of the many functions of the R. F. C. and other loan agencies, besides being Secretary of Commerce, he could go far to impose on us state socialism or any other "ism."

That is why the people of this country are opposed to his confirmation as Secretary of Commerce. No more important vote will be cast in the next 2 years than the roll call on his confirmation.

The nomination of Aubrey Williams as Administrator of the R. E. A. further intensifies the threat of a regimented state, some form of bureaucratic state socialism. Williams' governmental record is not too inspiring. He was one of the happy spenders of the W. P. A. He scattered funds with reckless abandon as head of the National Youth Administration. His chief qualification appears to be his ability as a political organizer, and it is suspected that is the chief reason for his appointment. He can help his good friend Henry to gather in the Democratic Presidential nomination in 1948.

The policy revealed in the Wallace and Williams appointments is particularly alarming. They demonstrate utter disregard for fitness or ability to serve this country in the most critical hour of our national life. There is no pretense of efficiency. The form of government is important, but the spirit of government is vital to the people's liberty.

The President states the reason for such appointments bluntly and frankly in his letter to Mr. Jones. He says Henry has earned, because of his vigorous support of the New Deal fourth-term campaign, any place in the administration he might ask for.

There is the policy in words no one can misunderstand. High and vitally important posts go to individuals, not because of any qualifications for the job but as political pay-offs.

Think of it. In a great war crisis, with tremendous post-war problems ahead, with the fate of private enterprise in the balance, we see an able, experienced businessman like Jesse Jones removed to make way for the payment of a political debt. And then they accuse the opposition of playing politics. Surely this is not the way to bring about national unity.

There are lessons to this country in these recent appointments. One is the need of electing men and women to Congress who will stand up and fight for honesty and sanity in Government and for the preservation of the American way of life. Another lesson which should be clearly manifest now is that it is unwise to give any individual too much power. That is why in the George bill now pending in the House we should adopt satisfactory amendments which will be a further safeguard against too great a grant of power to any one man.

The indifference of the administration to the rapidly expanding Federal debt; the urging of vast expenditures after the war without consideration of how the necessary revenue shall be raised; the continuance of a tax system which stifles financial ventures and industrial expansion; these all would be the policies pursued if one wanted to precipitate a crisis which would bring about a radical change in our way of life.

Some day this war will end. Millions of men and women will be coming back home from the fighting fronts. They will be coming out of the shipyards and the war factories. They will want jobs, real American jobs at real American wages, under American working and living condition; they will want a future glowing with hope for a fuller, richer life.

These men and women will have done their full share in winning the war. They will deserve every chance to live happily, peacefully, and well, with their loved ones. Our task is to see that they have that opportunity. They certainly cannot get it under the system now being fashioned by the new dealers.

Congress must do its part through the adoption of sane, forward-looking post-war plans, which will operate to provide our service people and defense workers with good jobs.

We must, at the earliest possible moment, pass a practical tax bill which will give merited and necessary relief to individuals and business enterprises. A tax bill which will lower the tax taken from the individual, which will release additional purchasing power; will result in more jobs for all. A tax bill which will give business enterprise an opportunity to retain a fair share of its profits will encourage expansion and create new activities which will be needed if we are to secure full employment. We Republicans have a study committee working on that subject. We will be ready with a proposal when the time comes.

In the Central and South American countries will be opportunities for increased trade. Through a greater interchange of goods, more jobs will be created. China and Asia will need goods and services to an extent hitherto undreamed of. Europe must be rebuilt.

These are all potent reasons why we must take an active part in the reconstruction of the world. Our part can be just, helpful, humane, and philanthropic, without sacrificing the interests of America. A program fair to our own people, as well as to others, is the only policy that can endure and succeed over a long period of years.

Let's help the world, but let's do it in a way that will command the respect of the people we are helping. In that way, we can build for permanent peace and good will.

We Republicans have always recognized our obligations to the people of the world, as well as the people of America. We have always been ready for our country to assume her full share in keeping the peace of the world. At Mackinac, in the 1944 platform, and in the campaign of 1944, we forcibly and forthrightly demonstrated our position. Permanent peace, we have repeatedly declared, should be based upon the principle that all nations, small as well as large, have a right to expect a full measure of justice.

We can, if we wish, close our eyes to the danger signals which confront America. We can joy-ride today and console ourselves with the smug assumption that our country will somehow or other escape disaster. That would be the easy way. But it would certainly not be the right way; it would not be the honest way; it would not be the safe way. Nor would it be the American way.

Let us fearlessly face the facts. Let us deny ourselves some of the luxuries. Let's have the courage to fight to keep our free way of life so we can give the future generations of Americans some hope for a life free from regimentation and bright with the golden promise of equal opportunity for all.

A majority of the people are against the fumbling, bungling New Deal. It is our duty as Americans to unite this majority. Through aggressive leadership and through organization, it can be done. It must be done if the kind of America we love is to endure.

Address of George Maurice Morris, of Inter-American Bar Association, at the Inauguration of the Inter-American Academy of Comparative and International Law, Habana, Cuba

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 9, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave granted, I tender herewith to be printed in the RECORD copy of notable address delivered at Habana, Cuba, on January 8, by one of this country's most distinguished lawyers, Mr. George Maurice Morris, recently president of the American Bar Association.

The occasion for this address was the inauguration of the Inter-American Academy of Comparative and International Law. Mr. Morris and his associates in the American Bar Association, and members with similar high purpose of other bar associations of the Americas, in bringing together American lawyers in association and comradeship and in enterprises such as this in which all the peoples of the Americas are mutually interested, are doing a great constructive service for the peoples of the Americas and for the peace, justice, and good order of the world.

Following is the text of the address:

Something less than 4 years ago, the Inter-American Bar Association held its first meeting. That meeting was held here in this intellectually fruitful and brilliant city of Habana. It is doubtful if any action in even that historic conference has had a greater potential for lasting value than has been enjoyed by the vote of that gathering to create in this seat of learning and culture, Habana, the Academy of Comparative and International Law. Men of vision and courage proposed that resolution; [1] men of faith voted for it. There was then no certain indication that funds [2] would be forthcoming to support such a school or even that teachers or pupils could be found to people it. Nevertheless, we all realized the tremendous aid to mutual understanding and the international spirit which such an institution could contribute.

Great as we knew the potentialities of such an institution were, it must be confessed that

[1] See Proceedings of Havana Conference, vol. 1, pp. 167–168; 386–389.

[2] Decree No. 2249, issued July 31, 1943, Gaceta Oficial, August 5, 1943, p. 13443, and decree No. 2302, issued July 29, 1944, Gaceta Oficial, August 7, 1944, p. 12710.

many of us voted for the project with sensations of hopefulness predominating over those of expectancy. And here and now, in virtually no time at all, and to our happy surprise, we are about to see, in being, that which so short a time ago appeared to some persons as only a remote possibility—an academician's dream.

Little did the doubters know of the determination and energy of the men of Cuba, who were chosen to organize the academy. Tribute should be paid to those men on this occasion. In naming them one risks the accusation of incompleteness through leaving out others who should be named but certainly three men are in the group to whom high commendation is due. They are Dr. Manuel Fernandez Supervielle, the distinguished first president of the Inter-American Bar Association, Dr. Ernesto Dihigo, the indefatigable chairman of the organizing committee, and his colleague, the learned Dr. Juan Clemente Zamora. Upon behalf of the Inter-American Bar Association,, we commend and thank these men and their associates for the interest, the time, and the personal sacrifices which they have contributed in the inauguration of a project so close to all our hearts. These men have given fact to what with us was only a hope.

One of the prominent members of the academy's first faculty, Dr. James Oliver Murdock, has said something born of his experience as a student, a teacher, a scholar, which at this moment it is appropriate to repeat. Professor Murdock states:

"International and comparative law can best be studied in an international atmosphere where students and faculty, sitting down together, are from diverse countries. An environment is afforded which is not possible when they are all from a single country. There is an exercise in the application of the tolerant spirit which evolves from oral discussions with persons of different nationalities. The restraints and capacity for understanding resulting from such exercise are priceless in conducting international relations. An academy, such as that instituted in Habana, inescapably will furnish this exercise to a degree which no quantity of reading and lecture attendance in one's own country alone will bring to him."

While the initial sessions of the academy may not furnish the diversity of attending pupils, which is desirable or optimum, certainly the faculty follows the principle of diversity and we probably have but to await a termination of the war and a broader knowledge of what is available here to see the desired diversity come to the student body.

In the intellectual intimacy which may be expected ultimately to develop in this school, the younger generation should get early something that their predecessors got later. Information, understanding, sympathy, humor, have been the payment we older men have begun to take from our investment of time and thought in the Inter-American Bar Association. These values are available, a generation earlier, to those who will invest their time and thought in the Inter-American Academy. The community stands to gain in the field of international cooperation as a result of the availability of such opportunities.

As session follows session and year follows year, the lectures offered and the round-table discussions scheduled at the academy should, when printed and circulated among the scholars, students, schools, and associations of lawyers, stimulate all recipients to a genuine interest in the constructive work of the academy.

We may have confidence, also, that the quality of the offerings of this superschool will add luster even to a community which has long known luster in its learning. One suspects that the problems of the future will not be the lack of appetite of the public for the wares here offered. "A good wine needs no bush." The problem will be to secure the financial support which will enable the hungry consumers of such wares to possess the time and the means to come and feast upon them. The Cuban Government has made the initial contribution. Let us hope that the demonstration which follows will induce other public and private donations to so worthy a cause.

Permit a conclusion which emphasizes that the world continues to need a concentration, or focusing of the thinking which men of these Americas have been doing with respect to the international and comparative law, which most relates to this region. Men of new countries with their new problems and new opportunities think new thoughts. They have a fresher approach. They are not too burdened by the crushing presence of past failures. Let us hope that some of this new world freshness will make its way into the thinking and the teaching of the men who will instruct here. Let us hope that men already able will talk and teach so well and so wisely, in this academy, that the pupils will progressively outshine the masters.

The world cries in agony for peace, for procedures through which men will resolve their conflicts without resort to force. May the work of this school advance the discovery and perfecting of those procedures.

May the blessing of our Lord rest upon this new House of Learning and upon all of those who strive within it.

American Farmers Cry Out

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1945

Mr. BENDER. Mr. Speaker, it was, of course, inevitable that selective-service problems would prove to be among the most difficult personal issues our country has ever attempted to solve. When 12,000,000 men are removed from the pool of civilian life, hardships of varying degree are certain to occur. The question raised by the May-Bailey bill proposing to draft IV–F's as it applies to the thousands of American farms is being answered by the men and women who live on those farms in an ever-louder outcry against the results of the new effort to induct young farm workers.

In farm county after farm county the fathers and mothers of these young farmers are pointing out the gravity of the new situation. They are not protesting against the service of their sons in our armed forces, but they are justified in pointing to the inequity of a situation in which farm work is not recognized as the vital contribution to the war effort which it is.

Farm folks listening to their radios nightly and hearing the reports of professional boxing matches, professional basketball games, and the many other diversions in which the strongest, best-conditioned young men of the land participate cannot be blamed for comparing the plight of their essential farms to the spirit prevalent among those who permit these nonwar activities to flourish among able-bodied young men of induction age. Our selective-service officials are charged with a duty to weigh the relative contributions of our civilian population to the winning of the war. That is all our farm neighbors ask. They have a right to be heard and their voices heeded.

The American Legion

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 5, 1945

Mr. MEAD. Mr. President, few organizations in the history of our country have contributed more to the common good or have followed a more constructive course with greater consistency than has the American Legion. There is hardly a patriotic or any related type of activity in which Legion posts have not made important contributions.

With more than 300,000 World War No. 2 veterans already members of the Legion, with roughly a third of the membership of the Congress composed of Legionnaires, and with 2,000,000 members in 21,000 Legion posts and auxiliary units in every section of the country, it is obvious that the American Legion is steadily gaining strength as a united force for victory, an enduring peace, and a strong Nation.

Recently Edward N. Scheiberling of Albany, N. Y., national commander of the American Legion, presented an impressive story of the Legion, its policies, purposes, and activities, before a distinguished group of leaders in the newspaper, magazine, radio, and motion-picture fields. The occasion was a dinner in his honor at the Waldorf-Astoria in New York City.

I ask unanimous consent that Commander Scheiberling's address be printed in the CONGRESSIONAL RECORD, and I commend it to the attention of the Congress as an inspiring story of a truly American organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Foremost among the many revelations being made to the world during this tragic war, is the marvelous power of the American people when with common purpose they face a grave emergency.

The United States stands before the world today, not a nation which bungles through, weak with the inefficiencies so often attributed to popular government. We stand as a united people of high courage on the battle fronts. We have shown vast resourcefulness for unparalleled production of the tools of war. But we are not as united in protecting and strengthening our democratic institutions; in seeing that they function for the common good and as a symbol of hope for freemen everywhere.

There is one reason, above all others, why we have progressed so notably in this conflict. It is because the great body of the American people—with few exceptions—forgetting all differences of racial origin, of religious beliefs or political concepts, have made the winning of the war their first order of business.

SOLIDARITY AND TEAMWORK

To the prosecution of the war, the American people have given their young men and young women; their resources and their most concerted effort. Solidarity and teamwork explain both our great productivity and the advance of our armed forces on opposite sides of the world. Solidarity and teamwork have brought into bold characters the outline of victory that was so dim and shadowy after Pearl Harbor.

We know now that if we do not relax our efforts here at home, but rather, if we intensify them to meet the urgent call of our military leadership for more munitions and supplies, the splendid progress of our armed forces, stirring our deepest faith and admiration, will continue unchecked until the forces of aggression are completely routed.

We must now resolve, as a people, to keep alive and in full play this national solidarity and teamwork and apply it in solving the great problems growing out of this war. At no time in the history of our country has there been a greater call for unity of purpose and cooperative effort, unity in speeding victory; unity in facing the vital problems of peace; unity in preventing another of these world conflicts; unity in preserving and giving new life to our processes of democracy; and unity in safeguarding these processes against the visionary theories that seem to breed in emergencies.

PURPOSE OF THE LEGION

It is our purpose in the American Legion to stimulate this national solidarity and teamwork, this unity of action, on those measures imperative to orderly demobilization and adequate jobs and opportunities; to the maintenance of individual freedom and the American way of life; to the safeguarding of our Nation from attack from any quarter; and to the development of an effective formula for maintaining peace.

The American Legion is composed of more than 2,000,000 veterans of World War No. 1 and World War No. 2 and auxiliary members. More than 300,000 veterans of this war are already Legionnaires and the number is steadily increasing. The Legion is national, State, and local. It functions through 59 departments, at home and abroad, and 21,000 Legion posts and auxiliary units.

The American Legion—veterans associated together for God and country—is the largest organization ever formed by the veterans of any nation's armies and navies. Chartered by act of Congress in 1919, the Legion lives and acts in accord with the preamble to its constitution, recited at the opening of every American Legion meeting.

LEGION'S CONSTITUTION

This preamble provides for what all Americans accept and none reject—preservation of our Constitution and all that it implies, nationally and locally.

To uphold and defend the Constitution—the first objective of every citizen—is to believe that it is worth fighting for and to be prepared to fight for it.

The American Legion wholeheartedly and consistently has supported a preparedness program knowing full well how greatly it is needed. The Legion regrets that our Government has not seen fit in years past to follow more closely some of our recommendations on national security and defense. The Legion has been particularly concerned over subversive and destructive movements within our borders which have necessitated costly action when war comes to make up for years of public indifference.

The American Legion prides itself on the programs it has advanced since its first national convention held in 1919. Through the years the American Legion has made studies, conducted research, and worked with the officials of the Federal Government on matters involving our national defense. The Legion has and will always advocate a sound, progressive, and intelligent program. Had it been followed our country would have been in a firm and respect-commanding position on Pearl Harbor Day.

PREVENTING AGGRESSION

World War No. 1 taught the American Legion that war-provoking acts of aggression are likely or unlikely in the ratio that the peaceful party is prepared to fight. That catastrophe also taught us that war's cost in blood and money is proportionate to the country's degree of preparedness. To make our Nation, its ideals, and its people secure from attack by provision for an adequate defense has ever been a principal objective of the American Legion.

The Legion also believes that the maintenance of a strong and adequately equipped Army, Navy, Air Force, and Marine Corps, backed by trained Reserves, is imperative.

Military preparedness, however, is not enough. We must carry into the post-war period the unity in citizenship that has made it possible for us to be the arsenal of democracy. We must train youth for the responsibilities of citizenship.

The Legion seeks to promote peace and good will among the peoples of the United States and all the other nations. The Legion believes that our country should participate in an association of free and sovereign nations for the maintenance of peace. It should have authority to act with whatever force may be necessary to maintain world peace and prevent a recurrence of war.

As I interpret the Legion mandates of its last three conventions, our delegates to this international association of free nations must be clothed by Congress with the power to represent the United States instantly and effectively. They must be ready to move on any international incident that threatens to engulf the world in war.

CONCERN OVER PEACE AIMS

It is disturbing to find that almost on the very eve of victory there is serious concern over the position of the United States on world problems after victory comes. We believe that the peace aims of the United States should be clear cut and known to all so that there will be widespread sentiment behind American viewpoints to be expressed at the peace table.

We also believe that representatives at the peace table should include those on both the production and fighting fronts.

Our peace terms, while firm and clear, must recognize that an industrialized nation depends on world trade. If we are to have an enduring world peace, we must recognize that war hatreds will in time be erased and the people of the world will again live together.

The Legion does not believe that peace and good will among peoples requires that we permit "enemies within our gates." We believe strongly that immigration laws should be amended and treaties concluded to provide for the immediate deportation of naturalized citizens whose citizenship may be revoked for subversive activities.

When the glad note of final victory sounds, and the way is being paved for peace, our job on the home front really begins. It will be up to all Americans to make good every glowing promise we have made to our fighting forces. It will require the highest degree of united action we have ever known. It will mean some sacrifices, but none that even begin to compare with the horror and suffering of the battle fronts.

DEMOBILIZATION PERIOD

However, the impact of the demobilization period can be greatly eased if we recognize now two highly important principles. They are:

First. That the rehabilitation of veterans and their readjustment to civilian life are as much a cost of war, as much a part of the over-all cost of defending our country and our way of life as any phase of actual warfare. We cannot afford to spend billions upon billions in wartime and then quibble over those few millions needed for the rehabilitation and readjustment of our fighting forces when peace comes.

Second. That the men and women in our armed forces, by every rule of right and fairness, should be entitled upon their return to pick up a competitive position in civilian life. Obviously, they should not be expected to start all over again to win the place in life they held before war came. Any attempt on the part of any segment of our people to maintain wartime advantages gained solely because of the absence of millions of men and women in the service will create one of the most tremendous employment problems we have ever faced. I am confident that public opinion will be on the side of those who are now on the global fighting fronts.

The report of the Legion's commission on post-war America, headed by our toastmaster, Louis Johnson, and including any other distinguished men offers an 11-point program for post-war problems. It is the Legion's bill of rights for constructive action in the post-war period. I commend it to the attention of all concerned with preserving our competitive system of business and indusary based on private initiative and individual ability.

Consecration to mutual helpfulness and service to their country is another pledge in the preamble to our constitution. Outstanding among the services of the American Legion has been its work with young people—in sports, in recreational guidance, and in inculcating patriotism and inspiring devotion to flag and country.

Let us look back for a moment. It was not many years ago that observance of the patriotic forms, so meaningful to youth, was frowned upon by many well meaning citizens zealous in their efforts to make war less likely. The word "nationalism" came to carry a sinister connotation and by many was used with contempt. Simple ceremonies such as the salute to the flag or the pledge of allegiance in the schools were condemned as conducive to a militaristic attitude. Pacifist youth movements flourished. The last war, it was alleged, was promoted by munitions makers and fought for bankers' gains. Many questioned whether, if our country ever again became engulfed in a foreign war, large numbers of our younger citizens would respond. You who have been so closely identified with the trends of public thought, know that I do not overemphasize the frequency, extent, or depth of this pacifist teaching. War was to be prevented by closing our eyes to its possibility.

VALUES OF CITIZENSHIP

During this uncertain period, the American Legion did not forget the deeper values and responsibilities of American citizenship. It helped to keep alive and vital among the youth of our country the spark of patriotism and a true understanding of the citizen's obligation to respect the flag. I do not need to mention that it is these young men, subjected in immature years to the idealistic

preachment that to avoid war one must only scorn it, who now make up the finest Army and Navy in our history.

One of the principal activities of the American Legion with young people has been in the Boy Scouts. For the last two decades, the American Legion has sponsored each year around 2,500 and 3,000 Boy Scout troops, and through its individual members, has worked with numerous others. More than three and a half millions of boys, under 17 years, have played on teams in the American Legion junior baseball competition, started in 1926. Half a million boys were enrolled last year. Here again the returns have been abundant in the physical strength and courage, and the sportsmanship and teamplay, which the large number of these young men have shown in the service of their country. Anyone will be impressed with the long list of major league baseball players—including some who have reached the pinnacle of fame in this sport—who have come up from the teams sponsored by our Legion posts; but they will be even more impressed with what this competition has meant in health, vigor, and sportsmanship, in sturdy bodies and strong chacter. Our survey in 1943 showed that approximately 90 percent of those who have enjoyed the advantages of Legion junior baseball are serving in the Army or Navy. They have a high average of physical fitness, important when we consider that 30 percent of all 18 year old boys have been rejected by the services due to physical defects.

LEGION ACTIVITIES

Another important phase of our work with young people has been the national high school oratorical contest, in which more than 120,000 high-school students in 47 States participated last year. They learned the fundamentals of our Constitution, the Bill of Rights, and other bases of American freedom. I need not emphasize the great importance of these local district, regional, and national contests to a proper appreciation of the values of our Government by our young people. Numbers of our posts augment this work by conducting essay contests in the schools on subject of Americanism.

Still another phase of these activities has been the establishment and extension of the institution known as Boys' State. Begun in Springfield, Ill., with 200 boys in 1935, this program has been extended to most of the States, and in all instances it has proved its high educational value in training our young men in practical American citizenship. Its object is to offer youth a better perspective of the practical operation of Government. To that end, a miniature commonwealth is organized by the participating boys, who form their own political parties, plan campaigns, and set up and conduct their own state, county, and municipal governments by electing their own officers, who in turn fill the appointive jobs.

WORKING WITH F. B. I.

The Legion has taken a leading part in combatting, on both a local and national basis, juvenile delinquency, which has been an unfortunate outgrowth of this present war. We have worked closely with the Federal Bureau of Investigation and with State and local organizations to correct the conditions that breed and foster crime. A program of visual parent education in the wartime care of children was included. This broad activity is now an important phase of the work of our many posts. Emergency financial aid was extended last year to more than 490,000 needy children.

The American Legion distributes annually 2,000,000 Flag Codes to educate citizens in the proper usage and respect of the Flag. It cooperates with the National Education Association in the annual sponsorship of American Education Week, and it cooperates with public education in its fight to "hold the line" against federal control. Its opposition to text books that do not strengthen adherence to constitutional government is well known. It operates 2,000 citizenship schools for the foreign born. It presents annually 15,000 School Award medals to inspire scholarship and leadership among the elementary schools. It conducts orientation courses in pro-induction basic military training in the secondary schools. Its Americanism program is positive and militant.

CHILD WELFARE WORK

Let me mention just one more activity of the American Legion. Since the establishment of the Legion's Child Welfare Program in 1925—5,900,000 children have been rendered aid and service. Ninety per cent of these children aided were with their own mothers or in their family homes.

What has been accomplished in the field of our youth activities has been repeated along many other lines. Our work ranges through the full panorama of American community and national life. Our solicitous care has always been extended to those who were disabled in the last conflict, and this work has been enlarged and extended to include the greater number of wounded and disabled of the present war. We want no delay, red tape or run-arounds in handling the claims of the disabled veteran. Across the country our posts have set up local organizations to cooperate with other public-spirited groups and with the agencies of the Federal Government in the pressing responsibility of reemploying soldiers and sailors returning from this war, or assisting them in the establishment of their own businesses or the creation of independent services through which they can, themselves, create jobs and contribute to reemployment and the expansion of our trade and industry. That kind of aid is fully as necessary as finding jobs, because these men may be expected to assume positions of leadership in our economic and social, as well as our political life. What organization could be better fitted than the Legion, with its personal experiences after the last war, to take the leadership in the restoration of our returning veterans to constructive service in our peacetime economy?

VETERANS IN CIVILIAN LIFE

The American Legion believes that assistance in the restoration of these men to civilian life does not constitute the entire problem. They need guidance in giving the country the leadership they have every right to aspire to during the years ahead. To put it plainly, we do not want this leadership touched with resentment or tainted with bitterness. That will come if special advantages are wrested out of the war effort by any group of our citizens. It will come if we do not produce out of this war an enduring peace. It will come if these men are forced to believe that the home public, by laxity or omissions, has in any manner let them down. That is why we must intensify our war production now, and keep the supplies and equipment rolling from our plants and farms in the full volume required by our commanding officers. The American Legion believes that these men, on their return, will have the same concepts of service to the cause of free America, and of right over might, that actuated the returning veterans of 1917–18, who wrote the guiding principles of this organization. We want this fresh, vigorous leadership to devote itself, during the next 30 or 40 years, to the service of God and country.

In every part of this great war effort—in civilian defense, in the bond campaigns and salvage drives, in recruitment and in aid for the convalescent and disabled, in caring for the needs of inductees, in protecting their interests while they are away, and in seeking opportunity for them when they are discharged—in these and many other ways the American Legion has undertaken to provide help and guidance.

In conclusion, the aims of the American Legion may be summarily described in a few words—the preservation of the American home, the American system of private enterprise and competitive opportunity, as the foundation for a sound and strong America. As we are now the arsenal of democracy, let us become in the years ahead the citadel of world peace.

Sixth War Loan Drive in Montana

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, it is with real pride that I call the attention of the House to the record made by Montana in the Sixth War Loan drive. There is very little I can say at this time as the figures speak for themselves. Yes, Mr. Speaker, all of Montana can be proud of the results of the Sixth War Loan which are shown below:

MONTANA WAR FINANCE COMMITTEE FINAL REPORT—SALES TO DECEMBER 30, 1944

HELENA, *January 8, 1945.*

To Chairmen, Committeemen, and Workers of the Sixth War Loan:

All of Montana can well be proud of the results of the Sixth War Loan, which are shown in detail in the figures and analyses enclosed herewith. The maps and statistical tables make a graphic showing of results, and you will be interested in studying them.

The success of the Sixth War Loan throughout the Nation is shown by this drive-end message from Secretary Morgenthau to National Director Gamble:

"I am delighted to have the opportunity to congratulate you and those who work with you on the smashing success of another war loan * * * Your workers, especially the army of volunteers which is doing the big end of the job, deserve again not merely thanks but unstinted praise for their effectiveness. I salute them, the members of your full-time staff and you for another great and inspiring success."

Montana was the first State to achieve the E bond quota.

Montana was the first State to achieve all quotas.

Montana ranks third in E percentage, exceeded by Wyoming and North Dakota.

Montana's per capita sale of E bonds was $34.13, national average, $21.98.

Montana achieved 160.4 percent of E bond quota; national average, 114.7 percent.

Montana's per capita purchase of E bonds from the beginning of War Finance, May 1, 1941, to December 30, 1944, is $299.04, national average, $230.50.

Every county in Montana achieved and exceeded every quota—E bond, other securities to individuals, total individual, corporation, and total all investors.

Total sales, the largest of any of the six drives, exceeded the quota by $18,242,116.76, sufficient to sponsor 30 B–29's, an Avenger bomber and a Corsair fighter. Counties qualifying as sponsors are named on another page of this report.

Montana's total sales in the Sixth War Loan were:

	Quota	Sales	Percent
E bond	$10,000,000	$16,041,481.25	160.4
Other individual	7,000,000	10,102,174.00	144.3
Corporation	15,000,000	24,098,461.50	160.6
Total, all investors	32,000,000	50,242,116.75	157.0

Men and women from Montana serving in the armed forces, largely overseas, purchased through their military organizations for credit of Montana and their home counties $901,000 E bonds, included in our figures.

All honor to the good people of this great State who have shown their patriotism in supporting the war and their fighting men in this generous response in the Sixth War Loan and have shown their good judgment in purchasing the world's best investment.

Our special State chairmen—Mrs. J. H. Morrow, women's activities; J. A. English, theater activities; Oliver H. Campbell, 16-mm films; and P. W Singer, retail merchants—have done outstanding work in special promotion which has materially aided.

District, county and Sixth War Loan chairmen by diligent and consistent work and by exemplary leadership have carried all districts and counties over the top.

Committeemen, solicitors and bond salesmen have labored throughout the drive personally contacting, soliciting, and selling all Montana people. To all of these, the 15,000 fine people who make up the Montana war finance organization, we gratefully acknowledge our appreciation. We pay tribute also to the great army of others who have cooperated so fully in making this drive such a tremendous success—to the banks, postmasters, and other issuing agents, to the press and radio for their comprehensive and consistent support, to the merchants, service clubs, business, civic, agricultural, and labor organizations.

Only by cooperative effort of people, organizations, and business throughout the State could the results of the Sixth War Loan have been accomplished.

In these critical days of the war, when the cloud of its tragedies is heavy over our whole people, we may all take some pride, comfort, and satisfaction in having done our best in this vital war financing.

A. T. HIBBARD,
State Chairman.
FRED J. MARTIN,
Executive Director.
WM. H. BARTLEY,
Executive Vice Chairman.
ARTHUR NELSON,
Associate Director.
R. B. RICHARDSON,
Vice Chairman.
EUGENE SAVAGE,
Associate Director.

MIKE: Every once in a while we come out of the sagebrush—and when we do—
BILL BARTLEY.

Lanham Act Program in the State of Washington

EXTENSION OF REMARKS
OF
HON. HAL HOLMES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. HOLMES of Washington. Mr. Speaker, under leave to extend my remarks, I include a letter from Mr. L. R. Durkee, Bureau of Community Facilities, Federal Works Agency, Seattle office, in which he presents an interesting picture of the splendid cooperation in the State of Washington in efforts to meet the situation created by the great influx of employees to carry on the very important war industries of my home State. Mr. Durkee's letter is as follows:

FEDERAL WORKS AGENCY,
BUREAU OF COMMUNITY FACILITIES,
Seattle, Wash., February 7, 1944.

Hon. HAL HOLMES,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HOLMES: I am enclosing two copies of a recapitulation taken from page 52 of the Fifth Annual Report of the Federal Works Agency, recently published. I call your attention to the record set by the State of Washington and its local subdivisions in cooperating financially with the Federal Government on Lanham Act projects.

Please note that Washington is fourth on the list as regards total project cost, being exceeded only by California, Texas, and Virginia. In terms of total cost, less than 22 percent of these projects were constructed on a strictly Federal basis, whereas contributions were received from applicants on more than 78 percent. Applicants' contributions are nearly double those of any other State.

It is true that the large Ross Dam project of the Seattle City Light, wherein we succeeded in securing more than an 80-percent contribution from the applicant, is largely responsible for this phenomenal showing. However, deducting the applicants' contribution of $8,300,000 and the Federal grant of $1,864,760 (and I don't see why we should) still leaves our applicants in the State of Washington contributing 38.5 percent to the cost of all non-Federal projects; the next highest State is Michigan, contributing 33.5 percent.

I know you will be proud, as I am, of the spirit of local cooperation which has always been extended my office throughout the Lanham Act program and which is so clearly demonstrated in the attached tabulation.

Best personal regards.

Sincerely,

L. R. DURKEE.

Lanham Act public works—Number of allotted projects and estimated total cost by source of funds and States, as of June 30, 1944

State	Number of projects	Estimated total cost	Federal construction	Non-Federal construction		
				Applicant's funds	Federal grants	Federal loans

Study and Recommendations of the American Political Science Association on the Reorganization of Congress

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of the House to the press release announcing the recommendations of the American Political Science Association's study of Congress. These complete reports have been sent to each Member of Congress. The press release follows:

Ten recommendations, designed to mitigate congressional handicaps and remedy the defects in the internal organization and operation and in the external relationships of Congress are presented in a report just issued by the committee on Congress of the American Political Science Association.

Based on a 4-year study by 10 distinguished political scientists, under the chairmanship of George B. Galloway, this consensus report was submitted to the association's executive council at a meeting in Washington, D. C. "While this report reflects the unanimous views of the committee," Mr. Galloway explained, "it does not necessarily represent the opinion of the American Political Science Association, a professional organization traditionally neutral on questions of public policy."

In releasing the report, the chairman stated: "In our study the committee on Congress has been neither critic nor defender of our National Legislature. We undertook our inquiry with no secret ax to grind, no pet panacea to promote. Our role has been that of impartial and neutral observer proceeding in a nonpartisan and scientific spirit. Our sole aim has been to see how well Congress is organized and operates and to suggest ways of helping it to function more effectively."

Guided by these aims the committee finds that Congress as an institution is handicapped in the performance of its proper functions in eight ways:

SUMMARY OF CONGRESSIONAL HANDICAPS

1. By being overburdened by many local and private matters which divert its attention from national policy making and which it ought not to have to consider.

2. By the lack of adequate, independent, technical advice necessary for wise lawmaking, and the lack of sufficient secretarial service to handle requests from constituents and routine chores.

3. By too many committees with overlapping jurisdictions and by the diffusion of responsibility for the development and coordination of legislative policy.

4. By inadequately developed channels of communication with the Executive, making teamwork between them difficult.

5. By the lack of adequate facilities for the continuous inspection and review of administrative action.

6. By the importunities of special-interest groups which tend to divert legislative emphasis from broad questions of public interest.

7. By the need of a redistribution of power, especially in the House of Representatives.

8. By the inadequate compensation of its personnel.

In order to mitigate these handicaps and remedy these defects, the committee makes 10 recommendations:

RECAPITULATION OF RECOMMENDATIONS

1. That Congress divest itself, because of the heavy volume of legislative business, of such work and activities as it can appropriately delegate to other agencies, such as the government of the District of Columbia, the settlement of private claims and pensions, and other private and local legislation, eliminating the Private Calendar.

2. That the committees of Congress be adequately equipped with independent, qualified experts to aid them in making laws, such experts either to be attached to the committees themselves or drawn from a central pool or joint legislative staff service, or both.

3. That appropriations to the Legislative Reference Service and to the Office of Legislative Counsel be substantially increased so as to strengthen their research and legal facilities.

4. That the committee systems of both Chambers be simplified by (a) eliminating the inactive committees; (b) consolidating those with ovelapping jurisdictions; (c) creating twin committees in both Houses; and (d) correlating them with the major areas of public policy and administration.

5. That a Legislative Council be established, to be composed of the Vice President, the Speaker of the House, the majority leaders in both Chambers, and the chairmen of the reorganized standing committees; and that it be the duty of this Legislative Council to plan and coordinate the legislative program of Congress and to promote more effective liaison and cooperation with the Executive.

6. That the reorganized standing committees also be utilized as vehicles of communication and collaboration between Congress and the corresponding administrative agencies within their respective jurisdictions; and that the heads of the major departments and administrative agencies appoint congressional secretaries who shall devote full time to liaison with their corresponding committees in Congress.

7. That the function of legislative oversight of administrative performance be entrusted by Congress primarily to the subcommittees of the House Committee on Appropriations which should be adequately staffed to permit continuing review and evaluation of the work of the executive agencies within their respective jurisdictions. Each executive agency should submit periodic reports, in sufficient detail to give an adequate picture of its actions and expenditures, to the House Appropriations Committee and to the legislative committees of both Chambers which have jurisdiction over it.

8. That all groups, representatives of which appear before congressional committees, should register and make full disclosure of their membership, finances, etc.

9. That an automatic time limit of, say, 6 years, be fixed upon service as chairman of a standing committee; or, alternatively, that standing committee chairmen be chosen at the beginning of each Congress by the committee on committees of the majority party, as they are in some of the States; and that committee chairmen be required by the standing rules to (a) call committee meetings when desired by a majority of the members; (b) report bills within 10 days after the committee has taken favorable action, failing which report any member of the committee could report the bill; and (c) keep a complete public record of all committee proceedings except executive sessions.

10. That the annual salaries of Senators and Representatives be increased to $15,000; that each Member's annual allowance for clerical hire be substantially increased; and that the Civil Service Retirement Act be amended so as to make Members of Congress eligible for retirement annuities on a contributory basis after long legislative service.

"It will be noted," said Mr. Galloway in releasing the A. P. S. A. committee report, "that our report and the Heller report, released by the National Planning Association on January 17, reach very similar conclusions. This is not surprising when it is recalled how heavily Mr. Heller, as he has acknowledged, leaned upon the writings of and interviews with numerous political scientists, including several members of my own committee. It is a significant and encouraging fact that engineers and political scientists alike recognize the key place of Congress in our scheme of democratic government, that both groups stress the vital importance of remedying the serious defects in its archaic machinery and methods, and that we agree in the main upon the steps that must be taken toward the restoration of Congress. I hope that our report and the N. P. A. report will inspire Congress to move in this direction."

"Our report," Galloway concluded, "is far from being the last word on this great subject. None of the members of my committee is so naive as to believe that the changes we propose would bring about a political millenium or provide a panacea for all the ills of our democratic institutions. Nevertheless, we think that our proposals are worthy of consideration by the Joint Committee on the Organization of Congress."

The report of the committee on Congress of the American Political Science Association, entitled "The Reorganization of Congress," has been published with the cooperation of the American Council on Public Affairs.

Remember the Loyal Mailman

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Worcester (Mass.) Sunday Telegram:

REMEMBER THE LOYAL MAILMAN

No visitor is more welcomed, by those who live and work upon the land, than the * * * mail man. During these days, when almost every home has a boy, or one in whom it is interested, in the armed forces, this daily visit of the mail carrier is looked upon, more than ever before, as an important event.

There are no more faithful public servants anywhere than these workers for Uncle Sam. Daily they are at their tasks, regardless of storms or seasons. Many of them have spent their entire lives in the service. And at a salary that should make the old uncle blush with shame. Many of them have had no increase of pay since the old horse and buggy days—and some of them are reminded of this as they recently have had to resort to the use of their old faithful animal transportation.

Our Government, however, must be given much credit for its vast system of * * * home delivery. Anxiously these days do fathers and mothers and others, await the daily mail, to be kept informed, and to hear from those beloved, fighting on foreign soil. Nothing thrills more than a letter from such a one. And nothing thrills so at the other end, either. That boy prays for letters—and there can't be too many. A penny card, or a letter, that costs but a few cents, and a little

time, does more to lift morale than anything any of us can do for these brave lads.

There is not a farm or a hamlet in all this great country that does not have a contribution to the winning of this war. And no one can say that letters do not play a major part. So, to the loyal, faithful mail man we owe a debt of gratitude for the part that he plays. And it is about time that his services should be adequately rewarded. * * * There is a bill before Congress at the present time for this purpose. It should receive the support of every one of our law-makers. And I hope that it does.

One thing that the * * * mail man has in abundance is time to think. As he goes from place to place, he can both think of the past and speculate upon the future. He, too, has a family to care for, and he, too, has boys in the service. He appreciates the importance of letters. May none of us let our boys down at this crucial time. Keep the letters gladly flowing. And may we consider this great servant of ours, both rural and city—the mail man. Let's not let him down.

The Churches and World Order

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, I am pleased to extend in the RECORD a summary of the second national study conference of the Federal Council of Churches of Christ in America, held in Cleveland, Ohio, on January 16 to 19, 1945, under the auspices of the Commission on a Just and Durable Peace, which appeared in the Christian Century on February 7, 1945. I am certain this matter is of great interest to the people of our Nation at a time when we are looking for a cessation of hostilities and the coming of peace.

THE CHURCHES AND WORLD ORDER—A MESSAGE TO THE CHURCHES ADOPTED AT THE SECOND NATIONAL STUDY CONFERENCE, HELD AT CLEVELAND, OHIO, JANUARY 16–19, 1945, UNDER THE AUSPICES OF THE COMMISSION ON A JUST AND DURABLE PEACE OF THE FEDERAL COUNCIL OF THE CHURCHES OF CHRIST IN AMERICA

I. CHRISTIAN FAITH AND WORLD ORDER

1. The Christian faith

We are living in a uniquely dangerous and promising time. It is dangerous because we are faced with widespread evidence of religious and moral disintegration as well as with effects of war in increasing suspicion, fear, and hatred. It is promising because a new spiritual vitality is manifesting itself under the providence of God and witnessing to that quality of the Christian faith which demonstrates its strength in adversity. In our effort to make decisions and to take action which shall help to guide the world from anarchy and chaos forward to a just and creative peace we are called to reaffirm our faith.

It is the Christian faith that God's righteous rule is over all men and nations; that in Christ he confronts us all alike in judgment and mercy; that men, though sinful, are made in His image and are not only the concern of His saving work but His agents as well, each of value in His sight, without distinction of class, race, or condition; that the church, the body of Christ and the fellowship of Christ's followers, is the creation of His spirit and the steward of His purpose; that His kingdom on earth is an unconquerable kingdom of justice and mercy and truth in which it is our responsibility to bring human laws and human institutions into increasing accord with His holy will.

In this Christian faith, the purposes which we seek to realize are fashioned. As we affirm the worth of man in God's sight, so we must act by the Christian principle of reverence for human personality. God sees his children united in one family whose individual and corporate life is the goal of redemption; we must be joined in the common effort to make effective in individual relations and in corporate acts the Christian principles which we affirm. God's way is the way of justice, love, and mercy; justice, love, and mercy must rule our life with our fellows. While compulsion and control are needed for the restraint of evil in a world of imperfection, the ultimate victory over evil must be by way of redemptive good will, by which alone can good be created. God's way with men is the way of freedom and responsibility; man's true life as man is achieved only when that way is freely chosen and freely wrought out. As we need humility and penitence in standing before God, so do we need humility and penitence in our dealings with men. Whenever human practice goes counter to these principles which root in our faith, the Christian must raise his voice in protest.

It is in this Christian faith that our confidence is grounded. For our confidence is in God, the establisher of the order within which men and nations work, and in the forces of the spirit which God employs. We believe in the might of truth as against falsehood and deceit and in the power of right to command the conscience and to overcome oppression and wrong. We believe in the power of good will as greater than selfishness and force; in the value of mutual trust as against distrust and suspicion; and in the might of faith as greater than cynicism, doubt, and despair. God's grace, made manifest in Christ, rescues men from despair, has power to remake them when they turn to him for healing and forgiveness, and redeems all their life. We see this power even now at work in the world in lives made new, in sins forgiven and conquered, in hopes rekindled.

We rejoice in the church of Christ as a world fellowship which today unites men in faith and love, transcending nation, race, and class. We rejoice that a growing number of men of good will outside the church, in recognition of the moral law, seek with us the creation of one world of justice and security for all men. Let the church purge itself of inner division, unite with all who work for these high ends, and so live out its principles of justice and love in the face of all dictates of selfishness and counsels of expediency as to create new faith, new conscience, and new hope.

2. The church's mission

Out of the continuous creative vitality of the Christian faith has grown the church of which we are a part. The church as bearer and sharer of the revelation of God in Christ stands under a divine compulsion to serve the world, with equal responsibility for all people. The misery, want, and sin of the world today bring to us a new sense of the urgency of the commission, "Go ye into all the world."

Home missions and foreign missions are aspects of the one world mission to which the church is called. Both are significant in the church's contribution to world order. The most effective assurance for justice in an abiding world order is in the expansion of allegiance by men and nations to the Christian faith. This is as greatly needed within America as elsewhere. The reconstruction of devastated lands, the rebirth of hope and determination for a world of justice, and the will to create instruments for the expression of that hope are central in the church's mission.

The world mission of the church has helped to create among our people concern about international affairs and has opened channels for the efforts of the churches toward a just and durable peace. Through missionary agencies relief is and can be administered, reconstruction can be furthered in many areas, and the long-range objectives of world order promoted. The immediate and practical necessities of mission work as well as the impulse to unite in Christ have promoted widespread interdenominational cooperation. This, in turn, has given impetus to that ecumenical movement which now brings promise that the energies of the churches will be utilized to face their overwhelming opportunities. This cooperation must be further developed. What is called for is a united Protestant missionary movement. The churches are therefore urged immediately to strengthen and unify their missionary enterprise both at home and abroad so that their unique contribution to world order may be equal to these opportunities.

3. Principle and action

Christians must act in situations as they exist and must decide what God's will demands of them there. At all times they must keep the ultimate goals clearly in view but they have equal responsibility to mark out attainable steps toward those goals, and support them. An idealism which does not accept the discipline of the achievable may lose its power for good and ultimately lend aid to forces with whose purpose it cannot agree.

If we accept, provisionally, situations which fall short of our ultimate objective, we cannot be morally bound to sustain and perpetuate them. That would be stultifying. It is the possibility of change which is the bridge from the immediate situation to the Christian ideal. That possibility is an imperative for Christians, who must constantly maintain tension with any secular order.

The churches through their leaders have the task of assisting people in situations of this kind. Specifically, in the realm of world order, the churches must declare their understanding of the will of God for life among the peoples of the world. They must do this while proposals are being framed. They must continue to to do it after governments have made their decisions. When a concrete proposal for world organization is presented, Christian leaders must help the people to decide whether it marks a presently obtainable step in the right direction and, if so, urge them to give it their support.

4. American attitudes and world peace

Whether America will be a help or a hindrance in building a peaceable world depends upon the attitudes of individuals and groups in our Nation. We call attention to the dangers which lurk in complacency toward existing injustices; the frequent contradictions we tolerate between our ultimate beliefs and our conscious aims; the false sense of national security which—in spite of the lessons of two tragic wars—holds that the United States can live apart from the rest of the world and its problems; intolerance and discrimination; selfishness which refuses to recognize that we are members one of another and is unwilling to run risks for the sake of the world community; blind devotion to national sovereignty; the cynicism which believes there always must be wars and puts its reliance upon force alone; and the spirit of hatred and vengeance toward other peoples. It is our concern that such attitudes should not prevail, but rather

that in us and in our fellow citizens those attitudes should be developed which support the growth of world community.

5. Domestic order and world order

Over a century and a half ago it was given to the American people to determine by struggle and experiment whether government by the people could be established and maintained on earth. Upon the success of this adventure rested a great hope for mankind. In the intervening years the growth of the United States as a home for human freedom has been a notable fact and influence. It must now be demonstrated that human freedom is compatible with economic security. A new challenge is offered to the people of America to establish along with political democracy an opportunity through productive employment to earn an income sufficient for the basic needs of food, clothing, shelter, health, recreation and cultural pursuits, and assurance to every individual, of whatever race, of an equal and unsegregated opportunity for worship, protection in time of unemployment, illness, or need, and full political and civil rights.

The economic system which proved adequate in an earlier period has, in our day, revealed grave defects and inadequacies under the strain of modern industrial conditions. All elements in the economic system—consumer, employee, management, capital, and Government—should move from the strife and restrictions of our present situation to a full and free cooperation with the objective of greatly increased production and distribution to meet the expanded human needs in this and other countries. We recognize the need of experimentation with various forms of ownership and control, private, cooperative, and public.

A challenging effort in the United States in the solution of our domestic economic problem will be followed by favorable repercussions in the economic and spiritual life of the world, thus contributing to the establishment of a just and durable peace.

The right of private property is not an absolute right but a right qualified by the public interest. Likewise freedom of enterprise does not imply absolute freedom but operation of enterprise consonant with the interest of the public and the welfare of the Nation. In the use of property and in the operation of enterprise, therefore, the welfare of society should be given primary consideration; and it is the duty of the state to prescribe such regulation of industry and of the conditions under which it is carried on as will result in wholesome conditions of employment and fair treatment to those who are engaged in it and to the public at large.

The church must therefore condemn any failure of our economic system to meet the basic needs which have been indicated. We must ask our people to recognize that in order to supply these needs for all, many changes may be necessary in our economic practices. These changes will probably lie in the direction of a larger measure of social planning and control than characterized our pre-war system. They should be brought about by democratic processes and should be consistent with Christian principles with respect to the worth of personality and the value of freedom. We should not allow our devotion to any single system or method to deny anyone the basic requirements for the good life. Nor should we allow our preference for our economic or political system to prevent us from collaborating, for the achievement of world order and world peace, with peoples who have a different system.

In order to maintain our democracy at a high level it must continually be adjusted to meet the necessities of history and the demands of justice. Only if our domestic order is born again with fresh vision and determination to meet the needs of men can America fulfill her new mission and bring hope and encouragement to a broken world.

II. CHRISTIAN STANDARDS AND CURRENT INTERNATIONAL DEVELOPMENTS

The decisions and actions of governments in the present international situation will have direct bearing upon the extent to which nations will collaborate in the post-war period. Tentative proposals for an international organization were agreed upon at Dumbarton Oaks by delegations of the United Kingdom, the Soviet Union, China, and the United States. They have been offered to the public for discussion.

In the light of the Guiding Principles and the Six Pillars of Peace,[1] we offer our appraisal of the Dumbarton Oaks proposals and we call attention to certain related matters which we believe must be considered in connection with any international organization for world order and security.

1. The Dumbarton Oaks Proposals

We commend these proposals to the consideration of the churches.

The proposals are the only plan which governments have thus far evolved and therefore are the only available index to the extent of agreement which is now possible.

They set forth certain purposes and principles essential to world order and peace.

They provide for continuing collaboration of the United Nations, and in due course of other nations.

They provide, through an assembly, for the periodic consultation of all member nations and for promoting cooperation in the interest of the general welfare.

They provide an economic and social council for facilitating solutions of international economic, social, and other humanitarian problems and for coordinating international policies and agencies in this field.

They provide, through a security council, for continuing consultation of representatives of the greater powers and of selected lesser powers with a view to a peaceful settlement of disputes and the restraint of aggression.

The proposals now stand at a formative stage and the way has been opened for recommendations for improvement which will make them more acceptable to the Christian conscience.

Accordingly, we recommend that the churches support the Dumbarton Oaks proposals as an important step in the direction of world cooperation, but because we do not approve of them in their entirety as they now stand we urge the following measures for their improvement:

1. Preamble

A preamble should reaffirm those present and long-range purposes of justice and human welfare which are set forth in the Atlantic Charter and which reflect the aspirations of peoples everywhere.

2. Development of International Law

The charter should clearly anticipate the operation of the organization under international law and should provide for the development and codification of international law, to the end that there shall be a progressive subordination of force to law.

3. Voting Power

A nation, while having the right to discuss its own case, should not be permitted to vote when its case is being judged in accordance with predetermined international law.

4. Amendment

In order to permit such changes in the charter of the organization as may from time to time become necessary, the provision for amendments should be liberalized so as not to require concurrence by all the permanent members of the security council.

5. Colonial and Dependent Areas

A special commission should be established wherein the progress of colonial and dependent peoples to autonomy, and the interim problems related thereto, will become an international responsibility.

6. Human Rights and Fundamental Freedoms

A special commission on human rights and fundamental freedoms should be established.

7. Eventual Universal Membership

The charter should specify that all nations willing to accept the obligations of membership shall thereupon be made members of the organization.

8. Limitation of Armaments

More specific provision should be made for promptly initiating the limitations or reduction of national armaments.

9. Smaller Nations

There should be provisions designed more clearly to protect and defend the smaller nations from possible subjection to the arbitrary power of the great.

2. Political conduct required to promote further collaboration

There are four principles of conduct which are needed to bring collaboration out of the realm of theory and into that of reality:

1. We believe our Government should adopt and publicly proclaim its long-range goals. These should stem from our Christian tradition and be such as to inspire and unify us. Without such defined goals we will lack enthusiasm and sense of direction. We will not be able to measure our progress.

2. We believe our Government should not merely talk about its ideals. It must get down into the arena and fearlessly and skillfully battle for them. It must do so, not merely sporadically but steadily. It must do so even under conditions such that partial and temporary defeat is inevitable.

3. We believe our Government must, however, battle for its ideals under conditions such that no particular setback need be accepted as definitive. It must be made clear that collaboration implies not merely a spirit of compromise but equally a right, on the part of every nation, to persist in efforts to realize its ideals.

4. We believe our electorate, demanding the foregoing of its Government, must judge its Government accordingly. It should not judge it merely by the immediate results attained. It must rather judge it by its announced long-term objectives, by whether it works competently to achieve them, and by whether it brings into actual functioning procedures of peaceful change so that the world may evolve away from present harsh necessities. If our Government will meet those tests, the electorate should applaud such conduct irrespective of dissatisfaction with immediate results.

3. Economic cooperation

The economic aspect of human life concerns the church in two ways: Through the widespread fact of poverty and through those maladjustments, never the sole causes of war, which may predispose populations to war.

Poverty concerns the Christian conscience not alone because men hunger but also because their spirits tend to be stunted by it and their freedom limited. Low standards of living over large areas diminish the possibilities of trade and also of cultural intercourse. Morality and self-interest combine to show that in a world tending toward unity

[1] Thirteen Guiding Principles were adopted by the first national study conference held at Delaware, Ohio, March 3–5, 1942. The Six Pillars of Peace were subsequently issued by the Commission on a Just and Durable Peace of the Federal Council of Churches.

by communication, the standard of living of men anywhere is a concern of men everywhere.

Poverty is not to be dealt with primarily by charity but by aiding undernourished populations to use their own resources, to develop agricultural techniques and industries suitable to their region, and to participate in world trade.

In order to prevent recurrent depression, the goal of full employment of labor and of economic resources on a world scale should be continuously pursued.

Because of the growing interdependence of peoples, the development of backward regions has become a common task of mankind, in which regard for one's neighbor joins a long-range self-interest. The immensity of the task, which is equally economic and educational, requires cooperative investment and effort on a world scale. Here some form of world organization, such as the Economic and Social Council proposed at Dumbarton Oaks, must be sought as a supplement to private undertaking. The international labor organization and the organized labor movement are also to be recognized as having an important role in raising the standards of living of the peoples.

Economically advanced nations constitute among themselves a community in which no one can prosper through the disadvantage of others. Their policies can no longer intelligently follow the line of economic nationalism. Barriers to world trade, whether in the nature of tariffs or of cartels, have become doubtful props of national welfare, and all of those acts, economic and political, in which one people affects the fortunes of another become subject to the judgment both of self-interest and of morality. A world point of view must be developed in economics, and the appropriate institutions developed. In such institutions our own Nation must actively participate both for its own welfare and for the common good.

Such intelligent supervision of world agriculture, resources, markets, currencies, and communications, and of world trade, may not imply in each case an authoritative regulating agency, but it does require an active self-regulation with a sense of responsibility and of stewardship for the just and constructive use of economic power.

The right of property is based, not upon man's animal need, but upon his personal nature as man. Private property is an essential aid to the maturing of human personality. It has been customary to set communism and capitalism over against each other on this point, the one denying private property, the other holding private property an absolute claim over against the state. Neither of these positions is now held in this extreme form; in both types of economy property is recognized as important for human character and is therefore the proper subject of public interest; so all economies today are mixed economies, showing a degree of private and a degree of common property. Neither is a fixed system, and to some extent in practice they tend to converge. To the extent that the sacredness of the human person, his liberty and responsibility to God are acknowledged by both systems, their cooperation in building a peaceable international order is facilitated. But in any case they can and must cooperate.

4. Human rights

We have recommended that, in connection with the world organization proposed at Dumbarton Oaks, there be established a special commission on human rights and fundamental freedoms. We believe that religious liberty is basic to all human rights and that it should be accompanied by equal and unsegregated opportunity for all races. The commission we have recommended should seek an international agreement on the rights and freedoms to be secured to all people; it should further formulate the procedures for their realization by action of the world organization and of the separate states. This is in harmony with our sixth pillar of peace which declares "that the peace must establish in principle, and seek to achieve in practice, the right of individuals everywhere to religious and intellectual liberty." It also follows a purpose set forth in the Dumbarton Oaks proposals, "to promote respect for human rights and fundamental freedoms."

5. The peace settlement in Europe with special reference to Germany

In respect to the peace settlement in Europe, we share the following convictions:

The settlement following the war should be inspired by the desire to secure the maximum of collaboration among the peoples of Europe and encourage the economic development of Europe as a whole including Germany. The unilateral determination of boundaries would impair such collaboration. The settlement should insure to the smaller and weaker nations the fullest measure of autonomy consistent with European unity and world organization for peace.

The settlement should make possible the reconciliation of victors and vanquished. That implies that it should remove the power as well as the will of aggressive elements within Germany to make war. However, the necessary discipline of Germany because of the crimes committed in her name should not be vindictive. The participation of Germany into separate states should not be imposed upon the German people. The treatment of Germany should be calculated to strengthen the forces within that country committed to liberal civil policies and to international cooperation.

Among the constructive forces upon which a new Germany and a new European concord can be based, the churches are of primary importance. As they have been centers of resistance to tyranny and injustice within Germany and within the occupied countries, so they may become a medium through which reconciliation may be accomplished and through which the process of the reeducation and reconstruction of Germany may be carried out in the only way that gives any promise of success—voluntarily from within. The World Council of Churches will greatly aid in the process of reconciliation and reconstruction as the churches of the defeated, the liberated and the victorious nations are brought together into conference and collaboration.

6. The peace settlement in Asia with special reference to Japan

We are convinced that a just and durable peace in the Far East is possible only in the framework of world organization, supplemented by regional cooperation for security and welfare.

China desperately requires unrestrained opportunity for internal development. It is of urgent importance that China's voice in international affairs be given special heed, in order to cement new relationships between oriental and western peoples.

As in the case of Germany, so with Japan, the power and will to make war must be removed. However, Japan's basic economic problems, aggravated by the war and by the expected loss of her colonial possessions, must be met by "access, on equal terms, to the trade and raw materials of the world" as pledged by the Atlantic Charter "to all states, great or small, victor or vanquished." Treatment of Japan by the United Nations should be favorable to constructive forces within Japanese society, and should aim to bring Japan at an early date into normal relations with the world community.

We can enter into right relations with the vast and significant populations of China, Japan, and southeast Asia, none of them white, only upon the basis of the equality of races in justice and law. Indeed, a Christian outlook upon the Far East discerns that a world order is impossible if color discrimination is maintained. The churches recognize a special responsibility for reconciliation in such ways as may be possible after the war.

Addendum to 5 and 6. The Peace Settlement with Special Reference to Germany and Japan

We urge that the time is at hand when the governments of the Allied nations should make a more explicit statement as to the status of both Germany and Japan following the war. We believe such a statement is needed in order to satisfy Christian concern and to prevent needless sacrifice of life upon the battlefield.

7. Dependent peoples

Long and intimate relationships with the dependent peoples of Africa, southeast Asia, and other parts of the world place on the Christian churches a responsibility to champion their right to freedom and to develop their capacity for self-government.

We therefore call upon our Government and others: (1) to proclaim self-government as the goal for all dependent peoples; (2) where dependent peoples are ready for self-government, to give it now; (3) otherwise, to initiate progressive steps suitable for each area for achieving that goal; and (4) in the interim to provide that all such areas shall be administered under the supervision of world organization.

We cannot in good conscience be a party to the dismantling of the Japanese colonial possessions without at the same time insisting that the imperialism of the white man shall be brought to the speediest possible end. We cannot have a sound or stable world community so long as there is enforced submission of one people to the will of another whether in Korea, in India, in the Congo, in Puerto Rico, or anywhere else.

III. RECOMMENDATIONS FOR ACTION

The task now before us is to channel the spiritual power generated in this conference into deeds. Solemn pronouncements are not enough. Upon the minds and consciences of our people must be laid the duty and opportunity of using the world-wide resources of the church to bring about a world organized for justice and peace.

1. Church and federal unity

The present structure of denominational Protestantism is not adequate to deal with the issues of our time. The problems of war, of labor, of the chaplaincy, of the returning veteran, of the world-wide mission of the church, of our relations with the Christian churches of Europe and Asia and with other faiths, are all too vast and difficult for solution by our separate denominational units. While we are asking for cooperation and unity in the political and economic fields, Protestants themselves must take seriously to heart the duty of achieving a far higher degree of unity.

We have already come far on the road of cooperation. But we must achieve a more vital and visible federal unity than we now have—a unity that will preserve the freedom of various denominational groups and at the same time release the undeveloped and uncoordinated resources of Protestantism and focus them on the solution of these pressing problems. We therefore urge the denominations to consider earnestly the possibilities, in ways not now envisaged, of realizing more fully the ecumenical fellowship by implementing the principle of federal unity on local, state, and national levels.

2. Youth and the world order

If our purposes are to be achieved the new leadership of the churches must be world-minded and trained in the techniques of building a Christian world community.

In these efforts, youth itself must lead and the youth agencies be strengthened to provide more challenging programs resulting in life dedicated to Christ. Increased representation of youth in all the agencies of the churches should be speedily provided.

The churches are urged, in their total educational process but especially through the church-related colleges, the student Christian movements and the theological seminaries, to expand and adjust their programs in order to enlist and train world-minded churchmen who will take their place in the ecumenical movement.

3. Children and world peace

Parents and teachers in the home and in the churches are called upon to teach children the conditions of world peace. Particularly they should be helped to develop constructive attitudes, devoid of hate toward other peoples. Christian education for children must include study dealing with missions, race relations, and community life. Adults must help children develop attitudes and ways of behaving essential for Christian world citizenship.

4. Study and action for American participation in international cooperation

The Protestant churches must use all their facilities, denominational and interdenominational, to secure American participation in international cooperation. New methods of education and all legitimate means by which public opinion is formed must be utilized in this effort. We urge a concerted program of intensive study of the message of this conference, with the appropriate social and political action as an integral part. This program should include youth in churches and colleges, men and women in our military and civilian services, church members, and all men and women of good will in the community.

5. Relief and reconstruction

Assistance given to those in special need will be conducive to the mutual sympathy and trust which are essential to international cooperation. War-ravaged peoples in many lands will require help in their struggle to reestablish civic order. Basic welfare relief will need to be supplemented by assistance to the churches to reconstitute their services within their local communities in order to become effective centers of vital life and hope. The churches of America are urged to support to the fullest their agencies of relief and reconstruction already in operation in order to assist the churches of other lands in this period of reconstruction. The World Council of Churches and the national Christian councils in Asia will afford channels of immediate services, thus undergirding stable world order.

6. Race relations

Race prejudice is a primary obstacle to world brotherhood. It is strongly urged upon churches and church members that they wage a continuing campaign against race prejudice in all its forms. The churches should not only support all efforts to wipe out discriminations against minority groups, but they should also deliberately arrange cooperative programs in which racial barriers are broken down. We recommend active support by the churches of legislation providing for a permanent Federal Fair Employment Practice Commission; providing for the repeal of poll-tax and other discriminatory laws; providing for housing projects without discriminatory practices and other measures designed to advance the well-being and constitutional rights of Negroes and other underprivileged groups.

The church must counteract hate in all its forms and expressions. Anti-semitism represents a rising threat to brotherhood and must be wiped out. The Oriental Exclusion Act should be repealed and all Orientals be placed on the quota system. The churches should uphold the civil rights of Japanese-Americans as they return from relocation camps and wherever they may be.

7. New study conference proposals

A just and durable peace is conditioned by the ability of our own Nation to achieve economic stability and interracial justice in its domestic affairs. Therefore, it is recommended that national study conferences (1) on industrial relations and rural economics, and (2) on race relations, similar to this conference on a just and durable peace, be held under the auspices of the Federal Council.

8. Recommendations with regard to specific immediate action

(1) We urge a meeting of the United Nations, at the earliest possible moment, to consider the Dumbarton Oaks proposals.

(2) We concur in the resolutions of the Federal Council of Churches and many other religious and educational bodies urging that congressional action on peacetime military conscription be deferred until after the war.

CONCLUSION

The unique contribution of the church is to bring to all these tasks the maximum of Christian faith and the full development of its power, its motivation and its resources. Before we can do Christ's work, we must appropriate more of His life. Basic to all else are greater depth of Christian faith, greater endurance in Christian fortitude and courage, more wholehearted devotion to Him and a more universal experience of His forgiving and creative grace.

As the Christian church faces its duties and the dangers of this hour, it must undergird its own life and the life of its people with prayer through which are made available to men the infinite resources of God. Without Him we can do nothing. With Him we can advance toward His kingdom of righteousness and brotherhood.

The Rural Mail Carrier, a Faithful Public Servant

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Austin Daily Herald of Austin, Minn.:

THE RURAL MAIL CARRIER, A FAITHFUL PUBLIC SERVANT

Probably no service—rendered so many people—is less appreciated than rural mail delivery. Those who knew life on the farm before the advent of the R. F. D. can recall the isolation and loneliness of the residents of remote rural communities 45 years ago. To them rural free delivery was a godsend and the mail carrier an angel in disguise. He carried the news of the neighborhood from farm to farm. He gave advice on everything from colic to canning. He ran errands in town for the farmer's wife. He minded her baby while she hastily answered a letter he brought. He relayed information—important and trivial—the announcement of a basket social, the birth of a baby, or the death of a friend. Through the years he has been, and is today, as constant in his devotion to duty as the seasons that come and go. Patiently and uncomplainingly he makes his rounds three hundred and some odd days a year through the snowdrifts in winter and the mud of spring and fall. The mail carrier has become an integral part of rural life in America, his service an almost indispensable factor in its scheme of things. Yet this service, faithful if not distinguished, which he has rendered through the years is not altogether appreciated. He has not, for example, received an increase in salary for 20 years. This in spite of the fact that living costs have materially increased during this period. And his actual operating costs have kept pace with the increased costs of living. Should he, for instance, buy a new automobile today—were they available—it would cost at least one-third more than formerly. And the cost of gas, tires, and repairs have increased proportionately. Any garageman who services mail carrier's cars knows that an uncomfortable bit of his salary check goes for car maintenance. Yet the rural mail carrier still receives the same salary as he did 20 years ago. And there's nothing he can do about it. He can't strike against his Government and wouldn't if he could. He deserves a break. It's time Congress dispensed with technicalities—which in the past seem to have prevented the raise to which the mail carrier is entitled and which he has earned—and granted him a salary at least in some measure commensurate to the service he renders.

Lincoln and Agriculture

EXTENSIONS OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. HAYS. Mr. Speaker, American agriculture owes more to Abraham Lincoln than is generally recognized. His contribution to the progress of agriculture was so completely overshadowed by the war that we find it difficult to appreciate the vast significance of measures inaugurated by him to advance our agricultural society. A Department of Agriculture headed by a Commissioner was authorized by an act of Congress approved by President Lincoln on May 15, 1862. Five days later he signed the famous Homestead Act under which 234,000,000 acres of the public domain went into private ownership. In the same the Land Grant College Act, often referred to as the Morrill Act, was passed and approved. Thus, 1862 was a year of tremendous significance for the American farmers, and Abraham Lincoln, by reason of the leadership which he devoted to these good causes, became one of agriculture's greatest benefactors.

His concern for the welfare of our farm population was a natural and unconscious reflection of his character. His intimate knowledge of pioneer life and his understanding of the problems of farm people was accompanied by a warm and sympathetic attitude toward those who struggled to conquer the wilderness.

He gave no evidence of being aware of any relationship between his political pursuits and this deep interest in farm life. In an address before the Wisconsin State Agricultural Society in Milwaukee in 1859, which is reproduced in an excel-

lent bulletin of the Bureau of Agricultural Economics, he said:

I presume I am not expected to employ the time assigned me in mere flattery of the farmers as a class. My opinion of them is that in proportion to numbers they are neither better nor worse than other people.

This is sufficient proof of the fact that he disdained the arts of the demagog.

It must have been apparent to his audiences, however, that here was one who had fully entered into their experiences and who had the capacity to become an effective advocate of their claims upon the Nation. This fact led Everett E. Edwards to say that—

He came slowly but surely to represent the frontier, the farmer, and the small-town democracy * * * as few other men ever represented a people.

While he had been denied the advantages of scientific instruction in agriculture he displayed a remarkable knowledge of the problems of production and of the economic interrelationships resulting from our expanding civilization. He predicted the mechanical plow, and although he thought it would be steam propelled he evidenced an uncanny insight into the revolutionary developments which were ahead.

He was just as interested in the moral and social aspects of the new influences and told his Milwaukee audience that—

By the best cultivation of the physical world, beneath and around us, and the intellectual and moral world within us, we shall secure an individual, social, and political prosperity and happiness, whose course shall be onward and upward, and which, while the earth endures, shall not pass away.

It is apparent, not only from the content of Federal statutes with which he is identified, but from his whole career that his emphasis was upon social and moral values rather than material gain, even for the farm group which he loved and for whom he had expended so much of his energy.

The part that education should play in the improvement of agriculture had a great interest for Lincoln. It is reflected in his statement that—

Nothing is so pleasant to the mind as the discovery of anything that is at once new and valuable—nothing that so lightens and sweetens toil, as the hopeful pursuit of such discovery. And how vast, and how varied a field is agriculture, for such discovery. The mind, already trained to thought, in the country school, or higher school, cannot fail to find there an exhaustless source of enjoyment. Every blade of grass is a study; and to produce two, where there was but one, is both a profit and a pleasure. And not grass alone; but soils, seeds, and seasons—hedges, ditches, and fences, draining, droughts, and irrigation—plowing, hoeing, and harrowing—reaping, mowing, and threshing—saving crops, pests of crops, diseases of crops, and what will prevent or cure them—implements, utensils, and machines, their relative merits, and to improve them—hogs, horses, and cattle—sheep, goats, and poultry—trees, shrubs, fruits, plants, and flowers—the thousand things of which these are specimens—each a world of study within itself.

Many great monuments to the memory of Abraham Lincoln have been built but no memorial will be more enduring than the legislative foundation for an agricultural policy which he himself devised in 1862.

Underlying that program is the concept of farm ownership, the identification of the farmer with some of the earth which is his to tend and to conserve. He saw this factor in its true relationship to the total problem of democracy and that is the reason that he, like Jefferson, cherished those institutions that are associated with agrarian life. Every aid should be given to improved farming skills with the ideal of independence as the goal. The thought was expressed in this language of Lincoln's:

No community whose every member possesses this art, can ever be the victim of oppression in any of its forms. Such community will be alike independent of crowned kings, money kings, and land kings.

We could honor the memory of Lincoln in no better way than to perfect our homestead policies and to preserve for farm youth, particularly the returning veterans, the land resources of this Nation that they might have the same hopes for useful and happy careers afforded those of Lincoln's time.

Address by Brig. Gen. R. C. Crawford at Meeting of Nebraska State Reclamation Association

EXTENSIONS OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Brig. Gen. R. C. Crawford, United States of America, division engineer, Missouri River division, at the Nebraska State Reclamation Association meeting, held at Lincoln, Nebr., January 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Congress derives its power for enacting legislation affecting navigable waters of the United States from section 2 of article III of the Constitution, vesting admiralty and maritime jurisdiction in the Federal Government; and from the third clause of section 8, article I, of the Constitution, known as the commerce clause. This clause reads: "The Congress shall have power to regulate commerce with foreign nations and among the several States and with the Indian tribes."

This legislative power under the commerce clause as it relates to navigable waters was definitely established by the Supreme Court of the United States in 1824.

Public navigable water was defined by the Supreme Court of the United States in December 1870 as follows: "A river is navigable in law when it is navigable in fact, and it is navigable in fact when it is used, or is susceptible of being used in its ordinary condition as a highway for commerce over which trade and travel may be conducted in the customary modes of trade and travel on water. * * * A river or other waterway constitutes a navigable water of the United States, within the meaning of the aforesaid acts of Congress, when it forms by itself or by uniting with other waters a continuous highway over which trade and travel is or may be conducted between the States themselves or between the States and foreign countries."

A congressional act of February 1932 provides that the term "commerce" shall include the use of waterways by seasonal passenger craft, yachts, houseboats, fishing boats, motorboats, and other similar water craft, whether or not operated for hire.

The first settlers arriving from the Old World found natural harbors and safe anchorage which presented few problems for the navigation of their small craft. However, our very first Congress enacted provision for the future support and maintenance at Federal expense of lighthouses, buoys, beacons, and public piers, and for rendering safe the navigation of bays, harbors, and ports.

The early settlers also found the country largely an unbroken forest, and for the first two centuries of our history our rivers were the principal highways.

The National Government in those earlier days drew a distinction between marking a waterway obstacle and removing it. The question of whether improvement of rivers and harbors was a matter of national concern, subject to appropriation under the Constitution, remained unresolved until 1824, when the first definite river and harbor act was passed. In May of that year Congress adopted a measure entitled "An act to improve the navigation of the Ohio and the Mississippi Rivers." This act provided appropriation "for removing sandbars from the Ohio, and planters, sawyers, and snags from the Mississippi."

Almost each succeeding Congress has passed one or more acts providing for work of maintenance and improvement of rivers and harbors. These acts comprise two phases—one authorizing specified works in accordance with reports previously submitted by the Chief of Engineers, the other authorizing and directing preliminary examinations and surveys at designated localities.

Prior to 1922 the river and harbor acts not only approved projects but also appropriated the money for their execution. Beginning with the act of September 22, 1922, the river and harbor acts have been authorizations of projects only and funds have been provided in separate War Department Civil Appropriation Acts. Certain of these acts have also contained specific instructions which have been the basis for procedure of the Engineer Department in the study of projects and the execution of works of improvement.

By an act of October 11, 1888, Congress authorized the Secretary of War to cause practical and sufficient fishways to be constructed to facilitate passage of fish upstream to spawning grounds in the upper reaches of streams in which river and harbor improvements were found to operate as obstructions.

By the act of February 21, 1891, and subsequent enactments, Congress provided for the collection of statistics to determine the amount of commerce using navigable waters. Other provisions for the compilation, publication, and distribution of waterway statistics were made in the Transportation Act of February 28, 1920. This Transportation Act also declared the policy of Congress to be "to promote, encourage, and develop water transportation, services, and facilities in connection with the commerce of the United States, and to foster, and preserve in full vigor both rail and water transportation."

In the act of March 3, 1899, Congress provided for the protection of navigation by prohibiting the discharge of dumping of refuse matter, other than that flowing from streets and sewers, into any navigable water or tributary thereto.

The Board of Engineers for Rivers and Harbors was created by the act of June 13, 1902. This act provided that all reports on preliminary examination and survey provided for by Congress, and all projects, or changes in projects, for works of river and harbor improvement are to be referred to this board of senior engineer officers, for consideration and recommendation prior to their transmission to Congress.

An act of March 4, 1913, established procedure to be followed to determine which of the proposed river and harbor projects are worthy of improvement at Federal expense. The act provides that reports submitted to Congress shall indicate the present and prospective commercial importance of the project, the benefit to commerce likely to result, and other information necessary to indicate the need for the improvement.

By the act of June 5, 1920, Congress directed that each report, on a preliminary examination or survey, shall contain a statement of special or local benefit to accrue to localities affected by such improvement; also a statement of general or national benefit, and recommendation as to what local cooperation shall be required, if necessary, on account of such special or local benefit.

For more than a century, Congress has entrusted to the Corps of Engineers of the Army the responsibility of planning for the Nation's waterways, investigating proposed works, and carrying on authorized projects. From the first modest beginnings designed to meet immediate needs, we have progressed to a point where channels of navigable depths have been provided and are maintained in our principal rivers. These river systems have been supplemented by a network of canals, including the interior canal system along much of the Atlantic and Gulf coasts for intracoastal commerce. Invaluable to our peacetime trade and commerce, these waterways have been a vital factor in the prosecution of our war effort.

In the course of executing navigation works in the Mississippi River, the floodwaters of the lower river created a serious problem in maintaining navigability, as well as causing serious loss to the increasing number of settlers. National interest in the improvement of this river for the control of floods was indicated as early as 1850. In that year Congress appropriated $50,000 for starting the survey of the river, made by Humphreys and Abbott, two Army engineers, and in an act of 1871 Congress authorized and directed that certain water gages be established and daily observations made of the rise and fall of the Lower Mississippi River and its chief tributaries.

The Mississippi River Commission was created by the act of June 28, 1879, to consist of seven members. The act provided that three of the members shall be officers of the Corps of Engineers, one of whom is to be designated president of the commission. The duties of the commission are to direct and complete surveys of the Mississippi River, to consider and mature plans to permanently locate and deepen the channels for the improvement and safety of navigation, to promote and facilitate commerce, trade, and postal service, and to prevent destructive floods.

The first major national legislation for flood control was enacted on March 1, 1917. This act authorized appropriation of $45,000,000 for the control of Mississippi River floods, to be expended under the direction of the Secretary of War as approved by the Chief of Engineers. It also authorized appropriation of $5,600,000 for Sacramento River flood control, and it further provided that examinations and surveys for flood control be made in the same manner as those for navigation improvements.

Multiple-purpose surveys came into the picture with the River and Harbor Act of January 21, 1927. In this act Congress assigned to the Secretary of War and to the Chief of Engineers, the duty of making surveys in accordance with House Document No. 308, with a view to the formulation of general plans for the most effective improvement of the navigable streams of the United States and their tributaries for the purpose of navigation, the development of waterpower, the control of floods, and the needs of irrigation. The reports of these extensive investigations and surveys have been published, and these documents are commonly known as the 308 Reports. They cover virtually every major stream in the entire United States. The data contained in these reports were used as the basis in formulating the War Department's comprehensive plans for flood control and other purposes in the numerous river basins throughout the country. These data have been used also by other agencies in their studies and improvements of river basins.

It might be stated that one of the many 308 Reports compiled by the War Department was that for the Tennessee River, which is printed as House Document No. 328, Seventy-first Congress, second session. As the Corps of Engineers had made the first detailed investigation of that stream, the duty of constructing the first major improvement thereon was assigned to the corps. Later, the improvement of the water resources in that basin were taken over by the Tennessee Valley Authority, and the data compiled by the Army Engineers on the proposed improvements have since served as the basis for the comprehensive development of the basin.

It was not until the Flood Control Act approved by the President on June 22, 1936, that a definite policy was established by Congress for Federal participation in the construction of economically justified flood-control projects throughout the United States, in cooperation with the States, political subdivisions thereof, or other local agencies.

The declaration of policy embodied in this act is in part as follows:

"Section 1. It is hereby recognized that destructive floods upon the rivers of the United States, upsetting orderly processes and causing loss of life and property, including the erosion of lands and impairing the obstructing of navigation, highways, railroads, and other channels of commerce between the States, constitute a menace to national welfare; that it is the sense of Congress that flood control on navigable waters or their tributaries is a proper activity of the Federal Government in cooperation with States, their political subdivisions, and localities thereof; that investigations and improvements of rivers and other waterways, including watersheds thereof, for flood-control purposes are in the interest of the general welfare; that the Federal Government should improve or participate in the improvement of navigable waters of their tributaries, including watersheds thereof, for flood-control purposes if the benefits to whomsoever they may accrue are in excess of the estimated costs, and if the lives and social security of peope are otherwise adversely affected.

"Section 2. That, hereafter Federal investigations and improvements of rivers and other waterways for flood control and allied purposes shall be under the jurisdiction of and shall be prosecuted by the War Department under the jurisdiction of the Secretary of War and supervision of the Chief of Engineers * * *.

"Section 3. That, hereafter, no money appropriated under authority of this act shall be expended on the construction of any project until States, political subdivisions thereof, or other responsible local agencies have given assurances satisfactory to the Secretary of War that they will (a) provide without cost to the United States all lands, easements, and rights-of-way necessary for the construction of the projects, except as otherwise provided herein; (b) hold and save the United States free from damages due to the construction works; (c) maintain and operate all works after completion in accordance with regulation prescribed by the Secretary of War."

The Flood Control Act of 1936 specifically authorized some 270 flood-control projects with an estimated construction cost of about $300,000,000, located in 31 States and affecting nearly every State in the Union. Preliminary examinations and surveys for flood control were also authorized for some 220 localities and streams throughout the entire country.

In the Flood Control Act approved June 28, 1938, Congress materially expanded Federal participation in flood-control projects. The act provided that all land easements and rights-of-way for dam and reservoir projects or channel improvement or channel rectification projects shall be acquired by the United States and be a part of the Federal cost of the project. Local interests were also relieved of the responsibility of maintaining and operating projects falling within this classification.

The Flood Control Act approved August 18, 1941, modified certain conditions of local cooperation prescribed in previous flood-control legislation. Under this policy, dam and reservoir projects because of their general benefits over large areas, are usually built entirely at Federal expense and are maintained and operated by the Federal Government. As the benefits provided by other types of flood-protection projects are more local in character, contributions by the communities protected are usually required. The amount of this local cooperation or contribution depends upon the circumstances of each case, but generally the minimum requirements are that the local interests provide without cost to the United States all lands, easements, and rights-of-way needed for the project, hold and save the United States free from damages due to the construction works, and maintain and operate the works after completion in accordance with regulations prescribed by the Secretary of War. The act of 1941 authorized the construction of projects at about 90 localities and also modified several projects which had been approved in the previous flood control acts.

The Seventy-eighth Congress, which adjourned a month ago, enacted the omnibus flood control bill known as H. R. 4485, which was signed by the President in the closing days of 1944. This act, with which most of you are familiar, declares it to be the policy of Congress to recognize the interests and rights of the States in determining development of watersheds within their borders and in water utilization and control. The act also provides for review of reports of the Chief of Engineers and of the Secretary of the Interior by the State or States affected by the report, and the comments of such affected States will become a part of the report when transmitted to Congress.

Other important sections of the 1944 act provide (1) for the development and administration of public park and recreational facilities in reservoir areas under the control of the War Department; (2) that electric power and energy generated at reservoir projects under the control of the War Department shall be delivered to the Secretary of the Interior for sale in accordance with rate schedules to be approved by the Federal Power Commission; (3) that the Secretary of War may make contracts for domestic and industrial uses of surplus water at War Department reservoirs; (4) that the Secretary of War prescribe regulations for the use of storage allocated for flood control or navigation at all reservoirs constructed wholly or in part with Federal funds on the basis of such purposes; (5) for the use under the supervision of the Secretary of the Interior and in accordance with reclamation laws, of storage available for irrigation in War Department reservoirs.

The act includes also, as you know, the authorization of the coordinated plans of the Corps of Engineers and the Bureau of Reclamation for the development of the Missouri River Basin, as well as a number of other projects for flood control throughout the Nation in accordance with reports of the Chief of Engineers. It also authorizes a number of projects to be undertaken by the Department of Agriculture in accordance with reports submitted by that Department. The act authorizes the appropriation of $950,000,000 for projects to be carried out by the War Department, $200,000,000 for work authorized to be carried out by the Department of the Interior, $10,000,000 for examinations and surveys by the War Department and the Department of Agriculture, and $500,000 as an emergency fund to be used by the War Department for emergency bank protection work to prevent flood damage to highways, bridge approaches, and public works.

In accordance with general flood-control authorizations since the Federal Participation Policy Act of 1936, the War Department, through the Corps of Engineers by June 30, 1943, had placed in operation 44 reservoirs and 101 local protection projects.

The flood-control program as well as navigation improvements, has been affected to a large extent by the war emergency. In accordance with present Federal policies, those projects not directly affecting the war effort have been suspended. However, the Engineer Department has carried on surveys, investigations, and the preparation of plans and specifications for dams and flood-protection projects at numerous localities throughout the United States. These activities will provide a reservoir of useful public works to be available for immediate initiation when the present wartime restrictions on the construction of public works are removed.

I have attempted to outline for you the legislative policies which have guided the Corps of Engineers in their practices and procedures for the development of navigation and flood control. Like our Nation's growth itself, they are based on the Constitution and have progressed step by step in the light of experience and accumulated wisdom. In the course of that progress, several other agencies of the Federal Government have been charged by Congress with different responsibilities toward the full development of the water resources of the Nation's river basins.

For example, the Department of the Interior, through the Bureau of Reclamation, has been charged with irrigation improvements. The Department of Agriculture is responsible for investigations and measures for the reduction of run-offs from land areas for the prevention of soil erosion. The Federal Power Commission must approve plans for power developments.

To assure that all national programs for water-resource utilization are completely integrated, there has been adopted a definite procedure for cooperation among permanent Federal agencies having special interests in such works. The chiefs of the principal bureaus directly responsible for the preparation of water-development plans and administration, have an agreement to insure cooperation on multiple-purpose projects. Under that agreement conferences are held in Washington at least once each calendar month for the purpose of discussing the results of studies and investigations, adjusting differences of opinions, and promoting ways and means for implementing agreements.

In conclusion, I can do no better that to quote from a recent statement of General Reybold, Chief of Engineers: "When the challenge of war is succeeded by the responsibilities of peace, the Army engineers will be ready to resume at full speed the mission they have performed for more than a hundred years—the river and harbor and flood-control programs for the Nation. We will not have to build a new organization. We have our organization—and it will be ready for its peacetime missions just as it has been ready for its wartime missions. It is this assurance that I am proud to leave with you as we look forward to the future of a great America."

I am sure that this applies equally to the other Federal water-use agencies, whose records of achievement in the interest of our people speak for themselves.

The Need for a Spiritual Revival

EXTENSIONS OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Need for a Spiritual Revival," delivered by the senior Senator from North Dakota [Mr. LANGER] over the facilities of the National Broadcasting Co., on February 9, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, if we are to have the post-war peace both at home and abroad which we all so deeply desire, we must admit the crying need for a new attitude toward the problems which now face us. That attitude must be based on a true spiritual revival.

If we expect to build a world security league the easy way, by the signing of a few documents of alliance or by some easy statement of principle like that embodied in the unfortunate Atlantic Charter, we are destined to a disappointment more bitter than that we tasted after the last war.

Good will toward men, both at home and abroad, is not something that can be won by mouthing phrases. It requires that we face our problems with realism as well as idealism.

Tonight I have elected to talk about the spiritual side of the case, of those living moral ingredients which are absolutely necessary if we are to prevent World War III and reorganize the world along decent lines, so that the ordinary, God-fearing men and women of all nations can go about in peace; and so that the bulk of the products of men's labor is not forced into nonproductive and useless armaments.

Before we can undertake any part of this, we must have a revival of the great ideals on which this Nation was founded, and of those human tolerances and sober religious attitudes which were the cornerstone of that foundation. Such a revival, if it is to succeed, must begin by discarding a number of the false conceptions which have been growing in this country as well as abroad.

I have quoted in a recent Senate speech from a brilliant book written by the famous author and thinker, William B. Ziff. It is called The Gentlemen Talk of Peace and is, I believe, today one of the country's best sellers. This great work has impressed many of us in the Congress. Mr. Ziff points to the gross dangers of dividing Americans along racial lines. He also points out the terrible danger of a vast racial war sometime in the future with the billion or more resentful people in India and China and other countries of the Orient unless a world is built in which they can live, too, as decent equal human beings.

Frankly, I ask you how America in the world conference can really take the dominant lead to make the world safe for democracy unless there is first a spiritual revival here.

In some parts of the country Mexican and Japanese citizens are barred from schools. In some parts soldiers who are partly Negro who are in uniform cannot even buy a cup of coffee in certain restaurants. In some parts of the country our neighbors from India cannot own real estate. The quota allowing 107 immigrants from China is a joke.

We see "Jim Crow" sections on trains and busses, and in parts of this country signs are displayed saying that certain minorities are unwelcome guests. Only when all of these evils have been eliminated from our American form of government, only then can we call ourselves fit and clean to take the lead in shaping the post-war world which will not permit these evils.

Society is built on faith as much as on power, on mutual acceptances, on the willingness of the son to take care of his aging father, on the willingness of each man to accord his neighbors dignity and the right to life.

The other side of this view is the harsh intolerant racism which now threatens to engulf the world and to rob our children of a secure peaceful future. The same terrible sickness which afflicted Nazi Germany will affect us if we do not secure for ourselves that spiritual cleansing which distinguishes the free and democratic man from the Fascist and potential Nazi. May God help us if we fail in this, our national task. Unless we can gain this victory also, military victory alone will not be enough.

All of this must have a direct bearing on our attitude toward a world-security organization. Can the present discussions by any stretch of the imagination be considered either spiritual in their objectives or a revival in the sense that they rededicate this Nation to its basic principles?

I regret to report that the actions of the nations at this moment are based instead on greed, on unilateral actions, and on the familiar cynicism and contempt for the rights of man, which caused the old League of Nations to fail and to become a cover for aggression. The Dumbarton Oaks proposals, regardless of the sincerity of the men who framed them, are inevitably leading to the cynical and unspiritual conclusions which were spawned by the Treaty of Versailles and the old League of Nations. We see this plainly in the actions of the nations today, which bespeak the deadly fear of still other and more terrible wars, not a faith in the ultimate peace. Let us consider, for example, the truly remarkable words of Harry Hopkins, the President's right-hand man, as given in the last issue of the American magazine. Mr. Hopkins says:

"We must accept a new and tough concept in world affairs. The world is not civilized enough to make world-wide disarmament practical for peace-loving nations. We wasted no time at Dumbarton Oaks, and we shall take our place in an international organization to attempt to keep the peace and to make secure the essential freedoms throughout the world. America's heart and mind will work intensively day and night to keep the world in peace. But that isn't enough. We can't take a chance. When this war ends, we must immediately prepare to defend ourselves, particularly to make sure that our enemies realize that if they dare to strike again they'll lose again."

What is this latest admission if not a declaration of lack of faith in the present peace league we are attempting to set up? Just think of it—we are going to set up a so-called Peace League, in the very midst of which we, and presumably the other nations, are to be armed right up to our eyebrows.

Is not this, with different trappings, the same old dangerous, outworn type of international attitude? Is it not authored in a cynical anticipation of international lawlessness in the future? If Dumbarton Oaks is to be the foundation for peace, why must we conscript our boys and spend the greater part of our wealth in preparing for still new wars? Is this the philosophy and are these the ideals of Christian belief on which the future of our nation is to be founded?

I, for one, would feel that I had betrayed my duty if I did not cry out against this settlement, against these almost psycopathic fears of the future, by which the affairs of men are all to be settled by brute force, by the terrible argument of shot, shell, tanks, cannon, rocket bombs, and deathdealing airplanes.

All these questions, I feel, can be answered. The truth is that Dumbarton Oaks, because its proposals lack both idealism and practicality, cannot succeed in their alleged goal—a permanent peace. A permanent peace can be achieved only if we face the facts of the modern world, put ourselves in the other fellow's boots, and make it possible for him to live in comfort and prosperity as well as ourselves—in truth approach the problem with a revival of the spiritual and practical values which made our forefathers great.

I shall outline briefly how this may be brought about, but first, I should like to tell you what my proposals do not by any stretch of the imagination represent.

They do not, as some of my opponents would have you believe, represent isolationism. Indeed, and on the contrary, it is the Dumbarton Oaks proposals, pursued to their logical conclusion, which will, if anything ever does, lead this Nation back to isolation—to an armed truce in which every other nation on the globe will have to be regarded as a potential enemy. My proposals are the very opposite to isolationism, though those impassioned advocates blinded by the worldly glitter of Dumbarton Oaks, have so tried to dub them.

Again, my proposals are not—as Dumbarton Oaks so patently is—an invitation to commit this Nation to the hilt on a world police force. I believe that if such a commitment is made, the power that controls such a force will control the world.

No, ladies and gentlemen, I do not speak to you here tonight advocating either isolationism or force. I beg rather, that we face the post-war world and its problems with logic, realism, and with a revival of the tried and true practical and spiritual ideals for which this Nation has long been so famous the world over.

I propose that we federate the world into a half-dozen great regional areas along lines of the natural interests of the nations. We would thus set up a system of regionalism which would be sane, rational, and genuinely international in character. None of the nations would lose their identity or cultural self-rule. They would simply move toward unity in their economic and other relations and would eliminate the existing currency, trade, tariff, and other barriers which now make some nations poor, weak, and impotent, in relation to their neighbors.

The present system does not guarantee the freedom and independence of small peoples as anyone can see in an instant by glancing at what is now taking place in Europe.

We are living in the midst not only of war, but of a tremendous international revolution which is completely changing the conditions of life on this earth. Yesterday, small states could exist in political isolation. Today small peoples in order to achieve security and prosperity must federate with their neighbors. Yesterday, the small state could manufacture muskets or cast cannon almost as well as anyone, though on a minor scale. Today this is not true and the small state is utterly helpless if in the path of invasion by a large, modern state.

Federation along regional lines would give the citizens of the small State an additional citizenship in a larger political grouping. This is not as unprecedented as it sounds. My very able colleague Senator ELBERT THOMAS, of Utah, has pointed out that the citizens of the Swiss cantons possess a dual citizenship. So do the citizens of the various republics of the Soviet Union. For that matter, the French Canadians possess a triple citizenship. They are citizens of the Province of Quebec, of the Free Dominion of Canada, and of the British Commonwealth of Nations.

It is the soundest of good logic that the world be consolidated into large, economically sound units in which people may live in peace and prosperity, without need of conquest to supply their wants in either raw materials or markets. The highroad for permanent security for the United States leads inevitably toward unity with our North and South American neighbors.

Only thus, and not in the present inquality between the Nations, can the world look forward to permanent peace.

[We must find some way to bring to bear our ideas and ideals in the settlement of the problems of this war and of the problems of the peace to follow. For the first time in history, we confront a situation in which the wrong of the past will be replaced by the horrors of the present, unless we can assume the moral leadership of the world. We must find some way by which, for the good of Russia, Britain, America, and the world, we can do this.]

Intolerance

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. CAPPER. Mr. President, Eric A. Johnston, president of the Chamber of Commerce of the United States, delivered an able address before the Writers' War Board, New York City, on January 11, 1945. His subject was Intolerance. I ask unanimous consent to have the address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I like to look on my presence here as a sign that the Hatfields of business and the McCoys of the writing world have ended their old-time feud. Maybe business is beginning to see more clearly that art has its practical aspects; and maybe the artist is beginning to realize that industry has its artistic values. More importantly, maybe both are beginning to understand that each is part of America and that neither has a right to pluck the mote out of the other's eye until he has first extracted the beam from his own.

Your subject tonight is The Myth That Threatens America. Surely, the businessman and the artist share responsibility in eradicating the myth of group or class superiority.

Those who pretend that it does not exist are kidding themselves.

Of all the social problems that face our great country in this area of crisis that of national unity seems to me the most challenging. Most other problems will not be solved if the American people are divided into mutually hostile and suspicious groups, sections, and classes. More than that: Even if solutions were possible under such conditions, they would hardly be worth achieving. They would be empty victories, utterly meaningless, if the character of our American civilization were changed in the process.

And the core of that civilization, it seems to me, is in the sacred dignity of the human being, regardless of race or class or place of birth. Individual freedom—liberty within a framework of law—are essential to the America we know and love. Without these elements it would no longer be our America, except in the geographical sense. In the deeper moral sense it would be an alien country, where those of us who cherish ideals of freedom would be exiles in our own homes.

We are all of us, in our several ways, seeking to preserve America. Millions of our sons are doing it on battlefields with bombs and bayonets. You who write and inspire and propagandize do it with the weapon of words. Those of us who build and manufacture do it with machines and goods. But what all of us have in mind is not simply the physical preservation of our country. It is the preservation of those human values which are implicit in the word America—the freedom, the opportunities, the equalities, the democratic ideals celebrated in our national songs and poety and books and holiday speeches.

I know these are the cliches of American patriotism and after-dinner oratory. But we dot not discount them for that reason. On the contrary, we accept them and cherish them as proof positive that the American dream is a dream of free men living together in a spirit of harmony and trust.

I regard as profoundly significant the fact that the average American, whether he be a blasé businessman or a cynical writer, looks on these so-called cliches as desirable even when he doesn't live up to them. Equally significant is the fact that even the salesmen of dissension must disguise their sales talks in the phraseology of American freedom.

Race hatreds and group intolerance simply do not jibe with any of the formulas of freedom so dear to the American heart. To the extent they are allowed to flourish, they threatened to change the American Dream into another European nightmare.

Let's not underestimate the threat. There is a tendency to soft-pedal the spread of alien doctrines of intolerance. The theory, I suppose, is that the best way to treat a disease is to pretend that it doesn't exist. That is a cowardly theory and worse, a futile one. It seems to me that honest diagnosis is the first and indispensable measure in meeting the challenge of propagandas and whispering campaigns directed against foreigners, against Jews, against Catholics, against Negroes.

Equally dangerous, but not so dramatic, and therefore not so well understood, are the campaigns of intolerance and vilification that are directed against economic groups such as business, labor and agriculture—sometimes by one another, and sometimes by the enemies of one or all. To the extent that business has been guilty of such intolerance in any direction I deplore it. I have set my face against it, and I shall continue to denounce it. To the extent that you, as writers have been guilty of this same type of intolerance with respect to any of these groups, including business, I invite you to have another look to see if the beam in your eye has gotten you off the beam of tolerance.

I have been privileged to travel widely in our country, and I do not hesitate to offer my personal testimony that the tremendous tension of race and group animosities are warping the very foundations of American democratic life. Men and women who should know better—who do know better—allow

themselves to mouth the catch phrases of anti-Semitism and antiforeignism, of anti-business, or antilabor, antifarm. Most of them are not themselves aware that they have been infected by the virus of intolerance which already has the whole world writhing in the fatal fever of war.

When there's a riot in Detroit or Harlem, when racial antagonisms break into the open in Boston or Brooklyn, it's more comfortable to shrug them off as local incidents. But the truth must be faced. These episodes of violence are symptoms of pressures and emotions and maladjustments which are Nation-wide.

The first thing we must do, it seems to me, is to confront the reality. Obviously the most violent and deep-seated of our antipathies are racial and religious. Widespread though these expressions of group hatred are, it is a hopeful fact that they still afflict only a small minority of the American population. That minority can be curbed and reeducated if conscious and organized efforts are undertaken.

At the very worst that minority can be frightened into desisting. Not by legal threats—you can't legislate the golden rule as you can the gold standard. I mean that Americans can be made sharply aware that intolerance endangers not merely the small groups against whom it is directed but the country as a whole. The obstreperous hate-mongers and their foolish or frivolous fellow-travelers who think it is smart to rock the American boat may drown with the other passengers.

If they achieve the calamity of race persecutions, they will drag our beloved America down to the barbarian level of Nazi Germany and we will pay for it in death and suffering and national degeneration, precisely as the Germans are doing today. We need to emphasize, day in and day out, that the spread of intolerance is not primarily a threat to the intended victims but to the whole country. Once the poison enters a nation's bloodstream, the entire population is doomed. Only 600,000 German Jews suffered through the triumph of Nazi barbarism—but the non-Jews who suffered from it include the more than 80,000,000 Germans.

If the day ever comes in this country when tolerance gives way to internal enmities and persecutions and discriminations, it will be the end of American civilization. Remember this: The dictates of intolerance cannot be enforced finally without the connivance of government. Should intolerance triumph, it will mean, as a matter of course, that free government is stamped out. Racial persecutions—whether in the old Russia or the present-day Germany—have always been conducted under the protection of a tyrannical governmental regime.

Viewed from the narrowest vantage point of the Nation's well-being, quite aside from human and moral considerations, the growth of doctrines of race and group hatreds represents a major economic threat. America has prospered because it has provided avenues of economic expression to all men who had the urge and the capacity to advance themselves. Wherever we erect barriers on the grounds of race or religion, or of occupational or professional status, we hamper the fullest expansion of our economic society. Intolerance is destructive. Prejudice produces no wealth. Discrimination is a fool's economy.

Freedom of the individual is the most vital condition for creative life in economy as in every other department of human existence. Such freedom is impossible where men are restricted by reason of race or origin, on the one hand, or on the other, paralyzed by fears and hatreds of their neighbors.

There are some in our country—industrialists, white-collar workers, laboring people—who hold to the myth that economic progress can be attained on the principle of an unbalanced see-saw. They think that if some groups can be forever held down the others will forever enjoy economic privileges and prosperity at the end which is up.

Fortunately it does not work that way. Any advantage thus gained must be paid for out of the fruits of the productive plant. The withholding of jobs and business opportunities from some people does not make more jobs and business opportunities for others. Such a policy merely tends to drag down the whole economic level. You can't sell an electric refrigerator to a family that can't afford electricity. Perpetuating poverty for some merely guarantees stagnation for all. True economic progress demands that the whole Nation move forward at the same time. It demands that all artificial barriers erected by ignorance and intolerance be removed. To put it in the simplest terms, we are all in business together. Intolerance is a species of boycott and any business or job boycott is a cancer in the economic body of the Nation. I repeat: Intolerance is destructive. Prejudice produces no wealth. Discrimination is a fool's economy.

These are things that should be made manifest to the American people if we are to counteract the pestiferous labors or race and group hate-mongers. The job lies to a large extent in the hands of you writers, in your colleagues in the movies, the theater, radio, the press. You are the people with direct access to the mind—and what is more important, to the heart and emotions—of the American people.

You must somehow take words like freedom and democracy and unity and lift them to the level of religious fervor. We require more than a broad acceptance of these American concepts. We need an eager enthusiasm. And you, in particular, have the power to arouse it and to keep it alive. I want to emphasize that.

If eternal vigilance is the price of liberty, the writer and the artist generally have a prime duty in keeping the vigil. It is for them to dramatize the strength and beauty that resides in America's multiplicity of races, religious, national origins and social backgrounds. The totalitarians who looked on us as mongrels, as a chaos of clashing cultures, have learned their mistake. We always must remember that America is a Nation made up of the peoples of all lands.

Any metallurgist will tell you that the toughest, most resistant metals are not pure ores but alloys that blend the most valuable qualities of many ores. It is thus with the American, who fuses in his blood and his spirit the virtues and vitalities of many races, creeds, and cultures—giving us an amalgam that is new, unique, and immeasurably strong.

That is why tolerance is necessarily and rightly a supreme American characteristic. In truth, we must continue to cultivate our native American tolerance for everything except intolerance.

Our enemies have learned in this war the toughness of our fiber. It now remains for the American people, likewise, to absorb that lesson. It was Walt Whitman who celebrated the diversity that is America's strength. "This is not a Nation," he proclaimed, "but a teaming of nations." In some measure every poet sensitive to the nature of our still young American experiment has felt and expressed that diversity. Russell Davenport has just done it in "My Country." Perhaps the poet, more than the economist or historian, senses the absurdity in attempts to hammer all Americans into a single national type and discriminate against the minorities who do not conform to an arbitrary creation.

Let's not apologize for the amazing variety of our human material here in America. Let us rather glory in it as the source of our robust spirit and opulent achievements. Let's not deny that there are differences in race and that our country has all the 57 varieties of God's humanity. Let us merely make clear that these differences cannot be measured on any scale of good, better, and best. They are all equally valid and all must continue to contribute to the magnificent mosaic of American life.

Subtract from the grand total of America the contributions of our racial and religious and economic minorities—and what remains? Subtract foreign-born Andrew Carnegie from our metallurgical industry, or David Sarnoff from American radio, or George Gershwin and the Negro composers from our native music, or Norwegian-born Knute Rockne from our football, or Dutch-born Edward William Bok from publishing, or Danish-born William S. Knudsen from the automotive industry, or Russian-born Major de Seversky from American aviation, or Belgian-born Leo H. Baekeland from American chemical achievements, or slave-born Dr. George Washington Carver from biological developments. The temptation is to list hundreds and thousands who have thrown their particular genius into the American melting pot.

And behind those whose names we know are the nameless legions of immigrants, generation after generation, whose labor and lives went into every bridge and tunnel, every mine and factory in these United States.

Too many Americans—indeed, too many of the immigrants themselves, whatever their race or land of birth—behave as if America only gave things to newcomers. We need to be reminded that America received more than it gave. After all, our country let the strangers in because it needed their muscle power, their purchasing power, their fecundity and their brains.

It is this vision of a society wonderfully rounded by reason of its many racial contributions, of an internation within the borders of a vast nation, that should be brought home to every American child and adult. The cooperation of these multiple elements, the unity of a powerful amalgam, has given a peculiar destiny and genius to our country. In pointing out our achievements to our preachers of division and distrust we are protecting that part of our history that still lies in the future.

But it seems to me that all of us who fight against intolerance can hurt our own cause by expecting too much too soon. The simple human fact is that prejudice is latent in all of us. The average Protestant, Catholic, Jew is normally prejudiced in favor of his own kind and against the others. The underprivileged are prejudiced against the well-to-do. The strong are prejudiced against the weak and vice versa. Men are prejudiced against women and women, alas, are even more prejudiced against men. The saintly soul who goes through life devoid of all prejudices is rare indeed.

These attitudes cannot be washed away or talked away or smothered with fine phrases. They are the products of centuries of history which must be taken into account in any functioning society. Those who would eliminate such things overnight may deserve good marks for their intentions, but they do not rate high in common sense. Let me say frankly that the bigotry and impatience of the right-minded can do as much harm as good. There is always the danger that their unrestrained zeal may sharpen animosities and stimulate unrealistic demands. I for one would caution such people that in clamoring for what is impossible they are sacrificing what is possible. A counter-propaganda that is divorced from living usually creates more tensions than it cures.

On the whole, America, through the generations, has shown itself capable of preventing natural prejudices from spilling over into unnatural intolerance. On the whole the trend has been toward greater equality. Even the worst manifestations of prejudice have been gradually tempered.

The danger today comes because the normal prejudices are being stimulated by deliberate propaganda. Watered by hate they flourish in more and more places as outright intolerance and discrimination. What is a mild and natural disaffection is being turned into a malignant disease. It is that which we are called upon to combat with all the skills, with all the energies that we possess.

Ill abused and unjustly treated are the victims of intolerant hate, but the dupes who follow the intolerant leader are unmercifully betrayed. Look at Nazi Germany. Intolerance is a hideous beast with an insatiable appetite. When it has devoured its unhappy victims, it turns upon its guilty followers. The strong Nazis liquidated the weak Nazis.

The inevitable cycle of organized intolerance is that it destroys the individual, the family, the community, and finally the state. In contrast, tolerance is constructive. It creates, builds, unifies. It gives strength and nobility to the individual, to the family, the community, the state. The fight against intolerance is not merely our duty as decent human beings. It is the indispensable condition of our survival as free individuals and as a prospercus Nation.

More than all this, it is a condition of happiness and a guaranty of spiritual enlargement. The very word tolerance itself derives from the same Latin stem as the words to lift up and to bear.

"Bear ye one another's burdens," said a clear voice long ago. This counsel should have been remembered by us during the past generation.

We all recognize that the two decades before the two world wars was a period of cynicism and little faith. In the enslaved and dictated countries, this cynicism found its most complete and ugliest expression.

But this degradation was not confined within the borders of totalitarian countries alone. Even among us in America there were symptoms of moral decay. During these two decades it was smart to question moral values to debunk traditional virtues, to rationalize brutalities, to make excuses for moral indignities. During this period we heard men sneer at freedom and make light of democracy. A lot of us forgot that our code of morals, respect for truth and fair dealing are not arbitrary laws imposed upon us from without. They are the products of thousands of years of human experience—the quintessence of the wisdom of the ages. To violate these codes brings disaster as surely as the violation of physical laws of nature bring disease and death.

To the extent that we yielded to this wave of cynicism, we have contributed to the greatest crisis of our epoch which came to a head in the most destructive war of all time. It has not been merely a political or economic crisis. It has been a spiritual and moral crisis. An evil wind has swept throughout the world and its havoc is all about us.

But in spite of this destruction, I know that the physical ingredients for a better, a happier, and a nobler America are at our disposal. Raw materials, machinery, skills, manpower in abundance. Can we match these with intelligence, good will, social idealism, and tolerance?

In the perspective of history, it will appear that ours is the tragic privilege—the tragic privilege of living in the greatest military crisis since Napoleon, the greatest economic crisis since Adam Smith, the greatest moral crisis since the fall of the Roman empire. But if ours is the tragic privilege, history will also show that ours is the magnificent opportunity—the magnificent opportunity to understand that in unity there is strength; in good will there is prosperity; in tolerance there is progress—progress toward a better, a healthier, and a happier America. In fact, this is the only way we may have peace at home or abroad in our lifetime.

Address by Ben Dean, President of Kiwanis International

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. VANDENBERG. Mr. President, Mr. Ben Dean, the president of Kiwanis International, is from my home city of Grand Rapids, Mich., and we are very proud of him. I ask unanimous consent to have printed in the Appendix of the RECORD a very able address which he delivered recently before the Kiwanis Club of New York, together with the introduction made by my distinguished colleague, the junior Senator from Michigan [Mr. FERGUSON].

There being no objection, the address and introduction were ordered to be printed in the RECORD, as follows:

SENATOR HOMER FERGUSON'S INTRODUCTION OF BEN DEAN, KIWANIS CLUB OF NEW YORK CITY, NOVEMBER 15, 1944

Mr. Stringfellow, honored guests, it is a real privilege for me to be able to be here with you tonight, that I may introduce to you the next speaker, and I know that you will enjoy the wisdom which he brings you.

The Kiwanis Clubs of America have a great slogan. They have a great ideal. They have a great motto in the words, "We build." Nothing could be better for America or in American life than those two words. I think you start to build at the right source. In Kiwanis you start with the youth, not only with those who have adavantages, but also with those who don't have advantages.

Today you find that building with youth is not sufficient, because we are in a great war, and it is necessary that we win that war, and that is your ideal today. That is the principle upon which you stand and upon which your willingness to go forward depends. You are not satisfied with the winning of that war alone, but you have an ideal that this civilization of ours must not only win the peace, but must also keep the peace.

You start back in your neighborhoods and communities, and you teach cooperation among the people there. I say to you that if we don't understand and practice cooperation in America back in our own communities, this Nation will never be able to cooperate with other nations that we might keep the peace. You start back there, and you say that you believe that we should live under law, and you know that you all hope for the day that we will have international law, that we will have an international court which will be able to settle the disputes of the world, and that we may, if necessary, enforce that peace through the international court.

You have today a man who believes in the fundamentals of America, the fundamentals of your ideals. He has dedicated his life to work among his fellow men, that he may have cooperation and a better America. I know that when America dedicates itself to the task of cooperation in the winning of this war and the peace of the future, we will have a better chance for a peace which will be lasting.

It is a privilege for me to be able to introduce this man from Michigan. He was born out in Grand Rapids. He came up from the school system of Michigan. He became city editor of a Grand Rapids newspaper, and after a few years of newspaper work he decided he would go into advertising in order that he might help to sell the products not only of Michigan but also of the United States as a whole. He has done well in that and now he is international president of Kiwanis, where he is going to sell the ideals for which you stand.

Yes, he and his good wife have a son in Italy. They know exactly what war is. They, too, watch for news from the front as you watch for news from the front. This man comes to you as no stranger because you have known him many, many years to elect him as your international president. It is a privilege, for Kiwanis was born in Detroit, my home city, for me to come here to you tonight just to tell you that the next speaker will be your international president, a great Michiganite, Ben Dean.

ADDRESS BY BEN DEAN, PRESIDENT OF KIWANIS INTERNATIONAL, TO THE KIWANIS CLUB OF NEW YORK CITY, NOVEMBER 15, 1945

May I acknowledge on behalf of Kiwanis International, Senator FERGUSON, our very deep appreciation for this fine introduction and the very gracious things you have said here this evening about our organization, and also which you said this afternoon on the program over the Columbia Broadcasting System, in which it was my pleasure to participate. I feel that I should like to say this to our New York audience: We are very proud of Senator FERGUSON in Michigan. That is why we voted for him and sent him to Washington. We admire very much the courage with which he fought boss rule in our home State and with which he prosecuted some public officers who were guilty of misuse of public funds. We followed his career with a great deal of interest in Washington, as we have seen him take a courageous stand for Government economy against bureaucracy. It is a real pleasure to me as a fellow citizen of Michigan to have had the pleasure of being introduced by him this evening.

I wish to congratulate this club and President Stringfellow on the very fine leadership and standing which this club has, and to say that Kiwanis International is extremely proud of this club and watches its progress, feeling that it is setting a pattern for the metropolitan clubs.

Now, just briefly, may I say a few things. I want to refer to an advertisement which was written 30 years ago and which is still considered in advertising circles—and the Senator has said that my business is advertising—as a classic. It was written by an advertising man in Detroit whom the Senator may recall, Theodore F. McManus. It was published in leading magazines in 1914. The space was bought and paid for by the Cadillac Motor Co., but unless you watched very closely and read a line of very fine type at the bottom, you would not have known who was buying the advertisement, because there was nothing in it about automobiles. It was entitled "The Penalty of Leadership" and went on to say in very eloquent phraseology that in every line of human endeavor leaders stand out, are subjected to the white light of publicity, and the penalty of leadership is that, while they enjoy the plaudits of the crowd, they are also subjected to the criticism of the multitude, and upon them lies the responsibility of constantly keeping ahead of the crowd and being entitled to the rank of leadership by their progressive ideas.

I should like to have you consider that with me for just a moment. First, I want to apply it to our country, the United States, which now, because of the strength of its armed forces, because of its great wealth and position, is necessarily subjected to the penalty of leadership. Whether we will or not, we must accept leadership in world affairs and must take this leadership, working out and welding together a peace which will be permanent.

I want to apply the penalty of leadership to the individual Kiwanian and remind you

gentlemen that when any of us accepts Kiwanis membership and places upon his lapel the Kiwanis button, we serve notice with that act upon our community that we have accepted a higher standard of citizenship and that we are available in our communities for leadership in community affairs.

Now, I want to apply that to this New York club. Kiwanis International is very proud of the New York club, proud of the leadership which President Stringfellow has given it, proud of the standing which it has in this community, proud of the fine relationship which has been developed between this club and the sister Rotary club in this metropolis, and that is one of the reasons I was very happy to accept this invitation, because I wanted to lay down three challenges to this New York club.

The first is that I believe Kiwanis International—and I speak for the board of trustees of Kiwanis International—has the right to expect of this club, the largest club, if you please, in the entire International set-up, in by far the largest city in the United States and Canada where Kiwanis operates, outstanding leadership in patterns of public service, and we look to you to give it to us in the days to come, so that it will be an inspiration for the other clubs of Kiwanis International.

The second challenge which I lay down to you is that your membership is composed of men of great influence, men of affairs and wide interests and wide acquaintanceships. Kiwanis International has a right to expect of this club that you devote some of that leadership and some of that ability and influence to the administrative affairs, not only to the New York district, but of Kiwanis International. The whole rank and file of Kiwanis International looks to this club for fine leadership because of the power and influence which you men have in this membership, and we want it in the future.

The third challenge which I lay down is that we believe there are literally thousands of potential Kiwanians in this congested area, who are not now members of the Kiwanis. The International Board believes that this club, this great club of the metropolitan area, should be the mother club in sponsoring a dozen or more clubs in this area, in communities within this great city, because of the possibilities of Kiwanis service which can be given by the motivating power of the leadership and manpower of this club.

Kiwanis International will be 30 years old next January, Today, our membership is 136,000. We have more clubs than ever before—2,243 was the last count—and this despite the pressure and anxiety of the war years. Kiwanis, along with other service clubs, has proved its usefulness and indispensability in these war years by its war services in various communities.

You may have seen the fascinating book which was published recently, Your World Tomorrow. It paints a fascinating picture of what science can do in adding new comforts and conveniences to America and to all civilization, once the last bomb is dropped and the last gun is fired and we can return to peacetime pursuits. It tells of homes which will be lighted by stored-up sun rays, meals that will be cooked by pressing buttons, newspapers which will be printed over night in our living rooms, and whatever we are lacking in raw materials will be made up for with synthetic materials. A great, new, promising future is opened up to the human race.

However, the other side of the picture is ominous, indeed, and within the last few days, intelligence in the newspapers has told us the horrifying story of the V-2 bomb, with unlimited potentialities. As I was coming over on the plane from Grand Rapids, I read the comments made by the engineering staff of the Ford Motor Co., which said that America was ahead of Germany in jet propulsion. We could have bombs in the future so destructive that they could travel 3,500 miles per hour and pack a ton of explosives.

Ladies and gentlemen, of what use is it to progress in the physical sciences, in the material comforts and conveniences of life, as long as science and scientists without souls, uncurbed in moral responsibilities by outlaw nations, are permitted to contrive their devilish inventions which may well destroy the human race? We shall never have security, no matter what the advance of science, until we develop, along with these physical sciences, these material comforts, the science which has been woefully neglected, and that is the science of human relationships.

I mention that because for 30 years Kiwanians, throughout the length and breadth of this land, have been practicing human relationships, the ability of men to meet with each other, men of different racial backgrounds and religious creeds and political opinions, working together and learning the spirit of cooperation.

One of the great contributions of Kiwanis clubs and other service clubs is their emphasis on community welfare and on community life. The heart of Kiwanis International is the individual club in the individual community. Our clubs are devoted not to their own progress and advancement, but to community service. We place the emphasis on the community. We have been running to Washington too much, as these distinguished gentlemen from the Senate know. We have had a dangerous trend toward centralized Government, and one of the great contributions of service clubs is that counter action against the centralized trend, putting the emphasis on community responsibility, on groups of business and professional men in their communities who will emphasize the needs of their own towns and cities and solve their own problems.

I wish I had time to tell you of the 10 great objectives which Kiwanis International has adopted for this coming year. I leave with you the administrative theme, which is: Win the war—build for peace. We recognize that after victory in Germany, whenever it comes, there will, inevitably, be a let-down, and Kiwanis clubs and other service clubs in their communities can help build the morale. We must help carry the energies of the American people through this war, lest we betray our fighting sons in the Pacific.

Reference has been made here tonight to how Kiwanis clubs and other service clubs can help to hasten a peace and help to build a permanent peace. We are going to ask our 2,243 clubs to establish, in the coming year, through forums and panels and public discussions, clear-cut debates on what a durable peace should involve, in order that we may clarify our own thinking and bring our influence to bear, and our suggestions as help to those in the legislative halls who will be confronted with the problem of building an international peace.

Many of you read a book last year with the intriguing title "A Time For Greatness" by Herbert Agar. Ladies and gentlemen, I submit to you that next year is a year for greatness, for greatness of faith, for greatness of resolution, for greatness of belief, Somehow, despite all these problems, these grave issues which confront us, if we believe in the fundamentals of American life, and if we use our influence as individual Kiwanians and through our clubs, somehow, through faith we shall be able to come through.

The last of our 10 great objectives is to stress spiritual values as basic to human problems and progress. We have come a long way along the road of materialism. America can never be saved, and this world, so grievously wounded and stricken with sorrow, can never be saved, and a new day can never be born until we get back upon the road of human values as superior to material values. I recall reading a story by Donald McKensie, a newspaper correspondent of one of the New York papers, who visited London in the fall of 1940 after London had gone through that bombing, when Hitler had all but defeated the British people. He had almost destroyed their city, but could not destroy their courage. Driving down one of the streets one day he came to where the fragments of a church were still standing, and he noticed a homemade placard on the wall of this church. He halted his taxi and walked over. This is what the poster on the fragment of the wall still standing said: "If your knees are knocking, kneel on them."

Is there a man or woman in the whole world tonight whose knees are not knocking for the fear of the future? Ladies and gentlemen, there is only one way out, and that is to find the way back through reverence and humility and penitence for this whole world. We must get on our knees and find our way back through spiritual and human values.

I close with this story and, if you will recall nothing else I have said this evening, will you please remember this. It sums up what all the previous speakers have said. It is a story of a professor of speech in a Scottish university, who, one Sabbath day, visited a friend in a small Scottish community, and they went to the village kirk or church to the service. During the service, the host arose from his place in the congregation and said to the venerable old pastor, a man past 70 who had spent his whole life in that community and knew the families intimately in their hours of joy and sorrow, "Pastor, we have a distinguished guest in our church, a professor of speech in a great Scottish university. I wonder if you and the congregation might not like to hear him repeat the Psalm of the Shepherd, the beautiful twenty-third Psalm."

The professor of speech came to the platform and recited, with all the beauty of cadence and diction and enunciation which he possessed, that glorious psalm, the Psalm of the Shepherd. The audience was visibly moved, and after the recitation when the professor of speech had taken his seat, someone in the congregation said: "Pastor, will you now repeat the twenty-third Psalm." And the pastor modestly and reluctantly said, "Yes," and without any affectation, in his simple way the old pastor repeated the twenty-third Psalm, and when he had concluded there was hardly a dry eye in the house.

As they walked home afterward, the man who was entertaining the professor of speech for dinner said: "Did you notice the strange thing which happened? When you repeated the twenty-third Psalm, the congregation was visibly moved, but when the pastor gave the Psalm of the Shepherd, there was hardly a dry eye in the congregation. How do you explain that?" And the professor of speech, who must have been a very wise man and modest withal, said: "That is very simple. I know the Psalm, but he knows the Shepherd."

That is the difference between lip patriotism and patriotism which wells from the heart. That is the difference between the casual Kiwanian and the Kiwanian whose soul and loyalties are stirred by the ideals of our organization. And, in facing these critical days to come, may we have a loyalty of the heart and a seriousness of purpose as we dedicate the great energies and power of our organization to play a part in the reconstruction of our world.

Thank you.

Address by Lt. Col. S. G. Neff at Nebraska State Reclamation Association Meeting

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Lt. Col. S. G. Neff, Corps of Engineers district engineer, Kansas City district, at the Nebraska State Reclamation Association meeting held in Lincoln, Nebr., on January 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR RESPONSIBILITY IN THE DEVELOPMENT OF THE MISSOURI RIVER VALLEY

It is a pleasure and a privilege for me to be here with you today, and I want you to know that I appreciate this opportunity of meeting you and talking to you. Although I am not a Nebraskan, I feel at home with you, for I have always been a resident of the Missouri River Valley. There is hardly a tributary of any tributary of the Missouri River that I have not been the length of, and when I think of this great territory I an conscious of its present wealth and the wealth of the resources within the valley that have yet to be developed. Nebraska should certainly be interested in this development, for it lies wholly within the Missouri River Valley and is the only one of the nine States of the valley of which this can be said. South Dakota almost falls into this category, but not quite. My most pleasant memories are of the fishing and hunting in the headwaters of the Missouri River. I was raised at Cody, Wyo., where one of the first Federal reclamation projects was undertaken. It was there, while watching construction of the Shoshone Dam, that I decided to be an engineer. I wanted to learn how to drive a tunnel from both ends and make it meet in the center of a mountain. There has been such great development since those days, and one feels proud to know he has been a part of it.

It might appear that I am giving a life history of myself, but my knowledge of the river basin has been gained by close association with its development since 1928, when, as a civilian engineer, I went to work for the Corps of Engineers at Kansas City. At that time the Corps of Engineers was starting the comprehensive survey of the water resources of the Missouri River and its tributaries.

The report, as a result of that survey, is referred to as the "308 Report." If you have never traveled the length and breadth of the Missouri River Basin you cannot comprehend the magnitude and unlimited resources of the river. In the course of 5 years we surveyed and reported on some four or five hundred dams, reservoirs, and various other projects connected with the development of the water resources of the Missouri River. Several of those projects have been built by Federal, State, or private agencies since the survey started. There are the Pathfinder and Alcova Dams built by the Bureau of Reclamation for the development of power and irrigation of land in Wyoming; the power development of the Loup River and the unusual tri-county project, both of which were constructed by agencies of the State of Nebraska. Let me here give credit to Professor Mickey, of the University of Nebraska, for the foresight and engineering courage he displayed in making the tri-county project a reality. He had the vision that was necessary to see the end results of such an undertaking. I remember going to his office at the University of Nebraska where he explained the proposed plan to Lieutenant Young, now deceased, and myself. I was 15 years younger then, and not much impressed with what appeared to be such a fantastic scheme. However, we made a survey of the entire plan, and the more we got into the details of the project the more feasible it appeared. A great part of that project is now constructed, and not long ago I went over it from end to end. I got a thrill out of seeing Johnson Reservoir, Sutherland Reservoir, the miles and miles of canals, and the powerhouses there on the ground in front of men. Years before they were on sheets of paper. The engineer never gets rich, but he gets some big moments out of life.

I must not neglect to mention Fort Peck, the next to the largest reservoir in the world. Mr. F. E. Fahlquist, of Boston, and I made the first investigation of the site in 1932. The valley was so wide that one could hardly call it a dam site, but it was a good site where a large amount of storage could be had at low cost. An amusing incident occurred at the site shortly before construction started. General Moore, the division engineer, Colonel Wyman, his assistant, and Mr. Coleman, mayor of Glasgow, Mont., were out from Glasgow to look over the dam site. They stopped their car on the west abutment, got out, and stood looking across the valley. The mayor asked where the dam was to be built, and when he discovered that he was looking at the site he remarked: "Why, it would cost a million dollars to build a dam across here." After 8 years of work it had cost about $130,000,000.

There are also extensive river improvements between Sioux City and St. Louis that many people do not know much about. Here are 760 miles of tamed river that at one time ran wild, cutting banks away, destroying farm land and property, and in general making a nuisance of itself. Floods still occur along this stretch, as we all know, but your land is not being washed and cut away, and in the not too distant future we hope that the valley will be protected from such floods as you have experienced the past 3 years. For one who has seen the shipping on the Mississippi River and some of its tributaries, it is easy to visualize heavy river traffic on the Missouri River when the 9-foot channel is a reality, and I am sure it will be a reality.

So much for what has been accomplished in the valley. Now let us look to the future and see what is yet to be accomplished here in Nebraska. A great start has been made, and it is our job to go on with this development. There are so many things to be done, and we should be at it as soon as possible. The State of Nebraska has a big stake in this. You have land to be irrigated, power to be developed, floods to be controlled, land to be saved from erosion, reforestation, preservation of wildlife, and many other problems that will call on everyone of us to put forth our best effort. I can name one problem that will give all of us something to think about. How are you going to control a flood on the Elkhorn River such as the one experienced last summer? There must be some way to do it, but it won't be easy. The thing for me to do is let Colonel Freeman help you figure it out. I have some problems of my own in Kansas City.

There is a great deal of land in Nebraska that needs irrigation, and it is not going to be easy to get water to all of it. It can be done; however, it will take a concentrated effort on your part, along with engineering skill in planning for it. Nebraska's need for irrigation reminds me of a plea for irrigation made by a Nebraskan years ago. He stated that the farmers in a particular area sowed in hope, cultivated in doubt, and harvested in despair. Not a very cheerful outlook, but we all know how often parts of your State have experienced such discouragement. Few things ever happen just right by mere accident. If it is a success or a triumph, you may be sure that someone or many have spent much time or effort to perfect it. There has been planning and teamwork, trial and failure, and trial again, with no giving up. There must be a definite objective with a desire and willingness to see it through. Such a spirit is essential in carrying out the development of this Missouri River Valley. We must make sure in our planning that we do not allow selfish interests to influence the development or destruction of our resources to the extent that valuable resources are lost to us forever. Thousands of good acres should not be inundated by a reservoir so that hundreds of acres of marginal land can be protected against infrequent flood. A low dam should not be constructed which would preclude the construction of a higher dam later on, provided a higher dam is economical and necessary for the full development of the water and land resources. Regardless of whether you favor private or public power development, no dam should be built without the necessary provision for the future generation of power if it is at all likely that the generation of electric power would be economical and desirable at some future date. Politics and trends of thought change from time to time, but we have only so much in natural resources, and they should be developed sanely and unselfishly. There must be a well-thought-out plan and a willingness to cooperate among yourselves and the agency delegated to carry on the work. There must be a trusting understanding and a willingness and a desire to work together for the greatest benefit to the greatest number. Without such cooperation, there will be many delays and set-backs in this development that we are all so interested in.

I know that you are all interested in the projects that have to do with the development of the resources of your State. Colonel Freeman has outlined the activities of the Corps of Engineers of the Omaha district affecting the State of Nebraska. I shall endeavor to cover briefly the activities of the Kansas City district office with regard to the projects on streams within the State of Nebraska. The principal streams of Nebraska within the Kansas City district are, in their order of importance, the Republican River, the Big and Little Blue Rivers, and the Nemaha River. The most important, of course, is the Republican, which presents problems in flood control, irrigation, and possibly the development of some power. The Big and Little Blue Rivers and the Nemaha have flood-control problems to be soved. It is unikely that much irrigation or power development will be undertaken on these relatively small streams within the near future. A review of the survey report of the Kansas River Basin, which includes the Republican River and the Big and Little Blue Rivers, is in the last stage of completion. It is quite likely that this report will be in shape for this session of Congress. The 1944 Flood Control Act, in addition to the authorized Harlan County Reservoir, includes the following reservoirs: Bonny Reservoir on the South Fork of the Republican River; Pioneer Reservoir, on the Arikaree River; Enders Reservoir, on Frenchman Creek; Culbertson Reservoir, on the Republican River; Red Willow Reservoir, on Red Willow Creek; Medicine Creek Reservoir, on Medicine Creek.

These reservoirs have been agreed on by the Bureau of Reclamation and the Corps of Engineers and, as I have previously stated, are a part of the present flood-control bill. It is quite likely that each of these, when constructed, will contribute to the storage of water for flood control on the Republican River and the irrigation of land within the State of Nebraska. To my knowledge, it has not been determined which of the two Government agencies will be responsible for the development of these projects on the headwaters of the Republican River.

The Harlan County Reservoir and irrigation project on the main stem of the Republican River is one of the major flood-control and irrigation projects yet to be developed in the State of Nebraska. The project was authorized by Congress in the Flood Control Act of 1941. The district office at Kansas City has completed the definite project report on the dam and reservoir and is now engaged in the preparation of final plans and specifications. Actual construction of this project of course cannot be undertaken until the war is won and the present restrictions on civil construction are lifted. The present plans call for a 105-foot earth dam to be constructed across the main valley of the Republican River near Republican City, Nebr., and just a few miles below the mouth of Prairie Dog Creek. At full pool elevation, the reservoir will extend up the main stem of the Republican River a distance of 15 miles and store approximately 850,000 acre-feet of water. This amount of storage will provide 200,000 acre-feet for silting allowance, 150,000 acre-feet for irrigation, and 500,000 acre-feet for flood control, which is equivalent to a run-off of 0.7 of an inch from the total drainage area of 13,300 square miles above the dam site and below the tributary reservoirs. This 500,000 acre-feet of flood-control storage will more than store the flood of May and June of 1935, which has been computed to be 480,000 acre-feet. The peak flow for this flood in the vicinity of the dam site was 260,000 second-feet. Fortunately, this rate of flow lasted only a short time. Agricultural lands subject to flood hazards between the dam site and the mouth of the Republican River comprise 154,000 acres. Of course, there are many thousands of additional acres along the Kansas River and Missouri River that will be benefited. It is estimated that a total of 86,700 acres of land in Nebraska and Kansas can be irrigated from the water stored in the reservoir. The development of the irrigation will be undertaken by the Bureau of Reclamation. It is undecided at this time as to whether power will be a part of the initial development. However, it is quite likely that in any case provision will be made for the future development of hydroelectric power by including penstocks in the initial construction.

There are two flood-control projects in the Republican River Valley in Nebraska that are not associated with the construction of reservoirs. The proposed basin-wide plan includes local flood protection for Bartley, Nebr., from floods on Dry Creek, and local flood protection for Indianola from floods arising in the Coon Creek Basin. Similar protection is planned for both towns which includes the construction of levees, bridge alterations, and channel rectification.

The Big and Little Blue Rivers do not offer much opportunity for the construction of large reservoirs for either flood control, power, or irrigation. However, local flood-control projects are included in our plan of development. They are, for the most part, small undertakings for the protection of communities located along the streams which have experienced considerable damage from past floods. The work generally embraces the construction of walls or levees and channel rectification. The present review report of the Kansas River and its tributaries includes in the recommended plan local flood protection for Beatrice and Hubbell on the Big Blue River.

As for the Nemaha River, very little has been done up to this time with regard to the survey that was recently authorized by Congress. A hearing was held at Falls City on September 8, 1944, for the purpose of determining the attitude of the local people regarding their flood problems, and at the same time to get as much information as possible which might assist in the study and preparation of a plan of development for the watershed.

These projects that I have discussed briefly, give you some idea as to the part the Kansas City office of the Corps of Engineers has in the development of your water resources here in Nebraska. I assure you that we have the greatest desire to work with you and for you in this great undertaking that lies before us. There is much work to be done, and it is going to stretch over a long period, but by working together we shall certainly make progress in the right direction with a minimum of mistakes and regrets.

It has been a pleasure to be with you, to meet new and old friends, and I wish to express my appreciation for being included on this program.

Surplus Property Disposal Through the Wholesaler

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Surplus Property Disposal Through the Wholesaler," expressing the views of L. J. Carleton of Manchester, N. H., a distinguished businessman of that city.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Underwear and Hosiery Review of January 1945]

SURPLUS PROPERTY DISPOSAL THROUGH THE WHOLESALER—PROGRAM WILL BENEFIT MANY SMALL MERCHANTS SAYS HOSIERY AND UNDERWEAR DISTRIBUTOR AT SENATE COMMITTEE HEARING IN WASHINGTON

The case of the wholesaler as a logical channel for the distribution of surplus Government goods, with special reference to hosiery, underwear, and other related textiles, was forcefully brought to the attention of the Senate Committee on Small Business at a hearing held in Washington December 12. It is rather significant that among those invited to the hearing to present his views on the subject was L. J. Carleton, a practical wholesaler of dry goods, who offered constructive suggestions for a program of distribution that will result in "freedom of purchase of surplus goods for some 1,647,150 independent merchants located throughout the United States, each doing a business of less than $100,000 a year."

The program outlined by Mr. Carleton, who is the head of L. J. Carleton Co., Inc., wholesalers of hosiery, underwear and other dry goods, at Manchester, N. H., was received with much interest by the committee which is now giving it serious consideration.

Mr. Carleton, who is a member of the Wholesale Dry Goods Institute and is actively identified with the National Association of Small Businessmen, urged the adoption of a program which would utilize the facilities of established wholesale firms for the most equitable distribution of textile and other consumer surplus goods and thus avoid the speculative practices and unfair competition that prevailed after the First World War.

The views expressed by Mr. Carleton at the Senate committee hearing, as here reproduced in full detail, are of particularly timely interest, as the subject will come up for discussion at the eighteenth annual convention of the Wholesale Dry Goods Institute, Inc., to be held at the Hotel New Yorker in New York on January 17, 18, 19. Lee R. Fleming, manager of the Zion Mills, Marshall-Field & Co., who was selected by the Secretary of the Treasury to serve as Director of the Textile Division, Office of Surplus Property, will speak on The Story of Surplus Property at the January 18 session of the convention.

"Please do not assume or gather from my remarks that my study on the matter of the disposal of consumer goods is totally in the interest of wholesalers," Mr. Carleton declared at the Senate hearing. "Frankly I am more definitely concerned about the interest of small business enterprise and in the welfare of returning servicemen. My remarks have a significant bearing on the act known as the Surplus Property Act of 1944, relative to objectives as outlined in section 2, also Disposition to Veterans covered by section 16 and Small Business covered by section 18.

"I strenuously oppose any proposed legislation that may be set up to work to any special degree for the definite interest of big business, speculative interests, or monopolistic practices which would result to the detriment of small business enterprise.

"In the March 3 issue of United States News the statement was made that 'sealed bids are the rule, in most cases, with all bids above ceilings to be rejected.' In my estimation, sales by method of sealed bids will have a detrimental effect on fair and equitable distribution and fair competition. Purchase of surplus consumer goods through the sealed-bid program could possibly lead toward monopolistic practices. The opportunity might exist whereby large operators or speculative interests could connive some method of purchase in order to obtain the total amount of a certain item that would be offered in the various zones.

NEW ITEMS SHOULD CARRY FIXED QUOTATIONS

"It must be considered that the small merchant in filing a bid for his requirements through a Government agency would doubtless be in a position to bid on (for example) a few dozen hosiery, shirts, pants, sheets, etc., or whatever the item might be. I see the picture, with no definite program having been formulated to take care of this condition.

"Another important point to be considered is that only through the service of some wholesaler or wholesalers can a returning serviceman collect the supplies needed to engage in any line of retail business. For his opening stock he could only go to a wholesale house to economically get together the goods he will need to embark in business. Only through a wholesaler can he secure his small part of the consumer surplus property.

"The wholesaler, from an economic standpoint, carries out the highly important function of serving department stores as well as the so-called small businessman with civilian goods from the sources of supply and in quantities to meet their requirements. The reputable wholesaler serves the small businessman in the capacity of warehousing—equitable distribution—banker in the extension of credit and business adviser.

"I advocate a program whereby new items in surplus consumer goods should carry a

fixed quotation and have equitable distribution throughout our Nation. Distribution should be made on an impartial basis throughout established regional territories. Surplus goods in the used or salvage brackets are not covered by the above suggestion. However, the sales of used and salvage material are in need of a definite and well-supervised program."

SHOULD RECEIVE ADVANCE NOTICE OF SALE

Mr. Carleton quoted from an article giving his views on the surplus-goods problem in relation to hosiery, underwear, and other textiles, which appeared in the February 1944 issue of the Underwear and Hosiery Review and reprinted in the Appendix of the RECORD, volume 90, part 9, page A1644. He then recommended that boards or commissions to cover sales of consumer surplus goods should be appointed in various regional territories and that these should be composed of businessmen who are familiar with local market conditions.

A wholesaler, he then stated, must be classified as an establishment presently engaged in the business of selling hosiery, underwear, or goods of a textile nature to retailers generally, with at least 50 percent volume of sales from out-of-stock merchandise (not considering drop shipments).

"Furthermore, it should be definitely understood that every wholesaler in each zone should have advance notice from his board, stating the date, also item of surplus goods that are to be released for sale—this procedure in order that merchandise may be offered in a fair and impartial manner."

EXPERIENCE AFTER FIRST WORLD WAR

He quoted from another part of the article in which he suggested that in the case of surplus goods not acceptable from the standpoint of styles and colors for civilian use, or so-called victory merchandise that the domestic public may not be interested in when they can doubtless get a supply of up-to-date goods, these should be disposed of through lend-lease.

"It is recalled that after the First World War," Mr. Carleton informed the members of the Senate committee, "the distribution of governmental surplus goods was handled principally by special types of stores that mushroomed during that period. Will our Government sanction a repetition of this condition?

"I am informed that in 1944 a national trade association composed of interests concerned principally with the distribution of surplus goods had already been incorporated. L. J. Carleton Co received through the mails the association's application blank covering annual membership fee of $25 for the small retail trade, and association membership fee of $100 covering publishers, manufacturers, and wholesalers.

"In my estimation no wholesaler or retailer participating in the distribution of surplus Government goods should be obligated in any way to the payment of fees in order to have the privilege of buying his rightful share of such merchandise."

Mr. Carleton quoted from an article in the September 1944 issue of Fortune magazine as to the unsolved question of how the small businessman is to obtain a share of the surplus property inventory when it is sold. The part quoted by him read as follows:

"There are already many complaints. The lots, it is said, are too big for the smaller dealer; he hears about the sales too late and doesn't hear about some of the offerings at all; the descriptions of the merchandise are vague and, unlike his larger competitors or the professionals, he can't afford a trip to a distant depot or warehouse in order to see samples of the actual merchandise. If everyone is to have a chance to buy, it will take smart merchandising—good catalogs, small lots, frequent sales, widely dispersed selling points, and credit terms. The plans, except for credit, which will require legislation, are not yet visible.

"If people are to believe that all are sharing alike, far more information on sales will be needed than is now available. There will have to be a regular accounting of the kinds of merchandise being sold, the volume of sales, the Government's realization, and the kind of buyers participating. At present this information is either unavailable or exceedingly difficult to find."

"These points above mentioned are quite well covered by my suggested program of distribution through the wholesaler," Mr. Carleton said. "Through the wholesale channel the items of good catalogs, small lots, frequent sales, widely dispersed selling contacts, and credit terms, in my estimation, will be well taken care of by the wholesaler and thereby result in a real saving by our Government."

ADVANTAGES OF DISTRIBUTION BY WHOLESALERS

"The wholesaler, from an economic standpoint, carries the highly important function of serving department stores as well as the so-called small businessman with consumer goods indirectly from the source of supply and in quantities to meet his requirements. The manufacturer, or any source of supply from a quantity standpoint (be it textile goods, food products, hardware, footwear, etc.), find it economically sound to distribute their wares through designated distributors throughout our Nation.

"This procedure eliminates for the manufacturer cumbersome bookkeeping records, simplifies and concentrates credit matters, as well as eliminates the work involved in making small shipments of possible a few items to individual accounts. In connection with this thought could not the Government well be considered as a manufacturing unit insofar as sales and merchandising of surplus goods are concerned?"

CITES DISADVANTAGES OF DIRECT SALES

"Sales of surplus goods direct to retail trade outlets only would tend somewhat to centralize sales primarily to metropolitan areas, inasmuch as department stores (with group buying facilities), also various numbers of large city retailers and chain stores are set up from a buying standpoint to be more definite and consistent contact with sources of supply. The small businessman located in urban territory or within the vast expanse of our country finds it inconvenient to contact the manufacturer or sources of supply located at distant points.

"Please do not assume that the wholesaler is interested to any degree in monopolistic practices with respect to purchase and sale of surplus consumer goods. The large metropolitan department stores in cities in excess of 250,000 population and operating prior to 1940 with annual sales volume of an amount to be determined, also group chain stores operating prior to 1940 with Nation-wide distribution, are customarily or commercially entitled to their share of surplus goods on a direct basis.

"However, the wholesaler and our Government as well, should be vitally interested in making it easy and convenient for the small retailer to buy his share of such goods, and our servicemen, many with limited capital and with a desire to enter the retail mercantile business, should also have an equal opportunity to purchase their share of surplus goods in lots to suit their convenience.

"As I see the picture, the bona fide wholesaler on his purchase basis of list cost, less trade discount of 16⅔ percent, is the logical outlet for sales to small business enterprises.

"The L. J. Carleton Co. recently received from a New York concern, Merchandise of Surplus Goods, an illustrated circular offering for sale a combination hood and cap made for the United States Coast Guard. This well-made cap is constructed of specially tested cloth with an all-wool siding. The cap is water-repellent and warm enough for subzero weather—perfect for hunting, camping, or any outdoor work. Price depends upon quantities ordered in various sized lots, namely in 5-dozen lots at $10 per dozen, up to 1,000 dozen at $7.20 per dozen.

"Bear in mind that the sales circular on this cap carries the notation;—'Similar caps are now offered for $2 each, at retail, in top-ranking national weekly magazines.' Can you imagine what the father of some serviceman, located in rural territory would have to pay for this cap when the small businessman, (if interested) must base his cost price on his purchase in lots of 5 dozen at $10 per dozen (83⅓ cents each)? The operator who could purchase 1,000 dozen would pay $7.20 per dozen (60 cents each) and I wonder what his price to the consumer would be?

"I herewith offer for your consideration the following sales analysis basing the cap as having a $1.50 retail value.

"Consumer ceiling cost price $1.50 each ($18 dozen).

"Retailer's ceiling cost price $18 a dozen less trade discount 33⅓ percent or net cost $12.

"Department stores, chain and mail-order houses previously referred to 33⅓ percent and 5 percent or net cost $11.40.

"Wholesaler's ceiling cost price $18 dozen less trade discount 33⅓ percent and 16⅔ percent or net cost $10 per dozen.

"This chart in checking from a profit standpoint shows retailers' profit 33⅓ percent on their selling price of $18, department stores, chains and mail-order concerns profit 33⅓ percent and 5 percent on their selling price of $18, and wholesalers' profit 16⅔ percent on their selling price of $12.

"It could be possible to establish a program on surplus Consumer Goods Disposal that would harmonize with the O. P. A. program. In order to reconcile the above statement to the O. P. A. schedule (as I understand it), the following schedule is possible: The Government establishes a fixed selling price on the above item of $10 per dozen cost to the wholesale trade. The wholesaler's selling price must not exceed a profit of 16⅔ percent on his sale price of $12 which should be O. P. A. wholesalers ceiling. Chains and mail-order concerns must not exceed a profit of 33⅓ percent and 5 percent on their sale price of $1.50 which should be O. P. A. ceiling for this group. Other retailers' prices must not exceed a profit of 33⅓ percent on their selling price of $1.50 which should be O. P. A. retailers' ceiling.

"It is imperative that you gentlemen bear in mind that no wholesaler could continue to exist if he were to merchandise all of his wares on a profit basis of 16⅔ percent. It just can't be done. Furthermore, it is a well-known fact that a majority of retailers must realize a profit percentage in excess of 33⅓ percent in order to operate successfully.

"To summarize, I am convinced that the wholesalers throughout the Nation are vitally interested in the sale of surplus consumer goods, not so much from a profit standpoint, but are conscientiously interested in the welfare and in the service they can render to their customers—the small businessmen of our Nation. They are willing to sacrifice a margin of profit on the sale of surplus goods for the welfare of small-business enterprise.

"I am confident that wholesalers and retailers alike will aid and cooperate fully with a fair and favorable governmental program in order to be of help in disposing of surplus consumer goods based on a small margin of profit for them. They recognize the benefits to be derived through the establishment of a program that will call for distribution of surplus goods through regular established channels and out of the hands of speculators—and away from the unjust competition that existed after World War No. 1."

The Rape of Europa

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Rape of Europa," which appeared in the Atlantic Monthly for January 1945.

Mr. Francis Henry Taylor, the author of this article, is director of the Metropolitan Museum in New York, and visited England and France last summer as a member of the American Commission for the Salvage and Protection of Artistic and Historic Monuments in War Areas.

I have checked with the Public Printer with reference to the cost, and am advised that the article slightly exceeds the number of words permitted for insertion in the Appendix without reporting the cost, which the Public Printer now informs me will be $104. Regardless of this, I ask unanimous consent for its insertion in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RAPE OF EUROPA

(By Francis Henry Taylor)

I

When Hitler triumphantly entered Paris in 1940, he went immediately to the tomb of Napoleon at the Invalides. As he stood there in the great rotunda, what were the emotions of this neurotic Austrian paperhanger who had cast himself in the role of the Corsican corporal? Was Paris the ultimate of Hitler's wish fulfillment? Was his reckless desire to sit upon the imperial throne of his great idol the madness which inhibited him from plucking the ripe fruits of Britain as they lay within his grasp beyond the sands of Dunkerque? Was it his hope that this later Pius would place the crown of Lombardy upon his brow in St. Peter's and thus seal with a concordat of illegitimacy the fate of 2,000 years of Christian civilization? In which case, would Paris have remained the cultural capital of Europe?

These were the questions which raced through the mind of the visitor to Paris immediately after the liberation. For Paris appeared virtually unscathed, more beautiful, more radiant than ever. From the long and wonderfully empty avenues leading into the heart of the city one felt the elation which comes only to those emerging after deep sleep from illness. The will to live had conquered. Paris as a supreme creation of the mind of man had paralyzed the hand that tried to seize her. And possibly it was the ghost of Napoleon himself that broke the mold into which this little Nazi upstart was so busily pouring his grotesque ambitions. Even the sniggering theft of two thousand Napoleonic items from the Musée de l'Armée upon Hitler's personal order to the Kommandant of Paris could not delay the deflation of this completely unauthentic Caesar.

Paris was the symbol of the unattainable. To Hitler she was a spiritual vision. One can imagine the visionary of Berchtesgaden standing at the great plate-glass windows of his eyrie overlooking the hills and valleys of a Wagnerian dream world, and conjuring up not merely the glories of Africa and Italy but the rewards of the Tuileries and Fontainebleau. To the other Nazis with grosser appetites, Paris was to be overcome by force if necessary, but much rather to be seduced by the irresistible virility of a master race. London was to be destroyed as the symbol of a power which would be forever inimical to the greater destiny of Europe.

Rome, on the other hand, had always troubled the Nazi conscience. And, since the ecclesiastical sanctions of the Pope might still be useful in attaining at least the episcopal trappings of imperial authority, it might be better to leave well enough alone. The ancient city republics of Italy would have to pay the price instead. Destruction, vengeance, terrorism would be the foundations of a new aesthetic, and on the rubble of the towns of northern Europe would arise a new culture of which Paris would remain the gay and prostituted capital.

The pattern of looting was long established. In November 1942, Soviet armies captured a German officer, Obersturmführer Normann Foerster of the Fourth Company of the Special Service Battalion of the German Ministry of Foreign Affairs. "The battalion," he stated in his deposition, "had been formed on the initiative of von Ribbentrop, Minister of Foreign Affairs, and acted under his direction. The commander of this battalion is Maj. von Kuensberg of the SS troops. The Special Service Battalion is charged with the task of seizing, immediately after the fall of large cities, the cultural and historical treasures and the libraries of scientific institutions, to select valuable books, first editions, and films and to send all of this to Germany."

This deposition, which was published in the bulletin of the Embassy of the U. S. S. R., Washington (No. 138, November 19, 1942), continues: "The Special Service Battalion consists of four companies. The First Company is attached to the German Expeditionary Corps in Africa, the Second to the Northern Army Group, the Third to the Central Army Group. The First Company is now in Naples, Italy, where it awaits a chance to be transferred to Africa. The battalion headquarters is located in Berlin at house No. 6, Hermann Göringstrasse. Confiscated material is stored on the premises of the shop of the Adler Trading Firm in Gardenbergstrasse."

A year later General von Mannstein in an order taken from a German prisoner captured in Italy confirmed the policy of the high command:

"Our pillage must be organized and methodical. We must take as many lightweight valuable objects as possible, such as jewels, precious metals and stones, works of art, religious treasures, books, linen, stamps, etc., so that they can be sold as easily as possible and transferred into cash deposits in safe and inviolable places. * * * This looting together with the destruction of factories and machinery and the terrors of deportation and scientific famine imposed on children and civilians should insure a speedy revenge."

Obviously such a military program could not have been undertaken without many years of preparation. The looting of Poland was so thorough and complete that the official figures of the Polish Government in London put the plunder and destruction of museums at 95 percent; libraries, from 60 to 70 percent; archives, 40 percent; and churches, over 30 percent. The cultural heritage of Poland has been destroyed, all private property confiscated. Moreover, when the Nazis plundered and stole, they took pains to burn all records, catalogs, and inventories which might later be used in evidence against them by courts of claims. The looting was systematically carried on under the direction of German art historians, notably Dagobert Frey of Breslau, Clasen of Königsberg, and Pinder of Berlin, whose students for years had been making inventories of art treasures in Poland and Czechoslovakia under the guise of historical researches.

Russia, next to the countries of central Europe, felt most severely the scourging hand upon the cities which fell to the enemy. The palace of Catherine the Great at Tsarskoye Selo was stripped, Chinese silks and tapestries torn off the walls, antique furniture and paneling shipped to Berlin. Even the inlaid floods were packed and sent away. The celebrated library of French and Russian books and manuscrips were pillaged. Peterhof was looted before it was burned, and the suburbs of Leningrad were sacked. Kiev, the religious and scientific center of old Russia, was emptied of its treasures, particularly the great collections and libraries of the university and the Ukrainian Academy of Sciences. The churches, the pride of Russian orthodoxy, and museums were likewise stripped before they were set on fire. What is true of Kiev is equally true of Kharkov and Krasnodar, of Lvov and Odessa, of Vinnitsa, Chernigov, and Poltava. In these latter cities the destruction and theft of scientific and especially medical equipment indirectly revealed the German's intention of destroying the population.

II

In August 1943, when President Roosevelt appointed, under the chairmanship of Associate Justice Owen J. Roberts of the Supreme Court, the American Commission for the Protection and Salvage of Artistic and Historic Monuments in War Areas, no one dared hope that the art of Europe would get off so easily as it has. The Nazis had repeatedly made clear their intentions, and we knew too well what they had done in Poland and in Russia. Italy was still an ally, feeble as she may have been, and France and the Low Countries were prizes too rich to destroy while they could still be exploited. Discretion and calculation, therefore, rather than humanitarian or intellectual considerations, stayed the hand of the plunderer.

The national collections in France had been put away to safety in 1939 in the cellars of châteaus in the south. Here the objects of the museums were being properly cared for by competent experts acting under the direction of the Nazi military authorities. And as the Germans, flushed with conquest, could not bring themselves to believe in the possibility of a successful invasion, they thought it best to leave these depositories undisturbed.

Not all the State treasures of France, however, escaped from German hands. Looting was carried on in high places, as is evidenced by the birthday gift to Hermann Goering by Abel Bonnard, the Vichy Minister of Education, of the Ghent altarpiece by the brothers van Eyck which had been entrusted to the Louvre for safekeeping by the Belgian Government. Bonnard signed an order for its removal from a depository at Aix-en-Provence over the head of Jacques Jaujard, director of the Musées Nationaux de France, who did not discover the theft until a month later.

Jaujard's violent protests to Vichy and the German authorities resulted in his dismissal from the Louvre. Thereupon the entire staffs of the museums of France resigned in a body. The scandal was more than even the Germans could explain. Since they sought to placate public opinion wherever possible, they insisted that Jaujard be immediately reinstated. Thus the prestige which he derived personally from this courageous act and the unity which it produced among his colleagues went far to protect the national collections from further pillaging during the occupation.

But the private collections of France no longer exist. The pattern of Poland and Russia was ruthlessly followed, although the Germans tried assiduously to cloak their thievery with some form of legal fiction.

Rigged auction sales of private property were paid for with worthless occupation marks. Prices soared; even where sales were not forced, nearly everyone was obliged to turn in family heirlooms in order to buy food in the black market. The slightest infractions of the ceaseless police regulations which were making life miserable for every citizen were punished with fantastic fines for which the money had to be raised by selling personal property. Nazi officers and Vichy officials accepted gladly "gifts in kind" from persons whose passports and identity papers were otherwise held up. Many a splendid apartment remained intact, however, by a simple little arrangement with the lady of the house. In fact, Mrs. Warren's professional solicitude for the arts has been one of the minor blessings for which we should be naively grateful.

As the veneer of correctness wore thinner during the 4 years of occupation, the true nature of German culture became more and more apparent. Increased pressure was put upon museum officials to release important works of art for cultural exchanges with Germany. The Bayeux Tapestry was among those items which a few weeks prior to the liberation had been requisitioned by the high command. Removed from the deposit in the Chateau de Sourches near Rennes because of Patton's break through the German lines, it was brought to the Louvre for transshipment to Germany. Less than 10 days after its arrival Paris was freed and the Nazi plan was never carried out. Nothing can show more clearly how little thought the Germans had given to the possibility of evacuation.

By 1942 the gloves were off and outright confiscation was in progress. The Vichy laws depriving Jews of all civil rights and property were enforced and the great collections of the Rothschilds and others were sent to the small gallery of the Jeu de Paume in the Tuileries which became the collecting center for confiscated property as well as the headquarters for that benevolent organization known as the Administration des Biens Juifs. To this gallery came periodically the agents of the party leaders, art historians, museum directors, and archaeologists employed personally by Hitler, Goering, Himmler, and those of lesser rank. These experts divided the booty among themselves and superintended the expedition of shipments to Berlin, to Berchtesgaden, to Karinhalle (Goering's palace in East Prussia), and to the museum at Linz which Hitler has built as a memorial to his mother. What was not wanted by these learned connoisseurs was sold preferentially to art dealers who had won special consideration by their collaboration.

III

So many stories have been written by war correspondents concerning the destruction of European art and architecture by military action, in dispatches containing both sense and sentimental nonsense, that before adding up the dreadful account and discussing the philosophy and principles of restitution, it may be well to examine briefly the facts as they are revealed in the official reports. For while a great deal, to be sure, has been destroyed, it is nothing less than a miracle that with an entire continent in flames it has been possible to save so much.

It must be borne in mind, above all things, that this has been from the beginning a total war. It was the proudest boast of Germany that it should be so, and Hitler proclaimed it to the world in Mein Kampf. No thoughtful person expected anything other than the Götterdämmerung. But war is waged, not by a single force alone, but by two opposing armies. To preserve what lies in the pathway of battle becomes the joint responsibility of the generals on both sides. Unilateral action is at best an improvisation; and in view of Germany's frank lust for destruction, the efforts of our armies were very often quixotic and in vain. But General Eisenhower was nonetheless insistent on what our policy should be. On December 29, 1943, he sent the following letter to all allied commanders in Italy—a letter which was repeated again in almost identical terms for the northern theater shortly after D-day:

"Today we are fighting in a country which has contributed a great deal to our cultural inheritance, a country rich in monuments which by their creation helped, and now in their old age illustrate, the growth of the civilization which is ours. We are bound to respect those monuments so far as war allows.

"If we have to choose between destroying a famous building and sacrificing our own men, then our men's lives count infinitely more and the buildings must go. But the choice is not always so clear cut as that. In many cases the monuments can be spared without any detriment to operational needs. Nothing can stand against the argument of military necessity. That is an accepted principle. But the phrase 'military necessity' is sometimes used where it would be more truthful to speak of military convenience or even of personal convenience. I do not want it to cloak slackness or indifference.

"It is a responsibility of higher commanders to determine through A. M. G. officers the locations of historical monuments whether they be immediately ahead of our front lines or in areas occupied by us. This information passed to lower echelons through normal channels places the responsibility on all commanders of complying with the spirit of this letter."

Remarkable as this letter is, what is even more remarkable is the astonishing cooperation which the Monuments, Fine Arts, and Archives officers attached to the various armies have received from their field commanders. Old-line Regulars who have devoted their lives to the study of firepower know the meaning and possibilities of destruction far better than men appointed from civil life, and it is possibly their inside knowledge of these things that makes them pay such particular attention to the protection of monuments. Whatever it is, posterity will be able to thank the Montgomerys and the Bradleys, the Alexanders and the Pattons, of this war for having preserved intact the vast majority of the artistic resources of France and Italy. And what is true of field commanders and artillery officers is even more true of the bomber commands and their gallant crews who take the most desperate risks in pinpoint bombing in order to spare a cathedral or famous palace.

Briefed in advance with maps supplied by committees of scholars in America and Britain, the Civil Affairs officers are further fortified with instructions regarding the emergency care of monuments which come under the jurisdiction of the armies to which they are attached. They are also given lists of local museum authorities, experts, and architects upon whom they can call for assistance. If damage through military action has endangered a famous historic shrine and, for example, has left it exposed to the elements, they call upon the military government to shore up walls or close in roofs to prevent further deterioration. In Italy they have gone even further, and it is interesting to note that the porch and roof of San Lorenzo, the only historic building damaged by our Air Force in the raid on Rome, has now been restored under the joint supervision of the Allied Control Commission and the Vatican. Costs for such emergency operations will be charged to reparations accounts.

In the early days of the Italian campaign, and before the American Commission was established, there was relatively greater damage reported, particularly at Palermo and at Naples. But Sicily came through with all the great Norman monuments of Monreale, Cefalù, and the Capella Palatina unscathed. It was the later Baroque churches which fared the worst.

In Naples too the Baroque churches, because of the conspicuousness of their high domes, were badly used in the early days of the bombardment. Much damage is reported around the harbor. The great library of the university was burned by German soldiers who, on the order of the kommandant, poured kerosene on the shelves and exploded hand grenades in the alcoves, but the museum, the greater part of whose contents had been moved first to Monte Cassino and then to the Vatican, was unhurt. The heavy sculpture had been sandbagged and protected and was undisturbed. Serious damage occurred in Pompeii in the new excavations, although to the average tourist this city of ancient ruins will not appear to have greatly changed. Only the archaeologist will be deeply concerned, and he may find his consolation in the fact that Herculaneum, Pozzuoli, Cumae, and Minturno escaped entirely. He can also look forward eagerly to a constant flow of doctoral dissertations on the new objects unearthed by bomb and shell in Magna Graecia.

IV

On the path to Rome many towns, particularly Benevento, suffered dreadful losses. The Abbey of Monte Cassino has already become the subject of historic controversy. The lives and heroism of thousands of brave men were sacrificed in vain to prevent this historic and religious shrine from becoming a major military target.

Rome, save for the accident at San Lorenzo, remains in all her pristine grandeur. That Rome would be spared was fully counted on by the Italian authorities, who poured into the safety of the Vatican countless treasures from the museums of Italy. Quite recently the subcommission on Fine Arts of the Allied Control Commission, with the aid of members of the Apostolic Household and of the Italian Government, opened an exhibition of these pictures such as Rome has not seen since the Renaissance. Here are united for the first time in the Palazzo Venezia many of the greatest masterpieces not only of Rome and Naples but also of the Brera in Milan, the academy in Venice, and the gallery at Urbino.

Following the armies north to the gothic line, the story becomes more complicated and distressing until it reaches a climax in the senseless fury of German vandalism in Florence. Certain of the hill towns escaped miraculously; at Assisi no damage was done at all. In Perugia the renaissance bridges were blown up by the Germans and many houses in the suburbs were destroyed, but the old town with all its monuments and treasures escaped any serious hurt. In Orvieto a single bomb fell and destroyed one house; everything else is intact. In Spoleto the damage was confined to broken windows, loosened roof tiles, and fallen ceilings. While Arezzo suffered some bomb damage, the famous frescoes of Piero della Francesca are reported safe. Siena lost only two churches of relatively little artistic merit, thanks to the promptness of her citizens, who found the plan for demolition and deactivated the mines with which the Germans had sown the city, and to the French general who spared it from artillery fire.

San Gimignano was wantonly shelled by the Germans after their withdrawal, but the early reports of devastation were exaggerated and 49 of her 56 famous towers are said to be standing. One of the frescoes by Barna in the Collegiata was hit. Viterbo was in great part destroyed, and other towns in the pathway of the fighting suffered to a greater or

lesser degree. At Pienza, for example, there was much damage, but its great glories, the Renaissance piazzas of the Duomo and of Pius II, are intact. Fortunately, too, the large bulk of works of art from these cities which had been removed to country places was recovered, although one irreparable loss to the art world is the destruction of the Triumph of Death fresco in the Campo Santo at Pisa, a town whose cathedral and tiresome leaning tower escaped injury.

Florence, however, is another story. A third of the old city of Dante and Petrarch along the banks of the Arno has gone forever. In the words of Herbert Matthews' dispatch to the New York Times, "it is the culmination of German vandalism to date. * * * The Nazis blew up the bridges in the early morning hours of August 4 after a thorough preparation lasting several days. During that time they evacuated 50,000 persons from a 200-meter zone on both sides of the Arno River. They then set explosive charges, tranquilly looted houses at their leisure, and finally set the fuses with very little more than verbal protests of the Florentines. They did not blow up the Ponte Vecchio, and that was their greatest crime because they destroyed many medieval palaces at both ends, changing the whole aspect of old Florence. What little credit they previously got for sparing the Ponte Vecchio with its old shops must now be withdrawn."

Fortunately, the Duomo, the Baptistry, the Bargello, and the Palazzo Vecchio and most of the principal churches escaped with only minor injury. The patience and the solicitude of Gen. Sir Harold Alexander, commander in chief of the Allied forces, in gradually forcing his way into the city and across the river with infantry rather than taking it by large-scale artillery action are responsible for saving for posterity the Medicean capital. The fact remains, however—and may posterity eternally remember it—that more American and British lives were lost than Italian in preserving for mankind this most perfect unit of European civilization.

The great collections of the Medici, accumulated from the museums and palaces, had been scattered in the Tuscan countryside by the Italian authorities in convents, castles, and wine cellars. One of the dramatic incidents of the artistic history of the war was the finding by Allied troops and correspondents of Botticelli's Primavera and a host of other paintings from the Uffizi in the cellars and outbuildings of Sir Osbert Sitwell's villa. By mid-August all the depositories had been recovered. Although much casual and haphazard looting has been reported, there is evidence to conclude that, because of the diligence of the Italian museum authorities, the greater part of the public collections were respected. But this, as in the case of France, is probably more by good luck and convenience to the Germans, who were otherwise busily engaged, than by good management or high morality. What the fate of Italian art beyond the Gothic line will be, only the gods can tell.

V

The war damage in France presents a picture which differs widely from that of Italy. A section of Normandy, the triangle from Calais to Cherbourg to Rouen, has been more or less obliterated because of the intensity of the fighting following the invasion. But even there precision bombing and accuracy of artillery direction contributed to the preservation of the greatest monuments. Bayeux Cathedral and much of the city are intact. At Caen, although the town was badly shattered, the two splendid abbeys of William the Conqueror and the cathedral are standing, having suffered relatively minor injuries.

Mont St. Michel, despite the heavy fighting at St. Malo, was untouched except for certain reconstructions and fortifications which the Germans built upon its ramparts. Chartres Cathedral, only a few hundred meters from one of the principal airfields of France, escaped 4 years of bombardment without a scratch. On the day of liberation three small caliber German shells hit the south tower. But the damage was slight and can easily be repaired. At Coutances, while the the lovely market place is gone, the cathedral still stands above the town.

Lisieux, St. Lô, and many other charming Norman sites have passed into the limbo of history. Rouen will never again be the same, for it first felt the impact of a German tank division in 1940, and then suffered from German and Allied bombing, and finally from the decisive battle for the Seine in August 1944. Five bays of the cathedral are reported to have been demolished. St. Maclou was hit, the Palais de Justice destroyed by fire. St. Ouen and other monuments are badly damaged.

But, on the whole, aside from this section of Normandy, it must be admitted that the art of France has paid a relatively small price for liberation. The late Henri Focillon cried from his deathbed, "Périssent les pierres pour que vive la liberté." If certain of these stones have perished the greatness of French art has nonetheless preserved its integrity for future generations. Thanks to the rapidity of the advance of Patton and Bradley, and of the British Armies toward Calais, famous towns were liberated before they could become military objectives. Like cavalry battles of the ancients, tank engagements brought decisions at their outskirts before the towns themselves had to be invested.

Normandy, to be sure, has borne the brunt, but the rest of France has come through practically unchanged. The capital is untouched, as are Burgundy, the valley of the Rhone, and the Île de France. The great monuments and churches in the west and southwest have hardly felt the breath of war. The Midi, except for some minor damage at the Mediterranean landings of the French divisions that marched north so rapidly, has only the starvation and indignities of Nazi rule to wipe from its memory. The soul of France, and what she has meant intellectually and artistically to the world, are happily hers as well as ours as long as peace can be maintained.

Would that it were possible to say as much for the Low Countries at this time. What trials lie ahead for Bruges and Ghent in the next weeks no one can predict. In Holland the added threat of inundation from the blowing up of the dikes gives little hope for Amsterdam, The Hague, and Delft. Consolation can be found in the fact that the greater part of the national collections of Holland were found unharmed in an air-conditioned cave near Maastricht. In Brussels, too, the state collections appear to be for the most part intact, as well as the city itself. Only the Palais de Justice was burned by the retreating Germans, an artistic blessing which unfortunately they did not visit on the Victor Emmanuel Monument in Rome.

VI

In reviewing the fate of Europe's art, the great surprise is the extent of British casualties from enemy action. Partly because of the Briton's phlegmatic reticence and partly because of security reasons, the American reader has been totally unaware that in the aggregate Britain has sustained greater artistic losses than either Italy or France. While the Vatican authorities were quick to tell us about the slightest loss to ecclesiastical property as the Germans were hurled back to the Gothic line, the English with characteristic stoicism have remained silent concerning the 4,000 churches, most of them Protestant, which have been damaged in the British Isles—some 2,800 hurt beyond repair.

It is well to remember also that the heaviest destruction by German bombers was made in the fall of 1940 and the following spring when the air raids on Germany by the R. A. F. had hardly got under way. The severity of these attacks and of the devastation they produced was not confined to London, where the greatest losses were received, but were widespread in England and even Scotland. The ports were ravaged: Bristol, Plymouth, Southampton, Liverpool were natural and obvious military targets. Along with their harbor installations, their palaces, museums, libraries, university buildings, and public monuments were wiped out. In contrast to these, however, were the famous "Baedeker raids" which took their toll in the cathedrals of Canterbury, Exeter, and Wells. These raids were nothing but spite, and what was not then imperiled or demolished was left to the mercy of the flying bombs in 1944.

London, with the possible exception of Berlin and Warsaw, has withstood more constant battering than any other European capital. Rome and Paris, as we have seen, are practically untouched. Brussels, The Hague, and Athens appear to be safe. Vienna has been affected, if at all, only in the industrial suburbs. But London has had the core of its historic life pocked and pitted and dismembered for more than 4 years. Behind St. Paul's Cathedral more than a thousand acres of the city are laid waste. The churches of Sir Christopher Wren, rebuilt by him after the Great Fire of 1666, are gone and will in all probability never be replaced. In the attacks of November and December 1940, on the city, not only were the churches and business districts the chief victims, but many historic shrines as well.

Repeatedly during the last 3 years the hallowed spots of London which were always haunted by American tourists have been picked off one by one. The Debating Chamber of the House of Commons, the Henry VII Chapel of Westminster Abbey, the Temple, Dr. Johnson's house in Gough Square, the Guildhall, Greenwich Observatory, Hampton Court, and the Dulwich Gallery—all these buildings have been seriously hurt along with hundreds more of equal importance and associations. Every museum building in London has undergone some change by bomb or fire or by concussion from blast in the immediate vicinity. The flying bombs moreover continued the devastation of London's lovely squares of the eighteenth century in Chelsea, Mayfair, and Regent's Park, and here the loss has been not so much in buildings fallen to the ground as of houses stripped of their former graciousness through scorched woodwork and frittered plaster.

That any part of the historic London that we know and admire is standing is due to guts alone. The fire wardens and the watchers, the men and women who loved their city as apparently the Florentines did not love theirs, by acts of heroism unparalleled in history, saved the Empire and, lest we forget, for America too, the heart of the English-speaking world. Curiously enough, despite the scars and wounds, the city's face remains unchanged. It is a determined and resolute face quite ready to meet the future on its own terms and without flinching.

VII

As we approach the final settlement with the filthy beasts who have done their utmost to destroy the European civilization which we cherish, there must necessarily be a period of soul-searching and calm reflection before justice can be dispensed and retribution made. Two wrongs cannot make a right; and, while justice demands that the Nazis be forced to give back what they have stolen and make restitution in kind for what they

have destroyed by deliberate acts of vandalism, it must be remembered that the cultural heritage of the German people has been subjected to equal catastrophe. Even in the siege of Aachen, efforts were made to spare the cathedral. Nevertheless the gross tonnage of bombs dropped on German cities has meted out a punishment which, however richly deserved, has left little upon which future generations may build.

If one recognizes that the Teutonic disease may lie dormant for half a century and suddenly break out with virulence because of social, economic, and political circumstances, one sees immediately the danger of reducing Germany to the same kind of cultural desert that she has made of Poland. For in the arid soil of such a desert the germs of future wars may breed. With this in mind the committees which have been meeting in London, composed of representatives of the United Nations governments, many of whom have had a tragic personal stake in the discussions, have tried to arrive at an intelligent and just program for settling the artistic problems of the peace, rather than a vindictive one.

General Eisenhower has already made public the policy of military government in Germany and has issued orders and directives to his officers in regard to property control in general. All forms of property, including cultural material, works of art, books, scientific specimens, will be subject to the same general seizure and "freezing" restrictions. Stolen or looted objects recovered will be held for disposition by the proper international bodies appointed under the terms of the peace settlement. It is interesting to note that the Dumbarton Oaks agreement provides for the establishment of economic and social agencies to deal with such matters.

The very vastness of the task facing the peace negotiators is terrifying to the lay mind. The British Board of Economic Warfare has announced that the Nazis have looted Europe to the tune of some $36,000,000,000. On top of this add the twenty-six billions which they have extorted as occupation costs from the countries which they overran. They stole, as they said they would, every imaginable category of property—bullion, jewels, works of art, securities and equities in corporations, rolling stock, inland water transport and ships, factory equipment and machinery, books and periodicals, and archives. It is difficult to think of any normal economic activity of man in which the Nazi hand had not been rifling. Various competent estimators have placed the value of works of art stolen or destroyed at some two and a half billion dollars in this larger total.

The problem of identification of stolen works of art alone will require a mobilization of all the available experts in practically every field. This cannot be done except by the most carefully integrated international cooperation. The implications of these operations will spread throughout the world and into countries that escaped the war but have given refuge to property concealed by Nazis or their agents. These who have illicitly profited by the distress of Germany's victims will have no title to their stolen goods, for the Declaration of Saint James', signed by the United Nations in London on January 6, 1943, invalidates all transactions made under duress in occupied territory. And more recently at Bretton Woods further steps were taken to this end.

War crimes must be punished and those who have been pillaged compensated, for Germany must learn that the rape of Europe, however scientifically and ruthlessly carried out, did not pay. German scholarship and Germany's claims to intellectual equality can never again be entertained by civilized men until the slate is clean.

Converted to War, a Great Corporation Lends Its Brains and Energy

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. RABAUT. Mr. Speaker, some of the more important products of General Motors Corporation are here announced from a list of more than 3,600 items manufactured for the fighting forces of the United States and her Allies. Since the beginning of the defense program in 1940 General Motors has produced:

More than 140,000,000 shells and shell casings.

More than 180,000 cannon.

More than 1,000,000 30- and 50-caliber machine guns.

More than 2,400,000 carbines.

More than 180,000 airplane engines.

More than 9,000 complete bombers and fighter planes.

More than 31,000 tanks, tank destroyers and armored cars.

More than 740,000 trucks, including amphibious "ducks."

A major part of all the Diesel engines produced for the United States on land and sea.

Truly a great work of brain and brawn devoted to the preservation of the ideals of humanity.

Address by Lt. Col. Delbert B. Freeman at Nebraska State Reclamation Association Meeting

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Lt. Col. Delbert B. Freeman at the first annual meeting of the Nebraska Reclamation Association, held at Lincoln, Nebr., Saturday, January 20, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ACTIVITIES OF THE CORPS OF ENGINEERS OF THE OMAHA DISTRICT AFFECTING THE STATE OF NEBRASKA

Mr. President, members of the Nebraska Reclamation Association, ladies, and gentlemen, I am pleased to have been invited to speak to this group today. I propose to talk to you briefly of some of the activities of the Corps of Engineers affecting the State of Nebraska.

In my present capacity as district engineer of the Omaha district and in connection with my previous duties in the Corps of Engineers, I have had the pleasure of meeting many of you, and discussing with you matters of mutual interest. I feel that I can speak to you today with a sympathetic understanding of the objectives of your association.

I was born and reared and received my university education in the irrigated Mesilla Valley on the Rio Grande project in New Mexico. I have lived on an irrigated farm. My early engineering experience was gained as an employee of the Bureau of Reclamation on irrigation and drainage work of the Rio Grande project. Following my graduation from college, I was employed for 2 years on irrigation and drainage work in the Imperial irrigation district in California, which, as many of you know, is the largest irrigation district in the United States. I left the Imperial irrigation district to accept employment in the Corps of Engineers to assist in the preparation of the so-called "308" report for the Missouri River Basin, to which General Crawford has referred in his address. So I feel justified in pointing out to you that neither the Corps of Engineers nor myself are strangers to the water problems of the State of Nebraska.

In this connection I believe it is appropriate to point out something that General Crawford has mentioned in his address, that although river improvement for navigation has been considered a Federal responsibility for over 100 years and money has been appropriated for navigation improvements since 1824, it was not until 1936 that the Congress of the United States recognized by a declaration of policy that flood control by the Federal Government in cooperation with the States is a proper Federal activity. It was not until 1902 that the Federal Government assumed responsibility for participation in reclamation projects.

It is apparent then why large scale federally sponsored irrigation and flood-control projects are, relatively speaking, recent developments.

The 308 studies carried out by the Corps of Engineers as mentioned to you by General Crawford included consideration of the development of the water resources of your State of Nebraska as well as the other States of the Missouri River region for irrigation, flood control, power, navigation, and other purposes. However, it was not until 1936 that the Congress authorized for construction any of the projects considered in these 308 studies pertaining to the Missouri River and tributaries. However, you people of Nebraska at that time were not strangers to the need for irrigation and flood control. At the very time the 308 studies were being completed in 1932 you had under irrigation in Nebraska more than one-half million acres of land, and between then and the Flood Control Act of 1936, you had a disastrous flood on the Republican River in which 105 people lost their lives and damages estimated to be about $9,000,000 were suffered. A newspaper account of that flood relates that two million acres of land were out of production 5 years later as a result of this flood.

The geographical boundaries of the Omaha district include only that portion of Nebraska which drains into the Missouri above Rulo, Nebr., and consequently does not include the Republican River Basin. I say the geographical boundaries do not include the Republican River Basin but in keeping with the close coordination which is maintained by all units of the Corps of Engineers in times of crisis, the Omaha district lent its full resources of men and matériel and worked shoulder to shoulder with the Kansas City district and local authorities in rescue and flood-fighting activities during this disastrous flood on the Republican River in 1935.

As you may know, the Corps of Engineers is not authorized to make any investigation for any purpose or to construct any project

for any purpose except upon specific directive from Congress, and it has only been recently that we were directed to make any investigations for flood control and allied purposes within that portion of the State of Nebraska lying within the Omaha district. As a matter of fact, following the 308 studies, the State of Nebraska was fortunate in that it did not have any major floods until 1943 and 1944 (with the exception of course of the Republican River flood of 1935).

In the meantime, those assassins Hitler, Hirohito, and Mussolini plunged us into the war in which we are now engaged and the winning of which must come above everything else.

In 1940, in addition to its duties on civil works functions, the Corps of Engineers was entrusted with the largest construction program ever heard of in the world. Today the Army Service Forces, of which the Corps of Engineers is a part, is the largest single business in the world, and the Chief of Engineers is responsible for all construction for the United States Army. In this military construction program, the Missouri River division and the Omaha district have played an important part.

Since July 1940 the Corps of Engineers has completed over one and one-half billion dollars worth of construction in the Missouri River division, $200,000,000 of which was placed under the supervision of the Omaha district in the State of Nebraska alone. This includes 13 facilities for the Air Forces, an aircraft assembly plant, an aircraft modification center, 3 ordnance facilities, a number of internment camps, a remount station, a dog training center, and numerous additions to existing facilities. At the present time, the Omaha district is busily engaged in modifying and expanding ordnance facilities both in Nebraska and Iowa.

The major portion of the military construction program was completed during 1943, and it was during the very peak of the program that we were visited by the three disastrous floods of 1943. Those floods caused damages for the entire Missouri River Basin of approximately $65,000,000 and cost the lives of 17 people. Nebraska suffered along with the other States, particularly along the main stem of the river, where every levee between Sioux City and Rulo, with the exception of the Updike levee near Herman, Nebr., was either breached, overtopped, or rendered ineffective by flanking.

It was during these trying times that the Corps of Engineers received a directive from Congress to restudy the flood situation on the main stem from Sioux City to the mouth of the Missouri River. This directive from Congress was dated May 13, 1943. The division engineer of the Missouri River Division, at that time Col. Lewis A. Pick (now General Pick, building the Ledo Road in Burma), immediately set to work in preparation of the report called for. Based on the wealth of data which had been accumulated over the years by the Corps of Engineers in their numerous investigations, he was able to complete his report and submit it to the Chief of Engineers on August 10 of that same year.

The report was submitted to other interested Federal agencies including the Bureau of Reclamation, the Federal Power Commission and the Department of Agriculture whose soil-erosion program has a very direct relation to the development of the basin. By December 31 of 1943, after all the interested Federal agencies had been given an opportunity to comment on this report, it was submitted by the Chief of Engineers to the Congress, through the Bureau of the Budget and the Secretary of War.

This plan, commonly known as the Pick plan, was designed to be a flexible framework into which the plans of all other agencies, Federal, State, and local, could be fitted and it was recommended that it be subject to modification from time to time as unforeseeable circumstances and events warranted.

After the Pick plan had been submitted, the Bureau of Reclamation, which had been making extensive studies within the Missouri River Basin, also submitted a plan. This plan has been commonly referred to as the "Sloan plan." Whereas the "Pick plan" was fundamentally a flood-control plan in keeping with the directive from Congress, the Sloan plan was fundamentally an irrigation plan in keeping with the responsibilities of the Bureau of Reclamation.

The Pick plan proposed a series of levees along the main stem of the Missouri River from Sioux City to the mouth, a number of reservoirs on the main stem above Sioux City and several reservoirs on the tributaries, including five on the tributaries of the Republican River in Nebraska.

The Sloan plan included some 90 reservoirs on the tributaries throughout the basin and, as you know, contemplates the irrigation of another million acres of land in the State of Nebraska.

These two plans have now been coordinated, and the omnibus flood control bill approved by the President on December 22, 1944, authorized a total of $400,000,000 to be appropriated for the execution of the first phase of the development proposed under each of these two plans. Two hundred million dollars is authorized to be appropriated for use by the Secretary of the Interior for the accomplishment of the work which will be done by the Bureau of Reclamation and $200,000,000 is authorized to be appropriated for use by the Secretary of War to be accomplished by the Corps of Engineers.

I am pleased to say that I attended the conference in Omaha on October 16 and 17 between representatives of the Corps of Engineers and the Bureau of Reclamation for the purpose of coordinating these two plans. Also, I am pleased to tell you that in less than 24 hours all the alleged engineering controversies and differences in these plans had been mutually agreed upon. This agreement was submitted to the Commissioner of Reclamation, Mr. Bashore, and to the Chief of Engineers, General Reybold, on October 17, 1944, and a joint agreement signed by Mr. Bashore and General Reybold submitted to the respective heads of their Departments on October 25, 1944. Since that time I have sat in on another conference in Washington between representatives of the Bureau and the Corps of Engineers in continuation of this policy of cooperation and coordination.

At the present time the Omaha district is doing everything possible—consistent with the first duty of winning the war—to complete the necessary detailed planning for preparation of plans and specification prior to construction of the projects.

In addition to this, as a result of the damage caused by the floods during 1943–44, the Omaha district placed more than 2,000,000 cubic yards of earth in repairing and restoring to their original condition, levees in 15 counties in the States of Nebraska and Iowa, alone.

Obviously, these levees were inadequate but under the direction of Congress, repairs accomplished by the Corps of Engineers are limited to the restoration of damaged levees to their original condition.

And in speaking of the floods of these 2 years, it was my responsibility as district engineer in 1944 to lend every possible aid and assistance within my authority to you people of Nebraska when your crops were being destroyed, your homes ruined, cities damaged, and your lives threatened. The Omaha District, in cooperation with the local officials, assisted in the rescue of people and livestock, ferried food and medical supplies, furnished emergency equipment for maintaining safe water supply at various cities, assisted in cooperation with the local people in sandbagging levees, and performed various other emergency activities required during flood disasters.

The floods of 1944 have caused damages estimated at the present time to be around $50,000,000 within the Missouri River Basin and to have caused the loss of 13 lives, 4 of which were in the Elkhorn River Basin. The damages to the Elkhorn River Basin alone for 1944 approximate $10,000,000, and to the highways and bridges of the State of Nebraska, according to figures furnished to me by our State engineer, Mr. Scott, the damages amounted to about $550,000. Many of you right here in Lincoln today are personally familiar with the high water on Salt Creek which occurred this year.

I am not in a position to give you final figures today on the total damages to the State of Nebraska during the floods of 1944; however, they were sufficient in at least two localities to result in directives from the Congress to the Corps of Engineers to study these localities for the purpose of determining whether any flood-control measures are justified at this time. I am pleased to tell you that as a result of the directive dated June 21, 1944, to study the Elkhorn River Basin and the Salt Creek Basin, we have made continuous progress. Most of the preliminary office studies and some preliminary field work on the Elkhorn River and its tributaries, have been completed; and we are well on the way toward initial selection of projects to be considered and initiation of the necessary detailed field surveys for these projects.

Field and office studies of the Salt Creek Basin are in the preliminary stage; however, a field reconnaissance of the entire basin has been completed. We propose to continue both of these studies as expeditiously as is consistent with the primary need for concentrating on the war effort and as availability of funds will permit.

Gentlemen, I will not take up any more of your time today, but I assure you of the continued interest of the Corps of Engineers in you and your problems and I assure you that we stand ready to carry out our share of the coordinated program as fast as the necessary authorities and funds are given to us to accomplish the work.

Morality of Public Servants

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BUSHFIELD. Mr. President, on October 19, 1944, before the Rotary Club of New York City, George E. Stringfellow, vice president, Thomas A. Edison, Inc., delivered an address entitled "Morality of Public Servants." I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Because a large body of our citizens seems to feel that the moral and ethical laws, which apply to business and professional men and women, do not apply to politicians, the character of our public servants is lower than it otherwise would be.

Politics have been defined in the positive sense as "the science and art of government;

the science of dealing with the organization, regulation, and administration of the business of a state, in both its internal and external affairs"; in the negative sense, "dishonest management, to secure the success of political candidates or parties." It is in the latter category that the public places a large percentage of our public officials.

When our public servants deliberately misstate a case, it is often justified by calling it "politics." When they run out on their promises—public or private—they are apparently forgiven when it is identified with politics. When the politician accepts bribes, this, too, is countenanced when identified with politics.

A common pleas judge, who was appointed by a Democratic governor and recently elevated by a Republican governor to the high office of attorney general, recommended that the governor appoint the attorney general's former law partner to succeed him on the bench. Before doing so, the brazenly remarked to an acquaintance, "I admit he's pretty dumb" (meaning his former law partner) "but we've got to find a job for him."

In nominating his attorney general's law partner for the high judgeship, the governor gave as his reason the county leader wanted this man on the bench.

Is there any significance in the fact that the county leader, or boss, is a lawyer and he and his clique practice before this court?

There was so much political patronage behind this appointment the senate confirmed the governor's nominee as quickly as greased lightning. Today, the attorney general, the governor, and the county leader are posing as symbols of civic virtue.

This word "politics" has come to denote an excuse, or justification, by our public servants, for almost every conceivable impropriety.

Negative politicians are often so brilliant, yet so corrupt—like rotten mackerel in the moonlight, they both shine and stink. The negative politician thinks only of the next election; while the statesman thinks of the next generation. The negative politician works and schemes for the success of his party; the statesman for that of his country.

As election day approaches, these negative politicians proclaim their virtues, make promises which they never intend to keep, and which they hope the public will soon forget. They invent high-sounding catch phrases, designed to mislead and deceive the voters.

Members of Rotary and Kiwanis Clubs do not have to be reminded that business or professional men who conduct their affairs like the negative politicians soon find themselves without friends; without associates; without customers, clients, or patients; without credit; and finally without hope. They are rightly shunned by society.

We should demand of our public servants a moral and ethical standard as high as that which we exact of our business and professional men and women.

What is so important to us is that politics affect every phase of our lives, every minute of our lives.

Our standards of living, our taxes, our wages and salaries, the condition of our cities, every condition of life is affected by politics. Yet we often accept, without protest, moral and ethical standards in public officials which we reject in others.

In this country, where our citizens are still free to choose for themselves the kind of officials who make and enforce the rules by which we live, there can be no excuse for our selecting second-raters. The only explanation I can think of for this laxity is that we have lost our sense of values and direction—that we have grown unmindful of our civic responsibilities. When a nation willingly accepts a low moral and ethical standard for its public servants, its people soon become soft and degenerate.

I have presented a very ugly picture, but it is a true one—wholly unexaggerated. It is true in every part of the country—in all political parties. It is true, only because the people permit it to exist. The fault is not primarily in the cheap and conniving politicians who gain control of our civic machinery. The fault, and the responsibility, lie with that great body of our citizens—like those who comprise the membership of service clubs—who, knowing what they face, do nothing to correct it.

We should regard a person who takes no interest or part in public affairs, not as harmless, but as a useless character.

I speak to you in this Rotary and Kiwanian fellowship in utter frankness, because I am convinced that we can admirably serve the whole people of the United States if we—of our farflung and highly respected organizations—reject the double standard in our public servants as we have in our personal, family, and business life.

We can make of ourselves a nucleus for its elimination by communities throughout the land, if we refuse to be dominated by political bosses, and recognize that we can never elect better candidates than we nominate.

Good government begins in the primaries, where candidates are nominated. If we nominate the right kind of candidates, without regard to party label, and elect them in the subsequent election, positive, capable public servants will invariably be the result.

Our organization can aid in setting a standard for public servants and the youth of our country which will be acceptable to all who are desirous of decent and efficient government.

It must be clear to every thinking person that our Government will never be any better than you, and millions of others like you, help to make it. It will be as bad, as inefficient and as corrupt as you, and millions of others like you, permit it to be.

Those who have the welfare of the Nation at heart cannot afford to be apathetic or cynical. They must come out of their cellars of silent submission into the open space of free political discussion. This is where they belong, and where they can best serve, and save, the greatest system of government ever conceived by man.

"Our Government," said Calvin Coolidge, "is a Government of political parties under the guiding influence of public opinion."

Let us consider these figures: Only 15 percent of the registered voters, on the average, take part in primary elections, when we select candidates for the general election.

Approximately 10 percent of the registered voters of the Nation are controlled by political machines—these machine-controlled voters always vote. In addition, they see to it that their relatives and friends vote for the machine candidates. What is still more important is that the voters who follow the dictates of their own consciences, outnumber the machine-controlled vote by ten to one, when they take part in the primary elections.

Mr. William Feather, writing recently in The Atlantic Monthy, said: "Believe it or not, there are only 250,000 in the whole United States whose opinions are important in the matters of grave concern. As these people go, so go the others. The thinking of these people starts the ball rolling—it never rolls until they start it."

As you know, there are more than 300,000 Rotarians and Kiwanians in the United States—all men of influence in their respective communities. By arithmetic, the solution seems simple.

Members of Rotary and Kiwanis, I believe this is a great challenge to our organizations. In the discharge of our civic responsibilities, let us use this power to influence public opinion to nominate and elect to public office honest and efficient statesmen regardless of party label—then, and only then—will we have, and will we be entitled to have, honest and efficient Government.

Importance of Railroads to the German War Effort

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. JOHNSON of Colorado. Mr. President, the Washington Times-Herald of February 3, 1945, carried an article by Frank C. Waldrop on the importance of Germany's railroads to her war effort. Inasmuch as American railroads are equally vital to our own effort, I ask unanimous consent to have the article printed in the Appendix of the RECORD. The railroad industry in the United States is beyond question our foremost war industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN BERLIN FALLS

(By Frank C. Waldrop)

Don't let anybody kid you. When Berlin falls, Germany won't be far behind, for one reason beyond all others. Railroads. Modern war doesn't take to the backwoods and fields successfully, no matter what the romantic guerrilla tales may lead you to think. Modern war is made of steel and has to move on rails.

Berlin is the heart of the German railroad system, and therefore is the heart of Germany. To appreciate this, consider what Berlin was before railroads came into being.

London is ancient and has long been huge, because geographically it is the point of departure for British business.

Along the Thames embankment there stand today foundations and walls of buildings in which Londoners used to trade with the agents of imperious Caesars in the days of the Roman occupation of Britain 2,000 years ago.

And Britains are still trading there.

But Berlin is a comparatively new city, and curiously enough, no really good history of it has ever been written. The first mention of it is as of A. D. 1230, and then it was only a collection of mud huts along the east bank of the Oder River.

It had no natural use, nor any natural charm, being relatively cold, rainy and in a countryside that is celebrated principally as good for growing cabbages and pines.

Germany's chief cities of old lay along the Baltic Sea to Berlin's north, or in the west along the Rhine. Berlin was a mere inland trading post that grew up secondary in power to the coastal cities in a trading combine called The Hanseatic League.

Today all the businessmen of the Hanseatic League would be indicted as violators of the Sherman Act if they and their system were in the United States—but they were the greatest productive force in the German states of the medieval era.

Berlin began to grow important in politics after 1415, when the Hohenzollern princes took it over and set up their rule of the Mark (province) of Brandenburg, from there. It was a good spot for holding up river traffic on the Elbe, Spree, and other smaller nearby waterways, for tax money with which to fight other princes for more tax money extorted from businessmen trying to get merchandise up and down other waterways.

But even so, Berlin was still a jerk town with about 10,000 population, counting in the suburb of Kolln, which claimed for awhile it was another and separate city.

The Thirty Years' War (1618–48) nearly wrecked Berlin entirely, and some historians claim it was really saved only by the persecutions of the French Huguenots by Louis XIV. Some 5,000 of these thrifty, inventive, commerce-minded Frenchmen fled to Berlin in the seventeenth century and began to build up a trade contact with the world. Now their descendants are Nazis.

The dirty, crooked, narrow little Dark Age streets of Berlin began to be wiped away under the Frenchifying influence of the Huguenots and air and light were let into the closed German bedrooms. Canals ran out to connect the Spree and Oder Rivers.

Frederick III, Brandenburg elector, called himself Frederick I, first King of Prussia, in 1701, and set up in Berlin to be a real heavyweight among German princes.

In 1713 he was succeeded by his son, Frederick William I, a military and governing genius who organized a standing army of 83,000 men—unprecedented in those days—introduced systematic education and training of citizens for the use of the Prussian state, and in 1740 was succeeded to the throne by a son who was an even greater war-making and governing genius.

That was Frederick II (the Great) and from his day Berlin really began to amount to something.

Frederick the Great used his father's armies to break down Poland, to scare the Austrians and the French, and to make Berlin the headquarters of politics in Central Europe.

The population rose from 70,000 when he took over, to 172,000 by the end of the eighteenth century. Napoleon's wars at the beginning of the nineteenth century scarred and scared Berlin, but didn't destroy it. And the city lay there waiting—until Bismarck, the Iron Chancellor, came to power and decided to organize the loose confederation of German states into one nation, built on iron, coal, canals and railroads.

The Borsig machinery factories, Germany's first, were built at Berlin. The railroads began to thread out from them. Population trends tell the whole tale in brief: In 1815, Berlin had 198,000 population. In 1910, the population was 2,529,000.

When this war began, Berlin's population was around 4,330,000. It was the terminal point of Germany's 12 main railroad lines and of the nation's principal highways and canal system.

It manufactured electrical equipment, machine tools, chemicals, precision instruments of all kinds, textiles, and of course a lot of steel for the railroads and heavy industries, though Germany's principal iron and steel works are in the Ruhr, which our armies are trying to capture.

But, above all, Germany's traffic control point is Berlin. Germany's armies have to get their supplies via Berlin, if they are to live—and Berlin itself is now virtually under Russian siege.

When Berlin goes, make no mistake, Germany will go with it. Hitler can bellow all he likes, jump off the cliff at Berchtesgarden, or hide in a cave, but he can't build railroads this late in the day.

Board of Veterans Appeals

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BUSHFIELD. Mr. President, in the issue of February 1, 1945, of Stars and Stripes, I find a very illuminating editorial upon the subject of the Board of Veterans Appeals. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD BE INVESTIGATED

Back in 1933 there was enacted by the Congress what is unpopularly known as the Economy Act. Written in secret, heard by congressional committees behind closed doors and passed in an atmosphere of hysteria "to maintain the credit of the United States Government," the measure was applied to few others than the veterans of this country and their needy dependents. It was one of the most wickedly conceived pieces of legislation ever to be placed before an American Congress. Its application to veterans and their loved ones was so vicious that it sent many to poorhouses, to mental institutions, and to premature graves. Despite numerous modifications, it will ever remain a black spot on the record of our lawmakers who voted in its favor.

Out of that act there came directly a change in the administration of affairs of veterans. From a system by which the Congress wrote legislation for their benefit, to be managed by the Veterans Administration, there developed a bureaucracy that writes the laws, and interprets and administers them, oftimes contrary to the expressed will of the people's representatives. Within that huge and fast expanding agency is a powerful group which literally vitiates the very purpose for which it was created. That is the Board of Veterans Appeals.

Down through the years, since the creation of a bureau to serve the needs of the Nation's disabled and their unfortunate widows and orphans, there has always been a means of appeal from decisions of original boards of jurisdiction that seemed to be contrary to the evidence presented. By congressional direction, any claimant was to have all doubts resolved in his or her favor. That system does not generally apply in cases presented to this appeals group. Instead, veterans are considered to be wrong in their every contention and must bear the burden of proving that they are right. In fact, the Board of Veterans Appeals acts contrary to every established practice usually accepted in judicial appeal. It is both judge and jury and, in most instances, makes its findings arbitrarily, frequently with little or no regard for the evidence.

More than that, the constituent sections of the Board, after hearing the evidence, do not actually write the decisions. These are determined by medical and legal consultants who do not listen to the evidence at all and who come to their conclusions from a study of the history of each case and from transcriptions of stenographic notes taken down at actual hearings. These "backroom boys" prepare the findings and, with few exceptions, the Board adopts their decisions. That is the shameful procedure followed by men who have been appointed to listen openmindedly and fairly to evidence presented by or on behalf of men who have served their country in time of war and of women who have been left by deceased warriors as a charge upon the country they served. We recognize that this is a serious indictment, but if we can believe what we see and hear, it can be substantiated by case after case of disabled men who have not received just treatment.

The Board of Appeals was put into being by regulations issued under authority of the Economy Act. Its principal purpose was to review judicially such claims as were presented, and a probable function was to prevent interminable reviews and hearings on cases with too little substance. Before the Economy Act became fully effective, lesser boards were redirected by law, "to resolve all reasonable doubts in favor of the veterans, the burden of proof in such cases being on the Government." It certainly can be concluded that an appellate group must be bound by the same rules, but it apparently is not. Although it is empowered to correct obvious errors, it is bound by precedents, its own rules and solicitor's opinions and cannot reopen a case, no matter what the finding, except upon submission of new and material evidence. How new or how material, it decides for itself. It is said the Board denies generally accepted evidence and indulges in speculative theories.

When first established, this appeals set-up was headed by an ex-Governor of Virginia who did not know a veteran from a horned toad. It was a purely political appointment, as have been those of several of the present 15 associate members. Governor Pollard was succeeded by a career man, who was his vice chairman, a veteran who seems to be more interested in saving money for the administration than in seeing justice done. We are advised that he is domineering, that he abuses his powers, and violates his own rules, quite carefully, of course. Our experience with him shows him to be personable but adamant, hardly the type to give veterans "the benefit of the doubt." His associates seem generally to be good fellows. Some play an excellent game of golf while the back-room boys decide their cases for them; others doubtless indulge in recreation less arduous if more entertaining and equally innocent while the men in the back room reach conclusions that are approved regardless of the individual liking of Board members. Although many cases presented probably have little merit, the record shows only 1.55 percent of allowals on appeal, during the past fiscal year, out of 13,618 decisions in 8,823 claims. Some were remanded, a few modified, and several reversed, but the vast majority were turned down cold.

At convention insistence, the Veterans of Foreign Wars, in 1942, named a committee to study the appeals regulations and to call upon the Administrator to correct abuses. The resolution voiced "universal and profound dissatisfaction with present functioning * * * and a settled conviction that it fails in many cases to properly apply the law and evaluate the evidence." The investigating committee received the well-known brush-off, but it did obtain several reversals. Where there is that much smoke present there must be fire. While the House veterans' committee is marking time on legislation, it should constitute itself into an investigative group and determine what, if anything, should be done to correct the evils complained of.

Nobody constituted to assure justice to veterans should act both as judge and jury, no matter what the basis of a claim. A presiding judge guides a court and advises on the law. The jury decides the case on evidence adduced, observes the conduct of witnesses, ponders their sincerity and their contentions. Here, the sub-board as a jury sees that the evidence is taken down, aids some in its development, and then the boys in the back room determine guilt or innocence without knowledge of the pleader. If the chairman of the whole board as judge does not like a favorable decision, he upsets it arbitrarily and calls in as many underlings as necessary to make a finding satisfactory to him. He does it without hearing one shred of testimony. The only appeal is to the Administrator of Veterans' Affairs, who is obviously too busy to handle cases personally, a procedure that has been demonstrated to be palpably farcical.

The whole linen needs washing. If these claims can be substantiated, there is being committed a travesty on justice. They should be thoroughly aired.

Germany's Place in a Post-war World

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Germany's Place in a Post-war World." This is a very scholarly and well-written article by Eugene A. Cox, a prominent and well known attorney of Lewiston, Idaho.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANY'S PLACE IN A POST-WAR WORLD

(By Eugene A. Cox)

After the war Germany must be completely disarmed and demilitarized and must be prohibited from producing munitions of any kind and prevented from ever again accumulating the materials for launching another war. Upon that point all commentators seem to agree. But when it comes to discussion of means to that end, there is not only much disagreement but some ill-considered and unwise solutions have been put forward such as Lord Vansittart's vengeance plan and Secretary Morgenthau's proposal to reduce Germany to the status of an agricultural country.

One factor involved in the problem, which must be taken into account if a wise solution is to be reached, is the fact that German economy is closely interlocked with the economy of all European countries and to a lesser extent with world economy. Decisions with respect to German production will have repercussions in many other lands.

Before the war Austria, Hungary, Rumania, Bulgaria, and Yugoslavia, which are mainly producers of foodstuffs and raw materials, and to a lesser extent Czechoslovakia, found a market for about half of their exports in Germany and received in exchange manufactured goods produced by Germany. The exports of these countries are of such a character that it would be difficult for them to find another market in the capitalist world, since the world market is already glutted with goods of that kind. If they are denied the German market, they must needs turn to Russia.

To a smaller extent the economy of Turkey, Greece, Italy, France, Belgium, Holland, Denmark, Norway, Sweden, Poland, Finland, and Britain was also linked with and dependent upon German economy. The destruction or serious limitation of German industrial production would have disastrous consequences in all of these lands.

Germany does not have sufficient resources to set up a self-contained economy, as Russia might do. The German people cannot feed themselves. They must trade abroad in order to live. If they are to exist, they have to be allowed to maintain sufficient civilian industry to provide for their needs. That conclusion is not based solely upon consideration of the interests of the German people but also upon consideration of interests of neighboring peoples and of the whole world.

REGULATE—NOT DESTROY

The destruction of German industry would measurably reduce the total productive capacity of the world, and it would at the same time and in like measure reduce the total capacity of the world to purchase and consume goods. For production and consumption are two different aspects of the same process. The reduction of effective consumer demand resulting directly and indirectly from the destruction of German industry would impose a strain upon capitalism at a time when the system is under greater pressure than it has ever before endured.

Probably the only solution of the problem is the regulation and control of all German industrial production by an Allied commission under a system of rationing similar to that in use in our country in wartime. By rationing power and raw materials to producers and requiring and checking accounts of their products Germany could be prevented from producing war materials of any kind without the needless crippling of her useful production. Factory inspectors appointed by the control commission could see to it that allotted materials were not diverted into the production of forbidden goods.

Production of aircraft of any kind, poison gas and other munitions could be absolutely prohibited without seriously impairing German economy, since those goods never figured largely in German exports. The prohibition would merely release energies of production for more useful employment.

CIVILIAN GOODS

But except for the absolute prohibition against the production of any kind of war materials, the German people should be left to decide for themselves what kinds and quantities of civilian goods they want to produce. If decisions of such matters were left to the Allied commission, the members would be under considerable pressure to base their rulings not upon considerations of the safety of the world, but rather upon apprehension as to the effect of German competition upon industry in their own lands.

In order to get rid of the Junkers finally it might be wise to expropriate the large landed estates and distribute the lands, not to individual peasants, whose small-scale farming would necessarily be inefficient, but to cooperatives operating upon a large enough scale to employ scientific methods and management. Such an arrangement would strengthen German economy at a point where it needs to be strengthened. It would probably meet the approval of most Germans, and it might build up a bulwark against communism. Members of successful cooperatives usually develop a pride in their organizations, and they do not willingly surrender their property and its management to anybody else. But such a proposal would probably be resisted by the capitalists in Germany and the Allied capitalists countries from fear of communism, the bogy which has so often frightened the capitalists into resisting changes which were necessary and which on the whole tended to strengthen and prolong the life of their system.

Germany must be compelled to surrender the territory which she has seized and part of her own land, if that is necessary either to prevent further aggression or for the establishment of acceptable and enduring frontiers in Europe and she must also be required to surrender the loot which she has stolen. Germans guilty of plotting and preparing this war and those who have committed crimes during the war must be punished. Punitive measures should be swift, certain, and rigorous. But the punitive process should be a cleansing rather than a vengeance.

MUST REGENERATE PEOPLE

After the war the most serious and pressing problem confronting the world will be the regeneration of the German people, without which there can be no lasting peace. To that end control of the educational system will be necessary. The whole system will have to be reorganized and purged of every trace of Nazi influence. The press, the radio, the movies, and all means of communication will have to be controlled, at least to the extent of prohibiting Nazi propaganda and all propaganda inciting the German people to preparation for future wars.

In the task of liberating the German mind and reeducating the German people, the churches, the labor unions, and all liberal and progressive forces will have to be enlisted and given a wide measure of freedom to act. The Allies can help by eliminating certain evil influences and providing the German people with opportunities and facilities for acting, but the responsibility for building a new and sane and democratic Germany rests upon the shoulders of the German people. With wisdom, the Allies can help. But only Germany can redeem her own soul.

Recent Russian history and recent German history have one point in common. Both have shown how plastic human nature is and how quickly people can be conditioned for a new way of life, whether for good or for evil. That fact permits the hope, at least, that by firm and wise handling the German people may be prepared within a reasonable time to take their place in the world as a peaceful and democratic nation. But that end, which all the world desires, cannot be attained if conditions are imposed which deprive the Germans of hope and make life intolerable for them. If the Germans are to adopt a peaceful, democratic way of life, that way of life must be made economically possible for them—the alternative is communism.

RUSSIA NEEDS PEACE

When this war ends the world will be in desperate need of a period of peace and tranquillity. That applies particularly to Russia, where so many of her people have been slain, so much of her land devastated, so many of her industries ruined. For her, world stability will be of far greater immediate importance than the spreading of communism. Russia's interests dictate that the issue of world socialism or world capitalism be left to abide the test of time and be peacefully decided by each people for themselves upon the basis of experience, comparison, and reason; and, as always, Russia will be guided by her own interests. She will gladly welcome the organization of the peoples of Europe as free capitalist democracies, if that will assure peace and save her from the peril to which she would be exposed by a period of revolution and turbulence in the neighboring countries. For the sake of her own safety Russia will strive for a just and lasting peace upon any terms that will assure her own security.

In order to determine what course Russia will follow it is only necessary to ascertain what Russia's interests are, and those interests are manifest. Above everything else, Russia needs peace and stability in the world. She has no other need that she herself cannot supply in peaceful collaboration with the rest of the world. Russia's purpose has been clearly stated by Stalin in these words:

"We have not and cannot have such war aims as imposing our will and our regime on the Slavs and other enslaved peoples of Europe who are awaiting our aid. Our aid consists in assisting these people in their liberation struggles against Hitler tyranny and then setting them free to rule on their own land as they desire. No intervention whatever in the internal affairs of other people."

But there can be no lasting peace if the capitalist powers impose their will upon the peoples of Europe, or if they permanently deny to any people the means of livelihood or the right to freely organize their own democratic government under leaders of their own choosing. There can be no lasting peace, unless the capitalist powers exercise greater moderation and restraint than they have ever displayed or are displaying now. In order to build a durable peace, which will enable the Germans and all other peoples to live as peaceful democracies, it is not Russia that we have to fear. It is ourselves.

Manpower, Compulsion, Optimism

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of February 10, 1945:

MANPOWER, COMPULSION, OPTIMISM

One of the most fascinating stories of the manpower crisis appeared some weeks ago in the Daily Sentinel, of Fairmont, Minn. According to a front-page story in that journal, a representative of the War Manpower Commission came to Fairmont to persuade people to take jobs at the Gopher ordnance works at Rosemount, Minn. The W. M. C. man put an advertisement in the local newspaper and awaited results. One of same was that Walter Bray, a workman possessing some of the skills mentioned in the advertisement, went to Rosemount to apply for a job. He has a son in the Navy and wanted to help the war effort. The rest of the story is on the Daily Sentinel:

"Do you have a union card?"

"No."

"Sorry, but you'll have to have one before your application can be considered."

"What will it cost me to join the union?"

"It will cost you $150, with dues thereafter at $3 a month."

"Will I have to pay it all at once?"

"If the union will accept you, arrangements can probably be made to pay by installments."

"How long will the job last?"

"Anywhere from 2 to 7 months."

Mr. Bray, eager to help the war effort, was not interested beyond that point.

Respectfully, before hollering our head off in favor of a universal service law, we should like to ask two questions?

1. To what extent is the present shortage of war workers due to episodes like this, plus the effect of union restrictions on the men already working, plus wasteful use of manpower by employers who have cost-plus contracts with the Government?

2. If the Government drafts Mr. Bray and half a million others like him to work in war plants, will he still be required to pay $150 for the privilege of helping his country?

It is also proposed that, to get 20,000 additional nurses into the armed services, we should draft them in. Nurses protest that this implies that their profession has not responded to appeals from the Army and Navy. They declare that almost a third of the active nurses in the United States have volunteered and that more than a quarter of them are now in the services. Others have been rejected because they are more than 45, an age limit they regard as too low, at any rate for service in hospitals in this country. They also declare that the physical standards are arbitrary and too high. It would seem that there are some hundreds of facets to this problem that ought to have been looked into before the yell went up to draft nurses.

The fascination for compulsions is a phenomenon which can be relied on to increase rather than diminish. The prevailing excuse for it in these fields is that the man in the street, that big yawp, has become overconfident about the war and has run out on the war effort. Too many cartoonists and editorial writers chime in which this propaganda without even asking themselves who made the home front so optimistic. A few weeks ago the St. Louis Post-Ditpatch took the trouble to look into this, and came up with a list of optimistic prophecies by President Roosevelt, General Eisenhower, Gen. Hap Arnold, General Montgomery, Winston Churchill, Admiral King, Gen. Mark Clark, and General Chennault. Every one of them expected the European part of the war to end in 1944, or so they said. If the people at home, who have nothing to go on but the word of their betters, became a little hopeful, whose fault was that?" Mr. Roosevelt has asked the boys to turn on the pessimism. An earlier application of gloom might have forestalled this talk of compulsion.

But it would not have disappeared, because we live in a period when the voice of the "planner" is loud and insistent, come war or peace. His case is best presented during emergencies, but we shall have to deal with it when the emergency is no more. In the meantime, it is entirely possible that we shall have to adopt one or all of the compulsions advocated by the administration, plus some others that we haven't thought of yet. As a soldier of our acquaintance put it, "They've been riding the gravy train for 3 years and the least they can do is stay on board." We agree. But before accepting the assumption that the methods which have raised the working force from nothing to 50,000,000 or so cannot produce another half million, Congress does well to examine all the angles, including those suggested above.

Address at Quartermaster Corps Officers Candidate School, Camp Lee, Va.

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the Quartermaster Corps Officers Candidate School at Camp Lee, Va., on Friday morning, February 9, 1945.

I was accompanied on the visit to Camp Lee, where I was stationed as an enlisted man at the time of my election to the House of Representatives last November, by the Honorable William Green, of Pennsylvania, who was also an enlisted man stationed at Camp Lee at the time of his election to Congress, Col. James D. McIntyre, General Staff Corps, and Lt. Col. James V. Hunt, Quartermaster Corps, War Department, Washington, D. C.

All were impressed with the appearance of Camp Lee and with the high military standards we found in various inspection tours through areas of the camp and the Quartermaster School. The military men in our party expressed their belief that Camp Lee is outstanding among all of the temporary camps in the Nation.

The training which the officer candidates received through their difficult course has fitted previous graduates so well for the tasks that were later assigned to them in their military careers that from approximately 25,000 officers produced by the school, less than 15 have failed to measure up to commission standards. This is a remarkable record and attests to the leadership of men like Brig. Gen. George Horkan, commanding officer of Camp Lee and former commandant of the Quartermaster Corps Officer Candidate School, and Col. L. L. Cobb, present commandant of the school.

The address follows:

General Horkan, Colonel Cobb, ladies and gentlemen, and members of the graduating class, it is rather odd that I am here before you. Only a short time ago I was an enlisted man stationed at Camp Lee. Today finds me a fledgling Congressman and you will soon be a fledgling officer of the Army of the United States.

I do not come before you to tell you how to solve the problems that you will encounter because I cannot, but being a former enlisted man, and knowing something about your school, I would like to tell your family and friends what you have been through to attain this position, and as a friend of the Quartermaster Corps I would like to tell you of some of the exploits of the Quartermaster Corps that you as Quartermaster officers are proud of and as Quartermaster officers you must attempt to live up to.

Back in 1942 Time magazine reported: "Most successful of the innovations of World War No. 2 are the officer-candidate schools. More than half of the officers of the most democratic of armies are now men up from the ranks, chosen solely for ability and leadership."

In January of 1941, when officer candidate schools were authorized none were authorized for any of the supply services including the Quartermaster Corps. The Quartermaster General immediately recommended that a quota be allowed for each supply arm and service. In March of 1941 the personnel of all arms and services were included in the officer-candidate program. And in April of 1941 an officer-candidate school for the Quartermaster Corps was authorized. The first Quartermaster Corps officer candidate class, numbering 150, was graduated at Schuylkill Arsenal in Philadelphia on the 1st of October 1941.

Realizing the need for field training, the Quartermaster School was moved from Philadelphia to Camp Lee, Va., on the 5th of October 1941. Since that time, approximately 25,000 Quartermaster Corps officer candidates have been graduated. The high regard of the Officer Candidate School held by the Quartermaster Corps is shown by the fact that of the over 111,000 Officer Candidate School graduates of the services, 25,000 of them were quartermasters. That the course is a hard one to pass is clearly shown by the fact that in the services approximately 150,000 men started the course and a little over 111,000 were graduated.

Your families and friends should be justly proud of you. You have completed a difficult course. You have studied over 28 subjects. You have been taught the actual operation of quartermaster equipment by observing and using it. You have been shown the over-all supply picture by the use of the miniature theater of operations, by motion pictures and lectures. You have lived in the field and participated in training exercises at A. P. Hill Military Reservation. You have practiced amphibious operations at Jordan's Lake. You have been taught methods of supply and how to defend those supplies. You have been prepared to do the job that is the most important job to America today; that is—to win the war.

The importance of your role in winning the war can best be told to you by your Quartermaster General, Maj. Gen. E. B. Gregory. He said, "Never before has an American Army been so closely supported on its offensive operations by such complete quartermaster supply and services. So far, the conflict has taken the American soldier to nearly every latitude of the globe but no matter what new

problems and conditions the future may bring, we know we can meet and overcome them with the confidence born of experience."

You men have a great deal to live up to. Quartermaster operations in this war have been noted for efficiency, ingenuity, and effectiveness.

We will never forget the quartermasters at Bataan who fished at night and gathered rice to feed the troops who were trying to stem the tide of the onrushing Japanese.

The north African invasion was the first big test of the quartermasters' ability to perform its assigned function. Over 700,000 items were necessary in this invasion, many of them quartermaster. This test was successfully met. The computations for requirements had been successful and the operations were ingenious to say the least. In one section even stables and barns were converted to warehouses. The transportation of supplies over the long supply lines in north Africa was accomplished in the main by the use of quartermaster truck companies.

The mountain fighting in Italy presented a problem in transportation of supplies. This problem was successfully met by the quartermaster through the acquisition of mules and by the use of packboards.

Quartermasters with the Fifth Army in Italy devised a clothing and bath exchange unit. Here tired and dirty soldiers could return their worn and dirty clothing, take a bath and receive a clean outfit of clothing. This is a great health and morale builder.

Dry-cleaning facilities were lacking in Italy so ingenious quartermasters converted laundry equipment to do dry cleaning.

Quartermaster operations during the assaults on Biak Island and Hollandia, New Guinea, were mostly a matter of blood and sweat. A lieutenant colonel who observed the action stated: "To stand on a beach and watch these service companies sweat in the tropic heat to move the prodigious piles of supplies and equipment, or to see those drivers coax and wheedle their big vehicles over unbelievably bad terrain; or to witness the growth from chaos to orderliness in the supply dumps is to marvel at the individual back-breaking efforts and the collective units' accomplishment."

Quartermasters with the American division operating in the Pacific needed refrigeration so they manufactured an ice plant out of salvaged materials. Many warehouses in the Pacific have been improvised from native materials.

For the assault on Kwajalein, quartermasters devised and constructed over 4,000 cargo sleds. Supplies were palletized on these sleds for rapid movement from landing craft to shore dumps.

In Burma, quartermasters did the initial development of dropping supplies to ground units from airplanes.

Fresh meat is provided jungle fighters in Burma by a Quartmaster Butchery Platoon.

On the continent of Europe a major supply battle was waged and won by Quartermaster gasoline supply units of the First Army which furnished gasoline to troops, tanks, and trucks during their 400-mile dash across northern France and Belgium.

Mobile dumps were operated by the quartermasters with the Thirty-sixth Division in the invasion of southern France.

Quartermasters in the Persian Gulf have been transporting American supplies to the Russians for over 2 years. The round trip is 1,400 miles. The importance of this work is shown today by the drive that the Russians are making against the Germans.

You will soon take your place as junior officers in the Quartermaster Corps to continue the great work that has been and is being accomplished. The importance of the position that you are about to assume can best be told to you by Gen. Dwight D. Eisenhower who said, "In the hands of junior officers lies the fate of the Army. You are in direct, immediate command of the troops. You are their inspiration and leaders. All of you are fighting for the right to live as you please so long as you don't get unjustly in other people's hair. You are fighting against dictation and dictators. Only discipline will win a war. Victories come from discipline and discipline comes from the everlasting efforts of the junior officer."

Again, as a former enlisted man and as a Member of your Congress, I want to congratulate you upon the successful completion of this course, and may God grant that you discharge faithfully this trust that is about to be placed upon you.

Lend-Lease and Victory

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Sunday, February 11, 1945, entitled "Lend-Lease and Victory":

LEND-LEASE AND VICTORY

Lend-lease is one of the primary instruments for the victory of the United Nations in this war. Never before have allies in battle worked out so harmonious and so successful a plan for mutual aid on so vast a scale. If this truth had not already been demonstrated we would be entitled to deduce it from the facts furnished last week by Administrator Leo T. Crowley, of the Foreign Economic Administration, in his testimony before the House Foreign Affairs Committee. If there are still honest skeptics about Lend-Lease they are so because they do not know these facts.

The ill-informed or wrongly informed, with help from enemy propaganda sources, have spread certain "fictions" about the operation of the Lend-Lease system. Mr. Crowley lists 20 of these with the answers. It is not true that Lend-Lease has helped Britain to keep up her export trade at our expense; that she has charged us for the use of airfields in Britain; that she buys gasolins from us and resells to us at a large profit; that she is overcharging us for goods used by our forces or for freight on her railways, or charging us at all except as these items appear in the reverse lend-lease accounting; that the figures used in such accounting are excessive; that she won't let us have planes badly needed by our Army. And so on.

It is not true that exports are responsible for the cigarette shortage—Lend-Lease shipments took 1¼ percent of our production in 1944. It is not true that American scarcities of butter, beef, veal, shoes, or munitions have been cause by Lend-Lease. It is not true that we are sending goods to Latin America for civilian use under Lend-Lease. It is not true that the Russians are trading American Lend-Lease planes to the Japanese in return for rubber. And so on, again. Enemy propagandists will have to think up other lies to take the places of those now disposed of. And they will have to be better lies. What Lend-Lease actually is doing is splendid enough to drive any enemy propagandists to despair. The dazzling mobility of the Soviet armies is in part due to the 362,000 motor vehicles we furnished down to December 1, 1944, the 1,045 locomotives, the 7,160 flat cars, the 478,000 tons of railroad rails, the 110,000 tons of railroad wheels and axles, the 333,000 field telephones, and more than 1,000,000 miles of field telephone cable. Their industrial recovery after the destruction of the Dnieprostroy Dam was aided by 60 American "power trains," each carrying a steam-driven electric generator system. We sent them 12,000 planes, 295,000 tons of explosives, 135,000 submachine guns, 6,000 tanks, 1,800 self-propelled guns, 1,200 half-tracks, 3,300 armored scout cars, 5,500 artillery prime movers, 1,700 ordnance service vehicles. We helped give motion and power to their superb courage and generalship.

Lend-lease works in two directions. Most of the 5,000 ships used in the Normandy landings were British-built and British-manned, but some of the ships and some of the steel for building others had come from the United States. Some British-built planes contained American lend-lease engines. Some American planes were powered with British-designed engines. The French troops on the western front have received equipment from both Britain and the United States. French and Belgian factories are producing vital supplies for the United Nations armies. American and British supplies have gone to maintain French, Polish, Yugoslav, Brazilian, Czechoslovakian, South African, and East Indian troops now engaged in Italy. French warships, overhauled and refitted in American shipyards under lend-lease, are now patrolling the Mediterranean. In Burma, Chinese, British, and American soldiers have received American arms and ammunition, British uniforms, and Indian food. Fifteen thousand American-built trucks are to be poured into China over the Ledo-Burma Road to reinforce Free China's worn-out 6,000 trucks. Nearly all the tires and tubes required by our forces in the Southwest Pacific in 1944 were produced in Australian factories with the aid of some American lend-lease materials.

The complete picture of lend-lease could not be presented on this whole page or on many pages. But this much can be truly said: Its effect is to shorten the war and to save lives; we receive as well as hand out; and if in the end the money balance runs against us, if we have paid out more in cash values than any other nation, we are still the gainers. For lend-lease, even when we have extended it to other peoples who are fighting our battles, has eased our burden even as it has eased theirs.

Presentation of Medal to Maj. Gen. Merritte W. Ireland

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mrs. BOLTON. Mr. Speaker, in accordance with permission granted me, I wish to place in the RECORD the remarks of Dr. Ray Lyman Wilbur, of the American Social Hygiene Association, in presenting the William Freeman Snow Medal for 1945 to Maj. Gen. Merritte W. Ireland, retired, together with an extract from the report of the committee on awards.

Dr. Wilbur quotes a message from Gen. John J. Pershing, chairman of the committee on awards, who was unable to be present.

DR. WILBUR'S PRESENTATION OF MEDAL

At this meeting it is my privilege to act for Gen. John J. Pershing, chairman of the Awards Committee of the American Social Hygiene Association, in presenting to Maj. Gen. Merritte W. Ireland this medal for distinguished service to humanity.

In asking me to represent him, General Pershing said:

"I regret that I cannot be in Chicago on this occasion to honor by friend, General Ireland. I have followed with the greatest satisfaction his long and distinguished career of public service in behalf of both military and civilian health and welfare.

"In 1929, I had occasion to write a summary of General Ireland's career for the History of the Medical Department in the First World War and, in conclusion I said, 'He is abounding in vitality, mental and physical, quick and accurate in decision, and prompt in action once the decision is made. He understands men and knows how to work with them for the common end. He has a thorough knowledge of the organization of the Army and of the Medical Department's place in it. He is far-sighted in making plans, and unusually able in administration. He is loyal always, but courageous in promoting sound views and avoiding error. He has an attractive personality and a diplomatic turn of mind, through which he has been able, among other things, to promote in the War Department and in Congress the goal of his ambition, which is to make his department more useful not only to the Army but to the profession in eneral.'

"Now, in 1945, Dr. Wilbur, I would like to have you say that I can see no reason to change that statement except by adding that in these years since his retirement General Ireland has served civilian as well as military health and welfare with unabated zeal and statesmanship. Among the most valuable of his distinguished services to humanity has been his promotion of the social-hygiene movement.

"I have always had a profound sense of the importance of the control of the venereal diseases. It is my fixed opinion that our people can be educated up to such a state of mind on this question that these diseases can be wholly eradicated in this country. We have been most fortunate in having General Ireland's leadership in this field."

In these words General Pershing has summed up for us the thoughts we all have for General and Mrs. Ireland whom we honor today. They exemplify for the people of our Nation all that social hygiene stands for in its promotion of successful family life and living.

Through many years of association in official and public service I have found General Ireland one of those rare men who stands up for facts, pleasant or unpleasant, and uses them along with a large element of good will and faith in making decisions or developing policy. His constant efforts to improve medical standards, to better the care of soldiers, and to use science in the service of man make him a natural to receive the William Freeman Snow Medal for distinguished service to humanity. It is a rare pleasure to me to hand General Ireland this beautiful medal and to thank Mrs. Ireland for all the help that she has given to him and to us.

RAY LYMAN WILBUR.

EXTRACT FROM THE REPORT OF THE COMMITTEE ON AWARDS

The committee on awards decided this year to select for the award of the William Freeman Snow Medal for Distinguished Service to Humanity, Maj. Gen. Merritte W. Ireland, one of the great leaders in this movement, who exercised such vital and constructive influence on the successful programs for control of the venereal diseases, repression of prostitution, and promotion of social hygiene education during and following World War No. 1. During the post-war period General Ireland continued this influence as Surgeon General of the United States Army, and in many capacities of leadership as an officer in civilian agencies, such as the American Medical Association, National Medical Examining Board, and the American Social Hygiene Association.

The committee felt that as we approach the post-war period of the present world conflict, we are most fortunate in continuing to have the vigorous, experienced participation and counsel of this wise and understanding leader; and that awarding of the medal at this time to General Ireland would be an appropriate token of our affection and appreciation of his great services.

The Soldier Ballot

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask permission to include therein an editorial from the Creston News Advertiser, Creston, Iowa, of February 7, 1945. It is a timely commentary on Secretary Stimson's recent report disclosing the ineffectiveness of the Federal ballot that received so much ballyhoo before the election.

As a member of the minority group of the Committee on Election of the President, Vice President and Members of Congress, I decried the "bobtail" ballot because it was probably unconstitutional, and also because it failed to give our men and women in the service an opportunity to vote a full ticket. The Creston editorial points out that the percentage of Federal ballots cast was very small in comparison with the State ballots cast and did not justify the complexities involved in handling them. Clearly the disproportionate results do not recommend a continuance or enlarged use of the Federal ballots and the editorial urges the Congress that in future legislation of this kind provision should be made for supplying the Federal ballot, at most, only to the men in such States as do not make provision for their absentee voters by supplying ballots of their own.

Following is the editorial from the Creston paper:

STIMSON MAKES REPORT ON THE SOLDIER BALLOT

Naturally—and necessarily—all American voters have become accustomed to the political lies which have developed as a part of every campaign in this Nation, and the misrepresentations are confined to no single party.

Last summer and fall one of the chief items employed by the fourth-term campaigners was a denouncement of the State ballots which were to be supplied to the men in service. Secretary Stimson, of the War Department, has just published a very educational statement on this soldier-ballot issue. His report fully sustains the law enacted by Congress which gave soldiers the right to use the State or "complete" ballots, and also a provision for the use of the Federal or "bobtail" ballot where the full ballot was not obtainable.

When this measure was passed, in spite of the opposition of the radical New Deal Congressmen, it was denounced by the fourth-term speakers and writers as an attempt to prevent the soldiers from voting. "It is a vicious effort to disfranchise them," one of the chief campaigners said, and Roosevelt himself stated that: "I denounce this measure as a fraud on the servicemen and the American people." Well, of course, there was nothing to any of that complaint except the usual petty politics, and the report of the War Secretary shows how utterly foundationless it was.

It is now made evident that the men preferred and largely used the State ballots. This is shown by Secretary Stimson, who is simply reporting the facts. His statement is that "most servicemen who desired to vote were able to obtain, and then vote, and then return their State absentee ballots, leaving very few who needed (or legally could) use the Federal ballots."

What actually happened is clearly shown by the official figures covering 10 States which gave the servicemen a choice of ballots. These 10 States supplied the absentee voters with their own State ballots and also the "bobtail" Federal ballots. The soldiers, under the State regulations, were permitted to use whichever ballot appealed to them, and their choice is the best proof of the regard of the soldiers for the two blanks.

In those 10 States, but 2.2 percent of the soldiers used the Federal ballot. There were just 28,136 of the eligible voters who filled out and returned those ballots, while in those same States, 34.6 percent of the men returned the State or "complete" ballots. That means that where the ballots were given equal opportunity, 446,947 men voted the State ballots to 28,136 who used the Federal blank. Stimson calls this "an insignificant use" of the "bobtail" ballot.

In the Secretary's report to Congress he states: "In addition to the insignificant use of the Federal "bobtail" ballot, the administration of this ballot was excessively complex and entailed burdens which appear disproportionate to any resulting utility."

The Stimson report makes the further showing—that in the 20 States which approved the Federal ballot, only 5.3 percent of the soldiers who were supplied with them, filled them out and returned them.

As a matter of course, the voting is all over—it is water that has gone under the bridge and the whole subject would be of no value except for two reasons. The actual results, when compared with the President's denouncement and charge of "fraud" and all the rest of the fourth-term campaign propaganda, show that there was nothing whatever to the complaint and further show that the Federal ballot and the opposition to complete State ballots was not for the purpose of protecting the rights of the servicemen, but was for merely selfish political purposes.

Now, the other thing that is indicated by the Stimson report, and is of importance for it is still an issue, is the continued use of that "bobtail" Federal ballot if the war should continue through another election, or if the war is ended before that, its application to the many thousands of American servicemen who may still be abroad, serving in armies of occupation.

If the Washington Government is to be prevented from election meddling in the future, then it still remains for Congress to enact a further measure: A measure which at most would only provide for supplying the Federal ballot to the men in such States—if any—as do not make provision for their absentee voters by supplying ballots of their own. This is a matter Congress should attend to because the less the centralized Government has to do with our elections, the further we are from acts of dictatorship.

Opposition of Railroads to Water Transportation

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 12, 1945

Mr. BILBO. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter addressed to me by Hon. Wendell Philips Dodge, editor of the Marine News, of New York City, bearing on the arguments of the railroads against water transportation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE MARINE NEWS,
New York, N. Y., January 11, 1945.

The Honorable THEODORE G. BILBO,
The United States Senate,
Washington, D. C.

MY DEAR SENATOR: Having in mind what happened to the river and harbor legislative bill, H. R. 3961, during the last few days of the second session of the Seventy-eighth Congress, what we saw in an article in the April 29 issue of the Traffic World, Chicago, comes to mind:

"Senator BILBO wanted to know what waterway development there had been that had cut down the revenue of railroads. Mr. Fort, general counsel of the Association of American Railroads, said he knew from past association with the Illinois Central that diversion of traffic to river carriers had cost that railroad a large sum annually. He said there was no doubt but that traffic on the Ohio River had hurt the railroads in that territory.

"He said that a philosophy that would support such a project as the Tennessee-Tombigbee would tend to weaken the railroads, over a period of time, so that their defense value, upheld by War Department spokesmen and many other high officials of the Government, would be reduced to a far greater extent than the national defense would be promoted by the waterway construction."

It is certainly unfortunate that there are not more broad-gage railway executives today with the outlook and interest in the general welfare as former President Markham, of the Illinois Central Railroad Co. At the time the Federal Barge Line was established down in your country, President Markham said:

"The Illinois Central, of course, recognizes that the barge line offers competition paralleling it on the Mississippi River, but our interests are clearly identified with the interests of the people of the Mississippi Valley * * * if it is a good thing for the people of the Mississippi Valley, it in some way will probably operate as a good thing for the Illinois Central System. If it supplies additional transportation that is needed and may be needed in the future that we cannot supply, or if it supplies a cheaper transportation than we can supply and makes for the prosperity of the people in that section of the country where our own interests are bound up, it in some way may work back to our own selfish interests. Perhaps it will increase the population, increase the amount of business everybody does down in that territory. If it does operate in that way we are going to reap some benefit too."

Who can reckon the benefits to the Nation from a waterway connecting the Tennessee and Tombigbee Rivers? These navigable waterways flow through the industrial heart of the South, a region overflowing with vital natural resources: Iron ore, coal, limestone, all in juxtaposition and near to the Nation's great oil and gas producing regions of Louisiana and Texas. No other area in America is so blessed by nature.

When almost all waterborne commerce is either prehandled or rehandled by railroads, their never-ending opposition to waterway improvements is utterly bewildering. Railroads have some $150,000,000 invested in floating equipment operating on Federal waterways. Some railroads simply would not exist but for the fact that almost all their tonnage is transhipped via Federally improved waterways: The Chesapeake & Ohio, Norfolk & Western, Virginian, Baltimore & Ohio, Western Maryland are notable examples. It is a fact that the Louisville and Nashville and the Illinois Central on the east, and the Missouri Pacific on the west bank of the Mississippi, would suffer tremendous losses almost every year, with traffic frightfully disrupted, but for the Mississippi levees built by the Federal Government, from Memphis to New Orleans. We cannot recall hearing the railroads call this expenditure from the Federal Treasury a blank check, or inroads on the Treasury, or tendency toward socialism.

When self the wavering balance holds,
'tis rarely well adjusted.

It might be helpful to the railroad boys to reread Aesop's fable, "The Dog in the Manger."

Best wishes.

Sincerely,

WENDELL PHILLIPS DODGE, *Editor.*

More Forest Production

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport Times:

MORE FOREST PRODUCTION

Twenty-five southern Congressmen last week pledged that they will work for a program designed to stimulate rebuilding of timber resources on 200,000,000 acres of southern forest lands. They propose to establish 20 experimental forests, to serve as demonstration areas.

Representative GIBSON, of Georgia, chosen leader of the group, said an appropriation of $1,500,000 will be sought for next year and $1,000,000 annually thereafter to finance the program, which would be under the jurisdiction of the Department of Agriculture.

This project deserves applause and support, as does every other plan which has the purpose of increasing the productiveness of southern forest soil.

The only mistake which might be made, as we see it, is the error of assuming that because such a program is under consideration, and may be launched, satisfactory progress is being made toward the development of southern forest production.

Actually, of course, several areas of the South, including Louisiana, have had experimental forests of this kind for years. They have encouraged better handling of forest lands, especially in the areas immediately adjacent to the experimental tracts.

Also, several Southern States, including Louisiana, have gained much from the operations of pulp and paper mills which, to their own advantage, as well as to the advantage of landowners, have taught better timber-growing practices. It was not until the pulp and paper mills began operation that timber was widely regarded as a crop, to be harvested with the same foresight and care as any other crop coming from the soil.

In addition to these influences, a great deal of intelligent work has been done in the past by the forestry agencies of several States, by university extension departments and parish or county agents. The effectiveness of this work has varied, but it has contributed to a broad forward movement in forestry practices.

We say, therefore, that the worthy project which has been launched in Washington should not be magnified beyond its true importance. If the plan is carried through successfully, and the money is obtained for the experimental and research activity, that will be just one more force helping to promote maximum use of the South's timber-growing capacity.

Our guess is that the effects of all of these influences will be fully felt only in those rural communities and rural parishes or counties where local interest in proper forestry practices has been aroused by local people.

The distant Government in Washington will not be able to do the job alone. Neither will State agencies or local agencies. The main power for the forward drive must come from the southern farmers who own timberland. It is where they are actively pushing the program that the most gratifying gains in forest-land production are now being attained.

The Wallace Appointment

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NEW YORK CITY, *February 10, 1945.*

SIR: I am a 52-year-old, Texas-born, Southern Democrat, of Houston, Tex., not a member of the P. A. C. I have been in every State of the Union except Maine (my apology to the gentlemen from Maine) and have traveled literally around and about the world. Was in Japan, across Siberia to Tomsko, China, Guam, and Hawaii, among other places, in the last war. I have sailed the North and South Pacific, around Australia, across the Indian Ocean, the Arabian Sea, Gulf of Gaman, Persian Gulf, Red Sea, Suez and Panama Canals, Mediterranean, around the Cape, the South and North Atlantic, the Caribbean, crossing the equator six times (and almost forgot) the Gulf of Mexico. I have visited England, Scotland, Australia, and all the continents in various places, in my wandering lifetime—and will continue to "ship out" until this war is over, destination unknown.

I alone have written and will continue to write every word which appears above my signature; and am paying for the stamps and all expenses preparing same. I have no ax to grind, just a man in dungarees doing his job.

Here's what I want to say, please listen:

Life for some of us unfolds such a peculiar pattern, we are never sure that we understand it; while others pursue the even tenor of their ways, their success and happiness circumscribed only by their narrow orbit. So I was thinking, wandering along the banks

of the Euphrates River—thinking of the seventeenth chapter of Isaiah: "What is man that Thou are mindful of him." A civilization 14,000 years ago with virgin fields, and a people wise for that early time; now, a morass of creeping sand, the graveyard of known cities as recent as 20 generations past; and, there before my eyes, barefoot men in dresses, hungrily fighting among themselves for our wasted garbage as it was being dumped out on those same imperishable sands. May God forbid that it could happen to America.

Yes; life is a bit tough at times for all of mankind. Out of the hopeless sand dunes of past mistakes, and their endless paths of destructive greed, two nations, the two strongest—the United States and Russia—will lead, either together in peace or apart, but in cooperation with all nations, I hope. Although we dress, talk, and look differently on first appearance, and at the world's distance, it would seem we have nothing in common. As I come to know different peoples in their own environment, I am impressed more by the striking similarity of each individual's desires, thoughts, and efforts, than by the visible differences of languages, customs, governments, opportunity, and resources.

Returning last week after many months from the silence of the seas, like Rip Van Winkle, I am amazed at what I read, see, and hear.

The first thing that struck me was the very bitterness of this ignominious fight on Mr. Wallace.

Somebody down in Congress said it was his lack of qualifications, and yet nobody named a businessman, bank, or individual he has robbed. They don't want to try him (they closed the committee without taking the testimony of businessmen). They want to lynch him. This man whose personal life and every act has been in the public spotlight for more than 12 years.

What is he charged with? Being starry-eyed? Where are the witnesses? One prejudiced, old millionaire—and the case is closed.

We appeal. Americans are testifying all over the land for him. We must make Congress listen to the voice of the people. Who is behind this maligning persecution? The same group of rugged individuals that brought on the last depression, or, to say the least, were not capable of preventing it in their unwarranted freedom to prey upon their fellow men, but in the quaking fear of their greed, hoarded their ill-gotten gains and left too many of the citizens to starve.

Yes, this opposition is the same established order of special privilege from Texas to New York that the Roosevelt revolution at the polls has overthrown so repeatedly the past 12 years. The depth of their hate is because they rightly see in Mr. Wallace the continuing leadership of that fight.

Starry-eyed! Dreamy! Idealistic! Thank God, in this dark hour for America, Henry Wallace is looking forward. The truth is his philosophy is too realistic for them. He, like the immortal Abe Lincoln and our noble Commander in Chief, believes in governing for the benefit of the majority, with unfairness to none.

Henry Wallace has handled $6,000,000,000 worth of the people's money with sagacious credit to himself and prosperity to all. Why, folks, there wasn't that much money in Texas when my old friend Jesse left my home town, Houston, Tex., for Washington, D. C.

His personal character, undisputed by his worst enemy, his vast business experience, a matter of record; and now his realistic and most farsighted approach to the dangerous problems of peace are sufficient reasons why millions upon millions in America today believe unquestionably that Mr. Wallace is not only the best qualified citizen for Secretary of Commerce ever to have been nominated by a President, but amply capable in the not too dim future of a greater service to the Nation.

"One-Eyed Chips Soundings" on "That man, Wallace!"

The ship's carpenter is called Chips. The rest is obvious. He takes soundings twice daily at sea to find out if there is any bilge water or leakage in the cargo holds at ship's bottom, which might lead to damage and disaster. Let's pump out the bilges and see what we find in the "rose boxes."

It takes no discernment to see the issue is not Mr. Wallace's lack of qualifications, no more than it could be Mr. Jones bumbling of war preparedness in failing to provide, with all the billions at his disposal, rubber and other essential war materials when he had the early opportunity. Sometimes squeezing money is more fatal to the nation than spending even at a high cost. Better investigate the R. F. C.

This clash of opinion is bigger than the office, Secretary of Commerce, at stake, and the personalities of either man. In the head-on collision of the liberal Mr. Wallace and the arch-conservatice Mr. Jones, the importance of the conflict is emphasized.

Neither is it wholly Democratic or Republican; it cuts sharply through and is an issue in different forms in each State in the Union. This same cleavage is apparent, or will come up on every important measure to be considered in Congress in both Houses, with continued and increasing bitterness as pressing peace problems are debated.

The voting public will look for the line of division, not in the major parties, but individually study the outspoken stand of each representative. The fate of each officeholder will be determined as he comes up for reelection on whether he was a liberal or conservative (in this broad sense) in considering most important legislation. Personal friendship of long standing is not sufficient when the majority of the citizenship's welfare is being adversely affected.

It slightly confuses this plain distinction of position, when either side points alarmingly at the other, shouting "Fascist" to one and "Communist" to the other. The first implying that the Fascist is a dictator who would enslave his fellow citizens for his own gain. While the Communist is branded as one who advocates the overthrow of the government by armed force. I must confess I have not been able to find either a Fascist or Communist (even Joe Stalin) that advocates either of these un-American concepts, so equally dangerous to the American way of life.

But I do know that vested interests of accumulated fortunes and established power, who are trying to escape their proper share of the cost of the war and shift more taxation upon the burdened backs of the people; those who want deflation to enhance the value of their multiple securities; longer hours and less pay for the working man or woman; lower prices for the farmer, the stockman, and producer; those who are blind to the needs of the great middle classes, and professional men and women, those who seek to crush the competition of the small businessman and especially the prejudicial class of whatever nature, those who wish to continue "white man supremacy," "Jim Crowism," and the poll tax, all of which are most pernicious forms of archaic slavery and can find no justification that is not selfish, unChristian, and undemocratic, and violates the constitutional, moral, and economic rights of the helpless minority; those who want continued discrimination in employment, education, and opportunity; those who would hark back to uncontrolled rugged individualism of preying private capital that precipitated the despairing depression after the last war; the isolationists and pacificists who would not maintain world peace by force, but wait, too late, for another, doubtless, more destructive Pearl Harbor; and any and all reactionary interests of any form of undeserved special privilege—all of these, I say, have huddled together to plan Mr. Wallace's defeat. And I didn't even mention the big interests, newspapers with their daily foul and untruthful camouflage attacks.

But, sir, if you really believe in governing for the utmost benefit of the greatest majority, with unjust discrimination toward no citizen; and that the future peace of America can only be maintained by cooperating with the peace-loving nations, on a world-wide plan that will justly consider the rights of all nations as well as ours and theirs individually and reach a realistic compromise and help to maintain that peace by force if necessary; if your acts are sincerely motivated by such inner belief in this realistic world, no longer separated by geographical distances of the near future, where no nation can live alone and so conduct its national affairs, as to harm any of its world neighbors unjustly—if you so believe, you belong on Mr. Wallace's side.

Clean out the rose boxes, Mr. Mate—I gotta ship out.

Thank you, sir.

"ONE-EYED CHIPS,"
Rating, Ship Carpenter.

The World of the Future—My Ideal

EXTENSION OF REMARKS

OF

HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mrs. DOUGLAS of Illinois. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an essay by the late Pvt. Robert Kenneth Osterberg, 19 years old, of Chicago, who died in action in Germany last November 27, and who understood what he died for:

THE WORLD OF THE FUTURE—MY IDEAL

(By Robert Osterberg)

Not an America of the future, not an England of the future, not a Germany of the future, but a more perfect world of the future is what I anticipate. When we say world of the future we mean it in its direct and literal sense. There can be no portion of the world isolated from any other portion, nor can there be any isolationist philoscphy. It is by no means a stretch of the imagination that we try to visualize a future world in which we would like to live. In reality, it would be no different from that for which previous generations have striven.

First and most important of all we should have a free and friendly commercial intercourse of nations. This is necessary for a strong economic status in all nations. Also, there must be a fair and equal distribution of all the world's natural resources.

There must be an equal opportunity for all in the field of education, which must be compulsory, and in which a common universal ideal is taught. This ideal ought to be respect for all human personality, because, in the eyes of the Creator, all men are created equal. It was the great American patriot and President, Thomas Jefferson, who first said, "Equal and exact justice to all men." These words apply now as well as they did then.

Each nation will have the right to choose its own form of government. It will be regulated, however, so that this Government remains within the limits of its own boundaries and does not attempt to impose itself upon other nations.

There must be a great reduction in armaments, and an international police force established, composed of all nations. This police force will act as a body, to see that the terms of the peace are preserved, and will prevent the breaking of these terms by any nation or group of nations.

A world court shall be formed which will settle all disputes justly and peaceably. Its authority shall be absolute.

There must be tolerance; tolerance of all nations, creeds, races, colors, faiths, and ideals.

A group of the most brilliant doctors and scientists will work together, in a body, for the betterment of world health and sanitation and for constructive inventions rather than for implements of war.

We of the younger generation realize that much of this work must be begun by the great leaders of the present generation, but that more will be left for us to do, and still more for our children to complete. If we can accomplish these beginnings, our future world will be one of which we can well be proud. It will be one of construction and not one of destruction; of tolerance and not intolerance. Our future world will eulogize less the feats of war and more the arts of peace. The future of the world rests largely in the hands of young America. We cannot afford to fail.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by my colleague from Iowa [Mr. DOLLIVER], on February 9, 1945, before the MuSoLit Club of Washington, D. C.:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle and for his widow and his orphan—to do all which may achieve and cherish a just and a lasting peace, among ourselves, and with all nations." In these closing phrases of the second inaugural address, Abraham Lincoln set the keynote for the future of America and also gave us a pattern for our conduct in the present war and in the post-war years. Remember that when the second inaugural address was given, the Civil War, which up to that time had been the most fearful and destructive of human conflicts, was drawing to a close. Within a few weeks, the armies of the South were surrendered, their men scattered, and the organized Confederate resistance ceased.

There must have been great bitterness in the hearts and minds of many, many people when Lincoln uttered that immortal phrase. Thousands upon thousands of families had lost sons and husbands. There had been incomparable waste of men and the material resources of life. The internal economy of the country, especially in the South, was completely chaotic. The country faced a tragic and dreadful situation.

Yet the man whom we honor tonight on this anniversary of his birth, was able to give a pattern of conduct which is valid, not only for his own time but for the times in which we live. Just as the United States was torn by disorder with many homes broken on account of the war and with chaotic conditions existing in the country, so the world in which we live today has lost, not thousands, but millions of lives to the god of war, and the whole economic basis of human relationships is completely upset. During the Civil War, hatreds and animosities were aroused which even today find some faint echoes in our political life so the world in which we live is riven and torn by hatreds and animosities which will take generations to heal. Think, for instance, of the Polish and Russian homes and cities that have been wantonly destroyed! Think of the horrible massacres in cold blood!

What was Lincoln's pattern for meeting and solving these difficulties and problems? He said, first, "with malice toward none." How magnificent an ideal this is for us to attempt to achieve in this present day. How difficult it is to try to secure an attitude of charity and kindness toward those who are our enemies. Indeed, there are many who will say it is impossible; that it is inconceivable for us or any warring people to avoid malice and hatred. Perhaps it is. Nevertheless, most of us will admit that ultimately the only solution of the problems of this war-torn world will come through the application of the principle set forth, "with malice toward none, with charity for all." Obviously it cannot come at once. That would be expecting angelic action from humans. But, as surely as there is a moral law in the universe, so the ideals set forth by Lincoln will at long last come into fruition.

Lincoln was a great believer in the right. When someone expressed the hope that God was on our side in the Civil War, he gave the rejoinder that he was much more interested that we were on God's side. Throughout all his public utterances and his private life, there is the constant reminder that this man was a man of deep moral conviction. This is again expressed in his second inaugural. Lincoln then proceeds to the task at hand. "Let us strive on to finish the work we are in; to bind up the Nation's wounds." And indeed, gentlemen, that is now the task that we have before us, "to finish the work we are in," and "to bind up" not only the "Nation's wounds" but the wounds of the world.

This war is not yet finished. We must go forward with it to its final victorious conclusion. Whatever may be its cost in money or sacrifice the American people are determined that we shall go forward to glorious victory. While we become dissatisfied and cynical at times with the progress that has been made, while we deplore and regret the many obvious mistakes and blunders that have been made, nevertheless, we must finish the work we are in; we must accomplish a complete and total victory over our enemies, and this must be done at whatever sacrifice and at whatever cost it requires.

Whatever differences of opinion there may be, politically, in America, whatever diverse opinons may be held as to who was responsible for this holocaust of blood and who brought our country into this world madness, the fact remains that we are in it, we have become engulfed and we must see it through to the end. Let no one doubt that it will be accomplished and we will achieve a glorious victory, and when that is done we shall have the task of binding up the wounds left by war. By reason of the gigantic resources and power of America we shall be shouldered with heavy responsibilities in bringing about a healing of the wounds of war. It will have to come not only through government election, but through the voluntary assistance rendered by voluntary groups of people in the United States of America. Leadership in world affairs has come to our country whether we have sought it or not. It is here and whether we accept or reject it will have tremendous repercussions on the future.

Incidental to healing these wounds, but a very important part of it, will be "to care for him who shall have borne the battle, and for his widow and his orphan." No one realized better than Lincoln or appreciated more fully that the men who really make sacrifices in war are those who are actually at the battle front under arms, bearing the heat and toil, the blood and sweat of armed conflict.

Surely, there is no one who would deny to them the care that a grateful nation can give. For the most part, they had no responsibility in bringing about this war. Most of them would rather have stayed in their comfortable homes doing their work in civilian life; but they were called upon to enter the armed services and had been compelled by the exigencies of war to fight the battles of their country on all the battle fronts of the globe. Let us see to it that after this war we do not forget the sacrifices that they have made and that we give to them the kind of care that Lincoln talked about.

Some splendid strides have been made in this direction already. The G. I. bill of rights passed by the last Congress, certainly was a comprehensive act helping the returning serviceman.

Not only must we care for him, but also for his widow and orphan, and the legislation of the Congress of the United States has undertaken to do this, likewise. Lincoln's injunction "to care for him who has borne the battle and for his widow and orphan" has not gone unheeded.

Finally, Lincoln said that we must "do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations." This is a beautiful phrase, embodying one of the most difficult accomplishments confronting us. It is difficult enough to achieve a lasting peace among ourselves, with all the conflicting interests that exist in America today, to solidify ourselves, to make ourselves into one people; to achieve a lasting peace among ourselves is no small accomplishment. Our task shall be to seek an ordered freedom in America, to continue that opportunity which is the heritage of all Americans. Freedom under the law should be our watchword.

How much more difficult it will be to achieve a lasting peace among all nations, with the world disordered and in chaos, with the normal governments tottering and torn down, with Europe and the Far East in a state of flux. We shall have a gigantic task to maintain the peace of the world. But surely, Mr. Lincoln in his second inaugural, spoke not only for the days in the immediate future following March 4, 1865, but he also spoke to the generation in which we live. He gave a wise and noble standard to which all of us may repair, an ideal to which all of us may cling.

In honoring him on this anniversary, we honor ourselves. In considering seriously for a few moments, the ideals which motivated him, we shall lift ourselves a little closer to the accomplishment of a peaceful, a free and ordered world.

Troop Rotation

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter from Mrs. Mildred Brownlee Dorman, of West Monroe, La. It so ably and eloquently expresses the thoughts and emotions

troubling the hearts and minds of the wives and mothers of men overseas that I present it here.

MONROE, LA., *January 30, 1945.*

Hon. C. E. MCKENZIE,
House of Representatives,
Washington, D. C.

DEAR MR. MCKENZIE: A number of things bother me with a nagging persistency. I sometimes think it would be better if I were one of those passive individuals who can settle back and accept without question whatever the day brings. I have even tried to tell myself that it is not for me to suggest, analyze, or even question; that I should simply mind my own business and that Washington will take care of the affairs of the world. This only brings forth the question of where do my affairs end and the affairs of the world begin. Where, indeed? I believe I have a right to ask questions, and though they are endless, I will limit this letter to the matter uppermost in my mind at present.

Although Congress has an enormous task on its hands already, surely it might take on one more problem, that is, rotation of troops, and endeavor to work out some plan to relieve our men who have served overseas for such a long time. Even after the war ends, which will be a long time yet, it may be years before all the men get home. But meanwhile, can't something be done to relieve the men after perhaps 18 months of overseas duty?

The one plan outlined was contingent on the end of the European war, and this plan did not seem to take into consideration the resources in the home front army, but rather propcsed to move excess troops in the European theater to the Pacific, and afford relief for men in that area who rated highest under the point system. This plan would be rather tough on the men who have been fighting the Germans. Wouldn't it be fairer to carry on the Pacific war with fresh troops, made up of men who have never been outside the United States? What is wrong with these physically fit men who have been in the Army for 3 or 4 years, stationed at one post for some 2 years or longer, and many of whom have never left their home towns? Why can't they have a turn in the foxholes and jungles for a change, permitting the weary men who have had this experience to enjoy stateside duty for a while?

I have tried to see some logic in the system which camps out one group on battlefields, and sets another up to comfortable living, but I cannot get away from the idea of "turn about, fair play." I realize a general shifting of troops would involve a problem of transportation and cause enough confusion to delay the end of the war. However, I fail to see where transportation is a problem in rotation on a small scale, when men who have lived through some 18 months of overseas duty are offered furloughs in the United States for 30 days—and transportation is always provided to return them to the hell from which they have been given a 30-day reprieve. Why can't this transportation take a new man into combat, and let the veteran take up the duties of the stateside hero?

Speaking of furloughs, whereas the men stationed in the States get a 15- or 20-day furlough every 6 months, it would seem that the men who do the dirty work of the war are deserving of even more. Instead, after a much needed rest of 30 days in the States, the combat men are returned to active duty. Why? When so many thousands have never been overseas at all, why must these men go back?

Too often, the men overseas do not even get a furlough. My brother joined the Navy in July 1942. He has been in four major campaigns, but has never had a leave long enough to come home. My husband has been in the Army over 2 years, overseas 18 months, and during the entire 2 years he has not had 48 consecutive hours off duty. Recently he was promised a rest leave in Australia—a 7-day leave after 2 years. But now he writes: "The hopes of getting a rest leave seem to be getting dimmer every day. Again I haven't given up hope altogether, but it won't surprise me if I don't get one. It's been a long time since I wanted anything so badly (except to come back to you). Even so, I suppose there are a lot of guys who have been over longer than I that haven't had one." How many more men there must be who have not had a furlough in over 2 years? And even worse, these men can hold little hope, if any, of coming home for years yet, under the present plan. Don't you agree that it is time to do something to relieve these men—now?

If anything is done, it will most probably be up to Congress to do it. While the commanding officers are anxious to give their men a break, they are too busy with the actual fighting of the war to do much about it. Congress has already gone a long way in passing the G. I. bill of rights. But isn't this matter urgent, too?

Now, I will apologize for taking so much of your time. But I have felt it was necessary to register some protest, and to ask questions where there may be answers forthcoming. Ralph and I both have the utmost faith in your conscientiousness, and I can assure you it is most encouraging to know that we have a representative in Washington who has the interests of the people at heart.

With all good wishes, and best regards, I am

Sincerely,

MILDRED DORMAN.

You Can't Blame the Dog

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Enid (Okla.) Daily News. It is timely and to the point:

YOU CAN'T BLAME THE DOG

There he sat, scared, uncomfortable, crated, a giant mastiff riding the skyways of America in an Army transport plane, and occupying four seats supposedly reserved for service personnel or for critical war-needed cargo. He didn't like this high flying so well, but there he was, crated, tagged, billed through to Hollywood. He hadn't stowed away; he hadn't gotten on the Army plane by choice. He wasn't critically needed war cargo. He was put there by orders, just as he had been shipped from England by orders, in Army airplane space supposedly reserved for the most urgent purpose of the war; for service or civilian personnel traveling on the highest priorities, in the interest of the war effort, or for foot sloggers or others, tired out with the battle, coming home for a few days of respite from the front line horrors.

The dog didn't know, of course, that alongside him in the plane were riding three servicemen—one a Navy tanker gunner, called home by the death of his father; another a veteran of the India-Burma jungle battles, hurrying to the sickbed of a wife critically ill; still another, a Navy Seabee, returning to duty from a hurried visit to his four children, who were ill. Nor did he know, or could he help it that these three were forced from the Army plane at Memphis in order that he could ride on. The dog hadn't asked an "A" priority rating, while the servicemen had only C and D ratings. He didn't know they were on tragic errands. It wasn't within his knowledge or of his desire that he was occupying precious air cargo space while three servicemen were put aground in order that he might continue his involuntary trip, as his mistress said, "to start a breed."

You couldn't blame the dog, because his master, Col. Elliott Roosevelt, had sent him from England by Army air transport. You couldn't blame him if he was continuing on to Hollywood by air while war veterans were grounded. He was only a dog; and he couldn't have known of the warship that turned back in the Pacific a few months ago in order to pick up another dog, a Presidential dog, a famous dog named Fala; or he couldn't have known how last week a President's wife took up the time of her "press conference" and cluttered the news wires with the astounding, world-shaking information that Fala was "honeymooning in the country"; that Fala was "about to become a father."

Nope! You can't blame the dog, or dogs, either of them.

Food Production

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. CARLSON. Mr. Speaker, the War Food Administration has established increased food production goals for 1945. The farmers of our Nation have patriotically cooperated in the past and they are going to do their utmost to secure these increased production goals in 1945. They are going to do this despite the fact that many farm boys who were deferred for agricultural reasons have been inducted into the service, farm machinery is becoming obsolete and badly worn and new farm machinery production is being curtailed. Many farmers have written me that despite the fact they are 60 or 70 years of age they are going to do their best to carry on for another year. Farmers' wives and farm boys and girls are assuming burdens that should not be placed on them except during a period of national emergency or war.

I would like to urge that the War Production Board give serious consideration to increased priorities for labor and material for the production of additional farm machinery. We not only need new farm machinery, we must have a greatly increased supply of repair parts as the farm equipment is badly in need of replacement parts.

Several of the county agricultural conservation associations in my district have written me regarding the problem facing the farmers in their counties.

I am including in these remarks a letter which is typical of others I have received. It is submitted by Jess A. Connor, chairman of the Trego County United States Department of Agriculture War Board in Kansas:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
AGRICULTURAL ADJUSTMENT AGENCY,
Wakeeney, Kans., January 20, 1945.

The Trego County U. S. D. A. War Board in session to consider 1945 food-production

goals for Trego County, find that with weather conditions being normal, goals can be met except for the growing scarcity of experienced farm help. We need tractor operators, truck drivers, combine men, skilled operators of machines, and experienced livestock men.

Trego County is willing to furnish her share and more than her share of the armed forces, as long as it does not jeopardize food production. The only industry in our county is food production. Every farmer is engaged in essential work.

We are not in position to know just what would be a reasonable number of servicemen to be drawn from Trego County as compared with other counties and other States but Trego County has furnished about 12 percent of its population. The result is that farm labor is becoming so scarce as to be critical. Inasmuch as it is our responsibility to foster the production of food in this county, we believe that it is well to call attention to the shortage of farm labor and the impossibility of carrying on normal farm operations if more men are drafted off our farms.

Not being in capacity to give advice, we would like to call to your attention the real seriousness of the labor problem. There is a small amount of land showing up already in idle classification. The milk cow numbers are beginning to drop. There is quite a lot of corn in the field that has not been husked, and so on down the line.

We believe the local draft board has done a good job and we commend them for their faithful work, but we believe they are being called upon to furnish more than Trego County's share of the armed forces. In order that food production may not be jeopardized, we suggest that a way be found to leave more of our active young farmers on the land.

JESS A. CONNOR,
Chairman, Trego County
U. S. D. A. War Board, Kans.

Streamlining the Foreign Service

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent I am inserting in the RECORD an article which appeared in the February 10, 1945, issue of the Christian Science Monitor. Mr. Neal Stanford, the author, has done a good job in compressing into a few words some of the needs of the State Department. It is my feeling that the efficient work being performed by the Department has not been recognized on the many occasions when it has laid the groundwork, cooperated in nursing a necessary policy, and worked quietly and unobtrusively to bring it to fruition. While I cannot speak for its personnel in all parts of the globe, I can say, from personal experience, that in China it has done a grand job. Not only have our representatives there done extremely well in attending to their own duties but, in addition, they have cooperated with the Army in that theater and helped it tremendously. The members of the diplomatic staff in China—many of them old hands out there—have hid their contributions under too many bushels for too long. They are a credit to our country and we should feel grateful that we have such people doing the work they are doing for us at this time. As a Member of the House I want to thank them for their efforts and to wish for all of them good luck and God speed.

STREAMLINING THE FOREIGN SERVICE

(By Neal Stanford)

In war America stands out a global power. In peace will it accept global responsibilities?

President Roosevelt in his state-of-the-Union message to Congress promised it would. Secretary of State Edward R. Stettinius is going on the assumption that it will. He is asking Congress for roughly an extra $24,000,000 to expand American Foreign Service this coming fiscal year.

The United States has 800 Foreign Service officers at present. It wants 1,400 after the war. The entire Foreign Service personnel (including clerks, stenographers, couriers, and other employees) totals 6,000. Before the war it was 3,000. After-the-war plans call for expansion to 9,000. Those figures give some idea of how this Government is preparing for peace.

The Service is taking on a dozen new activities. For it is not only the Foreign Service for the State Department, but for every department of the Government. The Commerce and Agriculture Departments will not have foreign services of their own as in the past. Instead of the State Department's Foreign Service will be the eyes and ears and voice for all American governmental interests. Beside watching and reporting on diplomatic, political, commercial, agricultural, and financial developments in foreign countries, it will have specialists in mining, in the petroleum industry, in civil aviation, in labor problems, in cultural relations, stationed in offices abroad.

The United States already has the largest Foreign Service corps in the world. Britain's may be only 60 percent as large. Russia's is an unknown quantity but certainly smaller. That of France has to be entirely rebuilt. Though all will undoubtedly expand after the war, America's plans are the most formidable. It aims to know its United Nations neighbors better than ever before.

How will the United States go about almost doubling its Foreign Service in the next 2 years? There are three ways.

First by expanding the corps by the regular method of examinations. No examinations for commissions in the Foreign Service have been held since 1941. So that actually the regular corps has shrunk in that time rather than expanded.

The Service met the stepped-up demands due to the war by creating an auxiliary. It includes about 600 men. They have been drafted, or they volunteered for these temporary assignments. They are men not eligible for duty in the armed services. Admittedly a temporary expedient, the auxiliary has filled a need.

Some Service Corps officers, however, have watched their infiltration into the Foreign Service and become alarmed. Surprisingly frank letters to the editors of the monthly American Foreign Service journal express this concern. Why pull in outsiders when Foreign Service men by right should be advanced to those posts?

The answer is that most of the jobs are of a technical nature and call for specialists. "Stop squawking about the auxiliary and thank heaven we have in it a group of loyal and devoted public servants without whom the Foreign Service could not have fulfilled its obligations in so magnificent a manner," bluntly replied one Foreign Service officer.

This auxiliary may provide a few new men for the regular corps after the war. Those between the ages of 21 and 35 (the eligibility limits for entering by way of examinations) will go in that way. Those over 35 would need legislation (in preparation) to permit them to stay on after the war. Of the 600 auxiliaries only about 120 say they would like to stay.

The third way of expansion is through the creation of a foreign-service reserve—an idea winning official approval. With the specialized kind of activities the Foreign Service is planning to deal with after the war—from civil aviation to mining—it might not be possible within 5 or 10 years for the Service to train its own specialists. And then most such specialists could get $10 from private business for every $1 the Government could pay them.

The proposal has been made that a panel of foreign-service reserves be drawn up including economists, professors, engineers, experts in innumerable fields who could be tapped for temporary assignments in the Foreign Service. No reserve officer would be called to duty if a regular officer was qualified. But many businesses, colleges, concerns, even newspapers, would be glad, it is believed, to have one or more of their personnel spend a sabbatical year or more abroad in foreign service, gaining in experience as well as aiding the Government.

There's an impression that American Foreign Service officers are inadequately paid. Except for heads of missions, however, their income is generally comparable with that of similar posts in the foreign service of other nations. It is the heads of America's missions abroad that are invariably worse off than representatives of less powerful nations. Not in salary, however. American ambassadors get higher salaries than most other ambassadors, but their allowances for entertainment are considerably smaller. And because taxes eat into salaries but not into allowances, ambassadors of other countries are even better off.

In one world capital, Brazil's chief of mission gets a salary of only about $3,000, but with allowances—on which there is no tax—it becomes $20,000. In the same capital the British chief of mission gets a salary of about $8,000, with some $13,000 for expenses. But the American ambassador with a salary of about $15,000 (taxable) gets only $5,000 for expenses. Much of his official entertainment had to come out of his income after taxes.

Back in the thirties Cuba's Ambassador in Washington got the equivalent (salary, plus allowances) of about $45,000. But America's Ambassador in Cuba got the total equivalent of $23,000. Britain's Ambassador to Washington, all told, is provided with about $87,000. America's representative at the Court of St. James's gets only $23,000.

Except, however, for these top diplomatic posts the American Foreign Service is not the domain of the privately wealthy. And efforts are being made to correct this anachronism.

Even a college education is not necessary. Only about three-fourths of the Foreign Service officers are college graduates. About 1 out of 12 has had no college training at all.

But intelligence is necessary as any perusal of the examinations one has to take to get into the Foreign Service proves. Back when "exams" were still being given, only about 10 percent made the grade. Out of say 400 who might try the 4-day written exam, only 150 would get above the required 70. These were then orally screened. Possibly 40 pulled through.

The exams cover a wide field: all kinds of law, economics, trade, languages, geography, history, government, English.

Officials in the Foreign Service office believe that in the long run the United States gets about the kind of foreign service it wants. The State Department has presumed to ask for almost a doubling of appropriations and personnel because it believes the country today wants global representation equivalent to global responsibilities. It believes that it's just as true in diplomacy that you shouldn't ask a boy to do a man's job

as it is in industry—nor should you try to pay the man a boy's wages.

The $24,000,000 increase Mr. Stettinius is asking for is pin money in today's figures. The $54,000,000 total he is asking for to meet Foreign Service expenses is only what this country is spending every 5 minutes for the war.

Treaty Ratification

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. GOSSETT. Mr. Speaker, last week the House Judiciary Committee unanimously reported the Sumners resolution proposing to amend the Constitution in the matter of treaty ratification. A more vital piece of legislation will not be presented to this Congress. If the Congress and the American people are to have any real voice in treaty making that provision requiring a two-thirds vote of the Senate to ratify treaties must be changed. For all practical purposes, the greatest Nation in the world is now impotent and helpless in the matter of treaty making. At no place in American jurisprudence does the dead hand of the past lie so heavily across the path of the future.

Because of the current importance of this matter, I wish to insert two items on this subject which have been in my files several months: First, an editorial appearing in the New York Times on September 5, 1944, and, second, an editorial appearing in the Washington Post on October 21, 1944:

[From the New York Times of September 5, 1944]

THE SENATE'S TREATY POWER

Dr. Nicholas Murray Butler, as president of the Carnegie Endowment for International Peace, has added his voice to those who are advocating an amendment to the Federal Constitution to provide for ratification of treaties by a majority vote in each of the two Houses of Congress instead of by a two-thirds vote of the Senate alone. The present requirement, as Dr. Butler points out, "might easily lead to almost irreparable damage to the prosperity and happiness of the American people as well as to the great movement of international cooperation to establish and maintain world peace."

There can be little doubt that, if the Senate itself took the initiative in proposing such an amendment, it would be immediately endorsed in the House and endorsed overwhelmingly by the country. The Senate alone has stood in the way of this change. It is understandable that when a small body of men holds the great power that a Senate minority now does, it should be reluctant to give it up or to share it. Many Senators doubtless quite sincerely feel that retention of the present system is in the best interests of the country, even though a majority of their fellow citizens do not share this feeling. But the Senators would do well to ask themselves seriously whether, even from the narrow standpoint of the interest of the Senate alone, it is wise for that body to try to retain its present treaty power in its present form.

Let us suppose that a treaty or a group of treaties is submitted that two-thirds or even a majority of the Senate feels that it cannot conscientiously accept. If such a treaty were submitted to the full Congress and rejected by a majority in both Houses, the country would no doubt accept this result as a reflection of its own majority opinion. But a much different situation would exist if the Senate alone, by failure to obtain a two-thirds vote, rejected such a treaty. Especially if a majority vote of the Senate favored the treaty, it would be pointed out that once more a minority had prevented the majority of the country from making the kind of peace it wanted. There would certainly follow proposals, with a great measure of public opinion behind them, to bypass the Senate and hence Congress altogether, in future treaties. However unwise that public opinion might be, if the Senate had public opinion strongly enough against it, it would be sure to find itself effectively bypassed altogether by one method or another.

The Senate will be following its own self-interest as well as the interest of the whole country if it takes the initiative in removing the two-thirds requirement and in sharing its great treaty responsibility with the House.

[From the Washington Post of October 21, 1944]

TWO-THIRDS RULE

Governor Dewey's speech in New York came close to cementing an agreement between the two major parties to keep the United Nations charter out of politics. Both President Roosevelt and Governor Dewey are now on record also as favoring prompt approval of a peace system before the war ends. The outlook for early completion and ratification of a treaty setting up a new peace system is thus most promising.

We cannot overlook the fact, however, that a shadow continues to hang over our entire relationship to this peace system. The shadow is the two-thirds rule for approval of treaties in the Senate. Probably the basic United Nations Treaty, with endorsement from the leaders of both parties, will slip through the Senate without too much trouble. In any event it will have to go to the Senate before there is any chance of amending the Constitution to eliminate the two-thirds rule. But no one should be deceived by a favorable outlook for a single treaty. International dealings will probably be more numerous in the post-war era than ever before. A major oil treaty is already before the Senate. Others designating armed forces to be at the disposal of the Security Council and dealing with such basic subjects as food, finance, and aviation will doubtless be negotiated. It would be self-defeating to leave in our Constitution a provision which permits a minority of one-third plus one of the Senate to sabotage international collaboration in these fields.

We think it is unmistakably clear, therefore, that the two-thirds rule must go. A Gallup poll a few months ago indicated that 69 percent of the people are of the same mind. Yet the machinery for removal of this obsolete appendix from the Constitution has not been set in motion. We hoped for a long time that the Senate would see the light and initiate action of its own accord. That hope now appears to be futile. Other means will have to be found to force the Senate's hand.

Attention may now well be concentrated on the House. The House has good reason to demand a voice in treaty-making. Only a misconception of how the Senate would function led to denial of House participation in this process in the first place. The House is apparently eager now to correct this error of the founding fathers. We think that a whopping vote in that chamber for a constitutional amendment providing for ratification of treaties with the advice and consent of simple majorities in both houses would give a proper start to the repeal movement.

To undermine any recalcitrant action on the part of the Senate the State legislatures should also be brought into the fight. Two-thirds of the State legislatures can call a constitutional convention for the proposal of amendments and an amendment set in motion by this method could be ratified by the States without ever going to the Senate. Use of this complicated procedure is not likely to be necessary, however, if concerted movements in the States demonstrate to the Senate that there is an overwhelming national demand for democratization of the treaty-making process.

Fortunately, some organizations are already campaigning for this reform. The League of Women Voters has prepared an excellent memorandum for its workers throughout the Nation and is beginning to strike hard for a show of action. If many other national organizations will join hands, they can convert this movement into a truly national campaign. In our opinion it is worthy also of the earnest cooperation of the American Bar Association, the United States Chamber of Commerce, the A. F. of L., the C. I. O., the American Bankers Association, the American Legion, and dozens of other national and local agencies through which public opinion is influenced.

The Post has suggested on more than one occasion a national committee to head up this movement and draw all the groups that are interested in a lasting peace into it. It is high time that such an organization be set up. We shall be cruelly fooling ourselves if we assume that world peace can be achieved without prodigious effort and without democratic (majority) control over our own participations in it.

Letter From a Constituent

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HENRYETTA, OKLA., *February 5, 1945.*

To the Congress of the United States,
Washington, D. C.:

The mothers and fathers that have sons in this war, also the wives of the men in the war, they want the Congress of the United States to stop fussing over this post-war system and do something to bring this war to an end as quickly as they can. They say that you Congressmen have had 2 years on this post-war system and have done nothing about it yet. They say all the Congress has done is to fuss over this post-war system. They want to know what you are going to do about it. Can you expect the mothers and fathers to have any confidence in the Congress? Now there is another thing I would like to ask about, that is letting the Japs come back in the United States. If all reports are true that comes over the radio about the cruel Jap treatment of our boys over there in the Philippines, and which our soldiers are fighting and dying for, we, the people of the United States, want to know of the Congress and this Government, are they going to suffer the Japs to come back here even if they are native-born. I myself, being a United States citizen, and the people of the United States, weren't loyal to our Government we would be prosecuted by the laws of the United States. Once a Jap always a Jap.

We the people want to know what you are going to do about this. Please read this in the Congress.

G. W. SELVIDGE.

Full Employment Program Based on Economic Fallacies

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, Mr. Scoville, economist for Chrysler Corporation, is exceedingly well known as one who presents his views in a dramatic fashion. In the following article he fully measures up to the fine reputation he established years ago. I am sure the Members of this House will derive both pleasure and profit in reading this highly interesting contribution which appeared in the January 29, 1945, issue of Barron's National Business and Financial Weekly:

FULL EMPLOYMENT PROGRAM BASED ON ECONOMIC FALLACIES—LAWS TO BRING PROSPERITY HAVE LOWERED NATIONAL LIVING STANDARDS

(By John W. Scoville)

Take several well-grown economic fallacies, mix thoroughly with a dozen undefined words, season to taste with economic ignorance and pressure group avarice, and bake for 2 years in the ovens of popular discussion—the result is an unpalatable, indigestible piece of hardtack known as the post-war employment problem.

This problem cannot be solved until someone states what it is. Apparently, it is merely a vague, mystical yearning which compels certain people to cry out that after the war someone must provide 60,000,000 jobs—that after the war we must have full employment and a national income of X million dollars—that we must never go back to conditions which existed in the Twenties—that we must have as much employment in peace as in war—that returning veterans must not sell apples on the street—that if industry cannot provide jobs the Government must take over—that we must have a 30-hour week to give everybody a job—that exports must be trebled to provide employment—that we must have full employment to enable the Government to collect necessary taxes—that we must have full employment to prevent a revolution.

We have become a Nation of hypochondriacs, and merely to list the diseases which threaten the body politic—as well as the proposed cures—would require a big book.

ECONOMIC TERMINOLOGY HAS CHANGED

In past decades, when we were more rational, we spoke of good times and hard times, of business being slow, active, or depressed. We realized that when times were hard everyone was less prosperous. The modern theme song promulgates the idea that that when times are hard the only class which suffers is made up of those who work for wages. Now, instead of hard times, we say unemployment, and instead of good times we say full employment.

Suppose that, by some miracle, the amount of labor required to produce goods was reduced by 80 percent. Ten million people could then produce all the goods formerly produced by 50,000,000. I suppose the advocates of full employment would consider this a great catastrophe, and believe that 40,000,000 would be unemployed and starving. They hold to the theory that the easier it is to obtain food, clothing, and shelter, the larger the number who will die of cold and starvation.

Now what would happen in this hypothetical case? Some people would work for 5 years and retire. Some would work for 10 weeks and then take a 40 weeks' vacation. Some would work 2 hours every day in the year. Most people would work to secure additional satisfactions—finer homes, finer furniture, better clothes. Many more families would hire domestic servants. There would be a great increase in travel, recreation, and amusements. More people would go to school. There would be a greater demand for barbers, beauticians, painters, sculptors, lecturers, gardeners, etc. In short, we would have more leisure and a higher standard of living.

Actually, we need not rely on a hypothetical situation. For a century the productivity of human labor has been increasing. What was the result? Less employment. Children, instead of working, went to school. More young people went to college. A larger proportion of old people retired. Those who labored worked fewer hours. People had better houses, better clothing, better food. Per capita production and consumption increased enormously in variety, quality, and quantity. Another result was a shift in occupations. There was a relative decline in employment in agriculture, mining, and manufacture and a gain in the professions, in clerical work, and in trade and distribution. Population increased, as did the average length of life.

As we gained mastery over the forces of nature we took part of the dividends in better living and part in more leisure or less employment. As technology advances, it is reasonable to suppose that these trends will continue. Let us be done with this scatterbrain doctrine that the end all and be all of life is work, toil, or employment.

The apostles of full employment do not consider it necessary to define the phrase. What is meant by employment? Is it the total hours of labor of all, is it the number who do some work, is it the number who work for wages, is it the proportion of those who want to work who are working? If all adults worked 3 hours a day, would that be full employment? Is the kind of work done important? Is a gambler employed? Is a dope peddler employed? Is a lawyer waiting in his office for clients employed? Is a wheat farmer employed in the winter? Is a boy who peddles papers employed? Is a housewife employed? If she hires a maid, is she employed? Is grandma employed when she knits? Manufacturers who introduce labor-saving machines are sometimes accused of reducing employment. They should admit the charge without any apologies. Instead, they frequently make the foolish defense that labor-saving devices create jobs and increase employment.

NO UNIVERSAL RIGHT TO A JOB

One of the most absurd of the current fallacies is the idea that everyone has the right to a job. President Roosevelt, in his message to Congress, said: "Of these rights, the most fundamental, and one on which the fulfillment of the others in a large degree depends, is a right to a useful and remunerative job in the industries or shops or farms or mines of the Nation." Does this alleged right to a job refer to the right to be self-employed? Has the citizen a right to buy a farm and operate it? Has he the right to buy and operate a grocery store, a barber shop, or a bakery? If qualified, has he the right to practice law, or medicine or dentistry? Obviously a citizen can do these things, but it would be foolish to say the citizen has the right to do these things, for the exercise of rights involves the interests of other people.

This right to a job does not apply to those who are self-employed. It must then apply exclusively to those who wish to be employed by someone. This right to a job is of no value to millions who have jobs. By elimination, we see this right to a job has value only to those unemployed who are seeking employment.

Since all rights are reciprocal relations, if the unemployed have the right to a job, some persons have the duty to employ them. But it does not help John Doe that someone has the duty to employ him. He has applied for work at several factories and farms without success. If the right to a job is to mean anything to John Doe, then someone must designate the person or firm who is to be compelled to employ him. I say compelled, because John Doe has been unable to find a voluntary employer.

President Roosevelt and Senator MURRAY have indicated that the responsibility for compelling someone to hire John Doe rests with the Federal Government. President Roosevelt and the full-employment bill specify that everyone has a right to a job in the industries, shops, offices, farms, or mines of the Nation, which are privately operated enterprises.

A Government official comes to John Doe's assistance. He tells him the Government has selected Farmer Brown as his employer. The official and John go to Brown to complete the arrangements.

Brown notices that John Doe is undersized and rather old. But he meets the official standards—he is able and willing to work. Farmer Brown asks if John would work for $30 a month. That will not be enough, says the official. The President has said—"Americans do not regard jobs that pay substandard wages as productive jobs." The full-employment bill specifies: "at locally prevailing wages." I find that average farm wages here are $60 a month. We demand that this man work for you at $60 a month.

Look here, says Brown. I make about $600 a year after paying my expenses. I have one hired man now, and I do not need two. If I hire this man, he will not earn his wages. If I pay him $60 a month, it will reduce my income to only $240 a year. Why should I be selected as the goat to hire this man? Let Smith hire him; his farm is bigger than mine. The official replied, "Brown, you did not sign up for the crop-restriction program. Our President has declared that everyone has the right to a job. In order to give these rights to the unemployed we must compel someone to hire them. We selected you in this case. You seem to be a reactionary who puts private interest above the interests of society. Furthermore, you are not to fire John Doe on the grounds of incompetence. He meets Government standards; he is willing and able to work." Farmer Brown then said: "I can't fight the Government. I am quitting this farm right now, and looking for work. Find me a job. I demand the right to a job." The official then took both John Doe and Brown to list them in the unemployment office.

This picture is not exaggerated. It illustrates exactly what the Government would be compelled to do to guarantee a job to every applicant in private industry. Of course, if the Government guarantees jobs to all, industry will no longer be private.

If the Federal Government guarantees to everyone the right to a job in private industry at remunerative wages, then employers are denied the right to determine the number employed, the wages paid, and the qualifications of employees. Most laws protecting rights of citizens are for the purpose of protecting citizens from injury by other citizens. But a full employment or right to work law enables job seekers to injure employers. This is a perversion of the function of law.

JOB GUARANTY WOULD MEAN COMMUNISM

The guaranteed right to a job in private industry is a promise the Government cannot meet—a right the Government cannot grant—without replacing freedom with communism.

We read in the full employment bill that "the rate of Federal expenditure may be varied to whatever extent the President may determine to be necessary for the purpose of assuring continuing full employment." And the President said in his recent message to Congress: "Our full-employment program

requires the extensive development of our national resources and other useful public works." So these jobs are not to be in the factories, farms, and mines. They are to be public jobs like the W. P. A. jobs, and the public projects are not to be undertaken because the people want them, or because they will be worth the cost. They are to be undertaken to provide jobs. The injury is to be inflicted, not on private employers who may be compelled to hire people they do not want, but on the Federal taxpayers, who will be compelled to pay for public works they may not want.

Since these Government projects will not be worth what they cost, they will not provide useful and productive jobs. While these jobs will not be substandard in wages, they will be substandard in utility. Which means that although the jobholders will not be cheated, the taxpayers will be. The real purpose of a full-employment law is to protect arbitrary wage scales established by labor monopolies by relieving the employed of the competition of the unemployed.

The President seeks to create more jobs by 'an increase in our export trade above the pre-war level." But the purpose of foreign trade—like domestic trade—is to secure goods with less labor. A gain in foreign trade would not increase employment unless we gave our exported goods to foreigners. We could hide the gift element by giving money to foreigners (or making unsound loans) and then accepting our own money for the goods exported.

I will pass over the purchasing power fallacy, the fallacy that we need 60,000,000 jobs, the fallacy that we must work as hard in peace as in war, the fallacy that it is a responsibility of government to provide jobs—all fallacies incorporated in the President's recent message to Congress.

FREEDOM TO EXCHANGE IMPAIRED BY LAWS

What is the reason so many people have difficulty making exchanges of labor or goods? Why are we less prosperous than we might be? I believe the great impediment to progress is the intervention of Government in our economic affairs. Freedom to exchange has been impaired by laws on wages and hours, by minimum wage laws, by innumerable laws relating to agriculture, industry, and trade, by the rules of trade unions, cartels, and trade associations, by unfair tax laws, by fixed customs, etc.

Practically all laws passed ostensibly to make the people more prosperous act in reverse. Most regulatory laws seek to reduce output. Federal farm laws seek to restrict the acreage and output of farms; labor laws seek to restrict the amount of work done by shortening hours and by making labor more expensive; old-age pensions will not be paid unless the recipient agree to quit working in covered employment; unemployment insurance makes it easier to live without working; tax laws are framed to interfere with the accumulation of capital and to penalize efficient firms and efficient individuals; customs duties interfere with our making profitable exchanges with foreigners; fair-trade laws prevent merchants from selling goods more cheaply; laws to keep profits and interest rates low restrict the accumulation of capital; frequent changes in the laws destroy confidence; laws to debase the currency destroy the public confidence in our money—and so on with no end in sight.

Nearly every law to regulate our economic affairs lowers our standards of living and creates more poverty. These ill effects of legislation have been masked by our great gains in technology. But our scientists cannot forever overcome the evils done by the lawmakers.

OUR REGULATIONS ENCOURAGE MONOPOLY

Just as tariffs are enacted to protect us from foreign competition, so we have domestic tariffs to protect us from domestic competition. Thus we have laws to promote labor unions, so that the worker getting high wages may be protected from the competition of those who would work for less; we have fair-trade laws to protect the merchant who sells for high prices from the competition of the merchants who would sell for less; farm subsidies and acreage restrictions to protect farmers who wish to secure higher prices by producing less; unemployment compensation to protect employed workers from the competition of unemployed workers; old-age pensions and youth assistance programs to protect workers from the competition of the old and the young; taxes on chain stores to relieve independent grocers of chain store competition; regulation of motortrucks to relieve the railroads of some of the competition from trucks; taxes on oleo so it will compete less with butter; profits taxes on efficient firms to protect inefficient firms; maintenance of membership clauses to protect the income of labor unions; minimum wage laws to protect arbitrary high wage rates; public works projects to protect employed workers from the competition of the unemployed.

These laws, which make it possible for sellers to ask higher prices, cannot compel consumers to buy at the higher prices. The result of these restrictions and interventions is a reduction in output, a distribution of total output according to governmental favors, a curtailment of competition, and encouragement to monopolies.

Can the Government create greater prosperity and help the people to product and exchange? Yes. By repealing every law to regulate trade, wages, prices, and employment, and by restoring economic freedom.

A full employment law would be an attempt by Government to cure the unemployment largely caused by the laws passed to regulate business. Can the Government help us? Yes. It can help by leaving us alone.

The fraudulent theories of the economic medicine men reduce to this: "Everyone is to get more for what he sells and pay less for what he buys." While all of us may attempt to apply this rule, and some may succeed, it is obvious we cannot all succeed in getting the best of the bargain. These flimsy economic fallacies are advanced by pressure groups who claim their schemes for advancing their own interests will promote the general welfare.

For society as a whole, production and consumption are equally important. But the individual, who get his income from one source and spends this income in a thousand channels, feels it is easier and more important to increase his income than to reduce his expenditures. A factory worker is more interested in getting a wage increase than he is in reducing the price of toothpaste, bread, gasoline, or shoes. The pressure on Congress comes from producers. But any law which helps producers will injure the consumers. Congress is therefore unable, by economic regulations, to increase the general welfare.

H. R. 381

EXTENSION OF REMARKS

OF

HON. FADJO CRAVENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. CRAVENS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am including a resolution adopted by the House of Representatives of the State of Arkansas in support of H. R. 381 on February 6, 1945, under the sponsorship of Hon. C. H. Herndon, of Montgomery County, Ark., as follows:

Whereas a bill was introduced in the House of Representatives in Congress on January 3, 1945, same being House bill 381, by Mr. FADJO CRAVENS, of Arkansas, which bill has for its purposes and intent, the assessment and taxation of real estate owned by the United States of America for local purposes; and

Whereas many of the local units of government in many of the States are in distressing financial circumstances; and

Whereas the enactment of said House bill 381 by Mr. CRAVENS would afford much needed relief: Now therefore be it

Resolved by the House of Representatives of the Fifty-fifth General Assembly of Arkansas:

SECTION. 1. That the House of Representatives of the Fifty-fourth General Assembly of the State of Arkansas go on record as favoring the passage of said bill.

SEC. 2. That a copy of this resolution be sent to Mr. CRAVENS.

Taxes and Employment

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the dinner meeting of the Controllers Institute, Thursday, February 8, at Hotel New Yorker:

It is a privilege to appear before this group of distinguished and practical experts.

More properly, you should be addressing me. For you gentlemen, keenly attuned to the problems of business and employment arising from taxation, can speak with the authority that only painful experience brings.

Further than that, the Congress and the Nation should thank you collectively and individually for your assistance in putting into operation the system of withholding taxes. Without this practical addition to our tax structure, very likely it would have fallen of its own weight.

I have not heard one substantial complaint about your self-imposed tax-collection job. I wish I could say that there were no complaints about our tax framing job.

BACKGROUND OF REVENUE PROBLEMS

We have come a long way in the past 5 years in the devising of the heaviest tax collections ever conceived by man. Our gigantic program of war spending makes this tax collection necessary. The Congress has used every reasonable means, and I am afraid some not-so-reasonable means, to tap the earnings of individuals and business on behalf of the Federal Treasury. Federal yearly revenues are now about $47,000,000,000, and with $10,000,000,000 added for State and local levies, taxes amount to over 35 percent of national income.

Our Ways and Means Committee, of which I have the honor to be a member, came to the conclusion last year that income taxes had reached the point of discouragement.

What is this point of discouragement?

Well, out in my big State of Kansas a farmer says a cow needs 3 acres of grass. The grass will grow just enough to keep ahead of her appetite. A hundred cows on 300 acres of pasture would be safe. Put 150 cows in there, and you'll soon get a bovine rendition of Don't Fence Me In, and a bunch of broken gates. When the grass disappears a cow gets discouraged. You lose both grass and cows.

If Government overloads business with taxes, it will lose both business and revenues. The millions that want jobs in useful private enterprise will be forced to look to a paternalistic Government.

Our committee stood pat against increasing individual income rates for 1945, and with success. The 1944 Revenue Act did increase corporate excess profits taxes from 90 to 95 percent, but the corporate normal and surtaxes were held at the 40 percent rate, and the 80 percent over-all limit was also maintained.

There have been many complaints about the complexity of the tax system and a lot more complaints about the way taxes are collected under interpretations of the law by the administrators. The present tax structure is involved and confusing; simplification and clarification can save many millions of dollars of both the taxpayers and the Government's dollars.

EFFORTS TOWARD SIMPLIFICATION

The Tax Simplification Act of 1944 is our start toward tax reform. It gave 30,000,000 taxpayers the privilege of using the withholding receipt for a tax return; it gave 10,000,000 others the privilege of rapid calculation through the short form.

Corporate and other business taxes deserve a similar simplification. Of course there are people who thrive professionally on these complexities, but by nature business executives have a yen for efficiency. The "make work" theory has never been accepted as sound economic practice.

The degree of simplification we achieve will be in ratio to your demand and public understanding and I urge you to use your creative talents for this high purpose. I am not nearly so concerned about your concealing complaints from Congress as I am about your being timid with suggestions.

On the Republican side—at least—we have a very stubborn attitude on taxation. In the face of all these brilliant new theories by tea-cup economists and long-haired leftists we cling to the idea that taxes should be adjusted to sound business practices, and not that business should have continually to adjust to new taxes.

We don't want government by "taxocrats" continually meddling with the competitive practices that brought this Nation the highest living standard on earth and the capacity to outfight and outproduce all regimented peoples.

SOME FUTURE CONSIDERATIONS

For that reason, we so-called conservatives have some weird experiences in trying to frame a tax law with the so-called liberals, who are especially liberal with the dollars of 50,000,000 taxpayers. It's like approaching fatherhood. You try to work, try to study, pace the floor, you begin to get scared. Finally, you get a law. Then come the screams. Your tax baby looks strange, maybe deformed. You say, "Did I help produce this thing?" So we look for someone to share the blame. We call in the tax doctors.

One thoughtful suggestion which came out of this group, I believe, proposes that information returns for income-tax purposes and the employers return for Social Security taxes be combined. To me, this double reporting, looks unnecesary and I hope you can suggest practical methods of relief.

Some of you report difficulty over an interpretation by the Bureau of Internal Revenue which requires tax withholdings to be reported as of the date of actual payment, rather than determining the withholdings on the basis of established pay-roll periods. I am sure a solution to this problem can be worked out with your assistance, so that you will not be required to abandon sound and established practices.

I mention these two problems because they illustrate how you can give us guidance from your own personal experience.

THE INDIVIDUAL INCOME TAX

We still have a complication with regard to individual income taxes which is bothersome. Exemptions for normal and surtaxes are not the same. We allow $500 exemption per taxpayer for the 3 percent normal tax, and for surtaxes we give a $500 exemption respectively to taxpayer, spouse and dependents.

This procedure is necessary to obtain as many tax contributors to the war effort as possible, since the burden is so great that all must share the load. Had the many surtax exemptions been allowed for normal taxes, about 12,000,000 would have escaped income taxes.

The great simplification feature of the present income tax is the option granted to some 30,000,000 taxpayers to use their withholding receipts as a tax return. Thus, we have shifted at least part of the cost and trouble of tax computation to the government. It does not hit the heart of the problem since the law itself is still cumbersome and unwieldy.

I believe we can produce a clearly written tax law which the average taxpayer can understand and follow. A man can dream, can't he?

THE TAXES ON CORPORATIONS

So far, nothing has been accomplished toward simplication of corporate taxes. There are five corporate taxes.

1. Normal tax, top rate, 24 percent.
2. Surtax, top rate, 16 percent.
3. Capital stock tax, $1.25 per thousand of declared value.
4. Declared value excess-profits tax, 6⅔ to 13⅓ percent.
5. Excess-profits tax, 95 percent.

The last tax is clearly a war measure and certainly has no place in peacetime economy. It should be eliminated immediately with victory. And it is only proper to call a spade a spade and refer to the recapture of profits through renegotiation a sixth tax and one which only war can justify.

The capital-stock tax and declared value excess-profits tax were adopted back in the early days of the Roosevelt administration.

The Budget estimates a yield from these taxes for the fiscal year ended June 30, 1946, at about $500,000,000. This is not all revenue by any means, because both taxes are allowed as deductions in computing income and excess profits taxes. Hence, the government realizes only about $150,000,000 revenue from these sources.

Aside from the comparatively small revenue involved, these taxes have caused more headaches to business than any tax which has ever been written into the Federal code. It is admitted to be a guessing game. The one guessing closest to the future income of his corporation is the prize-winner because he pays less taxes. This is a particularly difficult and often costly sport, especially in these times of uncertain incomes. The declared value excess-profits tax and the related capital-stock tax should be eliminated.

I believe our tax system should telescope corporation normal and turtaxes into one flat rate and give a lower rate to small business through credits or exemptions. The complicated structure of normal and surtaxes were enacted to collect income tax on the interest from partially exempt Federal bonds. They are still exempt from normal tax, but the surtax catches them.

Now, since the interest from all Government bonds issued after March 1941, is subject both to normal and surtaxes, the problem has all but disappeared, and could be solved if the Treasury would call in the partially exempt bonds, which are callable and allow a tax credit on the balance.

A SOUND TAX STRUCTURE

I am a great believer in having one tax for corporations in order to eliminate the waste and expense of keeping the many records which are now required to compute taxes on so many different bases. The Government would save the countless man-hours now devoted to checking taxpayers' returns; business would be relieved of many millions of dollars of needless cost of compliance.

Frequent changes in our tax laws play havoc with business policies. It has been impossible for most taxpayers to plan ahead. Not only that—but they must maintain idle funds against unsettled taxes, new claims and new decisions by the collector. Business cannot plan employment and operating policies upon such an indefinite tax policy and shifting interpretations. Certainty in taxes can contribute greatly to our future progress.

The tax policies of Great Britain and Canada in this respect provide quite a contrast to our own. While these nations, like ours, have been faced with extreme war conditions and have made frequent changes in rates and exemptions, the great body of their substantive tax law has not been changed in the last 10 or 15 years. They change the rates—not the tax structure.

Our post-war taxes should be so soundly conceived that we can emulate our British and Canadian cousins in their constancy.

PRESENT FISCAL PICTURE

What's ahead in taxes? Well, before discussing that, let us look at our present fiscal picture. During the current year the Budget anticipates a total outgo of $99,000,000,000. Estimated receipts, after the appropriation for the old-age fund, is set at $46,000,000,000.

Now, where are these collections coming from?

Individual income taxes, about $19,000,000,000.

Corporation income taxes and excess profits taxes, about $17,000,000,000.

This total of $36,000,000,000 of income taxes will furnish almost 80 percent of our total revenue. In addition, somewhat under $2,000,000,000 is expected to go into the Treasury through renegotiation.

We will collect $5,500,000,000 from excise taxes and one-half billion net from employment taxes. The balance—about two and one-half billion—will come from estate and gift taxes, customs, and miscellaneous receipts.

A COMPARISON OF NATIONS

No other country derives so much of its total revenue from income taxes. In many nations, more than one-half of the revenues come from excises. Great Britain gets a fourth of her total revenues from excises, even though she is a firm believer in the income tax. In one of his recent budget messages, the British Chancelor expressed hope for the return to the system of more reliance on excises. Canada gets about one-third of her revenues from excises.

Therefore, any consideration of post-war tax programs must determine what percentages of the burden shall be borne by excises, personal and corporate income. Men have been eternally seeking the proper balance. It is in the scales of economic justice.

TAX PLANS—GOOD AND BAD

Some of our post-war tax plans go so far as to advocate a complete repeal of the corporation income taxes. Some tax economists advocate an eventual repeal of most excises.

Other groups favor a high corporate tax and advocate low personal income taxes. There can be and is an honest difference of opinion as to which method merits approval. On one premise we must agree—that is,

as long as the Government spends, we've got to meet expenditures by taxes.

No; we cannot approach this bright new peace by reducing taxes simply to ease the tax burden, or by suggestions that the other fellow pay instead of you.

THE FEDERAL FINANCIAL SYSTEM

Our Ways and Means Committee of the House is the source of the tax law. Likewise, the Appropriations Committee is the source of authority to withdraw money from the Treasury. Of course both are subject to the vote of the whole Congress, but the House committees do the original planning and spadework.

As now organized, Ways and Means plans the taxing without so much as a conference with the Appropriations group on the spending. We in Ways and Means must impose all the taxes we think the economy can bear, yet revenues have lagged far behind expenditures. The result is deficit and debt, and while deficits are unquestionably necessary during war, as a peacetime policy they promise only national catastrophe.

The so-called streamlining of Congress is the subject of various plans, and some of them seek better correlation between the spending and taxing functions. Congress needs well-paid and expert help to handle these billions in budgeting. Also, professionally, you should be interested, for men of your methods and talents are just the type who can save us billions in both spending and tax planning.

We are just pouring sand down a rathole in our tax planning unless it is related to control of spending. Spending is taxing. The tax burden is compounded when that spending competes with business and destroys taxpayers.

THE TAX PLANNING

There have been several comprehensive studies on the post-war tax system. Two or three are being made by Government bodies; others come from unofficial, but nonetheless, authoritative, groups. They are all helpful and hopeful and will receive careful consideration. Perhaps they take too much for granted in spending economies and balanced budgets, but the fact that 62 proposals (at the last count) have been produced in prime evidence of aroused taxpayers.

Post-war taxes are getting more attention than any other proposed legislation in our history. All tax groups, whether they be Republicans, Democrats, right or left, labor, business, or agriculture, agree that expanded business activity and high employment are the twin goals of our post-war economy.

But let's not say that taxes in themselves will bring about either. The chief contribution our tax system can make is to give employment and business activity the best tax climate we can reasonably afford.

All of us concerned with taxation may well ask of each tax that is now on the books: "Does it injure the chance of full employment?"

The excess-profits tax is marked for early slaughter on my list as a tax which seriously discourages investment in new enterprise or in the expansion of business.

This tax tends to discourage the very type of business—that is going to make jobs—the enterprise that involves considerable risk. Surely there still is a place in America to make an honest gain by risking a shoestring on an idea, a patent or by hard work—an idea that will make jobs.

What other taxes should be reduced and to what degree is a round-robin argument. Surtaxes on personal income are too high and will discourage investment; the same is true of corporation taxes.

The double taxation of dividends as individual income after they have been taxed as corporation income is an inequity and needs serious study.

Small business needs special considerations. The big ideas of today, the core of our progress, came out of the little tinker shops of yesterday. More than any antitrust legislation, the promotion of the welfare of small business is a guard against monopolies and social stagnation. We must, therefore, be certain that tax relief applies to the lower brackets and small enterprises for the sake of employment as well as progress.

I speak particularly of taxes on business largely because I believe it is your professional interest and also because corporation taxes are my particular assignment in the Republican Post-war Tax Study Committee. This committee is composed of 25 members of the minority who are versed in tax matters, and under the able leadership of Mr. REED, of New York. However, I must for the record say that income taxes are just as burdensome upon the individual. Any reduction of corporate income taxes must have a compensating reduction in individual taxes.

TAXES AND BUDGET

By the lowest estimates, our post-war budgets are going to run $17,000,000,000 to $30,000,000,000, depending on how much we spend for war veterans, foreign relief, defense, debt, and public works. These are the items above those we used to consider a normal $4,000,000,000 Government.

We are collecting about $46,000,000,000 in wartime taxes. If we spend $23,000,000,000 we could reduce our tax collections 50 percent and still balance the budget on our present basis of national income. Actually, it is not as easy as that. Taxation, budgeting, and spending by the Federal Government have an effect on our national income. Now, please don't anyone say that we plan to cut post-war taxes in half. It might be good politics to say it, but it would be dishonest and a disservice. I hope we can do it. The only honest way is through economy in Government spending and prosperity shared by labor, agriculture, and industry.

JOINT COMMITTEE ON TAXATION

The Joint Committee on Taxation, representing the House Ways and Means Committee and the Senate Finance Committee, is giving the entire tax structure and our post-war problems a careful and close study. It has assigned its staff, directed by the very able and overworked Colin F. Stam, to the details of this tremendous task.

The joint committee, by a resolution, requested the Treasury to devote their full energy to this problem. Their tax economists and experts are cooperating wholeheartedly. Every possible effort is being made to gather in the ideas of tax-minded persons and groups.

Probable post-war budgets are being set up and from this long study, which started back in June and July of last year, the Congress will be furnished the basic facts, data, and information on which to proceed and write the changes in our tax laws.

You men who know the general thinking of our committee in the House under Hon. ROBERT DOUGHTON'S leadership, and the Finance Committee of the Senate under Senator GEORGE, will understand the good common sense that will be basic in the task. Perhaps that is the greatest word of encouragement and optimism I can bring you.

A FEDERAL TAX COMMISSION

The one thing I dread is a repetition of past experiences. Our committee will be petitioned by and hear the testimony of labor, agriculture, and business. Each group will ably and honestly present their suggestions.

In case of conflict, who are we to believe? Or shall we just follow the rule of votes and constituency? Will this old-fashioned, time-worn routine give us a sound tax structure? No; it will not.

I have consistently advocated a Federal tax commission, a commission composed of representatives of agriculture, labor, business, and industry, individual taxpayers and consumers, tax accountants, tax lawyers and tax economists, this committee to cooperate as a fact finding and advisory committee to the Congress.

Congress can write a tax bill but it must be acceptable to our people. We need the wide experience and broad views of every group. We must have the whole-hearted cooperation of labor, agriculture, and industry.

My anxiety is that the best tax plan bears the widest approval of the Nation, because it is the plan of most general approval that is going to be your tax law, perhaps the tax basis for generations to come.

Don't personalize your tax complaints. Fit them in with the tax problems of others. Judge them in terms of national welfare.

BUILDING THE POST-WAR TAX STRUCTURE

Having this in mind I think we can all agree on five basic points which must be the very foundation of our post-war tax structure.

1. As to its source, it must be developed by a representative, patriotic group, not one suspect of privilege.

2. As to its effect, the primary motive must be maximum employment and business activity.

3. As to its scope, it must give more than casual attention to the balancing of spending by revenues.

4. As to its benefits, it must equitably spread tax relief.

5. As to its soundness, it must bear approval by the most expert and practical opinion available.

Your taxation committees—the whole of Congress for that matter—are only the sounding board of the Nation. Before we are lawmakers, we are selectors and arbiters between the segments of our economy.

The justice of your Government depends upon the interest in government by the just. And the summary expression of government is its taxes, for in their collection the government manifests its character—constructive or destructive.

Let's not patch our tax structure with politics, privilege, and provincialism.

Let's leave enough grass for the cows.

Iowa General Assembly Asks for Repeal of Daylight-Saving Time

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include the following senate concurrent resolution recently adopted by the General Assembly of Iowa:

Whereas the return to standard time will help increase food production and help win the war and mean more daylight working hours for agriculture; and

Whereas daylight-saving time has proven a burden; and

Whereas daylight-saving time has failed to save daylight or accomplish its purpose: Therefore be it

Resolved by the senate (the house concurring), That the Congress of the United States is respectfully requested to immediately take the necessary steps to return the United States to standard time and abolish daylight-saving time by terminating the War Act of January 20, 1942 (ch. 7, 56 Stat. 9), said act providing that Congress had power by concurrent resolution to terminate said act.

That copies of this resolution be transmitted to the President of the United States, President of United States Senate, and the Speaker of the House of Representatives of Congress, and to the Iowa Members of the United States Senate and the Iowa Members of the House of Representatives of Congress.

The Fifth Army in Italy

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made over the radio on February 9, 1945:

January 18, after my return from the European combat zones, I made a report on the floor of the House, on our Fifth Army in Italy, as I had seen it. I tried to outline the history of that heroic army, since the time when it was formed by Gen. Mark Clark in Africa, shortly after the landings there in 1942, down to today, when it is attacking again south of Bologna. Since then, many requests have come to my office on the Hill to repeat that story. Now, in the 12 or so minutes allowed tonight, I cannot cover all the points made in that hour-long recital. Moreover, even that report was necessarily inadequate. Although I talked with literally hundreds of G. I.'s in Italy, it was impossible, during the few weeks I visited them, to get any complete picture of that vital front.

For example, it is impossible comprehensively to report on the Italian front, without understanding the job that our British allies are doing there. For the American Fifth Army, under Lt. Gen. Lucian Truscott, is holding only one-half of the line. The other half is being held by the British Eighth under Lt. Gen. Sir Robert McCreary. Both armies are grouped under the command of America's Clark. And he, in turn, is under the command of British Field Marshal Harold Alexander, who guides Allied military destinies in the whole Mediterranean theater. Time necessarily limited the scope of our committee's activities. I particularly regretted this circumstance in Italy because, since my return to America, I have been asked many questions concerning British efforts in Italy; I have heard a number of sharp criticisms of it, and I have been unable to answer them. Worse, I have discovered that there are many people in America who hardly know that a large British Army is today fighting beside our own, in the sleet-lashed mountains above the Po Valley, and are jointly with us forming policy in the liberated areas. I am particularly sorry that I have not been able to report to those who are interested in the character and efforts, aims and objectives of the British in Italy, for the part that our Allied armies play there today, and the diplomacy they practice there today and tomorrow, will largely determine the shape of things to come, politically, in central Europe. As Italy goes, you might say, so will go the whole Mediterranean. There, above all other places except Germany, it is of the utmost importance that American and British diplomatic and military efforts be well synchronized, if peace is to be harmonious and fruitful. Indeed, the troubles in Greece are only a forerunner of what may yet face American and British armies in Italy, if we can't get our joint war efforts and peace aims straight.

But now let me come to the main points that I tried to cover in the House about the American military effort in Italy. First, that effort has, unhappily, not received the popular appreciation on the homefront that the long and bloody battles of the Fifth from Salerno to Bologna have deserved. There has been a comparative blackout of news since the fall of Rome on June 4, 1944. This was natural enough since the Cross Channel Invasion began two days later, and the subsequent gigantic battles of Eisenhower's armies were vastly more decisive in character. But the fact remains that the scant news coverage the Italian theater has received since June 4 has not had an exhilarating effect on the Fifth Army's magnificent veterans, who are just as human as you and I are in liking their best efforts noted.

I pled in the House, I plead again tonight, with everybody who has a son or husband or relative in the Fifth Army, not to underestimate how terribly difficult their job still is, and how great the hardships they still endure. I urge them in their V-mail—the mail from home which is the backbone of an army's morale—to tell our men out there that they have not been forgotten, nor the importance of their front underestimated, simply because the newspapers are finding it difficult to give this front much coverage.

But why, you ask, doesn't it get more coverage, since there are plainly hundreds of thousands of our men there?

Well, let me give you the reasons as they have been given to me by professional newsmen themselves.

Said Lloyd Stratton, of the Associated Press: "We have a large staff assigned to Italy; coverage has been as constant as new developments have justified."

Harrison Salisbury, foreign-news editor of the United Press, said: "The Italian front hasn't gotten a play because the action is slow. * * * There's more action elsewhere, and action makes the news."

Now, I certainly don't want to argue what news should be published with these two well-known and able newsmen, who have played so great a part in informing Americans about the tremendous and rapid series of catastrophic events which have transpired around the globe since Pearl Harbor. But I must take issue with the definition that "action makes the news."

The truth is, and always has been, that "news makes the action." Let me make a very solemn reflection for a single minute on the subject of what is and what is not news. All news begins, of course, with words. Two thousand years ago a quiet sermon was preached on a mount. We know that it was not considered news by anyone in Rome at the time. But those words, and the effect they had upon people and the subsequent actions they took as a result of those words, including an incident on Golgotha, also unreported in Rome at the time, were the real news that finally overthrew the whole Roman Empire. Those words are still news today, which is making action. The men who believe the words, that is, the news, out of Jerusalem, will never be able to compose their differences with nazi-ism and communism, and this is still going to make plenty of world action. Again, a series of speeches in a Munich beer hall, delivered 20 years ago, although badly reported at the time, have resulted in all the military action on the western front today. Today the greatest piece of real political news in the world is what Mr. Stalin is saying to Mr. Roosevelt about Poland, Germany, and, of course, air bases in Siberia. These words—this news, if we ever get it straight, is going to generate most of the political and military action in the world for the next quarter of a century. In short, the real news—what men are saying, thinking, feeling, contemplating, as well as what they are enduring and suffering will inevitably result in a series of actions tomorrow. News makes the action.

Now by this definition, the real news in Italy today is the way that hundreds of thousands of American boys—and probably British boys, too—are feeling and thinking about the war that they are fighting, and the peace they are fighting it for. And those feelings and emotions, whether the press covers them today or not, are going to result in political action of a very determined sort when they get home.

Let me give you one example of what I mean. Many of our men in Italy and elsewhere, too, have been overseas 2½ years without a furlough. It is foolish to believe that their long exile in foreign lands and their experiences there, have not affected their thinking profoundly. This change in the thought processes of millions of Americans may not be action, but it is news. For what they think today will have serious repercussions in American political life for a decade.

For example, if they return home with no sense of grievance and injustice against the Government and the way it has run the war, everything will be all right. If they don't, everything may be all wrong. Now men who have been overseas and often under fire for more than 2 years do begin to feel they have such a grievance. They call it the failure of the rotation plan.

When I came home, I pleaded, as many others have done, for some policy of fixed tours of combat duty for troops and units. Now these words were not action, either. And yet it seems they were news—because they produced actions. Hundreds of letters came into my office, and those of other Congressmen, pleading that some such policy be adopted if possible.

Let me read you one editorial (among many) which was printed as a result of that by no means original observation made in an "unworthy" theatre. It is from the Army and Navy Journal of January 27. I quote:

"The present system of leaving ground combat units in the front lines indefinitely, replacing only those men who are battle casualties, must be revised to provide rest and relief for officers and enlisted men. * * * The conditions in the Fifth Army, as described in the House of Representatives by Representative CLARE BOOTHE LUCE, will be paralleled on a larger scale in other theaters unless measures are taken to correct the system. In World War No. 1 entire divisions were withdrawn from the front lines and replaced by fresh divisions to keep the personnel from suffering too greatly from battle exhaustion. Now divisions are retained in their combat positions, their strength being maintained by replacement of individuals. The result is that the men who are not yet casualties feel that they have no hope, that the law of averages is against them. The War Department frankly states that it has no plan for limiting the front-line service of ground-force men similar to the limited missions set up for Air Force men. Such relief cannot be afforded, the War Department says, because of the 'lack of personnel for replacements.' This, then, adds another cogent reason for the adoption of a stronger manpower policy (on the home front). The present rotation system, which is limited in its application and cannot be counted upon by the men to provide them relief in any given period, is the only means now available for the relief of front-line men. The new regulations on rotation, published in last week's Army and Navy Journal, will not result in any increase in the actual numbers of men returned to the United States, and hence does not constitute any liberalization of policy. * * * If manpower is the stumbling block then there is even more reason for putting universal service into effect so that the utmost

use may be made of men in production and at the war fronts."

On February 4 we read that certain selected troops of the Fifth Division serving with General Patton's Third Army in France have received top priorities for 30-day furloughs in the United States. The Fifth Division landed in Iceland on September 5, 1941, moved to England in August 1943 for 2 months, spent 8 months in Ireland, and landed in Normandy in July 1944. The overseas time of many men in that division probably ranks highest in our armies. But there are many men in Italy—and in France and in the Pacific—who have spent, perhaps, less time overseas, but more time exposed to shellfire and bombing, than many of the men of the Fifth Division. In any case, the First, Third, Fifth, Ninth, Thirty-fourth, Forty-fifth, Forty-first, and First Armored are all divisions which have been held overseas more than 2 years.

I know that General Marshall is doing everything in his power to formulate such a priority furlough policy, based on length and character of service in divisions. I think I understand (having witnessed them) the terrible difficulties of shipping shortages, and trained combat shortages that face him in this effort.

Still I do not agree with the Vice President, Mr. TRUMAN, who said recently of me when I urged that haste be made in this direction, that the matter was "none of her business." It is the business of every legislator to point out danger spots in the war effort. Incidentally, the Vice President knew that very well himself when he was just a simple Senator, heading the Truman Committee Investigating War Production, an effort which often led him to criticize occasional Army policies, and most intelligently.

Now it may be a very hard truth for all of us to bear; it may even be a problem to which there is no immediate and happy solution. But I shall stand on my private right as a citizen of this country and my public duty as one of its citizens to tell my listeners that our men in Italy—whether they are "active" in a headline sense or not—have been fighting a very long, very hard war, that this is currently not appreciated, and that either appreciation or relief and preferably both, are certainly due them. And that the "news" from the Italian theater is that our men know it, too, and don't like it. And I don't blame them. But make no mistake, whether they like it or not, they're going to finish the job, as they began it in Italy—superbly.

In closing, let me return to his strange definition that "action makes the news." I think that the greatest piece of news that could possibly be printed would be the news that all action has stopped—and that the war was over victoriously.

Your Congressman at Work

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. O'NEAL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address by the gentleman from Connecticut, Hon. HERMAN P. KOPPLEMANN, Sunday, February 11, 1945, over WDRC, Hartford, Conn., entitled "Your Congressman at Work":

A constituent said to me, when he learned that I was appointed to the Appropriations Committee of the House of Representatives here in Washington, "You know, Herman, the one who holds the purse strings is the master." Today I want to discuss with you the work of this congressional committee which holds the purse strings of our Government and of which I am honored to be a member.

The Constitution provides that no money shall be drawn from the Treasury but in conequence of appropriations made by law. Appropriation bills, with few exceptions, originate in the House, rather than in the Senate—just as all revenue-raising measures must originate in the House, because the Constitution so provides.

The percentage of Republicans and Democrats who sit on this committee is approximately the same percentage as prevails in the House. At the present time, it consists of 43 members, 25 of whom are Democrats and 18 are Republicans.

Our committee has a multitude of objectives. The first and most important of these is economy. Because of our present public debt and in view of its increase, we must, of necessity, economize wherever economy can be had.

It is the responsibility of the Committee on Appropriations to check the growth of the public debt in every way posisble with the general welfare. We cannot and should not deny a penny that is requested of us by responsible military and naval leaders as essential to the vigorous prosecution of the war, but, as to so-called nondefense money demands, we must weigh carefully every dollar we are asked to appropriate, having ever in mind the peacetime economy when our enemies shall have surrendered.

For the fiscal year 1940, which is the last fiscal year preceding the period which has been used in financial statements as the "war spending period," the total appropriations for all purposes was $12,827,000,000. We thought that was a tremendous amount. I still think so. However, the cost of fighting a war is expensive and the next estimated budget calls for eighty-three billions.

As we look ahead to the forthcoming peace era, what do we see? The annual interest charge on the public debt alone may be six billion or more. It has been estimated that veterans' aid and care alone will run between three and five billions. Our post-war defense establishments may occasion an annual charge of well over five billions. Therefore, you have an annual bill of around fifteen billions with no allowance at all for the other expenses of Government.

In this effort to reduce expenditures, there must be no politics in our committee. It is essential that we plan all appropriations with a thoroughness that gives to our deliberations a unanimity which could not be had if politics were permitted to enter into our decisions.

The Committee on Appropriations is exceptional and differs from the other House committees. Numerically, it is the largest committee in the House. It is also the only committee of the Congress that may initiate an appropriations bill. It has a powerful veto over all executive departments, agencies, and bureaus. It can deny money not only to any department or bureau, but it can also deny money for the purposes of administering any legislation enacted by the Congress which requires funds for its operation. Of course, the Congress, in its wisdom, may override anything recommended by the Appropriations Committee, but in only rare instances has the Congress acted in opposition to the recommendation of the Appropriations Committee.

The control of the purse strings has been the ladder on which nations have risen to become democratic governments. The old dynasties, the absolute monarchies of the world, especially France and England, could not have been disturbed if it had not been eventually necessary for them to secure the consent of the people as to the limit of the amount of taxes placed upon them. They could have ruled indefinitely through the divine right of kings had it not been that they could get money only by the consent of the people. When they failed to secure and spend money by arbitrary undemocratic whims, both the English and French dynasties went down and our democratic form of government developed.

Since appropriations must be met out of taxes, the foundation of our financial system and its success depends upon careful and wise appropriations for the conduct of our Government.

The committee's tremendous responsibility and vast scope of work is perhaps best visualized when we take a glance at some of the Government bureaus, departments, and agencies to which it appropriates money. Every branch of the Federal Government, Executive, legislative and judicial, comes before us with their budget—the War Department, the Navy, State, Post Office, Justice, Labor, Commerce, Agriculture, Interior, Civil Service, Communications, Social Security, Public Health, Food and Drug, Federal Trade, Federal Works, are but a few of the departments which lay before us their claims for moneys to carry out their functions as provided for by congressional legislation.

It would be a physical impossibility for each member of the Appropriations Committee to enter into the job of handling the details of all departments. Therefore, each member is appointed to a sub-committee which is designated to handle the detailed appropriations of some departments.

I have been assigned to a subcommittee for the Treasury and Post Office Departments. The Treasury has under it a number of bureaus which have a multitude of activities. Here are some of them: Foreign Funds Control, Control of Currency, Bureau of Customs, Division of Research, Bureau of Narcotics, Secret Service, Procurement Division (which purchases supplies for the Government), all lend-lease materials for all our allies, Fiscal Service, Bureau of Engraving and Printing (where our money and bonds are printed), Bureau of the Mint (which makes all the coins for our own country and, as a public service, for many other countries in the Western Hemisphere). In addition to these and many others, there is the all important Bureau of Internal Revenue. This Bureau, as you probably know, is charged with the responsibility for the collection of all taxes, including income taxes. The size of this one Bureau alone and the details of scrutinizing its appropriation requests can best be understood when I tell you that they employ close to 50,000 persons.

When examining the Post Office Department's requests for appropriations we must consider and approve the Department's activities in many fields: the erection and maintenance of post-office buildings, salaries for carriers and clerks, and railway and airmail service. We recommend the budget for printing postage stamps, money orders, and all the other important activities of the post office.

From these few duties in connection with only two divisions of our Government you can understand that we are, in truth, the watchdogs of the Treasury.

Our subcommittee, as well as all subcommittees, is compelled to conduct exhaustive hearings. We have before us not only the heads of the departments but also their assistants and the experts of the Government to aid us in understanding the need for a suggested appropriation. We examine them from day to day over a period of from 3 to 6 weeks to justify their requests. And in the event of a request for a deficiency appropriation (which is need for more funds than was appropriated in the first place), time must be devoted again.

When a subcommittee concludes its deliberations the bill it has agreed upon and

an explanatory report is presented to the entire membership of the Committee on Appropriations, which reviews the action of the subcommittee and must give its approval before the bill can be reported to the House for its consideration and passage.

The work is most exacting, and on a major subcommittee (such as the Treasury and Post Office, to which I have been appointed) one will devote the better part of 2 months in advance preparation, sitting at the hearings, reaching conclusions, attending a review by the whole committee participating in the consideration by the House. From the moment an appropriation bill comes to us we have on each subcommittee, as well as the whole committee, the services of career men, who sit with the committee through all its deliberations, giving us the benefit of their many years of experience and knowledge. To these clerks who help us must be given much credit for making our job a bit easier.

The committee has an investigative agency which it employs to investigate, verify, and report upon any matters upon which it may desire information either in Washington or elsewhere.

Since coming to this session of Congress, our subcommittee, for many days, has been sitting from morning to night. If there are any among you who have written or telegraphed me and have not received an immediate reply, you will now understand the reason for the delay. My work of necessity compels long hours in order to meet the demands of the people of my district.

Members of the Appropriation Committee have home work. It is not uncommon to see members of my committee leave for their hotels with heavy books and reports which must be read and studied so as to be prepared for the next day's hearings.

The necessity for studying is called forth by the desire to keep from making appropriations that are unnecessary or wasteful. Each member of the Appropriations Committee vies with every other member in his effort to save a dollar here or there because this committee appropriates your tax dollars and that concerns every citizen.

Hardly a day passes but that I must also give attention to questions of legislation in which persons from within and without my district are interested and who write, telephone, or call upon me.

There are many men and women in Washington who want to talk with a Congressman upon matters before his particular committee and on subjects of general legislation. In order that a Congressman may be adequately informed, he should listen to those who want to discuss legislation with him.

This country is fortunate in having a man of such broad vision as the Honorable CLARENCE CANNON, of Missouri, as the chairman of the committee. He is a man who believes in fair play and honesty in all his dealings with the committee, the Congress, and the Nation. It has been my good fortune to serve in previous Congresses with him but I consider myself especially fortunate that I am now able to serve with him as a member of his committee as well. Through my membership on Appropriations, I feel that I can better serve my district and the Nation than has heretofore been my privilege.

He is the author of Cannon's Precedents, which is the guide book to the transaction of legislative business. He occupies the seat in Congress filled for so many years with great distinction by the late Speaker, Champ Clark. The previous chairmen of this committee have been such national figures as Thaddeus Stevens, President Garfield, and "Uncle Joe" Cannon.

The late Edward T. Taylor, of Colorado, a former chairman of the Committee on Appropriations once said: "The solemn obligation upon every member of our committee to constantly and courageously protect the Federal Treasury against thousands of appeals and imperative demands for unnecessary, unwise, and excessive appropriations makes the Appropriations Committee of the House and its 11 subcommittees the hardest-worked, most powerful, and, in my opinion, the most important committee in Congress."

In conclusion, I want to say to you that the Committee on Appropriations is alive to the many problems of the Nation and the eager desire of all to keep the expenses of operating our Government at a minimum. Its job is difficult. Its membership is made up of men who, in my judgment, may be relied upon to discharge their responsibilities well, with the aim ever foremost to do that which, in the end, will prove to be best for this great country of ours.

Fight Against Inflation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. PATMAN. Mr. Speaker, the well-known firm of Johnson & Johnson, of New Brunswick, N. J., is doing an excellent job fighting inflation.

I have just received a letter from the vice president of the organization in which he states:

JOHNSON & JOHNSON,
New Brunswick, N. J., February 9, 1945.

The Honorable WRIGHT PATMAN,
The House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: We are certain that you are sympathetic to the tremendous job ahead in safeguarding the consumer against dangerous price increases. In our opinion it is second in importance to the winning of the war. Through the Office of Price Administration our Government has and is doing a most commendable job in price control. Johnson & Johnson is supporting this program wholeheartedly by carrying the "No inflation" message to the public through the medium of 300 newspapers, national magazines, farm, professional, and trade journals.

We submitted this promotional material to Mr. Chester Bowles, O. P. A. Administrator, and I quote here an excerpt from his reply:

"I think you and your people have done a grand job on the advertisements and window posters which compare the prices of Johnson & Johnson commodities with the prices of the same items during the last war.

"Actually, since May 1943 the cost of living has increased only about 1 and a half percent according to the Bureau of Labor Statistics. We have a tough job ahead of us if we're going to hold that line, but I think it is important to the whole stabilization program that the public have a true picture of where we stand. Misconception about the trend in the cost of living could only lead to increased inflationary pressures."

We thought you would be interested in the actual results of our long established policy of the lowest possible price consistent with the highest quality products. The attached sample advertisement is evidence of our accomplishment.

We feel that this is an opportune time for this publicity since the fight against inflation is most important to the economic future of our country.

Respectfully yours,

ARTHUR B. HILL,
Vice President.

The newspaper article that will appear is headed "No inflation here." It compares today's prices with prices during World War No. 1. For instance, Red Cross bandage, 2 inches x 10 yards, during World War No. 1, 1918, cost 20 cents; now it is 10 cents. Red Cross adhesive tape, ½ inch x 5 yards, was 35 cents; now it is 10 cents. Johnson's baby powder then was 25 cents; now it is 21 cents. Red Cross cotton, 1 pound, then $1.25; now 98 cents. Johnson's—Lister—dental floss, then 25 cents; now 10 cents. Red Cross gauze, 36 inches x 5 yards, then $1.25; now 59 cents. Johnson's baby soap, then 25 cents each cake; now 25 cents for two cakes.

In addition, the following statement appears in the advertisement:

These are "medicine-chest" items used daily in millions of American homes. Their lower prices spotlight the Johnson & Johnson philosophy of making the highest quality products available to you at the lowest possible costs.

The Late Honorable Francis J. Seiberling

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron Beacon-Journal on the death of the Honorable Francis J. Seiberling, who died in Akron, Ohio, on February 1, 1945.

The Honorable Francis J. Seiberling was a former Member of this House, serving in the Seventy-first and Seventy-second Congresses as a Member of the Fourteenth Ohio District, which I now represent. He was a gentleman of character and integrity who made a worth-while contribution to the Congress and to the community in which he lived.

The editorial follows:

FRANCIS SEIBERLING

Always constructive without being spectacular, Francis Seiberling was one of the men who helped build Akron into the great industrial city it is today.

His ability to analyze financial problems and his keen perception of opportunities made his advice invaluable to both big and little businessmen alike.

He was a foremost member of the Akron bar, but it had been years since he had tried a case in court. His work was as a business counselor in the conference room.

Mr. Seiberling gave generously of his time and wisdom to community projects and to his church. His interest in good government was evidenced by the fact that he put aside a lucrative law practice to serve as Congressman from this district for 4 years. Too many of our truly able and successful professional men are too busy to serve their city, State, or Nation in public office.

With it all, Mr. Seiberling was a very human sort of person, who enjoyed good companionship and lively conversation.

He was completely devoted to his family.

His death at the age of 74 closes a fruitful life, which leaves lasting benefits to the community as a whole and to his many friends.

A Lasting Peace

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. ROBERTSON of Virginia. Mr. Speaker, under unanimous consent to extend my remarks, I include herewith the radio address of February 4 on the subject of World Peace, by that distinguished lawyer and former Ambassador to Great Britain, Hon. John W. Davis, of New York.

In furnishing to me, at my request, a copy of that address which has not yet been printed by the Commission to Study the Organization of Peace, in whose behalf it was delivered, Mr. Davis said:

Undoubtedly there is going to be a hard fight over the final terms of any international organization. If we let too much cooling time elapse after the war is over we may find ourselves in the old familiar ditch.

I hope every Member of the Congress will carefully read Mr. Davis' speech. We must strike while the iron is hot.

I hold in my hand a paper signed by 150 distinguished Americans. The names of the signers are known throughout the country, and had I time to read the list you would realize that almost no field of activity is unrepresented. It is their message that I am asked to deliver this afternoon. I will let them speak in the words of the document they have signed:

"At Dumbarton Oaks the United States, Great Britain, the Soviet Union, and China took a momentous step in the age-long struggle for liberty by proposing to give international sanction to human rights. They proclaimed that in order to create 'conditions of stability and well-being which are necessary for peaceful and friendly relations among nations' there must be international action to 'promote respect for human rights and fundamental freedoms.' Thus they recognized that the violation of human rights anywhere may be a threat to world peace everywhere. To safeguard these rights they open the way for a permanent agency within the coming world organization.

"For this action at Dumbarton Oaks the long march of history has blazed the path. Freedom-loving men won Magna Carta, the Declaration of Independence, the Bill of Rights, the French Declaration of the Rights of Man and Citizen, and the constitutions of many of the United Nations—this gives us faith.

"In recent times these historic acts by nations have led to the beginning of international recognition of human rights as in treaties, in the Covenant of the League of Nations, and in the charter of the International Labor Organization.

"Then in our generation the forces of oppression and militarism defiantly sought to reverse the process. The flagrant violation of human rights by Nazi and Fascist states, revolting to the conscience of mankind, stands as a symbol of an ever-present threat to peace and freedom. First discriminating against, next persecuting, then butchering helpless men, women, and children they later enslaved small unoffending nations and ruthlessly set out to conquer the world. Not only was this an attack on the inherent rights of individuals but it was a direct attack on the moral and religious foundations of our society. At each dreadful step civilized men and nations were horrified. Too long we forgot that to defend man's freedom is man's endless battle; that eternal vigilance is the price of liberty for all nations, great as well as small, and for their citizens.

"In face of dangers now so evident, the United Nations have once more stressed the essential place of human rights. President Roosevelt rallied the world to the Four Freedoms as the common goal. In approving the Atlantic Charter the United Nations called for complete victory 'to preserve human rights and justice in their own lands as well as other lands.'

"A major objective of our foreign policy, as stated by Secretary of State Stettinius, is the encouragement of all those conditions of international life favorable to the development by men and women everywhere of the institutions of a free and democratic way of life, in accordance with their own customs and desires.

"Dumbarton Oaks is both a promise and a challenge—a challenge to us to see that the promise is fulfilled.

"For the maintenance of human rights we seek the support of all peace-loving nations and all men of good will. Let us make sure that those who shall have died in this war to overcome the gravest of all threats to men's freedom shall not have died in vain and that the coming generations shall live in a peaceful world in which human rights and fundamental freedoms are honored.

"To this end we urge the United Nations to create in the coming world organization a commission on human rights and fundamental freedoms."

That is what they wish me to say on their behalf; and for these views they ask the approval and support of public opinion in the United States. Not many, I believe, will dissent. Let us think about it for a moment. Some day, we hope, believe and are sure that this war will end in the complete defeat of our enemies. Their mad dream of world conquest will be over and the vast crimes they have committed will be avenged. Once more we shall have proved by force of arms that man is both too weak to wield unlimited power and, thank God, too noble to submit to it.

Then will come the slow, laborious, and painful task of setting the world to rights, and of building a world system under which decent men, honest men, men who respect themselves and respect others, can live with security in freedom, and in peace. Who thinks that this will be easy? We can and we will drive maruding nations back to their rightful boundaries. We can and we will strike the weapons from their murderous hands. We can and we will punish those who brought all the present misery on the world; and to the limit of our resources, we can bind up the wounds they have made and succor the multitudes whom they have tried to starve. Thereafter, building for the long future, while no less imperative, may prove to be hardly less difficult.

The Dumbarton Oaks plan is a good beginning, but we must frankly recognize that it is only a beginning. Out of it we hope there will come an organization where in Whittier's words "the nations lift their right hand up and swear their oath of freedom." We have high hope that this organization will advance the rule of law among nations as among men and that it will have sufficient force to bridle the restless, curb the ambitious, and punish the evildoer. We hope also that in the language of the Dumbarton Oaks proposals it will be able to "promote respect for human rights and fundamental freedoms."

The proposal I have just read to you urges the setting up of a commission on human rights and fundamental freedoms directed to this end. It is a necessary part of permanent peace for there can be no such thing as a lasting peace that is not founded on the decent treatment of human beings.

Nations can be considered free and independent only when they have shaken off the shackles of outside power and become masters of their own destiny. Individuals are free only when others cannot force them into action against their will. The chief duty of all governments, as we Americans conceive, it is to preserve, both for the nation itself and for its individual citizens, the freedoms they have the right to enjoy. It has been well said, however, that "he only is free who lives among free men," and this can only come about when every human being throughout the world, of whatever nationality, or creed, or race, or color, east or west, may, under just and equal laws, live out his life as he best chooses so long as he does no injury to his neighbor.

Truly this is a high goal and certainly a long, long road. Our grandchildren and their grandchildren may never see its end. The teachings of history warn us that the advance can only be slow and that success will require patience rivaling the infinite. Human nature cannot be changed by act of parliament or congress. Bigotry cannot be eradicated by a stroke of the pen or by mere creation of a commission. But all this is no reason why men of today should not set their feet on the path. They must set their feet on this path if civilization is to be justified by its works.

One often hears the statement that if this or that result does not follow our victory, the war will have been fought in vain. I do not care for this expression. To put down the lawless outrage of the Germans and the Japanese is worth all and everything it costs, and when that has been achieved no man will have the right to say the struggle was in vain. Victory over evil is never vain. But if after this war there shall come to the world a deeper love of liberty and a new birth of freedom, countless generations of men will kneel and bless our soldiers, sailors, and air men for their sacrifices on the blood-stained fields of battle.

Drafting of Farm Boys

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, I feel compelled to again address Congress on the question of drafting farm boys between the ages of 18 and 25. It is exceedingly unfortunate when a Government agency such as the Selective Service sees fit to put its own interpretation on a law passed by the Congress, and in this particular case I have reference to the now famous Tydings amendment.

It is an exceedingly unfortunate situation when farmers who took this law at its face value and proceeded accordingly now find that an agency of the Government can ignore in principle the provisions of the law, and under orders from Mr. Byrnes, chart a new course in the selection of these men. At the time the Tydings Amendment was passed, it would seem to me that it should have been the policy of the governmental agencies to read into the meaning of that amendment certain fundamental things, things

that will concern the lives of farm youth in the years to come.

By the action of General Hershey and his selective-service organization, they are today placing upon the lives of young men engaged in farm effort a stigma from which they can never recover. If it is legitimate and wise that trained minds in technical fields of industry are deferred on the principle that they are more needed in our great industrial plants, than at the war front, then the same should be said of the boys on the farm. The passage of the Tydings amendment was a complete recognition of the essential requirements of farm work in conjunction with the war. By this act then, all honor should be accorded to the boys who remain on the farm. This is not the case. They are being made to feel that they are slackers, that they are hiding behind the advantages of the Tydings amendment to avoid entering the Service.

Boys who dedicate themselves to the task of growing food in this hour of global war should have every honor placed upon them for their work. It must never be said of them in the years to come that they have failed in their task. It is the duty of this Government, and of the people, to impress upon the boys who dedicate themselves to farm effort that they are just as essential to the war effort as those on the battle front, and are entitled to every honor it is possible to give them.

Should we fail to do this, then these thousands of young men, whose parents seek deferment for them under the Tydings amendment, will have the feeling in the years to come that they failed in a great hour of test. If we are going to give honor to technical minds in industrial plants, then like honor should go to the boys on the farm. The policies that now are being followed, changing of plans, and new interpretations are bringing down upon the farm boys a disgrace from which they will suffer down through the years. There should be a way found to designate farm work and the production of food for the armed forces as an honorable profession, and one in every respect comparable with the work in the armed forces. Unless this Government can so bring honor to these young men, their lives in the future will of necessity be unhappy because their Government has failed to dignify and to make the effort of farm work in the time of war one of great patriotism.

The drafting of farm youth goes on even in the face of the Tydings amendment because the interpretations lack candor and understanding on the part of the selective service.

My able colleague from Michigan [Mr. MICHENER] made an excellent analysis of the situation in his remarks of February 8.

I am glad to note that the distinguished Senator from Maryland, author of the Tydings amendment, as well as others have seen fit to introduce a resolution to investigate the misuse of power and misinterpretation of the amendment. The trouble is it is too late, but it is a step in the right direction.

Sale of Surplus Property

EXTENSION OF REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 1945

Mr. RIZLEY. Mr. Speaker, under permission to extend my remarks in the Appendix to the RECORD, I include a recent article appearing in a local newspaper, showing a list of items offered for sale as surplus property.

This list of surplus products presents a situation that not many of us believed to exist. It will be noted that it includes 1,200 50-gallon drums of lard oil and 700 50-gallon drums of extra winter strained lard.

It has been my understanding and I am sure the understanding of most people throughout the country that there was an acute shortage of fats and oils. Under the administration's program, they have been and are now subsidizing some vegetable oils as much as 100 percent of the O. P. A. ceiling. This is true, while at the same time millions of pounds of lard have been allocated to the soap makers unrationed; and yet the housewife is rationed for lard to feed her family.

Now we find that lard is being sold as a surplus product, and while we continue to tax the Public Treasury to pay consumer subsidies to aid those who purchase canned vegetables, we now find huge amounts of these canned goods sold as surplus war materials.

The article follows:

FORTY RATIONED FOOD ITEMS SOLD BY GOVERNMENT AS SURPLUS—TONS OF LARD, CHEESE, CANNED GOODS OFFERED FOR SALE BY UNITED STATES AT LOSS

(By Walter Trohan)

As the Office of Price Administration resumed rationing of major foods late last December, the Surplus Property Board was arranging for the sale of millions of dollars' worth of foodstuffs, it was learned yesterday.

Among items for which American housewives would have had to turn over millions upon millions of red and blue food stamps were millions of pounds of lard, almost a half million pounds of cheese, and cases upon cases of canned goods requiring food points.

STAMPS INVALIDATED

At the time housewives' red and blue stamps were invalidated because civilian supplies of major food were short as war demands increased, according to Administration spokesmen, more than 40 food items were offered for sale as surplus commodities.

The largest single item was one of 20,216,817 pounds of lard, according to the Industrial Advisory and Research Service, which gathers data for clients on surplus commodities listed by Government agencies. The lard was described as Prime steam lard in storage tanks.

LARD BECOMES RANCID

It was learned yesterday that the Government had planned early in December to sell the lard back to processors so that it could be put in cartons for overseas shipment. It was acknowledged under this plan the Government would have sold at a loss on the original purchase price.

While negotiations were under way, the Army stepped in and halted the sale through the supply forces, headed by Lieutenant General Somervell, on the ground that the lard was needed for the Army. Later the Army found that the lard was not needed.

Meantime, according to the surplus organization, the lard became rancid so that it now cannot be used for food. It is offered for sale to soap manufacturers. It was said that the Government will take a substantial loss on the sale.

Another item with a high red point rationing total is one of 450,000 pounds of cheddar cheese. There is also 1,200 50-gallon drums of lard oil, which would take a heavy total of red points.

VALUE NOT DIMINISHED

There are hundreds of thousands of cases of peas, beans, and catsup, which require blue points at grocery counters throughout the Nation. It was explained at the surplus headquarters that these are being offered for sale to make room for new packs of these items.

It was acknowledged that the food value of these has not diminished in any way. These will probably be purchased by packers and eventually find their way to food shelves, but meantime the Government will probably suffer a loss, a spokesman said.

FRUIT JUICES INCLUDED

Other items on the lists include over a hundred thousand cases of eggs in shell, barrels of dry skim milk, flour, dried beans, rice, concentrated fruit juices and cans of vegetables not on the ration lists.

The list of items offered for sale recently follows:

One hundred and nineteen thousand seven hundred and forty-eight cases peas, No. 2 cans (24 to case).

Eleven thousand nine hundred and sixty-seven cases peas, No. 10 cans (6 to case).

Sixty-seven thousand one hundred and fifty-six 25- and 30-pound boxes seeded and seedless raisins.

Six thousand three hundred and twenty-eight 25-pound boxes Thompson seedless raisins.

Sixteen thousand 25-pound boxes Thompson seedless raisins.

Six thousand four hundred 25-pound boxes Thompson seedless raisins.

Five thousand six hundred and seventy-eight cases green olives.

Three thousand six hundred and fourteen cases green olives.

Sixty bags dry beans (all beans and peas in 100-pound bags).

Two thousand three hundred and ninety-eight bags pinto and pea beans.

Three thousand one hundred and ninety-seven bags pea beans.

Eight hundred bags Great Northern beans.

One hundred and four bags yellow split peas.

Eight hundred and ninety three bags garbanzos (50 kilos per bag).

Three hundred bags rice.

Seven 200-pound barrels dry skim milk.

Nine thousand seven hundred and twenty-two bags pea beans.

Three hundred and fifteen bags rye flour.

Three thousand two hundred and ninety-one bags cracked wheat.

One thousand bags white flour.

Twenty-five thousand three hundred and thirty-four cases canned snap beans, No. 2 can (24 to case).

Twenty-six thousand six hundred and fifty-nine cases canned snap beans, No. 10 (six to case).

Five hundred gallons lard oil in 50-gallon drums.

Seven hundred gallons extra winter strained lard oil, 50-gallon drums.

Seven thousand five hundred and eighty-two 24 14-ounce bottles tomato catsup.

Eight thousand two hundred and thirty-one cases tomato catsup (six No. 10 cans to case).

Five thousand three hundred and seventeen cases of (24 No. 2 cans) canned tomatoes.

Nine hundred and ninety-seven cases canned tomatoes, six No. 10 cans.

Twenty-three thousand five hundred and ninety, six No. 10 cans canned snap beans.

Three thousand four hundred and ninety-seven 24 No. 2½ cans canned snap beans.

Forty thousand one hundred and fifty-seven cases No. 2 canned snap beans (24 to case).

One hundred and twenty-one thousand seven hundred and fifty-six gallons concentrated orange juice (packed six 1-gallon cans to a case).

Twenty-four thousand eight hundred and fifty gallons concentrated lemon juice in 50-gallon barrels.

Twenty-two thousand one hundred and sixteen cases canned tomatoes (24 No. 2 cans to case).

Three hundred and six thousand three hundred and ninety-five cases canned peas.

Four hundred and fifty thousand pounds Cheddar cheese.

Forty-one thousand two hundred and seventy-four cases canned tomatoes (24 No. 2 cans to case).

Thirty-five thousand eight hundred and fifty-one cases canned tomatoes.

Twenty million two hundred and sixteen thousand three hundred and seventeen pounds of prime steam lard.

One hundred and ten thousand cases shell eggs.

O. D. T. Order No. 47

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein communications to and from the O. D. T. and Director Byrnes relative to O. D. T. Order 47:

FEBRUARY 3, 1945.

Mr. VINCENT CORBITT,
Assistant Director, Passenger Section, Railroad Transportation Division, Office of Defense Transportation, Washington, D. C.

DEAR MR. CORBITT: Attached please find a resolution dated at Springfield, Ill., January 31, 1945, and signed by the following: Edward F. Carter, legislative representative, Brotherhood of Locomotive Engineers; Clint Bush, chairman, Brotherhood of Locomotive Firemen and Enginemen; Richard Abram, legislative representative, Brotherhood of Railroad Trainmen; T. S. Roe, legislative representative, Order of Railway Conductors of America.

In paragraph two these gentlemen state in their resolution that reliable information has reached them that the Chicago & Illinois Midland Railway Co. contemplates the discontinuance of its passenger trains that operate between Springfield and Pekin on February 28, 1945. The reason for such discontinuance is O. D. T. Order No. 47.

I have not seen or read Order No. 47. Upon calling your office this morning your secretary read it to me over the phone and said she would mail me a copy. From the phone conversation it would appear this order was issued to discontinue trains handling resort traffic, etc. I am not personally familiar with the patronage of the Chicago & Illinois Midland Railway Co. I doubt very much if they are handing any transportation to or from any resort.

I would appreciate it very much if O. D. T. would send a representative in the Illinois area to investigate the matter, and if conditions are found to be as outlined by the four gentlemen signing the attached resolution, that the Chicago & Illinois Midland Railway Co. not be allowed to discontinue this service.

If there is no O. D. T. representative from that area, may I suggest one be sent from Washington.

Yours truly,

SID SIMPSON,
Member of Congress.

FEBRUARY 9, 1945.

Col. J. MONROE JOHNSON,
Director, Office of Defense Transportation, Washington, D. C.

DEAR COLONEL JOHNSON: With further reference to my letter of February 3 and phone conversation with Mr. Corbitt relative to the discontinuance of the passenger train service of the Chicago & Illinois Midland Railway Co. between Springfield and Pekin under O. D. T. Order No. 47, I would like to submit the following as additional evidence of protesting.

There are 29 towns and communities affected if this discontinuance is allowed to go through. You may be aware of the fact and you may not, but the farmers along this right-of-way some years ago gave additional land for this road. I think it amounted to some 100 feet of good Illinois farming land.

According to the 1942 report of the Interstate Commerce Commission statistics of the railroads in the United States this road had a gross revenue of $6,106,000. They had operating expenses of $3,561,000, leaving a net railroad operating income of $2,545,000; they paid the Federal Government a tax of $1,319,000. Their average surplus or excess profits were 25 percent where the average is only 7 percent on other railroads in the United States. They had a $650,000 net profit on their capital stock of $5,000,000, which is around 13 percent or 14 percent, and not bad. Their book value is $13,745,000. The percent of excess profits tax paid by the Chicago & Illinois Midland Railway Co. is among the highest of any railroad in the United States.

The fact that they show in 1942 a $90,000 deficit on passenger service is also considered, but may I call your attention to the fact that the same year the B. & O. Railroad showed a deficit as far as passenger service is concerned of $3,604,000. On this same basis what is to keep the B. & O. from discontinuing all of their passenger service?

If you will look at item 439, on page 386 of this 1942 report, you will find a deficit in practically every railroad in the United States on passenger service.

Taking everything into consideration and from an over-all picture, this is probably one of the best paying railroads in the United States. These figures that I have quoted are as of 1942. If we can possibly believe what we read in the newspapers, certainly the profits in 1943 and 1944 were even better than these figures.

It is my understanding that it requires six railroad men to operate this service which they contemplate discontinuing March 1. A reliable railroad man informed me that to operate the new schedule, which is a mixed train, will take more railroad men. The new schedule, to be exact, will require 10 men, according to the information I have.

I can appreciate the O. D. T. Order No. 47 in that it was hopeful to preserve manpower and fuel, but the railroads apparently are taking advantage of this O. D. T. order. Please permit to cite what a schoolboy would consider extravagant waste by this same road. This railroad takes freight from Kincaid and Taylorville to Springfield, gives it to the Wabash, which takes it to Decatur and then to Chicago. This is an additional and unnecessary 40-mile haul. This especially is true when they could give this same freight to the Wabash at Taylorville, to the Alton at Auburn, to the Illinois Central at Pawnee Junction, or to the C. & N. W. at Compro. Any one of these stations would save the additional 40 miles, which makes the discontinuance of the service between Springfield and Pekin look ridiculous and inconsistent.

Please do not overlook the fact that the farmers and citizens gave the bulk of this right-of-way with the understanding that they would always be provided with service.

The following is another instance of waste of manpower, coal, and the wearing out of material and equipment. It is my understanding that the New York office and probably 12 other offices of this railroad solicit through freight from New York to St. Louis. This freight is routed over the Nickel Plate from the east to Peoria, then on the C. & I. M. from Peoria to Taylorville and then to St. Louis on the Wabash which is apparently an unnecessary 150-mile haul.

If a saving of railroad equipment, manpower, and coal is mainly the purpose of Justice Byrnes' directive which caused the O. D. T. to issue order No. 47, why not do it in such a manner that the consuming public would save on freight rates as well as the saving on equipment, manpower, etc. I think we have cited you where trains run an unnecessary 40 miles in one instance, 90 miles in another, and 150 miles in another; so why let the Chicago & Illinois Midland Ry. Co. discontinue this much needed service that employs 6 railroad men.

Finally, if this service between Springfield and Pekin is discontinued, the locomotives used thereon will simply remain idle, because of the fact that they are of small type and will not even serve as switch engines.

Yours truly,

SID SIMPSON,
Member of Congress.

OFFICE OF DEFENSE TRANSPORTATION,
Washington, D. C., February 10, 1945.

The Honorable SID SIMPSON,
House of Representatives, Washington, D. C.

MY DEAR MR. SIMPSON: Your letter of February 9, reference the Chicago & Illinois Midland Railroad case.

Mr. Roe called on me and I arranged a conference with Colonel Johnson. Mr. Roe stated he would relay to you Colonel Johnson's decision in the matter. In this connection, Colonel Johnson told Mr. Roe that as soon as the present crisis is passed General Order ODT 47 will be rescinded.

Yours very truly,

V. T. CORBETT,
Assistant Director, Passenger Section, Railway Transport Department.

WASHINGTON, D. C., *February 10, 1945.*

Hon. GEORGE BARRETT,
Attorney General, Springfield, Ill.:

Because of General Order ODT 47 the Chicago & Illinois Midland Railway Co. has announced new schedule effective March 1 eliminating four passenger trains between Springfield and Pekin. Twenty-one of the 29 towns affected are in the Twentieth Illinois District. This is the only passenger service available. My information is 3,400 passengers used this service during November 1944. Present schedule handles fish, poultry, eggs, mail, express milk and cream. Because of 300 citizens in Twentieth District have sent me petitions protesting this office has made subsequent protest with O. D. T. but to no avail. May this office suggest that as Chicago & Illinois Midland service affects Illinois only that your office investigate same. If found as represented here that injunction proceedings be started at once. This is suggested because of your office's valuable service in the Illinois terminal case because of W. P. B. order at that time.

SID SIMPSON,
Member of Congress.

FEBRUARY 13, 1945.

The Honorable JAMES F. BYRNES,
Director, Office of War Mobilization and Reconversion,
The White House,
Washington, D. C.

DEAR MR. BYRNES: The above O. D. T. General Order No. 47 from the standpoint of principle was, no doubt, issued with the best of intentions. I can certainly subscribe to the theory of discontinuing resort trains, etc.

However, under O. D. T. Order No. 47 I believe certain railroads can take an unfair advantage of it. In other words, in my opinion, and I have arrived at it after investigating the matter, the railroads should not be allowed to make communities suffer in the discontinuance of established freight and passenger trains. Attached please find what I consider an example of the situation where the Chicago & Illinois Midland Railway Co. is taking advantage for their benefit under O. D. T. Order No. 47 and to the detriment of the Central Illinois communities affected.

We have received petitions signed by some 600 citizens protesting the discontinuance of this service.

The attached communication to Colonel Johnson, of the O. D. T., will explain it in detail. Because most of the towns affected by the action of this railroad and effective March 1 are in the Twentieth Illinois District, this office has asked the attorney general of Illinois to start injunction proceedings.

My reason for calling this to your attention is because there will no doubt be similar instances by other railroads over the United States. As previously stated, the general purpose of the O. D. T. Order No. 47 was all right if it accomplishes the purpose for which it was issued. I do believe that since the same has started functioning some clarifying directives should be issued, especially in view of the attached.

Yours truly,

SID SIMPSON,
Member of Congress.

Monopolizing Foreign Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. LEMKE. Mr. Speaker, are the multimillionaires—the economic royalists—in the Department of State attempting to monopolize and control the thinking of America? Are they trying to perpetuate their foreign ideologies through a university of their own? Are they trying to shape a permanent foreign policy favorable to American Steel—favorable to international bankers and manufacturers? It would seem so.

Following the reorganization of the State Department there was published in Time magazine, February 5, 1945, on page 78, a statement implying that anyone who wanted a job in the Department of State would from now on have to attend a school of which Joseph Grew, Acting Secretary of State, is a trustee. This ought to be interesting to every real American.

We are now informed that behind the scenes in the State Department young men and women will be trained by economic royalists—Stettinius and company. Their plastic minds will be filled with ideologies that represent not America but a little multimillionaire clique in the Department of State.

We are informed that Mr. Grew, Mr. Clayton, Ambassador Bliss, and others have started this school for the Department of State. Those who now wish to get a job in that Department will have to attend and be graduates from this school.

If the Department of State can have a school, why not the Department of Treasury? Why not the Under Secretary of the Treasury open a school across from the Treasury Department and educate the future heads and employees of that Department in foreign ideologies, or at least in the ideology of the powers that be?

Is this not a new form of Balkan diplomacy being introduced in Washington? Everybody knows that the heads in the Department of State belong to the economic royalists. They are, as it were, a multimillionaire club. Mr. Grew is a relative of J. P. Morgan, and uncle-in-law of his colleague, Nelson Rockefeller.

These gentlemen, of course, do not need the tuition fees of the poor applicants for jobs in the State Department. Neither does Mr. Will Clayton, the billionaire cotton speculator who squeezes tens of thousands of poor cotton farmers not only in the United States, but also in Brazil, Egypt, India, and elsewhere. In regard to Mr. Clayton someone please page Henry Wallace.

This small group of multimillionaires do not need the money; but they do desire to indoctrinate applicants for jobs in the Department of State with their foreign ideologies and international steel and trade philosophy. They want to make sure that in the future their foreign investments are policed by the sons of American unborn generations.

The philosophy of the school and its trustees might somewhat be compared to that of the Herren Club of Berlin where East Silesian noblemen, Rhineland industrial barons, and bureaucrats met to eat, drink, and discuss high policy. The school also aspires to be a modern Haileybury, which in its heyday controlled all jobs for the East India Co. You could not get a job in India unless you had a diploma from Haileybury.

Nearly a century ago the English ended Haileybury's monopoly. America had better nip this nonsense in the bud. If Mr. Grew and his trustees wish to create a "back door" to jobs in the Department of State, it is time for Congress to investigate the problem of misuse of official position. Mr. Grew already has his division heads and chiefs of offices teaching in his new institution—a most glaring example of misuse of one's official position.

This new Herren Club for Washington, or modern Haileybury, was incorporated in the law office of Assistant Secretary of State Dean Acheson, with the Acting Secretary Grew and Assistant Secretary of State Clayton on the board. Special adviser to the Secretary of State Robert Wood Bliss is also on the board, and the teachers are largely drawn from Mr. Grew's employees or former employees.

Many of these trustees sit on the personnel board which admits candidates to the Foreign Service. Lurking in the background is Hugh Wilson, former Ambassador to Nazi Germany, who undoubtedly knows all about the Herren Club.

Every section of the country is interested in this question. At the present time all of the leading universities of the country have foreign-service courses. The colleges which have been giving A. S. T. P. training courses are planning foreign-service courses for the post-war period. It has come to my attention that many of these institutions have become concerned with the monopoly attempts of Mr. Grew's Herren Club in Washington.

There is no need for a school of indoctrination of foreign-service candidates. There are already almost as many foreign-service schools as there are candidates, when you consider the curricula of our better colleges, especially such as Stanford, Pennsylvania, Yale, Michigan, Georgetown, George Washington, University of Washington, University of California, and Princeton.

If we need another foreign-service school, then it should be a Government institution, like West Point or Annapolis. There should be no back door to the Department of State run on the side by a group of inside officials.

America, watch your step. This new school is not for the best health of the Nation. Its purpose is too obvious. I am confident that its promoters are misjudging the temper of the American people. This thing is going just a little too far. If these people want to conduct a private school, let them get out of the State Department. They should not use their official position to sell America permanently to their line of thinking. Even if we would concede that they were the all-wise ones, yet they may be fallible. This school is incompatible with our system of government.

What Is a Fair Hourly Return for Farm Labor?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following letter of transmittal and tables are the result of many years' study of the hourly labor return of Wisconsin farmers in different sections of the State and on farms of various land types:

DEPARTMENT OF AGRICULTURE,
BUREAU OF AGRICULTURAL ECONOMICS,
Washington, D. C., December 8, 1944.

Hon. REID MURRAY,
House of Representatives,
Washington, D. C.

DEAR MR. MURRAY: I refer to our telephone conversation of November 24 in which you

asked for estimates of hourly cash and noncash returns to all labor on dairy and cotton farms.

Prof. Walter W. Wilcox, of the University of Wisconsin, has written me that his staff is preparing for your use such estimates for dairy farms in all major type of farming areas in Wisconsin. Professor Wilcox has charge of our cooperative project with the University of Wisconsin for study of dairy farms in that State.

Mr. Ronald W. Jones, of this office, is at present preparing typical farm indices for two additional areas in Texas and some minor revisions of indices of Mississippi and Georgia.

We expect, therefore, to be able to send you labor returns for typical dairy farms in at least six Wisconsin areas and one in central New York, as well as for five typical cotton farms in Texas, Mississippi, and Georgia.

Yours very truly,

RUSSELL W. BIERMAN,
Agricultural Economist, Division of Farm Management and Costs.

Estimated returns per hour of man labor on typical farms in different sections of Wisconsin

Net cash return per hour family labor	Dollars	.08	.02	.22	.30	.09	.03	.24	.37	.09	.04	.28	.40

[1] Receipts from sales of crops and livestock plus Government payments, credit for food and fuel used for human consumption on farms where grown and nominal allowance for rental on farm dwelling.
[2] Total cash and noncash income less contributions to family living on the farm.
[3] Interest on livestock and machinery and equipment at 5 percent plus net rental on land and buildings.
[4] Amount of labor hired was insignificant.

There are a few comments I wish to make in connection with these tables.

First. The farm labor return as shown in these tables indicates hourly labor returns on typical farm, which may show a higher return than the average hourly return.

Second. The hourly labor returns were from 10 cents per hour to 17 cents per hour in 1939, which was the seventh year of the present administration. In fact, these low hourly returns existed after Mr. Henry Wallace had spent billions in the name of agriculture.

Third. The returns in northern Wisconsin compare very favorably with the hourly returns in the older sections of the State. This is all the more apparent when one realizes that the A. A. A. program provided more funds in southern Wisconsin than in northern Wisconsin, because southern Wisconsin raised corn, a crop that was favored in the program.

Fourth. The returns for 1944 when compiled will no doubt show larger hourly returns because the whole year's milk subsidy will be included in addition to the Government payments already taken into account.

Fifth. These hourly returns being as low as they were in 1939 prompts everyone to look forward to exerting every energy to postpone such low hourly returns after the war.

Sixth. The 10 years from 1930 to 1940 provided such low hourly farm labor incomes that evidently were not increased except by the influence of the war.

The Mexican Water Treaty—How It Will Affect the United States

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. McDONOUGH. Mr. Speaker, in the congressional act which in 1928 authorized construction of Boulder Dam it is specifically provided that Colorado River water salvaged and stored by the dam be used exclusively within the United States.

California communities are obligated to pay $575,000,000 to the Federal Government in fulfillment of their contracts.

If ratified, the pending treaty would give to Mexican landowners water salvaged by these works and thus take from American communities paying for these works water they need and in good faith have contracted to take and pay for.

The proposed treaty would take hydroelectric power revenues from the United States farmers and give this money to Mexico for the benefit of Mexican landowners.

It would set up an arbitrary, dictatorial, two-man commission, with unlimited powers over the economic welfare of millions of American people, each commissioner being responsible only to the Department of State and not to Congress or the courts.

It would give the two commissioners power to enter into, carry out, and enforce further agreements, with the approval of the Secretary of State and the Minister of Foreign Relations of Mexico without the consent of Congress.

If ratified the pending treaty will set up in perpetuity and beyond recall or control of Congress a two-man International Boundary and Water Commission, with one man from the United States and one from Mexico, who is accountable only to the Secretary of State and the President, and once the treaty is ratified Congress will be shorn of all power to review or reject the policies, projects and expenditures of the Commissioner. Congress must either appropriate the funds demanded or breach the treaty. This is a violation of our Constitution.

If ratified, the pending treaty will set up a one-man administration with practically unlimited power and with authority to impose on the United States the spending of vast sums of money in line with whatever philosophy of government or foreign policy may be dictated by any Secretary of State in all the years to come.

The American Commissioner will be able to dictate what works are to be constructed, operated, and maintained, and have complete control over the entire works.

If we are to have national socialism with respect to water ways, it should be done in the open through proper legislation, so that the people may know what is taking place, and not secretly through granting unchecked authority, hidden away in a treaty. This treaty abridges and amends the Constitution of the United States without the consent of the people.

This treaty would require the building by Mexico within 5 years of a main diversion structure or dam across the Colorado River, which structure is not now necessary and which would create a flood and drainage menace to communities in the United States. Such a construction is now forbidden under an existing treaty.

If ratified, the treaty would give to Mexico water salvaged by these dams and take from American communities paying for them, water they need and in good faith have contracted to pay for.

Acting in reliance on the express words of Congress—"exclusively within the United States"—these California communities changed their position to their detriment by giving up certain of their rights and pledging themselves to repay the entire cost of Boulder Dam and the All American Canal.

The water delivery pledge is violated by the pending Mexican treaty in its guarantee of 1,500,000 acre-feet of Colorado River water to Mexican land owners—an amount of water that is greater than the entire consumption of water by the cities of New York and Philadelphia combined, and twice as great as the largest amount of water that has ever flowed into Mexico before the construction of these works.

Any gift of the waters of the Colorado River will curtail the development of the communities of this region. There are need and opportunities for use, within the United States of all of the waters of the river. Of the 244,000 square miles that comprise its basin, only 2,000 are in Mexico.

Un-American Activities as Viewed by American Labor Editors

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. DE LACY. Mr. Speaker, under the leave granted me to extend and revise my remarks in the RECORD, I include a copy of a news story released yesterday from Washington by the Federated Press.

Federated Press is a nonprofit cooperative membership organization of more than 200 labor papers throughout this Nation and is controlled and operated by its member labor publications, A. F. of L., C. I. O., and independent. It is the only daily news service of the labor movement and has been long accredited to the congressional press galleries and the White House.

Learning that the gentleman from South Dakota, Mr. KARL E. MUNDT, had sought the views of 100 persons on the question of what is considered un-American activities and, therefore, what might properly be investigated by the Committee on Un-American Activities of this House, Federated Press polled its own labor editors on the subject. Since this is the first time that we have had the views of these representatives and editorial leaders of millions of American workers, I believe it an important contribution to the thinking on the subject. I have made some minor deletions in the text of the story to eliminate references to Members of this House and of the Senate. Otherwise, the story follows:

LABOR EDITORS GIVE REPRESENTATIVE MUNDT SOME THINGS TO THINK ABOUT

WASHINGTON.—Editors of labor papers from coast to coast have some original ideas of what is un-American and what the new House Committee on un-American Activities should investigate.

Taking a cue from Representative KARL E. MUNDT, Republican, of South Dakota, who is polling 100 "friends and enemies" of the old Dies committee on the issue, Federated Press circulated a questionnaire among some 366 labor papers; A. F. of L., C. I. O., and Independent.

The replies, still coming in February 12, showed that the top choice for a Federal investigation of thorough proportions is the Christian American Association, an organization headed by Vance Muse, of Houston, Tex. The Christian American Association is sponsoring antilabor laws in various State legislatures.

Only one point below, according to the Federated Press returns, the editors were tied on the question of international cartels and the Hearst-Patterson-McCormick axis. In separating the choices, the Chicago Tribune was ranked as the first menace by the labor editors.

As a third most popular topic for investigation, the labor editors thought the House committee might look into race-hating groups and American fascists. Most mentioned in this latter field was the Constitution Educational League, one of whose officials is publisher Frank Gannett.

Indicating what is probably a turn from straight labor union concerns, the editors ranked antilabor activities in the same ratio with columnist Westbrook Pegler, the National Association of Manufacturers, Sewell Avery, of Montgomery Ward, and Father Charles Coughlin, of Detroit.

Bringing up in the rear were such subjects as the work of the old Dies committee, the Scripps-Howard chain, the use of war prisoners on civilian jobs, United States seizure of civilian industries, publication of news stories deliberately designed to split national unity, the work of "lying columnists and commentators" and the record of Martin Dies.

As summarized by Federated Press, here are some of the replies:

Editor Leslie R. Hurt, the Unionist, Austin, Minn.: "Any activities which deprive our people of the right to life, liberty, and the pursuit of happiness are un-American. * * * The committee should concentrate its attention on bringing to justice Fascist elements, alien and native-born, who would destroy freedom in the United States."

Editor John O. Kykyri, Minnesota Labor, Minneapolis: "Activities which tend to break down or destroy national unity are definitely un-American. Individuals and organizations carrying on campaigns to promote religious and racial hatreds fall into this category and merit investigation."

Editor Morris Watson, the Dispatcher, San Francisco: "The constant belittling of our war effort and slandering of our allies by Hearst, McCormick, Patterson, and Roy Howard."

Labor Advocate, El Paso, Tex.: "If the new committee proposes to follow in the footsteps of the old Dies committee, we would suggest that it begin by investigating itself."

Editor Harvey O'Connor, International Oil Worker, Fort Worth, Tex.: "Activities of Upton Close and his reputed connections with Japanese Government."

Voice of Labor, Scottsbluff, Nebr.: "The forces that make it possible for scores of venomous publications still to exist, spreading racial and religious hatred, spouting the Goebbels line and doing their straight-from-Berlin jobs."

Editor H. F. Petty, Kentucky Labor News, Louisville: "Hoarding of labor in cost-plus plants. Military taking over operation of civilian plants."

Editor Raymond Hofses, Reading (Pa.) Labor Advocate: "Let them orient their in-

vestigations toward the sincerity of any movement or individual. Let them brand as 'un-American' whoever practices subterfuge by advocating one thing in order to accomplish another."

Beach Erosion in Southern California

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SHORELINE PLANNING ASSOCIATION OF CALIFORNIA, INC.,
Los Angeles, Calif., February 10, 1945.

Congressman GORDON L. McDONOUGH,
House of Representatives,
Washington, D. C.

MY DEAR GORDON: Just as we are in the midst of preparing a beach protection-erosion committee meeting on a State-wide basis as far as California is concerned, an article in last night's Santa Monica Evening Outlook reported that you had announced in Washington that "The House Rivers and Harbors subcommittee will begin a study of ways to prevent erosion of California beaches. The study will be made in ccoperation with the Shoreline Planning Association of California, an organization for development and protection of beaches for public use."

We certainly congratulate you upon being appointed to such an important committee, and we are confident that with your aggressiveness and adroitness that you will become one of the leading members in this great national program of shore and beach erosion.

I spent last Thursday in San Diego County, and, in addition to the acquisition program, the erosion problems in that area were discussed. Up at Oceanside, in Orange County, they told me that they were somewhat fearful that the jetty constructed by the Navy in the Seal Beach-Sunset Beach area might prove disastrous to their beaches in that city in due course of time. The great structures at Seal Beach were put in by the Navy without any recognition of the dangers to local conditions which might arise, and which could have been taken care of without any additional cost as far as the Navy is concerned, if they had conferred with the local officials.

Then there is Newport Harbor in that area, which has suffered considerably from erosion, and the problems there have been considered somewhat by the Federal Beach Erosion Board. I understand that some studies are being made at this time. Up at Long Beach, their erosion problems have been quite enormous, and some protective works are now being constructed by the Navy and also by the city of Long Beach and the county of Los Angeles.

When we get out to Redondo Beach the situation is terrific. The houses and other structures have been washed out during the past few years and are now right up against the foundation of the Fox West Coast Theater. The cause of their troubles is the breakwater which they constructed some years ago, according to competent engineers. Then when we get up to Santa Monica where another breakwater was constructed, the sand filled in behind it, and therefore they do not have a successful yacht harbor.

Furthermore, it caused the denudation of the beach area southerly to Venice as far as sand is concerned. In addition, the breakwater is going to pieces and they are wondering what to do about it. That is the reason why it was decided that our committee and engineers who have been invited would assemble at the Santa Monica pier and hold a consultation on the ground.

Up at Port Hueneme a breakwater was constructed at that point and the Navy built a yard, and it has become one of the largest shipping points as far as the war is concerned, but it has raised havoc with the property. If the erosion continues for another 50 to 70 feet (so it has been reported), the town will be flooded, thus causing considerable loss. Then as we go up the coast, there are other places where erosion conditions are becoming troublesome, and as we reach Santa Cruz County there is found a very serious condition. Experimental groins will soon be constructed in order to determine upon the probable remedy for the protection of that area.

When we recently corresponded with San Francisco in connection with the State-wide acquisition program, we were informed that there was no land available as far as recreation is concerned, but that their problems were entirely that of erosion. Therefore, they threw their support for everything that could be done for San Mateo and Marin Counties, both of which have an acquisition program and have adopted master plans and met other requirements of the State. As we progress still further to the more northerly part of California, mention is made of erosion in one way or another, but they do not seem to have the same concern, which may perhaps be caused by a much smaller population for the whole area.

Certainly that condition is national in character. There should be a very definite program between the Federal Government, State, and counties, but it seems to us that the proposals made by the American Shore and Beach Preservation Association, copies of which are enclosed herewith, should receive favorable action by Congress. We believe that this will be done now that we find that you are in a position to make it one of your special jobs as a Congressman.

* * * * *

We appreciate your announcement mentioning this association, and whenever you require additional information we shall be happy to furnish it either directly or indirectly.

Kindest personal regards.

Sincerely yours,

GEO. P. LARSEN,
Executive Secretary.

Let San Francisco Review Yalta!

EXTENSION OF REMARKS

OF

HON. WILLIAM C. COLE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for today:

LET SAN FRANCISCO REVIEW YALTA!

The Big Three agreement at Yalta was an attempted post-war settlement without consulting the other allies. It was a compromise in which Stalin dictated most of the terms, and the Atlantic Charter pledges, other than German disarmament, came off a bad second. This Big Three political agreement, including its secret provisions, should be examined by the full United Nations meeting at San Francisco in April.

In justice to the President, it should be recognized that he has much less bargaining power than Stalin in any Big Three meeting now. At Yalta, Stalin had three aces and Roosevelt only one—which he could not play.

Stalin's first ace was actual possession of part of eastern Germany and all of eastern Europe, except Greece, and the strongest military force on the continent. His second ace was Churchill's prior acceptance of Russian claims and sphere of influence, and agreement that these decisions should be made by the Big Three (or Four) instead of the United Nations. Stalin's third ace was the power to help us, or not help us, lick Japan later.

Roosevelt's only ace was the power to withdraw from the war unless Stalin agreed to a fairer compromise. Actually, however, neither Roosevelt nor the American people would stop fighting before Germany's defeat—even if we had not pledged to stick to the end. Everybody knows that, including Stalin.

As a result, Stalin got what he wanted at Yalta with few exceptions.

The most important exception was Stalin's agreement that the entire German military system, as well as nazi-ism, must be eliminated permanently. Earlier he had publicly favored a post-war German army.

Since most of the other terms to be imposed on Germany were kept secret pending unconditional surrender, they cannot be evaluated now. Though war criminals would be punished, no specific reference was made to the Junker generals on Stalin's Free Germany Committee. Whether Germans are to be used as slave labor, as they have used others, was not mentioned. Germany must pay reparations in kind—Stalin wanted that, while other allies have been undecided or divided at home. This apparently eliminates, or modifies, the Morgenthau plan for de-industrializing Germany.

Roosevelt obtained a reaffirmation of the Atlantic Charter pledge of self-government for liberated peoples; first by broadening the representative base of the Russian puppet provisional regimes of Poland and Yugoslavia, and by promising later free elections. But, of course, the territories taken by Russia will have no such elections. Whether there can be really free voting elsewhere in eastern Europe, after a period of rule by Red-dominated regimes, is questionable.

Nominally, the President won a point in getting a United Nations conference called for April in San Francisco. But whether Stalin will have veto power over any league action relating to Russia, as he insisted at Dumbarton, is still a secret. Anyway, according to the Yalta plan, the San Francisco conference will not consider the peace settlement but only the machinery for a later security league. It is supposed "to prepare the charter of such an organization along the lines proposed * * * at Dumbarton Oaks," which sounds rather rubber-stampish.

The Polish settlement was the pay-off. Roosevelt agreed to Russia taking eastern Poland up to a slightly modified Curzon line; whether to include additional southern Polish cities and oil fields, as previously agreed to by Churchill, was not stated. Poland is to get substantial territory in the north and west—the original Stalin plan to load her with large slices of Germany, making Poland a perpetual Russian puppet for defense of a larger "Alsace-Lorraine." Since Stalin always has refused to discuss his seizure of the Baltic states and other territorial grabs, they were not mentioned.

The chief fault of the Yalta settlement, good or bad, is that the Big Three try to dictate decisions which only the United Nations as a whole can make—either in justice or with any chance of stability. The only Yalta reference to a peace conference concerns the German eastern frontier.

France is granted an undefined Germany occupation zone, and there is a vague promise to consult other nations on matters of their direct interest—as though the whole European settlement does not concern them.

Thus to shut out the other United Nations, who have suffered occupation, is fantastically unworkable. The peace will depend largely on the continental nations, none of which was at Yalta. If they are ignored now, they will be wooed by some future Hitler. They cannot be bound by agreements to which they are not a party, and some have said so. The full United Nations conference at San Francisco should review the Big Three political settlement.

Address Before Women's Republican Club, New York City

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1945

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me in New York on January 25, 1944:

Last Saturday several thousand of us stood outdoors in the snow to hear the newly elected President announce his aspiration for his new term of office. "In the days and in the years that are to come," he said, "We shall work for a just and honorable peace, a durable peace. * * * We can and we will achieve such a peace."

To some of his listeners must have come the thought as it did to me that the time to work for a just and honorable peace is not 'the days and years to come," but now. Still one must not be too captious about the President's use of words. The President would probably admit readily enough that it is none too early to work for peace. All of us hope that it is not too late. Few of us certainly would say that the cause of world peace had been advanced in the last 3 months.

Let me quote a few sentences from one of our new Senators. In New York last week he said: "Profoundly disturbing to all peace-loving citizens are the events of the past 6 weeks." * * * Our apprehension "springs from the hesitation and timidity, the lack of forthrightness in the managements of foreign affairs by our own Government * * * In spite of the 16 months in which to proceed, our Government has presented us with nothing more than an incomplete blueprint. We still lack the machinery for arriving at decisions, decisions based upon the give and take of mutual consultation. Conferences have been held, broad principles have been stated, but decisions by mutual agreement, with joint responsibility for specific action, have been largely avoided."

These are the words not of a querulous Republican or of a pettifogging opponent of the Roosevelt administration, but of the new Senator from Arkansas, J. WILLIAM FULBRIGHT. The 16-month period to which he refers is the 16-month period since September 1943, when the House of Representatives passed his resolution calling for the "creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world and * * * participation of the United States therein."
